The Nation

VOL. XCIX.—NO. 2557 ✠✠ THURSDAY, JULY 2, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

IMPORTANT NEW BOOKS ON PUBLIC QUESTIONS

Work and Wealth: A Human Valuation

By J. A. HOBSON, author of "The Industrial System," "The Evolution of Modern Capitalism," etc.

"Discusses philosophically and with high courage the great problem that is the center and starting point of all economic contentions. Modern industry, says Mr. Hobson, is inhuman, and vitally wasteful. The author in seeking converts for his propaganda condenses sharply, by assertive devices, where a doctrinaire would be inclined to explicate and amplify. The closely reasoned pages constitute a significant sign of the times and an encouraging prophecy for the future."—*Philadelphia North American.*

$2.00 net

The Great Society: A Psychological Analysis

By GRAHAM WALLAS, author of "Human Nature in Politics."

"A more comprehensive application of the principles of psychology to everyday life than has been done by any other writer upon this subject. The author deals with the general social organization, with especial reference to the difficulties which have been evolved by the developments of industry and the complexities of modern life, . . . and shows how psychology helps in the solving of some of their problems and the straightening out of some of their entanglements."—*N. Y. Times.*

$2.00 net

The Soul of America: A Constructive Essay in the Sociology of Religion

By STANTON COIT, Ph.D., author of "The Message of Man," "Woman in Church and State," etc.

"A thoughtful constructive study of the religious outlook in the republic, with pregnant suggestions for the development of national, spiritual resources, so that they may sweep away, rapidly and forever, the defects, wrongs, sufferings, and disorders which perturb the minds of patriotic citizens and wise statesmen. The work presents a new and broad view of the sociological functions of churches in the future."—*Philadelphia North American.*

$2.00 net

The American Doctrine of Judicial Supremacy

By CHARLES GROVE HAINES, Ph.D.

"Not since Professor Beard's book about our sacred Constitution—which proved to be not sacred at all—and about the divinity of 'the Fathers' who framed it—who, far from being divine, were revealed as quite humanly fallible, if not slyly self-interested—has there been a more fascinating book on a weighty topic. Read this book, and you will be in a position to approximate an intelligent opinion as to why you are or are not in sympathy with the recent attacks made upon our heretofore inviolate judiciary, and why you do or do not favor the suggested reforms for recalling judges and their decisions, or at least reviewing and revising them."—*N. Y. Globe.*

$2.00 net

Where and Why Public Ownership Has Failed

By YVES GUYOT, Editor-in-Chief of the "Journal des Economistes," former French Minister of Public Works, etc.

"A problem of acute contemporary importance, treated in an exhaustive manner by one of the world's leading authorities in the field of economic thought. . . . The author believes that neither States nor municipalities should attempt tasks especially adapted to individual effort. . . . For individuals the watchword should be action; for local and State governments, control."—*N. Y. Evening Post.*

$1.50 net

Democracy and Race Friction: A Study in Social Ethics

By JOHN MOFFATT MECKLIN, Ph.D.

"Presents simply the question before America of its relation with the negro, as well as the history and a résumé of these relations. It is eminently thoughtful and fair. . . . It is one of the most complete studies ever given the question and undoubtedly one of the most important."—*N. Y. Sun.*

$1.25 net

Violence and the Labor Movement

By ROBERT HUNTER, author of "Poverty," "Socialists at Work," etc.

"To any one valuing an unemotional study and orderly argument, Mr. Hunter's treatment of the mighty conflict over tactics and methods, in the labor movement, will strongly appeal. The discussion of the two diametrically opposite points of view is splendidly fundamental. . . . The author is most explicit and straightforward that the masses cannot be deceived by either kind of anarchist, the old or new type. Democracy is not a myth, it is a faith, and the socialists rest their case upon the decision of democracy, through the methods of education, organization and political action."—*Boston Daily Advertiser.*

$1.50 net

The Unconscious: The Fundamentals of Human Personality

By MORTON PRINCE, M.D., LL.D.

"A contribution to the subject that is valuable alike to the physician and to the psychologist; to the physician for its suggestiveness of method in treating those unfortunates who are troubled with what are roughly classed as nervous diseases; and to the psychologist for the accumulation, and more or less orderly consideration, of a great mass of facts that are significant for him as well as for neurologists."—*The Nation.*

HAZLITT: SELECTIONS
Edited by WILL DAVID HOWE, Indiana University

These essays, each complete in itself, show Hazlitt at his best as a critic of painting, of poetry, of books, and of men. They take us back to the theatre in the days of Kean, Siddons, and the Kembles; they give us the fine flavor of the evenings at the rooms of Charles and Mary Lamb, where one might hear the best talk of the day. No volume of selections contains more instructive criticism, more brilliant writing, a more stimulating philosophy of life than is included in the representative essays here gathered together.

The present volume is provided with a charming biographical sketch, and with critical and explanatory notes which add materially to its value.

The Nation.

NEW YORK, THURSDAY, JULY 2, 1914.

Summary of the News

The situation in Mexico, as we write, appears extremely discouraging. The protocol concerning the international side of the Mexican problem was signed by the mediators and by the delegates of Huerta and of the United States on June 24, but General Carranza has continued his temporizing policy in the appointment of delegates to confer with the representatives of Huerta on the question of the Provisional Government, and there appears to be no immediate prospect of the conference taking place. More serious is the split that has occurred between Villa and Carranza. The difference was adjusted temporarily last week, and on the same day that the protocol was signed news came of the capture of Zacatecas by Villa's army and the complete rout with heavy loss of the Federals. On Saturday, however, a statement was issued by Carranza accusing Villa of insubordination at the instigation of General Angeles and implicating in the same charge an employee of the State Department, understood to be United States Consul George C. Carrothers, who, since Huerta cancelled his exequatur in April, has been acting as confidential agent of the State Department with Villa's forces.

On Monday Carranza in a speech is said to have reitcrated his fears of "Judases in his own ranks," and Villa issued a counterblast, declaring that there was no "active breach" between the Constitutionalist leaders, but that he was returning to Torreon on account of shortage of ammunition. The fact seems to have been that Carranza sought to discipline Villa by withholding from his army his share of the ammunition landed by the Antilla at Tampico. Villa, therefore, abandoned his pursuit of the Federals and turned back with his army to persuade the First Chief to reconsider his determination.

In Mexico City, also, the situation is regarded as serious. Sir Lionel Carden, the British Minister, on Monday recommended all British subjects to leave the city, fearing disorder. Huerta, meanwhile, is said to be feverishly pushing on preparations for the holding of an election on July 5, in the parts of Mexico which he still controls. He is anxious, it is said, to hold out until sufficient returns shall have been received to elect some person to the Presidency, when he himself will retire. We comment elsewhere on the unpleasant revelations of the alleged connection of oil interests in the United States with the revolution, which are contained in stolen letters published by the New York *Herald* on Sunday. General Carranza has issued a complete denial of any such connection.

A curious conception of diplomatic duties was revealed in the papers of Saturday, in which was published a statement by George Fred Williams, United States Minister to Greece, on the Albanian situation. So far as can be gathered, Mr. Williams undertook an investigation of affairs in Albania, apparently authorized by the State Department, and found himself unable to restrain the free expression of his views until he should have been relieved of his official position. The State Department is understood to have made inquiries as to Mr. Williams's reasons for giving to the world the benefit of his views before they were communicated to his official superiors.

On Saturday the House concurred in a Senate amendment to the legislative bill appropriating $1,500,000 to defray the expense of collecting the income tax in the new fiscal year. Notice was given that $500,000 of the amount would be applied to the proposed inquisition to discover evasions of the income tax.

The President on Thursday of last week, addressing the Virginia Editorial Association, took occasion to defend the new trust laws and to indulge in the prophecy that after they shall have been passed "there will be a boom in this country such as we have never witnessed in the United States." Comment on the President's speech will be found elsewhere.

A considerable portion of the town of Salem, Mass., was destroyed by fire, which started in the industrial district, on the afternoon of June 25. The loss of life was happily small, six people only being killed, but the financial loss is estimated at $15,000,000.

Colonel Roosevelt, on his return from Europe last week, effectually dissipated any hopes entertained by the "insurgent" Progressives that he would countenance the efforts that have been made to oust George W. Perkins from the inner councils of the party. "As for reading him out of the party," declared the Colonel, "when that is done they will have to read me out, too."

The sale to Greece of the battleships Idaho and Mississippi, which was finally authorized by the House on June 23, appears to have had the effect which President Wilson anticipated in recommending the measure. A Greek note, published on June 28, is generally considered to have ended the crisis between Greece and Turkey, and the belief is expressed that the persecutions of Greek subjects in Ottoman territory will not be renewed.

Correspondence that has passed between the United States and Japan on the question of the Californian alien land law was made public on June 25. The new Ministry in Japan has rejected the proposal originally made by Foreign Minister Makino for the negotiation of a new treaty which should give to Japan all the rights of aliens of the most favored nation in the matter of land tenure. At the same time no alternative plan is proposed, the Japanese Minister for Foreign Affairs merely stating that Japan prefers to recur to the correspondence on the subject which was interrupted last August.

One of the most serious business failures of recent years occurred on Thursday of last week, when it was announced that the H. B. Claflin Company, the leading wholesale dry goods company in the country, would go into the hands of receivers. The amount involved is stated to be $34,000,000. Most of the retail stores in various cities which are controlled by the same company will not, it is said, be affected by the failure.

A Parliamentary crisis has been brought about in Spain through Socialist and Republican opposition to the Government's plan to build a second navy squadron. Premier Dato announced on Sunday that he would ask Parliament to vote on the question yesterday and that should he fail to obtain a majority he would resign.

The promised amending bill to the Home Rule bill was introduced in the House of Lords on June 23. The bill, as was expected, simply embodies the proposals made by Mr. Asquith on March 9, that the counties of Ulster be allowed to decide by vote for or against exclusion from the operation of the Home Rule bill. On a Unionist amendment to the Finance bill in the House of Commons on June 25, the Government's majority fell from its normal figure of over ninety to thirty-two. The Labor members and some Liberals abstained from voting, and the Irish followers of William O'Brien voted in favor of the amendment.

In Albania a conference has been held between the council of the insurgents and Col. Phillips, the British representative of the Powers, at which the insurgents are stated to have demanded the abdication of Prince William of Wied, the establishment of an ad interim government by the International Commission of Control, and the election of a new ruler to be chosen by delegates from all of Albania. Despite the armistice which had been arranged, desultory fighting has continued, and it was reported from Vienna that early last week the town of Elbassan was captured by the insurgents.

The Archduke Francis Ferdinand, the heir to the throne of Austria-Hungary, and his morganatic wife, the Duchess of Hohenberg, were assassinated on Sunday, as they were driving in an automobile through the streets of Sarajevo, the capital of Bosnia. Only an hour previously a bomb had been thrown at the Archduke's carriage as he was driving from the station to receive an address of welcome from the authorities of the city, but had missed its mark, injuring some of the members of the Prince's retinue. The Archduke and the Duchess of Hohenberg were on their way to the hospital to inquire after the injured when a young Servian shot them with a revolver. The crime is considered to have been the result of a plot by a section of the Serb inhabitants of Bosnia. The death of the Archduke Francis Ferdinand leaves the Archduke Charles Francis Joseph heir-apparent to the throne. We comment elsewhere upon the political aspect of the affair.

The deaths of the week include Lord Forbes, June 24; Duke of Saxe-Meiningen, Dr. Frederick W. True, Col. Garland N. Whistler, June 25; Archduke Francis Ferdinand, Duchess of Hohenberg, Franklin Harvey Head, Delos P. Phelps, June 28; Major William de Witt Miller, June 29.

The Week

The President was said to have "truckled" to England in the matter of the Panama tolls-exemption; to have been forced by the British Foreign Office to make a humiliating surrender of the American position; at the best, to have driven a "bargain" with the British Government, by the terms of which he was to receive a free hand in Mexico, in return for the removal of what was, in effect, a discriminating tax on British shipping using the Panama Canal. But all these fictions were put down last Monday by the plain tale of Sir Edward Grey in the House of Commons. The Foreign Secretary asserted that, far from having applied diplomatic pressure to President Wilson, not one line of correspondence on the subject of Panama tolls had passed between the two Governments since the new Administration came in at Washington. Not only was there no "bargain," but there had not been a single word of talk about one. Whatever President Wilson had done, he had done on his own initiative. He had not done it, added Sir Edward, "to please us or in the interest of good relations, but I believe from a much greater motive." This was a feeling of duty not to "flinch or quail from interpreting treaty rights in a strictly fair spirit." The cable dispatches say that Sir Edward Grey's statement made a great impression on the House; and it called out further approving comment in the English press.

It is now thought certain that the bill extending American citizenship to Porto Ricans will at least pass the House. Fourteen years ago the organic act was entitled "An act to provide temporarily revenues and civil government." Every observer agrees that the main cause of political unrest in Porto Rico is the failure to obtain a grant repeatedly recommended by the War Department and successive Presidents, and promised in the platforms of both the older parties. It would satisfy local pride, and end an anomalous condition. The new measure would also place the islanders more nearly upon their feet in home affairs, by substituting for the Council appointed by the President an elective Senate. Safeguards would still exist in the Governor's absolute veto, and in an educational qualification for the suffrage; but this, thanks to the excellent schools established since 1900, would exclude but a very limited percentage. Remedying a long neglect, the bill deserves the prompt attention of Congress.

The publication of the correspondence between Japan and the United States, extending from May 9 to August 26 of last year, discloses a situation fraught with great difficulty. The reply of our State Department to the Japanese note of August 26 was made only last week, and is not included in the published correspondence. There is, however, every reason to believe that whatever efforts were made in the interval of ten months to bring the solution of the problem within reach have proved unsuccessful. In any attempt to adjust the difficulty, our own Government is terribly handicapped by the division of rights and powers between the separate States and the nation; while there is reason to believe that fear of the jingo element in the Tokio Parliament constitutes an almost equally solid obstacle to freedom of action on the part of the Japanese Government. Thus the problem is one that calls for even more than the usual exercise of patient effort on both sides, in the endeavor to arrive at some kind of *modus vivendi*. If it were only difference of opinion as to the interpretation of the existing treaty that was involved, arbitration would offer a way out which ought to be acceptable to both parties; but unfortunately the trouble lies deeper, and would, in the nature of things, reassert itself upon the expiration of the present compact. Nevertheless, the idea of referring the controversy to arbitration, so far as regards the specific question of treaty interpretation, is well worth considering. It would at least serve the purpose of gaining time, which, in such a difficulty as this, might well prove to be all that was needed for its practical settlement.

The extraordinary performance of Mr. George Fred Williams, in issuing a flaming broadside about the internal affairs of Albania while occupying the post of United States Minister to Greece, would be more extraordinary if it were somebody else than Mr. Williams. His career has all along been marked by what to the outside world has seemed either eccentricity or an excessive craving for public attention. In the present instance, it is entirely possible that the state of things in Albania, which is certainly deplorable from any point of view, so wrought upon Mr. Williams's feelings that he felt impelled to force the facts, or his view of the facts, upon the attention of the world. That his official obligations as diplomatic representative of the United States forbade such a course, he appears to have been conscious, and his statement implies, though it does not expressly state, that he has resigned his post. "I could not await," he says, "the acceptance of my resignation by my Government" to denounce the cruelties and wrongs which, he declares, have been visited on the Albanians by the combination of wickedness and stupidity that has governed the course of the Great Powers. But a man who is so constituted that he cannot wait until the trammels of official responsibility are removed before breaking out on his own hook should decline to submit to the restrictions of diplomatic duty in the first place.

President Wilson may be right as to the chance of a coming great improvement in business, yet this would not prove that his reasoning about it is correct. If it comes, as there are many indications that it will, it will be due to other causes than the passage of his Trust bills. Rich crops and the easing of financial strain abroad will have much more to do with it than anything which our lawmakers may do, or fail to do. And in one point, Mr. Wilson runs pretty near to fatuity. This is where he assures business men that the bills in question, when once enacted, will write finis to the whole book of Trust legislation. There will be no other measures debated, no more agitation. But can he give any such guarantee? For his own Administration, doubtless. But can he be certain that no other politician will arise to tell the people that this or the other hook must be put in the nose of Big Business before the country can be quite safe and happy? Mr. Wilson can speak for himself, but can he speak for La Follette? Can he speak for the Colonel?

On one point that the Republicans have been trying to make against them, the Democrats need feel no uneasiness in the coming Congressional campaign. There is no trouble about a Treasury deficit, and the tariff has more than met expectations as a revenue-producer. Mr. Underwood's statement on the subject in the House on Saturday was simple and straightforward, and conclusively disposes of both these points; and it also brings out certain features of the income-tax situation which deserve attention. The total receipts of the Treasury for the fiscal year now closing will exceed the total of ordinary disbursements by about $30,000,000. If the Panama Canal expenditure of $35,000,000 is included, there will be a deficit, as has often happened before; but in the present instance this deficit is only $5,000,000 and will easily be taken care of by the accumulated surplus in the Treasury.

The new tariff has yielded $22,000,000 more than was estimated, which a little more than balances the shortage of the income-and-corporation tax as compared with the estimate. As for the future of the income tax, besides dwelling on the probability that a large amount must be allowed for failure of collection in the first year owing to the novelty of the tax, Mr. Underwood pointed out that, in addition to the tax as a whole having been operative only for ten months of the calendar year 1913, the supertax on large incomes became operative only after the passage of the bill, in October. As the period to which it applied in these cases, besides being so short, did not cover either of the great dividend dates—January 1 and July 1—Mr. Underwood regards the tax collected during this fiscal year as being, on the whole, about equivalent to only half a year's tax.

The mutiny on the Progressive ship continues. The fiat of the commander-in-chief that if Perkins has to walk the plank, he will, too, has not prevented some of the Congressional part of the crew from formulating a round robin of protest against the executive officer, Commander Perkins. They are not satisfied with the admiral's entrusting the navigation of their craft to this officer; they even assert that his handling of their ship has resulted in very unfavorable comments far and wide. Plainly, there is nothing left for the admiral to do but to bring these mutineers before the mast and give them their proper punishment. It matters not that they must submit to humiliating questions as to just what kind of cruiser theirs is when the crew serves one flag and the executive another. Admiral Roosevelt will fix all that; there must be discipline on his ship, whatever the cost. When he says that an officer is all right, that settles it. The mutineers will have to take their medicine, and we think they will. At least, we cannot imagine their deserting on the very eve of battle. And perhaps by next autumn the clever admiral will find a way to promote his executive to some other position where he can have about as much responsibility and can still be permitted to furnish a large part of the ship's stores. What is the use of being the admiral of your own navy without being able to do with it as you please?

Col. Roosevelt's renewed denunciation of the proposal to pay Colombia "blackmail" leaves one wondering how he would define the sum of money which he himself proposed to pay her. This sum was $2,500,000, as provided in the treaty which his own Secretary of State, Mr. Root, negotiated, and which was ratified by the Senate early in 1909, though it was never acted upon by the Colombian Congress. All this must have been with the knowledge and approval of President Roosevelt. Nor could he have been in ignorance of the admission by Secretary Root that Colombia had just claims on the United States. And the treaty which Mr. Roosevelt submitted to the Senate spoke of the desire to "remove all obstacles to a good understanding." What were these obstacles? If the Colonel had been out of office at the time, might not his eagle eye have detected in the mere reference to them an unspeakably humiliating apology? However that may be, it is impossible to draw a clear moral distinction between paying $2,500,000 and paying $25,000,000. If the latter is blackmail, the former smells of it. Blackmail is not a question of less or more. By the way, how does the Colonel know that the "regret" in the Bryan treaty, as in the Taft memorandum, did not refer to the base conduct of the Colombian Government towards President Roosevelt, which he again so scathingly describes, and which left him no alternative, as the guardian of civilization, but to "take" the Isthmus?

Senator Newlands's plan for a Federal Commission to control waterways improvement is an attempt to check the vicious practices long connected with rivers and harbors legislation. His amendment to the pending waterways appropriation bill would create a Commission consisting of the Secretaries of War, Interior, Commerce, and Agriculture, with two Senators and Representatives; and would allow it in the first year an expense fund of $500,000. This sum, in the Senator's opinion, would enable it to probe questions of "development, regulation, and control of navigation, . . . and the related questions of irrigation, forestry, fisheries, swamp reclamation," and so on; and to attempt coördination in improvements. Some authoritative agency is plainly needed to apply more common-sense and a better policy to the demands of the various sections than Congress has displayed. The debate last week in the Senate on the Rivers and Harbors bill has again illustrated the conviction of many unbiassed men that the bill carries too large a sum and too many unjustifiable items, and makes urgent a reform in the whole method of framing it.

The movement for a league of American cities to deal with utilities corporations, chiefly by maintaining a bureau which shall furnish expert service to any municipality in presenting its case before a Public Service Commission, has an impressive list of sponsors. The launching of it by Mayors Blankenburg of Philadelphia, Baker of Cleveland, Harrison of Chicago, and Shroyer of Dayton at the forthcoming convention of city executives will be an event worth noting. Its justification is succinctly stated by Mayor Blankenburg: "The equipment required for an adequate presentation of the rights of the people involves a technical knowledge which is not practicable for any one city to obtain." This is undeniable. The Bureau of Standards at Washington has lately undertaken to establish a central clearing-house for public utilities statistics, standards of valuation and service, and general information, which in a rudimentary way would fill the evident need. But it has been a main argument for State as opposed to local inquiry and regulation that State Commissions are able to avail themselves of such expensive service; and the cities' move may be taken as evidence that these bodies have not been as active as they should be. In arming themselves to put forward their cases for lower rates and better service they will tend to lessen the investigative functions of the State Commissions. The step was almost inevitable because of the wide sentiment that the State bodies are giving the cities an unfair hearing.

West Virginia is about to become the ninth prohibition State of the Union, by an act in many respects the most stringent of the kind every passed in America. It makes it unlawful to manufacture, sell, or give away intoxicating liquors anywhere in the commonwealth; forbids their sale by clubhouses or druggists; and fixes a heavy penalty for their advertisement by circular, billboard, newspaper, or any other agency. A State Superintendent of Prohibition is created, with extensive powers to enforce the law. The statute cannot wholly do away with the importation of intoxicants for personal use, but it promises to make the State as nearly "dry" as may be. It is two years since the Constitutional amendment providing for State-wide prohibition was ratified, and one since the Legislature made provision to put the amendment into force. In a State whose total vote is 250,000, the amendment passed by the huge majority of nearly 100,000; and the newspapers of Wheeling and Charleston do not indicate

that public sentiment has essentially changed.

Another appointment of a negro to a Federal office is vexing the righteous soul of Senator Smith of Georgia. He had succeeded in ousting the present holder of the office of recorder of deeds in Washington, a Georgia negro, and naturally expected, so the Augusta *Chronicle* explains, that "a Democrat" would be named as the successor. President Wilson agrees as to the Democrat part of it, but proposes to appoint a Democrat who also happens to be a negro. And the protesting Southern Senators are informed, to their disgust, that Wilson's election managers had made an agreement to keep certain offices for negroes. Such an agreement the *Chronicle* declares to be a "curious thing." But would it not be more curious to violate it? To ask for negro votes on the strength of it and then to repudiate it would be at least as immoral as Senator Smith evidently thinks it to have made such an agreement at all. However, the *Chronicle* knows of an easy way out. Negroes should simply be "perpetually barred from political office." If it is impossible to do this by law, why, let the negro "bar himself in perpetuity from office," being convinced that by so doing he will be "better off."

Correction of an old abuse is attempted by the bill for the construction of a reservoir on the San Carlos Indian reservation in Arizona, and for the bringing of suit for an adjudication of the claims along the Gila River to determine the rights of the Pima Indians and others. The Pimas had been entitled to sufficient water for working the soil. But in this case, as in so many other cases, the assumption of guardianship by the United States resulted in the loss by the Indians of old rights without the obtaining of new ones. For several years the waters of the Gila have been appropriated by settlers living above the reservation. To such an extent was this injustice carried that these Indians were reduced to poverty, and the Government had to aid them temporarily. But this was to substitute charity for justice, and the friends of these red men have been exerting themselves to restore to our wards their undoubted rights. An investigation by army engineers demonstrated that the project of a reservoir was feasible, and those interested in the protection of Indians should urge their Congressman to support the bill to put this plan into effect.

The United States has long held a position unpleasantly unique among the greater nations owing to the lack of a central repository for our archives. According to the recent convention of the American Library Association in Washington, however, concern upon this head is no longer confined to bibliophiles, but is spreading fast among Government officials. While the campaign for something like the British Public Record Office goes on, our manuscripts—as Professor Jameson, of the Carnegie Institution, lamented—rot in cellars, dry to a crisp under roofs, disappear from unkempt shelves, and merge into confusion in warehouses. The rent for storing them would pay interest on the capital needed for a building; while the officials of the Treasury, the Land Office, the Pension Office, and others will soon be crowded from their quarters by their documents. Papers on a wide variety of subjects cannot be found without a special guide and endless patience. In the basement of the Corcoran Art Gallery is a "body of Government records so stored that in a dry season they can be consulted by any person wearing rubber overshoes, and in a wet season are accessible by means of some old shutters laid on the basement floor." A conflagration, we have been recently reminded by official reports, might at any time cause the Government to lose several times the cost of a fireproof archive building. In Great Britain the first suggestion for such a repository, made in 1616, bore fruit in 1838; it is to be hoped that we may obtain the building before 2125!

Coming from such exceptional authority as Dr. Charles Mayo and Dr. John B. Deaver, the statement that too many surgical operations are performed without sufficient cause will undoubtedly have its effect on the attitude of surgeons and patients alike. It will also be seized upon by persons in the peculiar state of mind which believes in medical Trusts and doctors' conspiracies. The fact that too many unnecessary operations are undertaken is in itself a tribute to the high development of the surgeon's art. It shows that the old horror of the knife has passed with the vast improvement in the technique of the surgical worker, and the development of anæsthesia and asepsis. In the case of appendicitis, for instance, it is true that the ailment will frequently yield to conservative medical treatment. But there must be many people who prefer the short and definite application of the knife to a prolonged course of treatment with its attendant trouble and anxieties. It is also true that though there may be a good many ill-qualified surgeons at work today, the patient who submits to an operation is much more careful in picking out his surgeon than he would be in selecting his general practitioner.

"Probably the most radical suggestion yet made," says an Associated Press dispatch, referring to the annual meeting of the American Medical Association at Atlantic City, "is that the public welfare would be conserved if every man, woman, and child were to be subjected to a compulsory examination as to physical fitness once in very year." In just what form the "suggestion" was made does not appear. The context refers to "recommendations" made by the Association; but we cannot believe that it gave anything like a formal endorsement to the "suggestion" of a policy so radical. We feel fairly confident that a careful consideration of its merits would bring the result which befell a resolution offered at the recent convention of the American Medico-Psychological Association, recommending the enactment of laws requiring a clean bill of health and evidence of a normal mind before the issuance of a marriage license. Though this resolution had been proposed by the Council of the Association, it was subjected to a vigorous onslaught at the meeting, and was overwhelmingly defeated.

In the first Canadian Provincial election where prohibition was the chief issue, the temperance forces have been defeated. In the Ontario contest on Monday the Government, which stood against the measure, won a marked victory. Minor party contentions entered into the campaign. Tax reform and woman's suffrage had been endorsed by the Liberals, and the bi-lingual school question had attracted some attention. So salient, however, was the temperance question that party lines were utterly broken in many districts; and it was admitted by both sides that upon the election hung the possibility of a Dominion-wide prohibition fight in the near future. Now the movement is likely to be confined to local-option lines, where Conservatives and Liberals alike have supported it. Under the Conservative Administration, 1,214 bars have already been expelled from Ontario. No clear index of national party strength is afforded by the election, but it cannot fail to encourage the Conservatives in the coming general elections.

INTRIGUERS AND MEXICO.

The New York *Herald's* revelations, by means of stolen letters, in regard to the activities behind the scenes of the Mexican revolution of certain large business interests, hardly come as a surprise. That the large groups of foreign capitalists interested have been watching every move and have tried to bring pressure to bear on one side or the other, has been as notorious as it was natural. At bottom, the revolt which placed Madero in the Presidential chair was a protest against the exploitation of the republic by contending capitalistic forces and the absorption of the land by a few magnates. The illiterate peon, who has been food for the cannon since the beginning of the Madero revolution, has not, of course, been able to define the feeling of injustice within him. Those who have been in the "States," or had relatives here, have known that there are people living under superior conditions, obtaining simple justice in the courts, and having the opportunity to obtain better chances for their children. So they and multitudes who know nothing about American conditions have risen blindly—too often to be only the hapless pawns of great forces of which they were wholly ignorant.

Something of the methods of certain of these forces is revealed by the *Herald*. We have the familiar Washington representative in Capt. Sherburne G. Hopkins, long an adviser of revolutions in South and Central America, and so popular with those financially interested in Mexico as to be able to boast of declining "offer after offer of retainers" in order to be loyal to his employer, Mr. Henry Clay Pierce. The latter's adventures with the courts of several States, in connection with the Waters-Pierce Oil Company, can hardly have been forgotten. Capt. Hopkins's patriotic soul—like his retainer—makes him the champion of the American oil interests as against the British headed by Lord Cowdray. To Capt. Hopkins anything connected with Cowdray was anathema, after a visit to Madero (his fee for this was $2,000 in gold, paid by Mr. Pierce) to induce the late President to expel from the directorate of the National Railways of Mexico certain enemies of Mr. Pierce. Mr. Pierce's motives were, of course, of the best. As explained by Capt. Hopkins in a letter to Gen. Carranza, if it had not been for Mr. Pierce, these enemies "would have robbed the lines in the most outrageous manner." To Carranza, be it noted, Capt. Hopkins made no concealment that he was in the pay of Mr. Pierce, and in his behalf he urged Carranza to reorganize the National Railways in his possession in the northern States, "as a separate system, apart and distinct from the lines in the possession of the Huerta Government."

Rapidly, Capt. Hopkins rose to a place in Carranza's confidence, in which he not only obtained the appointment of "his friend, Mr. Pani," to take charge of the railways, but became apparently an important adviser to the First Chief. Unfortunately for the Pierce-Hopkins railway plans, Gen. Villa refused to permit Mr. Pani to take hold; there are still other evidences that the friction between the two leaders may have had an origin in some such business transaction. Meanwhile, Capt. Hopkins was busy influencing the American press to point out that the three Huerta delegates to the Mediation Conference were all agents of Lord Cowdray, one being said to be his personal counsel. When we add that during all this time Mr. Pierce was paying money to at least one Carranza representative, and, if he is to be believed, Capt. Hopkins was having long and private conversations with John Lind, it must be apparent that there was enough going on to satisfy any conspirator and wholly to warrant various plaintive appeals from Capt. Hopkins to Mr. Pierce for more money. Finally, it must not be overlooked that Charles R. Flint was also on hand, another gentleman with a rare talent for fishing in troubled foreign waters.

So far as they go, the *Herald's* revelations parallel what has happened in many similar cases. Mr. Pierce and those behind him have doubtless felt that, as heavy investors in the Mexican Railways, they were entitled to do something to preserve what is left of the property. Nor has the *Herald* as yet established the payment of any money to Carranza himself, or produced any specific proof of its contention that the whole revolution is merely a clash of oil interests. The most important matter for the Wilson Administration is the picture of John Lind in conference with Capt. Hopkins as late as April 30, the latter quoting Lind by wire to Carranza the next day as being "opposed to compromise"—that is, being opposed to Carranza's joining in the mediation proceeding with a view to putting an end to Mexico's troubles. Should this be substantiated it would expose Mr. Lind to a charge of disloyalty to the Wilson Administration, to say nothing of the embarrassment in which it puts the latter. Capt. Hopkins also quoted Mr. Lind as asserting that Mr. Wilson "hesitated to raise the embargo [on arms] at this time while mediation negotiations were pending," but that he, Lind, could give assurances that if arms were taken in by schooners from Cuba, "no obstacle would be placed in the way by Washington." This alone would seem to warrant Congressional inquiry, since it places the Wilson Administration in the position of playing fast and loose in the matter of importation of arms. Serious, too, is the proof that Capt. Hopkins, an American citizen, was daily urging Carranza to keep away from the mediation proceedings.

It is altogether a sordid picture thus presented of what is going on behind the scenes. At best it illustrates the extraordinary difficulties confronting those who would take sides in the Mexican controversy; they must always ask themselves whether they are not thereby supporting hidden forces of a more or less malign character. We have revealed to us anew how beset with obstacles is the task of the President, how long and difficult the way will be until the peon of Mexico is assured of just treatment.

THE AUSTRIAN TRAGEDY.

There are undoubtedly serious political implications in the assassination of Francis Ferdinand, which occurred on Sunday in the capital of Bosnia, but it is the personal aspect of the tragedy which first makes appeal. This new blow to the aged Emperor, whose life was thought a few weeks ago to be nearing its end, evokes world-wide expressions of sympathy for a ruler whose long reign has brought him almost unprecedented personal bereavements. The murdered Crown Prince had for some time past been active in the work of government. He was in this way visibly in preparation for his accession to the throne; and also had the motive of relieving Francis Joseph of some of the cares of state. Ferdinand was of strong and energetic nature, and Austria had looked forward to his becoming Emperor, confident that the transition would be made without shock, and that the administration of affairs would be in able hands. That outlook is now changed. The new heir apparent is a young and untried archduke, Charles Francis, who is said, however, to be democratic in bearing and popular. The old Emperor will doubtless make an effort to keep the reins in his hands as long and as firmly as possible, but it is evident that Austria will have to face trials of a sort to test her strength and her international policy.

For the causes of the assassins' mad determination can by no means be ignored.

They were not of the ordinary "crank" class, these boyish murderers, but felt themselves the instruments of their country's vengeance. Whether Servians or Bosnians, they had been bred to think of Austria as a national enemy and oppressor. Friction between the Austrian authorities and the Bosnians had been for some time severe. Only a little while ago the Government was confronted with a strike of the Serb students at Mostar in Herzegovina. Their complaint was that a Government professor had made violent attacks upon the Servians. These students were expelled; but thereupon their fellows throughout the two provinces struck in sympathy, and all the efforts of the Government had not, at last accounts, been able to make them return to their schools. From this clash alone, it is possible, the impulse to Sunday's tragedy may have been derived. All accounts agree that the relations have been bad between the Austrians and the inhabitants of the two provinces of which Austria undertook the protectorate under the Treaty of Berlin, and which she later coolly annexed, despite warm protests from Great Britain. It is now evident that she annexed not only territory, but race hatred and a lurking spirit of assassination.

This ill will has obviously been intensified by events connected with the latest Balkan war. Throughout, Austria's motives were violently suspected by the Servians, and the mobilization of her army on the Servian frontier gave great offence. In the diplomatic negotiations which followed the war, it was believed that Austria had designs on Servian as well as Albanian territory, and that she was determined to push on to the East at every opportunity. And the display of her military power in Bosnia seems not to have had the effect of over-awing so much as enraging. It was to attend Austrian manœuvres on the Servian frontier that Francis Ferdinand was on his way. The occasion was plainly seized for elaborate plots against his life, the first of which failed, but the second was deadly. There is no indication that the shots were fired at the Archduke as a ruler personally offensive; only, he typified the Government.

Such efforts to temper tyranny by assassination—we now speak, of course, from the point of view of the perpetrators of the crime—are almost always futile. This lies in the nature of the case. Governments cannot yield to terrorism. And there is no good reason for believing that Austria will be deflected from the general line of policy and of imperial development which she has been pursuing. The Austro-Hungarian Empire has been for fifty years the subject of more mistaken prophecies than any country in Europe. It has belonged to the class of what used to be called in Italy the *attendibili*—the "watched-over." Outsiders were watching Austria to see when the inevitable process of her breaking-up was to begin. Charles Sumner was positive, more than a generation ago, that the thing could not be long delayed. He called Austria merely "a geographical expression." But the Empire still stayed on the map. It even grew larger and more powerful and apparently more stable. At one time it was supposed that Pan-Germanism would prove a dissolvent. Early in Kaiser William's reign there was much talk of the predominantly German provinces of Austria gravitating to Berlin. But all this has long since dropped below the horizon. We hear much more at present of Pan-Slavism than we do of Pan-Germanism. And the real concern of European Chancelleries, in the presence of this Austrian tragedy, is more with personal and dynastic changes which may follow in Vienna, than with any possibility that Austria will be shaken out of her orbit; more, above all, with the race jealousies and conflicts beyond the Austrian frontier, and with the renewed tension between Greece and Turkey, than with any thought that Bosnia will make a serious attempt to rise against Austrian rule.

THE DEMON CAPITAL.

"At no time have the privileged few had such an effective scheme for living on the labor of the many," said Prof. Scott Nearing, of the University of Pennsylvania, in his testimony before the Industrial Relations Commission a few days ago. He had been giving figures relating to the cotton industry in Massachusetts:

> The total income derived from the cotton industry in Massachusetts last year added $81,000,000 in value to raw cotton. The salaries to officials totalled $2,500,000. The salaries to wage-earners amounted to $51,000,000. There is nearly $30,000,000 remaining.
>
> A small part goes to machinery and repairs. A large part to rentals and dividends. Of the $81,000,000 the people who did the work got only about five-eighths, and the other three-eighths went some place else.

What the nature of that "some place else" is, in his judgment, Professor Nearing indicated with sufficient plainness in the remarks above quoted, and in other expressions of similar tenor; "the people who hold mortgages and stock certificates and flaunt them before the eyes of civilization" are an abomination in his sight.

It is not, however, the condition of Professor Nearing's mind that concerns us. What gives interest to his talk is that it is typical of a great deal that passes current nowadays among persons of intelligence and education. Mr. Nearing himself, being a professor of economics, is doubtless perfectly aware of the actual function of private capital, of the nature of the part that it has played in the upbuilding of industry, and is still playing in its maintenance. It is to be presumed that he chooses deliberately to sweep all this aside, and to talk as though it did not exist. Probably he honestly believes that the time has come to kick down the ladder by which we have climbed, however useful it may have been in its day. If he thinks that private capital, or profits upon private capital, ought to be abolished, he has an unquestionable right to that opinion. It is not with his conclusion that we are quarrelling, however erroneous we may regard it; it is with his misleading presentation of the facts.

That there should be no such thing as interest on capital is a tenable proposition; but that the interest which capital has actually been drawing has been mere robbery, mere exploitation of the workers, is sheer nonsense. It is conceivable that the world might have devised better methods of building up and sustaining industry; but as a matter of actual fact, certain individuals have been induced to do this by the prospect of a special reward. The reward may be too great; it is even possible that by some kind of collective action there might have been furnished an equally effective provision of the machinery of industry and of the wherewithal for its prosecution during the period intervening between the beginning of the process and its consummation. To compare these possibilities is a legitimate employment of human reason. But to talk as though the persons who have, in point of fact, supplied to the world an absolutely indispensable element of its productivity, were mere parasites living on other people's labor, is not to use reason but to throw it to the winds. The emolument that goes to those who accumulate capital and apply it to the uses of industry is determined by the same kind of competitive struggle—the same kind of adjustment of supply to demand—that determines the reward of organizing ability, of professional skill, of any of the acts of men that are required for the satisfaction of the world's needs. If the service of capital can be obtained on better terms, and without evil consequences which outweigh the gain, well and good; but the world has not as yet seen its way to such a condition of

things. And until then it is not a matter of opinion, but a bare matter of fact, that private capital, whether from an ideal standpoint rewarded too much or too little or just enough, is not a worthless parasite, but an indispensable servant of the general good.

In comparison with this fundamental vice, other features of this kind of talk are of minor consequence. Yet it is of a piece with the looseness of the central idea that the people who indulge in these tirades always talk of the owners of capital as a "privileged few," and convey the impression that the opportunity to own capital is a limited affair, open only to members of some exclusive caste. That there are billions of dollars in savings banks, owned by millions of small holders, and invested in the country's enterprises; that there are other billions held directly by small stockholders; that insurance companies and building and loan associations account for another great mass of small holdings; that there are hundreds of thousands of small business enterprises—all this goes for naught, though it is matter of common knowledge.

SOCIALISTS AND REBELS.

The extremely readable letters from Mexico in *Collier's* are not written by "yours for the revolution, Jack London," but by plain "Jack London." The flaming challenge of the first signature would not only be inappropriate in a magazine of general circulation, but would be quite out of tune with the context which savors strongly of the individualistic, capitalistic, fiercely competitive spirit of the world that knew not the gospel of Karl Marx. Take Jack London's latest instalment. The very title is a sneer at the mollycoddle and the sentimentalist: "Our Adventurers in Tampico." The allusion is unmistakably to President Wilson's remarks about the nondescript type of citizen who has tied us up with Mexican affairs. The text elaborates on the title:

> I began to gather statistics of the pernicious activities of our American adventurers. One company alone had two roofed concrete tanks holding 1,250,000 barrels, along with 120 steel tanks holding 55,000 barrels each. Since a steel tank costs 30,000 pesos, the cost of 120 steel tanks would total 3,600,000 pesos. At the rate of exchange prior to Mexico's present troubles this investment in mere steel-tank equipment means 1,800,000 American gold dollars. When it is considered that this is but part of the one item of the oil-storage equipment of one company, and that there are many other equally expensive items of equipment, the grand total of the equipment of the many companies is vaguely adumbrated.

Thus might write an agent of the wicked National Manufacturers' Association or an emissary of Wall Street; but that an eminent apostle of red revolution should audibly be licking his chops over millions of gold dollars, of wealth wrested from its rightful owner, the Mexican peon, by the predatory ministers of international capital, is somewhat disconcerting. And again:

> The Dutch, up above Pánuco, have got an ornery eight-inch hole, nothing to look at, but it can throw 185,000 barrels a day when it ain't pinched down. Figure it up. Say oil at 50 cents a barrel; that makes $90,000 gold a day; in ten days $900,000; in a hundred days $9,000,000; in a year, allowing 65 days for delays and accidents, $27,000,000—and that's gold, United States gold coin, with the eagle and the Indian.

Thus Col. Sellers might have gloated, but Jack London! Can it be that the unregenerate Adam of Klondike adventure and of the splendid virtues of the prize-ring is alive in the best known of our literary revolutionists, ready to bob up whenever the matter directly in hand is not a treatise on the war of the classes?

Try as one may, it is impossible to imagine the Jack London of the primitive passions and virtues fitting into any neat scheme of economic determinism which shall iron out the aspect of society into that uniformity against which the individual temper rebels. It is hard to fancy Jack London under a rigorous State Socialism of the type that Herbert Spencer feared. But then it must be recalled that the author of "Before Adam" signs himself "yours for the revolution," and not "yours for the coöperative commonwealth." Revolution calls up all the virtues of stress and combat. A social upset holds out a promise beside which the perils of the icy trail and the call of the prize-ring pale into insignificance. It is this double aspect of the Socialist movement that accounts for the presence in its ranks of the restless spirits side by side with the doctrinaires of economic determinism. There is time enough for worrying over the constructive problems of the Industrial Commonwealth. For the moment, there is a great deal to be done in the way of clearing the ground. Whatever may be the differences of belief which the rebuilders of society may have to contend with ultimately, at present there is a common basis in Socialism for social rebels of every shade, the Marxist, the Syndicalist, the Anarchist, the ultra-feminist, and even the Futurist.

Yet a social and political movement cannot remain fast bound to original principles and unaffected by the character of its votaries. A creed is converted by its converts. To-day the Socialist movement in this country is plainly showing the influence of the rebel element, which is rather against things as they are than for any clear-cut scheme of social reconstruction. The I. W. W. movement, with its blending of Socialism and Anarchism, represents most clearly this factor of emphasis on revolution rather than on reconstruction. The individualists of art, of literature, of sex-liberty are doing their share in giving an impress to the popular conception of Socialism. Not that there is reason to suppose Socialist tramp poets and Socialist practitioners of Cubism will prove any more incongruous an element in the firmly organized Socialist Commonwealth than Plato feared they would be in his ideal republic. Even now the old-line Socialists find themselves badly embarrassed by their ultra-individualist allies; and it may be that this country will repeat the experience of Europe, where the ultra-revolutionary type of Syndicalism seems to be on the wane. The struggle between the two elements in the Socialist movement is already acute.

THE THEATRE FOR AMUSEMENT.

In one of those farewell addresses to their countrymen which play-brokers and play-producers are accustomed to deliver to the ship news reporters from the deck of the Imperator or the Lusitania, it was announced some days ago that the outlook for the theatre of ideas for next year was poorer than ever. The reason was moving pictures. The canvas-sheet drama has done more than compete with the theatre of three dimensions. It has imposed its standards upon the regular theatre. The "movies" have educated the public to swift action, with a minimum of text and no ideas to speak of. If the legitimate stage is to survive, it must imitate the movies, since the only form of competition that presents itself to the commercial manager's mind is imitation. Whirlwind is the adjective of the future—whirlwind farce, whirlwind melodrama, whirlwind sentiment, and, better still, a whirlwind mixture of all three. The managers are at one with Faust in asserting that in the beginning was not the word or the thought, but the deed, or, as we spell it now, the "punch."

The meagre showing of the past season in the way of serious drama stirs Mr. W. P. Eaton to solemn reflection in the *American Magazine*. What has become, Mr. Eaton asks, of the buoyant hope of an American drama of ideas which the early 'nineties cherished under the stimulus of a first contact with Ibsen? Foreign students and prac-

titioners of the theatre flattered us with a glorious future when the tremendous realities of life that were working themselves out on an unparalleled scale in our busy democracy should find reflection on the stage. The realities are here in a thousand forms; the serious problems of social and industrial democracy have been forced on our attention, but they have scarcely been mirrored on the stage, if we exclude the meretricious crime-and-vice drama of questionable realism and utterly worthless motive. Mr. Eaton is compelled to find what consolation he can in the familiar answer that one of the most real of realities is the human longing for romance, for adventure, for the story above the idea or the lesson.

The easiest and the safest way to explain the rule of fashions in the drama is not to explain them at all, but to accept them for what they are—the product largely of whim and accident. The explanation from the movies will not hold. Many of the successes of the last season were not whirlwind in any sense. Plays like "Potash and Perlmutter"—which London has accepted as gladly as New York did—and "Peg o' My Heart" and "Grumpy" and "Kitty MacKay" have little of the cinematograph appeal about them, though their appeal is elemental enough. The demand is rather for pure gayety and simple sentiment.

If Mr. Eaton wonders why we should insist upon being gay in the theatre when in so many other departments of life we are tremendously serious, it may be because he assumes too evident a connection between life and the theatre. That is, the connection is there, but it may show itself in a form totally opposite to what one would expect. After all, why should the merrie England of Shakespeare, the England of sturdy yeomen and Drake and the Armada, have taken pleasure in the gory tragedies of the Elizabethan stage? Possibly because the English theatre-goer of Shakespeare's time was a robust, care-free, happy individual, he found the grisly horrors of the stage a stimulating change. This explanation gives us just as much connection between the drama and life as if we had to explain an Elizabethan drama exclusively made up of hilarious farce. Naturally, we should have argued then that a robust and joyous populace insisted on robust laughter and slapsticks of the stage.

If then the season of 1913-14 on the stage has been one of knockabout farce and light sentiment, while the season of 1913-14 in American life has been one of business depression, I. W. W. demonstrations, child-labor agitation, minimum wage agitation, and tenement-house improvement agitation, the connection may still be present. It may be that people have gone to the theatre to forget the problems of the day. It may be that we are gay at the present moment as people were gay on the eve of the French Revolution. But in any case it is well to admit that the problems of life are not always literally translated into the drama. Next year may very well bring good times, a cessation of labor trouble, a general feeling of contentment and well-being, and a play chockful of ideas and social criticism.

VARIETIES OF BOOK-REVIEWING.

In the *Yale Review* Bliss Perry writes of "Literary Criticism in America," with a survey which leaves in relief the conclusion, put in 1905 by Henry James, that America "presents production uncontrolled, untouched by criticism, unguided, unlighted, uninstructed, on a scale that is really a new thing in the world." To this Professor Perry relates the fact that our literary advertisements, from that puffing Hall Caine's "masterpiece" as "a book which will take its place with the great classics in literature" to that of "the greatest magazine the world has ever seen," are not merely uncritical, but uncandid to the point of dishonesty. This relation is to him largely one of effect and cause. But the two conditions seem rather twin than child and parent. The reason why criticism is shallow is also the reason why literary advertising is disingenuous and exaggerated. It lies in the application of two rough forces—journalism and advertising—to a field which ideally should be reserved to select and informed minds. New books in a vast torrent require wide comment, and a publicity based on it. Those who emphasize the resultant evils fail to realize how apart criticism should be from the lower reaches of journalism and commerce. They ask why the newspapers cannot do for books what they do for news.

There are various reasons why the ordinary daily paper will never produce elevated nd trustworthy literary criticism. Too often it is allotted to the apprentice hand. Mr. Howells has expatiated with melancholy humor on the enthusiastic praises with which the young reviewer makes author and publisher alike tingle, and on the cruelties of which he is sometimes capable. Another disability of journalistic book-reviewing is its clannishness. Just as groups of men held together by a common bond of sympathy tend to exalt their own literary efforts, groups of critics cry up what appeals to their bias. Arnold remarked of Burns that, while Scotch drinking, religion, and manners often made a harsh, sordid, and repulsive world, it was so familiar that the Scotch "had a tenderness for it"; so in a criticism sufficiently broadcast the publisher can always discover reviewers whose personal chord is touched. But it is only in the select jury that we are sure of the intellectual detachment which is the basis of sound erdicts. Furthermore, if we divide books oughly as instructive, amusing, charming, or elevating, it is the second and third classes—by far the largest—that are worst written about. Standards of what amuses must always vary widely among the popular tribe of critics. Books like Doyle's detective stories will always be spoken of by some in the same terms that others use of Dickens and Dumas. All things consi ered, it is clear that sound appraisal of books will for some time remain within a small circle of reviewing periodicals.

The difficulty lies in getting the publisher to recognize this fact and to encourage sincere criticism. He is not to be blamed for the scamped work with which many periodicals are content; but ought he to seek to push his business by means of it? Sooner or later, it will be admitted that the multiplication of contradictory and empty notices only puzzles and disgusts the public. Especial measures should be taken against the open puff—often a very boomerang. The present beating of tom-toms over any given book as if it were the greatest ever published only induces the reader to stand on his own judgment. Advertising currency should be given to sound criticism, whether wholly favorable or not. The verdicts need not be unanimous; and one of the greatest benefits publishers could reap from critical keenness and frankness would be the freshening effect of controversy. Many books might benefit from the differences of opinon they aroused.

The importance of the whole matter does not lie on the surface. Just as the goal of the honest reviewer is to *form* the reader and the future writer, not merely to guide them in one instance, so the publisher should perceive that the effect of a single good review may extend to the purchase of scores of volumes to come. We may well doubt that misleading advertising is the cause of a wide critical demoralization "in creating an atmosphere highly unfavorable to accuracy of judgment and honesty of record." But no one can doubt that advertising may help perpetuate bad criticism.

THE NATIONALIST ARMY—MUTUAL ADMIRATION IN IRELAND—PARADOXICAL MEANS OF PEACE.

London, June 22.

The recruiting of volunteers in Ulster, pledged to prevent Home Rule or to make it unworkable if carried, was generally interpreted as a grave menace to peace. That being so, one might assume that the recruiting of an opposition force, equally determined that Home Rule should come, would bring armed conflict nearer. On the contrary, it has largely increased the probability of an amicable solution.

A humorist might explain the paradox by reminding us that this is a question, not of England, or of America, but of Ireland—a sort of Alice-in-Wonderland country, where the operation of the law of cause and effect is suspended, and where things are most firmly established by being turned topsy-turvy.

But there are reasons, after all, for this surprising conclusion. In the first place, the sudden and rapid spread of the Irish Volunteer movement has revealed to the Unionists the real situation in Ireland. They have been declaring, and doubtless sincerely believing, that in recent years the demand for Home Rule was a manufactured and artificial agitation. All the Irish grievances that amounted to anything had been redressed by land reforms. The Nationalist provinces would really be quite willing to accept the *status quo* if politicians would let them alone. Building on this comfortable assurance, the Unionists had persuaded themselves that Ulster was the only factor in the problem that mattered.

They have now had a glimpse of the task that would confront them if a general election brought their own party into power. They have discovered that the desire for Home Rule was not dead, but simply that its expression was held back by marvellous self-control. If the present Government has been worried by the difficulty in pacifying Ulster, a Unionist Government would have the rest of Ireland to pacify. The dramatic appearance of this territorial army cannot be attributed to the wire-pulling of John Redmond and Joe Devlin. There has been no such national uprising since 1780. Lord Dunraven calls attention to "the most remarkable fact" that this movement "has arisen without regular financial assistance, encouragement of prominent leaders of opinion, or the assistance or control of any preëxisting political or other organization of any kind," but is "the spontaneous exhibition of a national sentiment superior to, though not obliterating, all minor considerations." Unlike the Ulster Volunteer movement, it has received no help from English money. The Ulster Volunteers were called into existence by the Ulster members, and have been disciplined and led by them. The Irish Volunteers have grown from the bottom upwards, not from the top downwards. Professor Kettle has truly described the movement as "the anonymous impulse of a whole people."

The Unionist leaders in England are, of course, very angry at this change in the situation. While still approving and eulogizing the Carsonites, they condemn the enlistment of the Irish volunteers as an outrage. Their theory is that the Ulster Volunteer movement is justifiable because its object is the maintenance of the existing system of Government, whereas the rival organization is unjustifiable because it is attempting to bring about a change. But their suggestion that the existing order is in itself sacrosanct is a constitutional doctrine that will find few intelligent supporters in cold blood. If there is any outstanding distinction between the two bodies of Volunteers, it is that the Ulstermen have armed themselves in order to coerce the Imperial Parliament, while the others have taken arms in order to come to the assistance of that Parliament, against a menace of rebellion.

Whatever they may say, however, the English Unionist leaders will be compelled by this revelation of Irish feeling to seek a more pacific course than they have lately been pursuing. In Ireland itself the Nationalist uprising is working in a rather different way, but towards the same result. Instead of alienating the two parties more bitterly, it is creating a new bond of sympathy between them. In the House of Commons the other night the Chief Secretary said that, after spending ten days in Ulster, where he had conversed with people of all kinds, the one thing borne home to him was what a genius the Irish people had, not only for hating, but for admiring one another. This remark was provoked by an ejaculation of Sir Edward Carson's that he was "delighted" at the existence of the Irish Volunteers. The recent gun-running expedition of the Ulster Volunteers, Mr. Birrell continued, had excited almost as much admiration among the Roman Catholic Nationalists as among the most pious Protestants of the Ulster Volunteers. And a great many people who were strongly opposed to Home Rule took a real pride in the fact that among the Irish National Volunteers there were so many old soldiers ready for action and so many of the finest and best of the young men of the South and West of Ireland. Mr. Birrell's account of the situation is confirmed by the fact that the Ulster and Irish Volunteers are accustomed to exchange salutes when they meet. And Englishmen visiting Ireland have been openly told by Irish Volunteers that, if the Ulster Volunteers were to come into collision with British soldiers, they would go to the assistance of the Ulstermen. This helps to explain why John Redmond and the Nationalist M.P.'s used their influence to prevent any Government prosecution of the Ulster gun-runners. They knew, no doubt, of the sympathy this exploit had aroused among Nationalists. What it all amounts to is that the two sections of the Irish people are finding out that they have more in common with each other than either of them has with England. Ulster's contempt for Nationalist Ireland is disappearing through the discovery that Nationalists, too, are ready to take up arms in defence of what they believe to be their rights. And the Nationalists, with their inveterate tradition of being "ag'in' the Government," feel a warming of the heart towards their Ulster brethren for flinging down such a challenge to British authority.

The commander-in-chief of the Irish Volunteers, Col. Maurice G. Moore, C.B., has not previously taken an active part in any political movement. He is the head of an old Irish Roman Catholic family in County Mayo, and is a brother of George Moore, the novelist. His chief assistants in organizing the Volunteers are civilians. Sir Roger Casement, an Ulster Protestant, is famous for his courageous exposure of the Putumayo atrocities, and has had an honorable career in the consular service. He is said to be so ardent a Nationalist that he smokes Irish cigarettes. Prof. J. G. Swift MacNeill, M.P., of the National University of Ireland, is one of the leading authorities on the constitutional law of the United Kingdom. Another professor, T. M. Kettle, who holds the chair of economics in the same university, is an ex-M.P., and one of the most brilliant of even Irish journalists.

The body of men who have responded to the call of these leaders has rapidly outstripped the Ulster Volunteers in numbers. Its enlistment has increased lately at the rate of 15,000 a week. It has received offers of help from a large number of ex-officers of the British Army, and already 1,000 former non-commissioned officers are drilling its recruits. Of the enlisted men themselves a large proportion are old soldiers—as many as 30 per cent. in garrison towns like Enniskillen and Derry. An odd feature is that the largest number of Irish Volunteers in any single county is in one of the Ulster counties—Donegal.

This new and unexpected turn in Irish affairs dates from the Curragh incident. Lord Roberts's doctrine that it was "unthinkable" for the forces of the Crown to be used to uphold a Home Rule act against the forcible resistance of Ulster made it necessary, the Nationalists believed, to correct the pressure of Ulster's force upon Parliament by exerting counter-pressure of the same kind. It is now perfectly clear, if it never was before, that no "conversations" or other arrangements between the English political leaders will be worth anything without the approval of Ireland herself. It will be one of the ironies of history if the division of the country into two armed camps helps forward, in the end, the creation of a united Ireland.

H. W. H.

THE NEW TURKEY—VICISSITUDES OF THE OTTOMAN EMPIRE—PROGRESS SINCE THE BALKAN WAR.

PUBLIC

Constantinople, June 10.

Despite the interest that was aroused among Western peoples by the Young Turkish revolution of 1908, there are still many faces on which the mention of change and development in Turkish life would produce a skeptical smile. Nevertheless, it is a fact that Turkish history and Turkish life are very busy affairs. There are many more interesting things in the history of Turkey than mere wars.

Turkey, for instance, has been a melting-pot, far superior to America in quickness and thoroughness. The founders of the Turkish Empire were a mere fraction of a Turkish tribe that had left Central Asia on account of Mongolian invasions, and sought a new home in Asia Minor. These people, aggregating only a few hundreds, brought discipline and a sense of justice and safety into the small territory they acquired, while everything, both under Byzantine rule and under the rule of Mohammedan Seljuks in Asia Minor, at that time, was easy-going, corrupt, and unsafe. Furthermore, the Turkish rule afforded opportunities for the recognition and advancement of talent and merit in a very large measure. Talented people, men with ideas, were glad to gather under the Turkish flag to begin a new life.

To embrace Mohammedanism and to speak Turkish was all that was necessary to become a full member of the community. A man's origin was never asked, and the original founders of the empire enjoyed no distinction or privileges over the newcomers. The word "Turk" soon lost its ethnological meaning, and began to mean a citizen of Turkey who was a Mohammedan and who spoke Turkish. In a few generations, the Turks had become a mixed race which had received more blood from the population of Byzantium and more distant European countries than from the original stock.

The Turks of the sixteenth century and before were in many respects superior to the Europeans of their time. There was more intelligent and effective control in every detail of their life. While justice was a mere source of revenue for the European rulers, it was free in Turkey, and even the Sultan had to bow to its verdict. There were free schools of every grade, public libraries, free lodging-houses, and public kitchens for strangers and the poor. The Turks also excelled in some mechanical arts, notably, shipbuilding and founding.

After the sixteenth century, as a result of over-expansion, self-contentment caused by the excess of power, superiority, and success, and increasing love of luxury, at the expense of the old simplicity and discipline, decay set in in Turkey, while simultaneously a new era of centralization of power, development of industrialism, and experimental knowledge was dawning in Western Europe. The Turks, thoroughly convinced of their own perfection and superiority, as a result of their long career of success, remained for some time almost untouched by the industrial revolution and its far-reaching consequences. Their existence became more and more crystallized and coercive. Mohammedanism, that had been a progressive and civilizing influence in the earlier days, was now made a prop of ignorance and fanaticism.

Since the end of the seventeenth century almost every European observer who has written on Turkey has felt constrained to state that the end of Turkey was a matter of a few months only, and that the process of decay and destruction could not be long deferred or delayed. Time has again and again disproved these prophecies. In spite of her endless difficulties, and in spite of the fact that it is almost miraculous for an empire to exist for more than six and a half centuries on territories which are widely exposed to foreign aggression, filled with survivals of different ages and different epochs of culture, and populated by extremely heterogeneous elements, Turkey has come out from every crisis stronger than before. It is true that these crises have been accompanied by loss of territory, but that has simply meant a lessening of the imperial burden and an increase of opportunities of development for the remaining parts of the empire. Especially has this been the case since the population in the lost parts of Turkey was essentially non-Turkish.

The struggle for betterment and progress, which became more and more intensive, was at first headed by enlightened Sultans, in spite of the opposition of the lower classes. More than one Sultan was assassinated by reactionary mobs on account of activity in reform.

After the Crimean War of 1855, the movement for reform gained a popular character, and was at times a revolutionary movement, directed against the Crown, and aiming at the establishment of the most radical form of government existing in political theories.

The pressure for change was so great and the actual difficulties and obstacles so severe that the zealous patriots and reformers were impelled to seek relief only in extreme measures. It must be admitted, however, that they did more than mere agitating. They created a new and simple language, a new national literature, a new press; they attempted to popularize science and knowledge by giving free evening courses and founding free reading-rooms; they exposed in their articles, short stories, novels, and plays the shortcomings of the Turkish social system. In short, they succeeded in transforming the self-satisfied, contented mediæval community into one imbued, to a great extent, with restlessness, self-criticism, and desire for improvement.

In 1876, the efforts of the reformers seemed to be crowned with success. A liberal Constitution was proclaimed giving the people representative government. Sultan Abdul Hamid, who had obtained his throne by promising the reform party a Constitution, suspended this the next year temporarily, using the war with Russia as an excuse. After the war, the Constitution remained suspended. The reform leaders were exiled one after another, and a very efficient system was created to check ideas of reform and to maintain the absolute rule of the Sultan.

In 1908, at last, the Young Turkish activities resulted in an open revolution and in the establishment of a constitutional Government. The new Government had not received an enviable heritage from the old. The crisis did not, of course, mean a complete metamorphosis of the sad situation into one of harmony, wealth, and progress, as some of the Young Turks believed and hoped. It meant simply a comparatively free field of development to the potentialities in the people and in the country.

The political life was necessarily a picture of chaos and anarchy. The conditions were unsettled, and the leaders were in the making. As a result, bitter party rivalries, petty personal animosities, and short-sighted political dogmas and phrases filled the atmosphere. In spite of the tremendous changes it had caused in the social life, and the opportunities of development it had given to individuals, the constitutional change in Turkey was apparently hastening the end of the empire.

It was futile to preach harmony and political reconciliation so long as the sources of trouble continued to exist. In order to do away with them and to secure the survival of the empire, the burden checking its development had to be diminished and the social deficit resulting from it lessened.

That burden consisted primarily in the possession of parts of territory, like Macedonia, Albania, and Epirus, which were a storehouse of every imaginable kind of heterogeneity, and the people of which enjoyed trouble merely for the sake of it. No Turkish statesman would have had the courage, however, to suggest relinquishing any of these territories. An involuntary amputation was necessary to save the empire.

In the summer of 1912, the party of Union and Progress fell from power. The situation in the Empire, which was critical in itself, had gradually become worse and worse, as a result of the Italian war, the revolts in Albania, and the dissolution of the Parliament. The new Government believed literally the assurances of the great Powers regarding the maintenance of peace, dismissed thousands of trained soldiers, and began a long series of reforms by changing and disorganizing many things in the civil government, and especially in the army.

The country was caught unprepared when the four Balkan states declared war. With its prestige and self-confidence shaken, the party of Union and Progress, which had in its ranks the most ardent militarists and patriots, and which had always shown resourcefulness in times of danger, in the position of an opposition party, the new commanders out of touch with their soldiers and with conditions in the army, the war could not but end in a disastrous way for Turkey, so far as loss of territory was concerned.

Very soon, it was seen, however, that the outcome of the war was most fortunate for the future of Turkey. The loss of the provinces, populated by heterogeneous and troublesome elements, made her population relatively homogeneous, and rid her of constant sources of trouble and weakness.

Furthermore, the sweeping defeat proved that great changes and reforms were badly needed. The general appreciation of this fact gave undisputed power and control to the enlightened classes, at the expense of fanatics and the ignorant masses behind them.

A few years ago, when a translation of the Koran into Turkish was suggested, there was such an outcry of protest against it that the Young Turkish Government found it necessary to warn the press against publishing anything about the question of translation. Now, since the Balkan War, some few scholars have worked together and published a Turkish popular edition of the Koran. There was no opposition shown against it; on the contrary, the religious authorities publicly approved of this revolutionary step, and stated that a Mohammedan ought to understand his religion intelligently, and not be contented with mechanical observance of rites and forms.

In other respects, also, Mohammedanism experienced a remarkable renaissance after the war. Instead of remaining a prop of fanaticism and ignorance, it was made an intelligent basis of regeneration and solidarity. Those who were not satisfied with the new movement and with the attacks of the radical periodicals, no longer asked for Government or police interference, as they had previously done, but simply established periodicals of their own to defend their standpoint.

The new spirit of religious awakening gained so much ground within a year that those in power felt free to lay their hands upon some of the most blindly observed traditions. It was an old-established rule, for instance, to appoint to the high and important office of the Sheikh-ul-Islam, an old theologian of fame, for many years high in the hierarchy. The man appointed Sheikh-ul-Islam a few months ago, Hairi Bey, was neither old, nor did he belong to the religious hierarchy. He had studied some canon law, it is true, but he then gave it up, entered the law school, and, after completing his work there, became an employee of the Ministry of Justice. After the revolution he entered Parliament as a deputy from Konia, and later was appointed Minister for the Interior. Hairi Bey was known as a man of radical ideas, great activity and initiative, and good judgment. The fact that

there was no objection to his appointment, and that his activities in behalf of reform have been enthusiastically welcomed, is a remarkable index to the fundamental changes which have taken place in Turkey since the war.

One of the first reforms of Hairi Bey was to abolish the old system of mosque schools, which depended upon the ministry of pious foundations, and in which stupidity and inactivity had been virtues. Instead of them modern schools have been created as an auxiliary to the public-school system of the Empire. In the new mosque schools, as well as in other schools, more and more attention is given to physical education and sports. Many of the schools, including the different branches of the University, have a great variety of athletic organizations. "Race betterment" and "survival" have become words which attract public attention.

A national Boy Scout organization has been started, with the Minister of War as its honorary head. Foreign experts have been engaged for several years to direct the movement. The Turkish papers, which considered it beneath their dignity only two years ago to publish news of sport, now favor athletics in preference even to political news. Popular ideals regarding vocations have also entirely changed. Formerly a lucrative Government position was the most esteemed and desired branch of occupation. Now, instead of the easy-going dependence upon the Government, private initiative and self-aid have become popular virtues and ideals.

Books and Men

THE GREAT UNREAD.

The joke of the year, concerning books, has been about two chorus girls, one of whom asked the other what she should give Maude for Christmas. To the suggestion that she give a book, she quickly replied: "Oh, no, Maude's got a book!"

This has been repeated in mirth, in derision, and in sorrow by authors, publishers, teachers, literary critics, and all manner of folk. It has pointed many a doleful address and essay upon the great unread. Coupled with a publisher's remark that the average woman spends more on buttons than on books, and two or three revelations about "bookless libraries" and the gullibility of the victims of the *édition de luxe*, it has disclosed the indifference to books, or the ignorance of them, which characterizes so large a class.

Perhaps those whose daily work is with books, in one way or another, do not realize how large this class is. It used to be comfortably assumed that it consisted altogether of "immigrants" and other "ignorant" people. The discoveries of librarians in the foreign quarters of various cities have done much to destroy this notion. The reading of foreign-born citizens is not only so much more constant, but, on the whole, so thoughtful, that we can no longer smugly accuse the "immigrants" of being our unlettered class. As in Mr. Steffens's investigations of municipal corruption, the faults come home and perch at the doors of the native born.

The men—they can be found everywhere—who would as quickly wear an academic cap and gown to office as carry a book; the women who can keep awake all the afternoon and three-quarters of the night at bridge, but yawn after fifteen minutes with a book; the folk, in short, who think it "literary" and affected to be seen with a book at all—these form the illiterate group.

That discerning novelist, Mrs. Watts, has described one or two of them to a nicety. "Mrs. Jameson," she writes, in "Van Cleve," "was a large, vivid, extraordinarily corseted and high-heeled lady, about forty-five years of age, with the same kind of auburn hair as her daughter's, invariably arranged in the latest fashion, or even a little in advance of the latest fashion; and with a fondness for perfumery and for entire toilets in shades of purple—parasols, gloves, silk stockings, suède shoes, all elaborately matched, wherewith she might frequently be seen upon the streets, bearing herself with a kind of languid *chic*—the word she herself would have used."

Mrs. Jameson and her daughter, Paula, "lived at 'private' hotels or fashionable boarding houses, here and there, and went to the theatre a great deal; idling through the rest of their time in shopping, or having their hands manicured and hair dressed, or giving the French bulldog his bath, or yawning over the last lurid novel, with a box of chocolate drops, in the rocking-chairs of the roof-garden or lounge."

I am unable to get into a wrath with these amiable butterflies, although I know that they make it hard for me to own books, since they keep up the prices by refusing to buy. They would also keep me poor by neglecting to buy any learned book I might (for the sake of argument) be imagined to write. They are no more disagreeable, though far more numerous, than the extreme type of blue-stocking—the female "high-brow" of the comic papers. The latter comes in for any amount of derision, although she is as rare as the apteryx. Mrs. Jameson and Paula, on the other hand, duplicated to infinity, may be found sitting in rows on the verandas of all the summer hotels.

Mrs. Jameson, like the girl in the song, is more to be pitied than censured. She is laying up a stupid old age for herself, although she has the preventive against ennui advised by the Frenchman—cards. The escape, the freedom, the variety, the genuine pleasure and delicious fun that live in books—none of these are known to her.

Is it her fault altogether, or the fault of those who in the past have jealously guarded books, and built walls of different kinds about them? There are other ways of restricting books than by the chains of the old monastic libraries. The uninspired and forbidding teacher, the pedantic writer, the grubber for unessential facts—these and a dozen others have created not only the tradition, but the fact of dryness, in books. Through the heap of dust in which they would bury literature its humanity often has a struggle to emerge. Certainly, it has a hard time to attract the notice of the Mrs. Jamesons.

Is this a gloomy view? Perhaps it is. In the face of this cheerful advertisement, taken from a current journal, it must be admitted that there is hope—hope even for the rich. Here is the happy offer:

YOUNG WOMAN WHO UNDERSTANDS about books would like to form libraries of scarce books and first editions for people of means who know nothing about books, but are anxious to own a rare library. Please do not reply unless you have the desire and money for accomplishment of this object. Address, etc.

Another proverb—about there being no royal road to learning—goes overboard!

EDMUND LESTER PEARSON.

News for Bibliophiles

THE "ROLLING STONE."

For nearly fifteen years O. Henry lived in Austin, Tex. During 1894-1895 he edited in Austin an eight-page weekly newspaper called the *Rolling Stone*, which was widely praised by the State press as well as by humorous writers throughout the United States. John Kendrick Bangs and Bill Nye were particularly pleased with the paper, and the latter was a frequent contributor to it. Various specimen pages and extracts from the paper were collected by the late Harry Peyton Steger and published by Doubleday, Page & Company in 1912 as volume twelve of O. Henry's complete works under the title of "Rolling Stones." The book is interesting and valuable, but a careful examination of a complete file of the *Rolling Stone* shows that some of Mr. Steger's statements are misleading and brings to light new and important facts.

For several years and until the latter part of 1894, William Sidney Porter was teller of the now deceased First National Bank of Austin. In the early spring of 1894, a certain W. C. Brann, editor of the *Iconoclast*, moved to Waco, Tex., selling his paper to Porter for $250. When only two issues of the *Iconoclast* had appeared under Porter's editorship, Brann, who had decided to start a paper at Waco, asked for the name *Iconoclast*. Porter willingly surrendered it, and rechristened his weekly the *Rolling Stone*.

The *Rolling Stone* did not appear on March 5, 1894, as Mr. Steger says, on page 217 of his book. His statement involves an oversight, as the piece of which he is speaking, "Bexar Script No. 2692," was published May 5, 1894, in Volume I, Number 4, of the *Rolling Stone*. Volume I, Number 3, appeared April 28, 1894. It was a five-column sheet, thirteen by twenty inches, printed on cheap, dull paper. With the fourteenth number the sheet was reduced to quarto size, the five columns were changed to three wide columns, the inferior paper was replaced by glossy paper of a good quality, and the motto, "Out for the Moss," which had up to this time served as a sub-title, disappeared. With Volume I, Number 36, the sheet was enlarged to its original size, but the glossy paper and the three wide columns were retained. All of the issues of Volume II present the same general

appearance as Volume I, Number 36, except that they are printed on cheap, rough paper. The page called the "Plunkville Patriot," which was got up in imitation of a backwoods country newspaper, did not appear, as Mr. Steger says (p. ix), "each week, or at least with the regularity of the somewhat uncertain paper itself." It was evidently an evolution in fun-making; for it began only in Volume I, Number 29, October 27, 1894, when the *Rolling Stone* had lived more than half of its life. It was then published regularly in the remaining numbers of Volume I and in all the numbers of Volume II.

The first issue of the paper was prepared by Porter and his father-in-law, Mr. G. P. Roach, but it pretentiously purported to be the offspring of "The Rolling Stone Company, 113 East Seventh Street, Driskill Hotel Block." Soon afterwards, however, Dixie Daniels (now a dentist in Galveston) became business manager, and the offices of the publication were changed to Rooms 7 and 9, Bruegerhoff Building. In Volume II, No. 2, January 26, 1895, one reads that the paper is "edited by W. S. Porter and Henry Ryder-Taylor. Published simultaneously in Austin and San Antonio, Tex., every Saturday." In the editorial column of this same issue Porter announces that Mr. Ryder-Taylor ("No, not H. Rider Haggard") has accepted the position of local manager for San Antonio. Henceforth one page of the paper was devoted to articles and jokes written by Mr. Ryder-Taylor for the delectation of San Antonio people. The offices of publication were then 104 East Tenth Street, Austin, and 827 South Presa Street, San Antonio. In March, 1895, the *Rolling Stone* skipped two issues. In Volume II, No. 9, March 30, 1895, appeared a humorous apology for this temporary suspension of publication. (The apology has been printed in "Rolling Stones," p. 212.) And then, apologies over, Porter hopefully announced that Mr. Hec A. McEachin, of Austin, had been engaged as associate business manager, and would at once put the *Rolling Stone* on a firm financial basis. Despite this announcement, the paper discontinued publication with the twelfth issue, April 27, 1895.

That the *Rolling Stone* made heroic efforts to enlarge its subscription lists is seen from the fact that the first issue of 6,000 copies was distributed free. It also contained a double-column advertisement, which is incorrectly and incompletely reproduced on page 10 of "Rolling Stones." The part which is omitted reads as follows:

"Each number will contain Stories, Humorous Sketches [sic], Poems, Jokes, properly labelled, side-splitting references to the Mother-in-law, the goat, Governor Hogg, and the States of the weather and Texas."

The paper made thrilling pleas for agents in neighboring towns, varying the monotony by such notices as this:

"The *Rolling Stone* one year and half a dozen of Hill's best Cabinet Photographs for $2! Do you want photos of your wife, baby, brother, sister, of yourself, free? If not, let the cook have some taken."

Porter worked on the Houston *Post* from October, 1895, to July, 1896. Except for a few very brief visits, he was not again in Texas after July, 1896. With the death of the *Rolling Stone* and the termination of his work on the *Post*, Porter's connection with Texas and with the South may be said to have ended.

Risorgimento History

DECLINE OF MONARCHICAL PRESTIGE.

By William Roscoe Thayer.

I.

Recent history is proverbially uncertain, mainly because it often requires the lapse of a generation before the necessary material becomes accessible. In the case of our Civil War, however, memoirs of generals and political leaders began to appear soon after 1870, and by 1890 works of permanent authority, like Nicolay and Hay's "Lincoln" and Grant's memoirs, had been published.

In Italy, on the contrary, much important material concerning the struggle for independence was held back; but for some time past the Italian presses have poured out an increasing stream of books on every episode and, one might almost say, on nearly every man and woman of the Risorgimento. Documents have been edited; the correspondence and diaries of patriots and their adversaries have been published; recollections of eye-witnesses, or the reports of the stories their children heard them tell, have overflowed from the monthly and weekly magazines into Sunday supplements and the daily papers. Facsimiles of old illustrations have accompanied reprints of contemporary articles.

Besides the organization of the National Society for the History of the Risorgimento in 1906, there have sprung up historical societies in each province and in the principal cities; and these have been reinforced by the establishment of patriotic museums which preserve every conceivable relic. Milan cherishes old handkerchiefs on which the heroic Tazzoli scrawled in ooze from his wound messages to confederates outside his Mantuan prison; Rome treasures Garibaldi's military cloak; Turin shows Cavour's watch and chain and inkstand.

When you come upon Ugo Foscolo's faded brown beard in a glass case at the Palazzo Vecchio in Florence, you may smile at the extravagance to which this passion for preserving sometimes leads; you are struck by the lack of perspective in some of the books printed and in the judgments passed; but you cannot fail to rejoice that this passion came upon the Italians while it was still time for them to rescue from oblivion the records of their national redemption. Future historians will thank the thousand eager collectors of to-day; and although the task of winnowing will be formidable, it cannot daunt them. Better too much than too little is the true historian's motto. Contemporaries can never tell what material posterity will hold indispensable. All the more reason, therefore, for accumulating as much as possible for posterity to choose from.

II.

However it may be in natural science, it does not always follow in history that the assemblers of historical material are the persons best fitted to sort, weigh, and edit; much less to achieve that very difficult synthesis which results in an historical work of high rank and vital significance. And this sufficiently explains why the present in Italy is a time of accumulation rather than of interpretation.

More attention is paid to Garibaldi and Mazzini than to any other Risorgimento characters. The admiration bestowed on both has reached the stage of idolatry, and idolatry does not conduce to a sober estimate of men or measures; but it has the merit of causing everything, no matter how trivial, connected with the idol, to be devoutly preserved. How far the Garibaldi cult has gone can be inferred from the following title of a book just published at Capua, "The Sublime Figures, Jesus and Garibaldi, in the History of Human Redemption: Historical Notices and Revelations, Sacred and Profane." Comment seems superfluous! Thus Garibaldi, who spent his life working to abolish the worship of saints and superstitions created by idolaters of ages long gone by, is himself become a demigod, wrapt in an aura of legend and superstition of his own.

Mazzini, too, is far on towards apotheosis. Long ago the Italian Government decreed that a complete edition of his works, including all his correspondence, should be published by the nation. At least seventy large volumes, perhaps one hundred, will rise as a monument to the Conspirator-Apostle.

Here is revenge, indeed! The exile whose letters for forty years passed surreptitiously from hand to hand, being excluded from the mails, will fill more bookshelves than does the Great Napoleon. Not many of those volumes are likely to be read half a century hence; but if, in 1970, some historical student should wish to search into the details of Mazzini's career, he will find ample material. The best of Mazzini, what we may call his message, can all be distilled into a fair-sized, precious octavo. Mazzini can never compete with Garibaldi in popularity. Comparatively few of his countrymen knew him personally. He did his work, perforce, behind closed doors, and not on romantic marches and amid spectacular battles, with the whole world looking on. The black waistcoat and black cravat-collar, which he wore from his youth till his death as a token of mourning for his country, made no such appeal to the eye as the Garibaldian red shirt. Nevertheless, he also is having his deification, during which it would be discourteous to ask for a serious, critical estimate of his methods, doctrines, or deeds. Meanwhile, every scrap of his writing and every reminiscence of persons who knew him, however slightly, are being garnered —to the obvious profit of future historians.

The carefully planned campaign for whitewashing Crispi, which opened a few years ago, will result in similar benefit to historical students, although the documents which have thus far been published by Crispi's apologists are not always free from signs of doctoring. They err in proving too much —in dwarfing everybody else in the Party of Revolution, even Garibaldi and Mazzini

—in order that Crispi may stand out as *the* colossus among pygmies. Eventually, these papers must come into the hands of dispassionate editors and be printed without partisan omissions or suggestions. Until that happens, an historian who knows the subject deeply can easily distinguish the doubtful from the reasonably sure portions; and he will be aided by the evidence for and against Crispi which is continually being released.

III.

Each generation judges the history of its predecessors by its own needs, prejudices, and ideals. The French Revolution has remained so *live*—it has, in truth, so monopolized modern French history—that it is fought over to-day by writers with almost as much fierceness as the actors in it displayed. The Restoration reduced it to one formula; the men of 1830 to another; the Revolutionists of 1848, catching up and emphasizing some of its tenets, made their startling though abortive experiment; with equal assurance the Communards of 1871 drew from it inspiration for their havoc. Taine wrote its history to warn his countrymen against looking upon it and going mad, as those did who stayed to look upon the Gorgon. Aulard, on the contrary, has recently described it as an event of great intrinsic beneficence, to which France may turn for guidance along the path of progress. So true is it that "there is nothing either good or bad, but thinking makes it so," that, were a vegetarian party to spring up to-morrow and dominate France, it would not hesitate to assert that it derived its sanction from the men of 1789.

The Risorgimento is undergoing a somewhat similar transformation. Down to 1878, when Victor Emmanuel II died, the monarchical prestige prevailed, and only extremists denied that national unity had been won through the leadership of the House of Savoy. Garibaldi, in 1859 and again in 1860, openly announced that, although by preference a republican, he loyally accepted the King's authority. A little later, Crispi, till then one of the bitterest republican partisans, arraigned Mazzini for persisting in attempting to overthrow the monarchy. "The monarchy unites us," he wrote, "and the republic would divide us."

It followed quite naturally that the first crop of Risorgimento material was not only strongly tinged with monarchical ideals, but was also markedly monarchical in origin. The government published collections of official documents. Native and foreign historians had, logically, to designate Turin as the centre from which radiated the national movement. The death of Cavour, in 1861, while Italy was still incomplete, tended to spread broadcast and to fix the fact that the monarchy was indispensable. Every biography of him that appeared, however imperfect it was, owing to reserves imposed by prudence on the early biographers, confirmed this assumption. And as one after another of the men who helped to make Italy through the agency of the House of Savoy died, and their biographies and correspondence were printed, the monarchy was further exalted.

IV.

About twenty years ago, however, the output of Republican documents began to increase. The political control of Italy had already, in 1876, passed out of the hands of the Historic Right, the party which Cavour founded in 1852 and made the instrument of Italian independence. Thenceforward, Ministries were in part composed of ex-conspirators and Republicans—like Cairoli, Nicotera, Crispi—whose early careers, not less than the exploits of the associates of their youth, furnished topics for a thousand pens. Not merely the lives of individuals were written up, but the secrets of the Carbonaria and of Young Italy were disclosed. To have been a Revolutionist became a mark of special honor.

Mazzini's disciples collected with pious industry his correspondence, or reprinted his clandestine manifestoes and journals. The volume of Garibaldian material swelled from a brook to a stream, and from a stream to a river; and, as several thousand men had served under Garibaldi, and many of these had their own stories to tell, the river seemed at times to broaden into a freshet. What happened in the case of Mazzini and Garibaldi was repeated, to a smaller degree, in the case of the local leaders.

The local, or sectional, aspect added to the strength of the anti-monarchical propaganda; for the simple reason that it was chiefly members of the Party of Revolution who had carried on the patriotic agitation in the Two Sicilies and Rome and in Venice before 1859. As the constitutionalists migrated to Piedmont during the fifties, and became identified there with the Cavourian programme, so their work was merged in that of the monarchy.

Now, it appeared that every town had had its little nest of conspirator patriots, who labored at the peril of their lives; men and women who, whether wise or not, often sacrificed everything to their cause. Having trusted Mazzini's declaration that the Republic alone could redeem Italy, most of them had remained Republicans. Inevitably, therefore, when the records of these conspirators were published, the impression was created that it was the Revolution and not the monarchy which permeated the Peninsula with the regenerative doctrines, and had been the real creator of the united nation.

Sectional as well as partisan pride has had much to do in coloring both the testimony and the deductions drawn from it. The people of the south resented the imputation that they had not contributed at least an equal share with the people of the north. The Sicilians and the Neapolitans chafed at being governed, during the first years of their emancipation, by administrators sent from Piedmont. The Piedmontese found them not only not grateful, but unruly and rebellious. The memoirs and documents do not hide these sectional jealousies; on the contrary, their virulence attests their genuineness.

Nor must we overlook the fact that the advance of democracy in Italy, as elsewhere, has intensified the interest in the achievements of the lower classes. Had Garibaldi's Thousand been recruited from the aristocracy, and had they accomplished exactly the same dazzling feats, they would not have excited one-tenth of the wonder and admiration which covered his nondescript volunteers with glory. The Red Shirts sprang almost to a man from the People, and the People felt itself ennobled by their triumph. To exalt every popular accomplishment, and to slight, if not to ignore, whatever worthy thing is done by the upper classes, is a common stage in the democratizing process in Europe. Needless to say, the thin partition which divides crude democracy from demagogy is often broken down.

Thus, while the majority of writers and the great bulk of material during the earlier generation stood on the side of the monarchy, the balance has been more than redressed. The Radicals have not only been bringing their records to light, but they have the most vigorous disputants fighting their cause, who have agreed upon a conventional interpretation of the chief points at issue between the Revolution and the Monarchy—especially in the relations of Garibaldi and Cavour: they do not argue, they assert.

Crispi set the example in this, for during the last thirty years of his life he always contended that Italy owed her redemption to the Party of Revolution. In his speeches and articles he bowed in passing to Victor Emmanuel, as a loyal symbol, but he saluted Mazzini and Garibaldi and their followers as the national saviours, and he scarcely ever referred to Cavour. If he mentioned the Cavourians, it was usually to denounce their incompetence.

The potent influence of poetry has also been at work in behalf of the Revolution. Carducci, the foremost Italian poet since Leopardi, began as a youth to sing the exploits of the Republican patriots and the beauty of the Republican ideal. By implication, if not by direct charge, he discredited the monarchy; and, although his poems were too difficult in form, too involved in phrase, and too erudite in substance, to appeal to the masses, they did appeal mightily to the intelligent bourgeois, and particularly to the young university men, who transmitted their message to the common people. When he was nearly sixty years old, Carducci woke up to the fact that the monarchy was essential to the preservation, as it had been to the creation, of United Italy; but he could not then recall his utterances which had, for forty years, been encouraging those who wished to destroy the monarchy and to set up the Republic.

V.

These are some of the aspects which [illegible] readers and writers of Risorgimento history to-day. They show that, although historical

material may remain unchanged, each generation will approach it from a different angle, and in this case the material has changed, thanks to vast additions from many sources. The obvious caution that needs to be given is: Beware of those who interpret the past according to the issues of the present; and, conversely, beware of those who read back the present into the past. Mazzini, for instance, would rage if he knew what some of the Radicals profess who now claim him as their guide. So in America latter-day policies are foisted on Lincoln which he never dreamed of and would never have approved.

In Italy the period of accumulating historical material concerning the Risorgimento seems likely to continue for a long time to come, and the polemical tone of its editors will not soon die out. But every exaggeration, every attempt to magnify one party or to belittle another unduly, brings a reaction; and in the process some indisputable facts may be established. But facts are not all, if by facts we mean documented statements; we must finally know the passions which determine action and qualify judgment—transcendental facts of the highest importance. Not the least of the reasons why the Risorgimento will long hold the attention of foreigners as well as of Italians, is its richness in passion—vehement, varied, and representative. The very intensity of its factions, like that of Guelfs and Ghibellines, bespeaks the vitality which defies oblivion.

Correspondence

THE CONSTITUTIONAL POWER OF THE COURTS.

To the Editor of the Nation:

Sir: Perhaps a final word may be permitted me regarding the question of the constitutional power of the courts. There is just one fundamental point at issue between the three gentlemen who have engaged in this correspondence and myself. Their basic contention, if I have not misunderstood them, is that the framers of our Federal Constitution specifically granted to the Federal Judiciary the right to declare null and void any law enacted by the Federal Legislature which the judiciary might deem to be unconstitutional. My basic contention is that no such specific grant of power is to be found in the Constitution. Two lines of evidence are advanced by the gentlemen in support of their contention: (1) instances of the exercise of similar power by State courts previous to the framing of the Federal Constitution are cited; and (2) quotations from members of the Constitutional Convention and from persons contemporary with the Convention are cited. My reply to both lines of evidence is that, in view of the fact that the plan of giving this power to the judiciary was well known, we are still further justified in asking why so fundamental a grant of power was not specifically delegated, in unmistakable terms, in the Federal Constitution if it was definitely decided upon by a majority of the members of the Convention.

E. M. Hulme.

Moscow, Idaho, June 19.

THE COLORADO STRIKE.

To the Editor of the Nation:

Sir: Referring to an editorial paragraph in the *Nation* of May 28, I wish to express my appreciation of the position which you have taken in reference to the deplorable condition in this State arising from the coal miners' strike.

That such a warning as you give is necessary seems to me to be apparent from the readiness with which a large share of the public have accepted the misrepresentations of the magazines and newspapers. It is a sad commentary on the intelligence of those of the reading public who have allowed their own supreme reason to sleep under the influence of an hysterical and a degenerating metropolitan press.

Our State and many of its best men have been sadly misrepresented, and when the truth is finally known, your position, as indicated in the article referred to, will, in my judgment, be fully justified.

Arthur L. Kellogg.

Denver, June 6.

"THE LAST OF A GREAT AGE."

To the Editor of The Nation:

Sir: In the issue of the *Nation* for April 30, under the above caption, the reviewer of Mrs. Higginson's life of her illustrious husband, Thomas Wentworth Higginson, refers to him as "one of the most attractive figures of the great New England Age of which he was the *last eminent survivor.*" (Italics mine.)

I have recently read the delightful reminiscences of Dr. James Kendall Hosmer, published in a handsome volume entitled "The Last Leaf," in which he gives his personal recollections of Emerson, Lowell, Whittier, Hawthorne, Holmes, Thoreau, and others, including a visit to Emerson's home, and the fact that at the commemoration in 1865 of the Harvard soldiers who had taken part in the Civil War he spoke for the rank and file, following Lowell in the delivery of his Commemoration Ode.

Dr. Hosmer, I am sure, would not think of himself as belonging to the inner circle of the great poets named above, but he certainly was in close personal touch with some of them, and Longfellow and Lowell were professors during his student life at Harvard.

Then we have Franklin B. Sanborn, at eighty-two, who was the biographer of Emerson and Thoreau, and their near neighbor at Concord, and who is still writing and speaking for a large audience of admirers. I make no plea that Dr. Hosmer or Mr. Sanborn should be included in the inner circle, but they were both so near to the great writers of the last century as to make them of special interest to all Americans who admire the great ones who have passed away.

It may not be known to some readers of the *Nation* who in childhood read "Cudjo's Cave," "Neighbor Jackwood," "The Drummer Boy," "Martin Merrivale," etc., and used to recite the poems, "Darius Green and His Flying Machine," "The Vagabonds," and "The Charcoal Man," that John Townsend Trowbridge, the author of these, is still living in Arlington, Mass., at eighty-seven years of age.

Mr. Trowbridge began writing for the press sixty-seven years ago, at the early age of twenty; published his first volume, "Father Brighthopes," in 1853; was one of the first contributors to the *Atlantic Monthly*, founded in 1857, and has issued more than two score volumes of stories and poems, and was doubtless more closely identified with the great writers born in the early part of the last century than any of the men or women who have died within the past half-dozen years. While literary critics do not count him on a level with Emerson, Longfellow, Lowell, and Holmes, he has been a remarkably prolific, versatile, and popular writer. "My Own Story, with Recollections of Noted Persons," published in 1903, was probably intended as his "last leaf," but he has published two volumes, one of poems and one of prose, since then.

Doubtless years will elapse before the last of the men and women of literary culture who knew some of the writers of the "Great Age" have passed away, but as one after another departs we hold in closer affection those who remain; and "The Last Leaf" of Dr. Hosmer, coming from a man in his eighty-first year, whose eye has not grown dim nor his natural force abated, written with all the vivacity and interest of a younger man, touching on famous men the world over with whom he had come in personal contact, was an immense treat to me, heightened as it was by some personal acquaintance with the author.

SOUTHERN HISTORY IN THE SOUTH.

To the Editor of The Nation:

Sir: At a meeting of the board of regents of the University of Texas on April 28, Major George W. Littlefield, C. S. A., one of the regents, established a fund of $25,000 for the collection of materials for the history of the South. In his letter bestowing the gift, he says: "It has been my desire to see a history written of the United States, with the plain facts concerning the South and her acts since the foundation of the Government, especially since 1860, fairly stated, that the children of the South may be truthfully taught and persons matured since 1860 may be given opportunity to inform themselves correctly." For the next seven years the fund is in 6 per cent. securities, and will yield $1,500 a year. The expenditure of this income is vested in a committee consisting of Mr. H. A. Wroe, a banker, of Austin; the professor of American history in the University of Texas, the president of the University, the University librarian, and the State librarian. After fifty years the capital may be spent, if necessary. "The committee is fully empowered to use the fund as their judgment may dictate to purchase books, pamphlets, newspaper files, maps, manuscripts, etc., bearing on the history of the South," endeavoring "to lay with it the foundation of a collection that shall be of fundamental value for the full and impartial study of the South and of its part in American history."

Major Littlefield was born in Mississippi in 1842, moved to Texas in 1850, and in August, 1861, at the age of nineteen, enlisted in Company I, Eighth Texas Cavalry, better known locally as Terry's Texas Rangers. He participated in most of the heavy fighting in northern Mississippi, Kentucky, and Tennessee, and when incapacitated in December, 1863, by the wound which eventually forced his withdrawal from the army, he was a brevet major of his regiment. Starting at the close of the war, as so many others of the South, in a state bordering on bankruptcy,

he followed farming, shop-keeping, and finally laid the foundation of a substantial fortune in the cattle trade during the most picturesque period of the "cowboy," himself accompanying his herds to market along the Texas and Kansas trails. At present he is president of the American National Bank of Austin.

The feeling has long existed in the South, expressed most vigorously by camps of Confederate Veterans and chapters of Confederate Daughters, that the South has been treated always inadequately, and sometimes unfairly, by writers of American history. Too often, no doubt, these societies have been led to condemn particular books on the basis of isolated sentences. But with due allowance for a somewhat natural fervor and lack of discrimination in such quarters, judicious persons, North as well as South, frankly recognize that there is some ground for the feeling of soreness—that the South has not always been fully and fairly represented. The commonplace explanation that American history has been written mostly by New Englanders who were either prejudiced or dishonest is no longer sufficient, because respectable historians of the twentieth century are neither. The fact is that we have not only, resentfully enough, to be sure, allowed New England to write our history, but by neglecting to collect our materials and make them available we have forced it to write from incomplete and partial sources. There are some mitigating circumstances, but fundamentally the South has only itself to blame.

The three principal agencies which may in time be expected partially to remedy the situation are the State libraries and historical commissions of the South, the State universities, and local historical societies. The first two are dependent on legislative appropriations, and the last are generally supported by small membership fees, yielding barely enough to publish small quarterly journals. Individually, legislators are ready enough to concede the importance of the subject, but in their corporate capacity they are notoriously reluctant to spend the people's money for such an "unpractical" purpose as preserving the people's history—and such items as they allow have to run the gantlet of the Governor's veto, and not infrequently succumb.

Subject to such vicissitudes, nevertheless, the Historical Commission of Mississippi, Alabama, and Texas and the State Library of Virginia have made creditable progress within the last ten years in collecting and making available materials for the history of their respective States. The universities, however, which are not situated in capital cities and able to profit by these activities have fared badly. In the apportionment of university budgets but small allotments can be made to history, and small as they are, they must be stretched over the whole field of history, so that amounts which can be spent for distinctively Southern material are negligible. A glance at their catalogues shows that an attempt is made to teach certain phases of Southern history at the State Universities of Virginia, North Carolina, South Carolina, Georgia, Mississippi, Louisiana, and Texas. In most of these the period of reconstruction is the subject of the course; in some it is a course on State history. Instructors in nearly all of these institutions report inadequate material in their libraries for these courses, and appropriations too small to make good the deficiencies.

The University of Virginia makes no definite appropriation for American history, but the librarian says that they "buy as many significant things in that department as our means, considering all other demands of a competitive kind, will allow." The University of North Carolina spends annually about $300 on material relating to Southern history, but the library is not so well equipped for the study of Southern history as for other fields of American history. The University of Georgia spends $100 a year on Southern history, but its collection is weak, except in the field of Georgia history. Florida spends from $10 to $15 a year for American history; Mississippi from $400 to nothing on Southern history. Louisiana spends about $100 a year on Southern history, "including State and local works." Prof. Walter L. Fleming writes: "It is about all we can do to collect the most valuable publications on Louisiana history. . . . There is not enough material in the Louisiana State University library to form a basis for an adequate course in Southern history. . . . I doubt if an adequate course in any phase of Southern history can be given south of Mason and Dixon's line." At Arkansas, about $150 is appropriated to American history, and "probably 10 per cent." of this goes to Southern history. At Texas less than $33 a year has been spent for American history.* One correspondent writes: "With us the library funds are constantly drawn on to meet deficiencies in other lines—even in athletics, I suspect." Another adds: "A man who wishes to study any period or character in Southern history must go to the Northern libraries and to the Library of Congress to obtain the material."

Major Littlefield's gift is gratifying to historical students as a symptom of the South's dawning consciousness of obligation to its own history. It is the first practical step towards enabling any Southern institution to develop a respectable collection of Southern material. It is no part of Major Littlefield's purpose to promote the partisan study of history.

THE HONOR SYSTEM AGAIN.

TO THE EDITOR OF THE NATION:

SIR: I have read with much interest the contribution of Prof. O. W. Firkins in the *Nation* of May 7 on the honor system. I shall not attempt to controvert Professor Firkins's arguments, some of which, I confess, I do not fully understand—perhaps because I am unable to occupy his point of view. But I ask indulgence for a few remarks on this subject, on which (though Professor Firkins does not quote me) I have once before written to the *Nation*.

It would be impossible for any faculty sharing Professor Firkins's opinions to inaugurate successfully the honor system. This is, in its essential nature, reciprocal: it cannot live without mutual confidence and good faith. What the faculty expects of the students, it must accord to the students—that is, entire confidence, without any shadow of suspicion or espionage. Of course, under any system, occasional lapses will occur, but it is better to be sometimes deceived than to destroy the basis of mutual confidence. Yet I am sure that, under the honor system, such lapses will be fewer than under any other; for the wit of a student, or of a group of students, intent to deceive, is always sharper than any possible professor's eye.

I agree with Professor Firkins that the exaction of a pledge is offensive. In my opinion, it is inconsistent with any true conception of the honor system, and should be everywhere abolished, as it has been, with the best results, in this institution. The honor system, rightly conceived, is only the honor principle, such as exists everywhere among gentlemen, applied to the conditions of college life. It means that the faculty are gentlemen; the students are gentlemen; and the relations between them, always and everywhere, are such as should mark the intercourse of gentlemen, whether singly or in groups. It is a low and degrading conception of the honor system that confines it to examinations or to the classroom. It should govern the conduct and intercourse of professors and students always and everywhere. I hope Professor Firkins will excuse me if I ask him, and other readers of the *Nation*, to reflect upon this view.

Might I plead the privilege of old age and of long experience to add a personal word? Since 1848, when I became a sophomore, I have been in intimate connection with college life. I have lived under almost every system—that of the class monitor, and that of professorial supervision and espionage, both of which I have found to be futile and unsuccessful—may I add, also, at least unmoral, if not immoral; and it is my conviction that the only decent *modus vivendi* between faculty and students must be based on the honor principle, and that this is the only sound basis for the education of character. I venture to believe that the time is coming when no other plan will be deemed consistent with the growth of American manhood.

EDWARD S. JOYNES,
Emeritus Professor.

University of South Carolina, June 15.

DECADENCE IN RUSSIAN LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: As a lover of Russian literature, may I venture to protest against Mr. More's indictment of Dostoievsky and Tolstoy in your issue of May 21, in which he terms them a "main literary source" of contemporary literary perversion, of the belief that "decency is not permitted to art"? In support of his position, he cites the most famous scene in Dostoievsky's most famous novel, "Crime and Punishment," that in which Raskolnikov bows down to the feet of Sonia. On this he comments indignantly:

> There it is. Somehow we are to be lifted up by sympathizing with a madman worshipping humanity in the person of a girl of the street. Filth, disease, morbid dreams, bestiality, insanity, sodden crime, these are the natural pathway to the emancipation of the spirit; these in some mysterious way are spirituality.

Now, in the first place, Raskolnikov is not a madman (Mr. More's own quotation states that Sonia started back from him "*as she would have done* from a madman"), and Sonia has become a "girl of the street" only in order to save her stepmother and stepsisters from actual starvation. Furthermore, the leading thought in Dostoievsky's novel is that of the ascetic purification of character by suffering and meekness. Raskolnikov bows down to Sonia not as a girl of the street, but as the most perfect example known to

him of Christian self-sacrifice. Dostoievsky may justly be stigmatized as morbid and unwholesome, but to link him with the decadent school in his moral attitude shows a total misconception of his work. With his repulsive subjects he deals in a manner which is the reverse of the decadent unmoral or immoral attitude, and which may justly be termed spiritual, though the spirituality may not be such as will appeal to the average Anglo-Saxon. Whatever may be thought of Dostoievsky's social theories or of his æsthetic methods, his morality is ascetic and puritan, at the other pole from the decadent glorification of the lusts of the flesh.

"The same lesson," Mr. More continues, "runs through Tolstoy and Strindberg and a dozen other moralists who are, as it were, the prophets of our young." With Strindberg I am not concerned; for Tolstoy the statement is still more groundless than for Dostoievsky. Tolstoy was a man of strong physique, a lover of vigorous exercise in the free open air, and the spirit of such exercise fills his great novels up to and including "Anna Karenina." They are as free from decadence—well, as Sir Walter Scott. His later works, however, do deal with sombre themes. After his religious conversion, Tolstoy lost his taste for the world as it is at present constituted. In such tales as "The Kreutzer Sonata" he speaks of the seamy side of life with a disconcerting frankness. But, far from hinting that "spirituality is the product of vice," he upholds in that drastic book an ascetic morality resembling that of his fellow plain-speaker, St. Paul. It is one of the curiosities of literary criticism that Mr. More, who has read "What Is Art?" and written of it, should couple Tolstoy with the decadents against whom Tolstoy poured out the vials of his wrath. G. R. Noyes.

LETTERS OF LINCOLN.

To the Editor of the Nation:

Sir: The undersigned have been appointed by the trustees of the Illinois State Historical Library editors of a collection of uncollected and unprinted letters, speeches, etc., of Abraham Lincoln. We should greatly appreciate any information concerning such material that may be furnished us by your readers. Daniel K. Dodge.
Clarence W. Alvord.

University of Illinois, Urbana, June 25.

VOYAGES ON THE AMAZON.

To the Editor of the Nation:

Sir: Some voyages on the Amazon have been overlooked. Under instructions of the United States Navy Department, February, 1851, Lieuts. Herndon and Gibbon surveyed the valley of the Amazon. They started from Lima and made the survey west to east. Lieut. Herndon chose for his part the headwaters and trunk of the Amazon and followed it by canoe and sailboat to its mouth, probably seeing all the rivers. Lieut. Herndon says the most remarkable voyage on the Amazon was made in 1769, by Madame des Odonnais, from the head waters to the mouth. His report was made January, 1853, and was published by the Public Printer, Washington, in 1854. J. F. Llewellyn.

Mexico, Mo., June 3.

Literature

MEMOIRS BY HENRY JAMES.

Notes of a Son and Brother. By Henry James. New York: Charles Scribner's Sons. $2.50 net.

In "A Small Boy and Others," which we noticed last summer, Henry James devoted 419 pages to the somewhat nebulous recollections of his childhood. This second hunk of reminiscences, 515 pages, breaks off in his early twenties with an event which both William and Henry James felt as marking the end of their youth. Though the stuff of this volume is far richer than that of the first, the manner of it is not less exasperating. The simplest thought—for example, that Newport is not a bad place to live in either in summer or in winter—must go halting to the reader on heroic stilts: "Its rare distinction and precious attribute was that, being a watering-place, a refuge from summer heats, it had also, were the measure considerably stretched, possibilities of hibernation." Sentence after sentence half-a-page long reflects a moment of consciousness that has been stretched upon the rack and broken upon the wheel till it has gasped forth its shadowiest dubieties and its faintest qualifying afterthoughts. Furthermore, till one has penetrated the masking humility of the unpretentious title, the intention of the book is obscure, and the indirectness with which persons and events are presented seems purely diabolical. One feels as William felt in his student days at Cambridge, when, after a visit from Henry, he wrote home that "the above-mentioned H. could in no wise satisfy my craving for knowledge of family and friends—he didn't seem to have been on speaking terms with any one for some time past, and could tell me nothing of what they did, said, or thought, about any given subject. Never did I see a so much uninterested creature in the affairs of those about him."

If Mr. James had quite shamelessly entitled his two volumes "The History of the Evolution of My Literary Imagination," we should have been warned at the outset not to expect any sharp objective presentment of him or of the men and things among which his perceptive youth was passed. We should have tried to fix our attention not upon the striking object nor the object struck, but upon the nature of the concussion and the direction of the resultant force. To be sure, one's sense of proportion may be irritated by the expenditure of nearly a thousand pages in explaining how a young man of twenty-five was enabled at last to sit down in Boston and write creditable short stories. But that is really the problem to which our attention is solicited. The whole "blest" history—to adopt the author's favorite epithet—was laboriously designed to discover complex domestic, social, and national forces conspiring to disengage and extrude Mr. James from the mute American mass, and to transform him from an insignificant participator to a significant spectator of life.

The chief detaching force during the period of Henry James's childhood was the long educational sojourn of the James family in Europe, treated in "A Small Boy and Others." They returned to America late in 1860, but, owing mainly to the singular character and position of the father, did not effectively "join on to it." An independent Swedenborgian touched with Emersonian transcendentalism, the elder Henry James seems to have shunned for himself and his sons as the gravest of all perils the pressure of any established routine, creed, or institution. Living on his "means," he preserved his offspring from the care and contamination of business, and when any one of them showed an inclination for a profession, he intimated a fear that it was too "narrowing." An evangelist with an incommunicable gospel—he maintained that Swedenborg was fairly "insipid with veracity"—he subjected his children to no church discipline, and invited no clergyman to cross his threshold. As is set forth at some length, it could hardly even have occurred to him as a desirable possibility to expose his boys to the conventional moulding influence of an American college. Perhaps the last important detaching stroke was some sort of physical accident which at about the time of the outbreak of the Civil War made Henry perforce but an interested looker-on at the departures of his brothers and companions for the front.

Already other and positive forces had thrown him into the æsthetic attitude, and had awakened his passion to be "literary." He had revisited his native land with eyes stimulated by a "riot of discrimination" in Europe, and set for the detection and apprehension of American types. To nine out of ten readers the records of these apprehensions of more or less illustrious figures will seem the valuable pages in the book. The large unworldly character of the Swedenborgian father does here actually begin to loom up and flicker with the faint light of a lovingly humorous apprehension. The impression of the young William James's bright and eager versatility is happily fixed by the insertion of a considerable number of extracts from his spirited correspondence, and by the reproduction of half-a-dozen of his sketches and his portrait in oils of Miss Katherine Temple—"a piece of painting," says Mr. James, "having, as has been happily suggested to me, much the air of a characteristic Manet." Space will not permit an exhibition of the exuberant drollery of William's letters from Cambridge in the period of his study under Agassiz in the early 'sixties, but his characteristically direct, ringing speech can be illustrated in brief compass. Take this, for example, of C. W. Eliot as he was over half a century ago: "Professor Eliot, at the School, is a fine fellow, I suspect; a man who if he resolves to do a thing won't be prevented." "Professor F. J. Child is a great joker—he's a little flaxen-haired boy of about 40." "Give

my love to Wendell Holmes. I've seen —— ——— several times; but what a cold-blooded cuss he is!" William, as well as his brother, had an eye out for American types, and for the sake of contrast we must set down one of his "recognitions" recorded in a letter from Dresden:

The other afternoon as I was sitting on the Terrace, a gentleman and two young ladies came and sat down quite near me. I knew them for Americans at a glance, and the man interested me by his exceedingly American expression: a reddish moustache and tuft on chin, a powerful nose, a small, light eye, half insolent and *all* sagacious, and *a sort of rowdy air of superiority that made me proud to claim him as a brother.* In a few minutes I recognized him as General McClellan. . . . Whatever his faults may be, that of not being "one of us" is not among them.

How—again we fall into the Jacobean idiom—how could the impact of this ruddy fraternal personality upon the cool perceptiveness of his brother *not* shock the æsthetic consciousness into a wide-eyed awareness of possibilities on the American hunting-ground? Several months of painting in Newport with William and La Farge, if it had not made Henry a painter, had at any rate notably sharpened his appetite for an artistic career and quickened his sensibility to scenic effect. And La Farge himself had been a cheering discovery:

He was really an artistic, an æsthetic, nature of wondrous homogeneity; one was to have known in the future many an unfolding that went with a larger ease and a shrewder economy, but never to have seen a subtler mind or a more generously wasteful passion; in other words, a sincerer one, addressed to the problems of the designer and painter. . . . I see him at this hour again . . . leaning much forward with his protuberant and over-glazed, his doubting yet all-seizing vision.

Long an enraptured feaster upon the salmon-covered *Revue des Deux Mondes*, Henry James now came, through the mediation of La Farge, under the sway of Browning's "Men and Women," and was initiated into a life-long worship of Balzac—"the master of us all." After the abandonment of paint he passed through a vaguely indicated incubatory period at the Harvard Law School. His tribute to the literary stimulus of the Harvard airs is interesting: "Passing the Harvard portal positively failed, in fact, to strike me as the shorter cut to literature; the sounds that rose from the scene as I caught them appeared, on the contrary, the most detached from any such interest that had ever reached my ear." The great fruit of the Cambridge period was the "recognition" of Charles Eliot Norton and some of the finer spirits of his circle, and the momentary confrontation at Shady Hill of Charles Dickens. The account of Norton is a masterpiece of vague intimation, but one sentence on Dickens delivers a rather finely distinct impression: "The offered inscrutable mask was the great thing, the extremely handsome face, the face of symmetry yet of formidable character, as I at once recognized, and which met my dumb homage with a straight inscrutability, a merciless *military* eye, I might have pronounced it, an automatic hardness, in fine, which at once indicated to me, and in the most interesting way in the world, a kind of economy of apprehension."

Through Norton Mr. James made the acquaintance of Edwin Lawrence Godkin, at whose invitation, in 1865, he commenced as critic and assisted in the launching of the *Nation:*

Godkin's paper, Godkin's occasional presence and interesting history and vivid ability, and, above all, admirably aggressive and ironic editorial humor, of a quality and authority new in the air of a journalism that had meant, for the most part, the heavy hand alone, these things, with the sudden sweet discovery that I might for my own part acceptedly stammer a style, are so many shades and shifting tints in the positive historic iridescence that flings itself for my memory, as I have noted, over the "period" of Ashburton Place.

The "plot" in these years, as Mr. James says, was immensely "thickened" by the events and consequences of the Civil War. Throughout the conflict letters from the James boys at the front—a lively interlude in our record—supplied the imagination of the scrupulous observer at home with multitudinous, unfamiliar, and stirring sensations. The dispersion of the soldiers among the civilians at the close of the war was apprehended as a vast enrichment of the social soil. The death of Lincoln provided what had hitherto been lacking: "The collective sense of what had occurred was of a sadness, too noble not somehow to inspire, and it was truly in the air that, whatever we had as a nation produced or failed to produce, we could at least gather round this perfection of a classic woe." In short, the struggle between North and South had dignified and rendered illustrious the dull stage, and it had shaped and projected upon the æsthetic vision new and piquant types of character. A great vivifying thrill of recognition swept through the consciousness of the spectator: America had produced another artist!

"I like ambiguities," says Mr. James, "and detest great glares." It is needless to say that he does not allow the announcement of the birth of his talent to enter with any such thunder upon the ear. We strive only to convey promptly in our crude fashion an effect which we have received slowly in a hundred feather-light touches. It is an effect of anti-climax which is always produced in us sooner or later by an inveterate æstheticism—even by an æstheticism as remorselessly sincere, as tremendously high-bred as the æstheticism of Mr. James. Through all his cloudy ambiguities there glimmers the avowal that he has steadfastly looked upon this old earth and its denizens as but ministers to his artistic pleasure. In consequence of his æsthetic detachment he constantly writes, not like a much-experienced man, but rather like a refined and decorous collector and connoisseur of experience. "I bottle this imponderable extract of the loitering summers of youth," he says, "when every occasion really seemed to stay to be gathered and tasted, just for the sake of its faint sweetness." Felicitously phrased! Yet it is just this air of gathering and tasting, sustained throughout the book, that becomes ultimately almost intolerable; that makes one cry out that in a complete man there are other organs than "taste" for the apprehension of experience. A note of æsthetic relish is intolerable in a commemoration of the death of Lincoln. It is intolerable always to speak of America as "the American scene," of the Civil War as "our national drama," and of our sages and heroes as variously admired pictures in "my cabinet" or in "my gallery of portraits." It is undoubtedly true that the egotism which lurks in these phrases is not a personal, but a strictly artistic, egotism. But so was the egotism of the imperial harp-player who, clothed *in illo suo scenico habitu*, spoke of the "beauty of the flame" of burning Rome. It was a pretty phrase, but hardly up to the subject!

CURRENT FICTION.

The Price of Love. By Arnold Bennett. New York: Harper & Brothers.

How youth feels about age, the changes illness works in personality, all the little contradictory moods of irritation through which a steadfast affection works its will, and the desperate adjustments by which the little blind god sometimes manages to survive enlightenment—these are the things Mr. Bennett does inimitably well, the characteristic elements of his composition, and not one of them is lacking here. The idealism in which he has indulged is, of course, not that of the doctrinaire or perfectionist. It is merely the recognition that the literal truth about human nature is often very beautiful. No invention could possibly better an unregarded every-day miracle like this:

Every one of the millions of her kind thoughts had helped to mould the expression of her countenance. The expression was definite now, fixed, intensely characteristic after so many decades, and wherever it was seen it gave pleasure and by its enchantment created goodness and good will—even out of their opposites. Such was the life-work of Mrs. Maldon.

The love of which he counts the cost is one of the commonplaces of daily life, and a positive spiritual necessity to the three women who are willing to pay heavily for it. Mrs. Maldon had been obliged to maintain her charitableness at some sacrifice of candor. She could endure the knowledge of evil, but not admit it; and when her nephew's presence in the house coincided with the spiriting away of her one thousand pounds, in the frailty of her seventy-odd years she could no more combat the obvious implication and the ugly inference forced upon her by others than she could have withstood the thrust of a poisoned blade.

Rachel, the pretty piece of warm-hearted loyalty who had been Mrs. Maldon's "lady companion" and married the gentlemanly rascal of a nephew, was much too downright and honest to find refuge in self-deception. But she could take reckoning of the dubious possibilities of her husband's character and outweigh them all with a love that no longer had anything to fear from disillusionment. There was, besides, the abjectly noble Mrs. Tams, whose benevolences were rendered acceptable by a humility like that of a faithful animal. She is the perfect embodiment of the traditional virtues of her peculiarly British type—what Mr. Bennett himself would call the "classic" charwoman. With great cheerfulness she pays the price of self-effacement.

We must confess that, although drawn on broadly popular lines, and ably qualified with masterly strokes, Mrs. Tams inspires us with no little dissatisfaction. It is impossible to contemplate Mrs. Tams and preserve the feeling of being at home in the Five Towns. She carries with her a De Morgan atmosphere and even vague reminders of Dickens, through whom a tenderness for the slavey first came to infest the English novel. It would almost seem that a Galsworthian thought had struck Mr. Bennett when he dwells upon the wealth of adventure with which poverty and ill-usage had enlivened her career. But in spite of Mrs. Tams and her typical perfections, the picture is kept entirely natural by the faces of the men who all unconsciously assist at this triumph of feminine magnanimity. No picture could be anything but natural that contained such a lusty old self-seeker as Councillor Batchgren. "His mere presence was always disturbing; when he supervened into an environment he had always the air of an animal on a profitable voyage of discovery." No one prizes strongly marked individuality more highly, or develops the conflict of irreconcilable points of view, with more adroit humor than Mr. Bennett, and the perturbation wrought in Mrs. Maldon's sitting-room by the mere presence of this friendly, white-whiskered satyr, "a coarse male creature in a highly feminized atmosphere," is just the sort of thing that particularly delights him.

Midstream: A Chronicle at Halfway. By Will Levington Comfort. New York: George H. Doran Co.

A fashion of middle-aged autobiography is upon us. Jack London struck the note with no uncertain sound in "John Barleycorn"; Mr. Comfort now takes up the strain with even greater plangency. He is determined that nothing about himself shall be hidden from us. The kind of confidences Rousseau lets fall with a child-like smile are here thrust upon us with frowning determination. Of his odd, unhappy boyhood, with its cheerless home life and fragmentary schooling, of his early struggles with drink and with the pen, of his roving irresponsible experiences as a journalist, soldier, war correspondent, and finally apostle of peace, Mr. Comfort writes with a great deal of vividness and a marked lack of balance. There is little in these pages which the plain man can take to heart. The writer is not normal; he is too sincere and too sickly. His life now is determined by two obsessions: the necessity to write and the determination to philosophize.

To the narrative proper—which is itself almost as much gloss as text—is appended a long chapter of moralizing called The World Man and His Mother, in which the reader will find as many matters touched upon as in a woman's club lecture:

> The larger human consciousness is not reached until man has conquered intellectual arrogance, the disintegrating force of worshipping inferiors, the devilish magnetisms of artistic mastery, and finally that black enthralling passion for spiritual dominion. . . .
>
> The world-man hurls out his splendid offering to the race. The God-man is universal, a cosmic creative force. . . .
>
> Matter is dead. . . .
>
> This is the age of woman's transition. . . .
>
> We hear the song-sparrow a thousand times. At last in some moment of our purer receptivity we realize that this is one of Nature's angels saying "The plan is good. The plan is good." . . . The sparrow was singing it all the time.

The Return of the Prodigal. By May Sinclair. New York: The Macmillan Co.

The story from which this volume gets its title discloses, together with three or four others in the collection of eight, Miss Sinclair at her worst. Always an attentive student of character, she deals in these instances with personal traits which for convincing portrayal would require the space of many more than the few pages given to them. The result is incompleteness, furnished with some show of a conclusion by means of a penny-whistle climax. In the more extended pieces, such as "Miss Tarrant's Temperament," "The Wrackham Memoirs," and "The Cosmopolitan," the author is seen in typical operation. For Miss Sinclair is most at home in an imagined world, one not wholly detached from actual life, perhaps, yet one in which the fringe of consciousness is permitted full play; often to the detriment, it must be added, of downright, more familiar impulses. What does it profit though Miss Tarrant have an exquisite connoisseurship of men, if the men surrounding her are only shadowy spectators?

It is with woman, rather than man, that Miss Sinclair is mainly concerned—woman possessed of the new hope of enfranchisement. And the reader will follow with interest the various spheres which a person of Miss Sinclair's subtlety finds suited to the feminine mind.

The Cost of Wings, and Other Stories. By Richard Dehan. New York: Frederick A. Stokes Co.

The simple plan of giving the reader a surprise and calling it a story is employed some twenty-odd times in this volume. Occasionally, the supposed surprise (it takes a facile responsiveness to react to them all) is a mildly pleasant one, as when the slavey to whom the elderly valet has been kind turns out to be the mistress of a neat little fortune, and all eager to marry and set him up in the public-house business. Again, it is a shock of horrid disgust when the unappreciated wife blows out her brains before her insensible husband's eyes. Preferably the author includes a touch of the grewsome or grotesque, but incongruity is what really appeals to her most. This penchant was liberally instanced in her novels, where it made startling reading. Its best present illustration is found in the brief anecdote of the South Africa war veteran whose gallantry on the field of battle had won him the Victoria Cross—and wounds enough to pauperize him. The munificent acknowledgment accorded this poor wreck of a hero by his native town was nothing more nor less than the erection of a handsome public drinking-fountain in his honor.

There is not so much originality or robust humor in these tales as in an earlier volume, "Headquarter Recruit," but there is a good deal more journalistic flippancy; more, too, of what the lecturer who was laboring to commend Kipling to a country Chautauqua audience, described as "something of an olive taste."

PROBLEMS OF EMPIRE.

King's College Lectures on Colonial Problems. Edited by F. J. C. Hearnshaw. New York: The Macmillan Co. $1.40.

There are only six lectures in this series; but they constitute the most noteworthy contribution of their class to the literature of the British colonial system since Prof. W. J. Ashley edited the lectures on economic and commercial conditions in the oversea dominions that were given by various authorities on colonial economy at Birmingham University in the winter of 1910-1. In this King's College series, organized last year on much the same plan by Professor Hearnshaw, only one lecture—that by Sir Everard im Thurn, on "Native Land and Labor in the South Seas"—was concerned with the economic aspects of modern British colonization. The others were devoted either to the history of some phase of colonization or to political problems arising in the larger oversea dominions or out of the relations between the Dominions and Great Britain.

The first lecture in the series, by the Rev. T. J. Lawrence, lecturer on international law at the Royal Naval College, Greenwich, on the position of the oversea dominions in international law, falls within the last division. It is a study of the position of Canada, Newfoundland, New Zealand, Australia, and South Africa when England is at war, and of the demand of the dominions, now conceded, to negotiate commercial treaties for themselves. Canada was the first to make this demand. There was a concession to it in 1871, when Sir John A. Macdonald was appointed one of the plenipotentiaries

in the negotiations with the United States in regard to trade and fisheries. Since then there have been many instances in which representatives of Canada, temporarily associated with the Foreign Office, have negotiated commercial treaties, not only with this country, but also with France and Germany; and this method of negotiation of treaties affecting the dominions is now considered normal.

There has been no settlement of the assertion recently made that the oversea dominions can remain neutral when Great Britain is at war. Mr. Lawrence repudiates the idea; for neutrality and belligerency are functions of sovereign states. They are predicated of international persons, not of parts of such persons; and the oversea dominions, despite their large powers of self-government, are parts of Great Britain. A Power, Mr. Lawrence insists, can no more be neutral in part and belligerent in part than a man can be married in part and single in part. His suggestion is that there should be created some small central body on which should serve the British Prime Minister, the Secretary for Foreign Affairs, and representatives of the Ministries in the oversea dominions, and that to this council should be delegated the momentous issues of war, peace, and neutrality. With such a council, every war would be an imperial war in reality as well as in name, and consequently no attempt to keep out of it would be made in any of the oversea dominions whose representatives had agreed to it.

Sir John A. Cockburn, who was at one time Agent-General for South Australia in London, and who is now chairman of the Australasian Chamber of Commerce in London, surveyed the problems that confronted the founders of Australian Federation, and reviewed the working of the new constitutional machinery which was set up when the Commonwealth was established. It seems from his statements that the constitution of the Senate is still a matter of discussion in Australia. At the time the Constitution was framed, advanced Liberals were afraid to grant large powers to the Senate for fear that it might come to have a strongly conservative bias, and, like the House of Lords, stand in the way of Liberal legislation. But experience since 1900 has been the reverse of this expectation. The Senate is more democratic than the House of Representatives, and it has usually a larger proportion of labor representation in its membership than the House. Sir John Cockburn is a strong advocate of the policy of the Australian navy squadron; and he believes that the other dominions will eventually follow the example of the Commonwealth and create fleets of their own. Contrary to Canadian experience, during the short time that the Niobe and the Rainbow were in commission, Australia has had no difficulty in recruiting men to serve on the battleship, the three cruisers, and the six destroyers which now constitute the Commonwealth war fleet.

One of the most generally interesting of the lectures is that by Sir Charles Lucas on "The Influence of Science on Empire." Science, Sir Charles is convinced, makes for democracy; and in support of this contention he instances the motor car. Motor cars arouse the democratic instinct, because "every one has to get out of somebody else's way." They probably excite class feelings; but they also quicken the sense of rights and wrongs, and so are a stimulus to democracy. Prof. H. E. Egerton, in his lecture on "The Colonial Reformers of 1830," pays a tribute to Durham, Molesworth, and Wakefield, not only for the success that attended their work for what are now the oversea dominions, but also for the influence for good they had on contemporary British politics. "Whenever colonial reformers touched contemporary politics," Professor Egerton asserted, "there was imparted to them a new meaning, and a new dignity"—a statement that will not be controverted by any student of British politics of the period between Waterloo and the concession of representative and responsible government to the British North American provinces in 1840. The last of the lectures was by Mr. Sidney Low on the problem of an Imperial Executive. Mr. Low pleaded that the loose arrangement at present existing between Great Britain and the oversea dominions could not be final; that it served while the oversea dominions went through the pioneer stage, but that there must soon be created a distinct Imperial Cabinet, and an Imperial Council, formed of delegations from the dominion parliaments, to decide upon a common budget and to control the administration of funds allocated by the dominions for imperial purposes.

POETICS.

Castelvetro's Theory of Poetry. By H. B. Charlton. Manchester, England: University Press. $1.60 net.

The mentality of Lodovico Castelvetro has been the subject of continuous admiration from his own time to the present. There has been less willingness since the time of Vico to credit him with much else. De Sanctis, who read him a half century and more ago, did not reconstitute his personality. From America, in fact, came, in the work of Spingarn, the first definite appreciation of Castelvetro's real distinction. Croce, Cavazzuti, Bertoni, Vivaldi, and Trabalza have taken up successively his case. To-day we may say that his work is present in all essential traits before us. As a commentator on Aristotle's "Poetics," Castelvetro stands out in modern times with Butcher and St. Hilaire. In certain details he sees the real import of Aristotle's ideas more clearly than Aristotle himself; in every respect he has a juster notion of the "Poetics" than all of his contemporaries. In æsthetic theory itself Castelvetro's case seems irretrievable. He never attained to solid fundamental principles; he fluctuates and gropes, showing moments of keen vision and moments of absurdity. Here he is extraordinarily interesting, and that is all, in relation to many specific problems of literary history.

When we pass to philology, on the other hand, the situation is different. It is not enough to recognize him as the greatest of his period; he leads in this department not only his own age, but all before the rise of modern philological science in the nineteenth century. At the base of his method lie the two foundations of phonetics and, in morphology, of analogy. Leaving aside the capricious guesses of his contemporaries in etymology, he lays Vulgar Latin at the basis of Romance studies, and proceeds with a comparative method and with the same categories that are in use to-day.

This, in brief, is what was known of Castelvetro. And with much of this Mr. Charlton is, at the outset, unfamiliar. In biography, this distinguished English critic has not gone beyond Muratori; the philological phase of Castelvetro he overlooks entirely. To be sure, as the title of this volume indicates, the author's principal interest is in the æsthetics, and this one aspect of Castelvetro is treated more comprehensively than in any similar work in English.

The extensive discussion centres attention on certain points only cursorily noted before, as by Spingarn and Croce. If Castelvetro had no notion of the expressive nature of art, he was original in his time in substituting pleasure for didacticism as the function of poetry, and his hedonism has a superficial if not a radical democratic outlook. He was original, too, in seeing the futility of classic imitation in literature; and thus coming back to the insistence on original invention in art, he was at the threshold of real discovery, only to lose himself in the problem of "historicity" and fantasy, of "beautiful" and "ugly," and in details of perceptual formalism.

Mr. Charlton lays great stress on the conception of artistry as the "difficulté vaincue," with which principle he associates all of Castelvetro's rational point of view on art. We would not enter with the English critic into the detailed refutation of this position. The fact is that Castelvetro, like all of his age, and like nine-tenths of our own, considers æsthetics exclusively from the point of view of the audience and never from that of the producer. The question of what is pleasing and how to please is largely a question of social psychology; the mystery will yield only to empirical research. If at this point artistic "technique" enters, very well. We dare say that the rankest perceptualism in art may have a good financial basis, even a good sociological basis. In any case, those are problems not for the æsthetician. It is well to bear this in mind in dealing with the theorists of the Renaissance. Otherwise there is danger of adding futility to a futility already great enough. We are glad to welcome this volume as an indication of a healthy orientation of literary scholarship at Manchester, to which Mr. Charlton has made valuable contributions. We would ask it only to be a trifle more rigid in method.

STUDIES IN TRUSTS.

Corporate Promotions and Reorganizations. By Arthur S. Dewing. Cambridge: Harvard University Press. $2.50.

Federal lawmakers and all others who are inclined to express definite views on the "Trust problem" should read this book. Its painstaking examination of the promotion and reorganization of typical consolidations, its scholarly balancing of motives and results, its penetrating analysis of the financial and industrial administration of the individual businesses, and its revelation of the actual causes of failure in each instance, are an invaluable foundation for the construction of a programme of reform. We may love the "Trust" no more after we have read it, but we shall fear it less.

The studies cover such widely diversified industries as leather, glue, starch, glucose, salt, malt, cotton yarn, cordage, asphalt, bicycles, cotton duck, and real estate. They include the aristocratic Westinghouse Company and the disreputable United States Shipbuilding Company. Obviously, they are selected cases, conspicuous because of their magnitude or because they illustrate some special form of failure or reorganization. It is significant of the non-scientific attitude of our law-makers that the author has found governmental publications to be of least value as sources of information. In the matter of official investigations he says: "The examiners seem to have developed the testimony along preconceived lines determined by motives of political expediency." And he has this comment for the Bureau of Corporations: "Because of the prejudices of the men connected with the Bureau, their estimates and judgments have been neither reliable nor permanently significant." After this, however, one has difficulty in accepting the statement that "the most valuable source of information accessible is the memories of the men who have been connected with the growth of our large business enterprises."

The motives leading to consolidation are those with which every one is familiar, the desire to eliminate destructive competition and effect the economies of production on a large scale. It is doubtful whether in his summary of causes the author has given sufficient weight to the incentive of promoter's profits, although the discussion of this feature appears frequently in his pages. Of the thirteen consolidations considered, he finds that at the time of promotion the average percentage of control of the business was 54 per cent. It is his view that the number of combinations which controlled less than 50 per cent. of the American production far exceeded in number those that controlled more than 50 per cent., and that the popular impression of the extent of monopoly is greatly exaggerated. There seems, moreover, to be no correspondence between the extent of market control and the degree of financial success.

It would be impracticable here to trace in detail the disheartening story from the first step in promotion to the last in reorganization. Variety, but little relief, is found, as one goes from business to business. There is over-estimate of future earnings based upon the crumbling foundation of past earnings, and a capitalization in excess of actual tangible property by 60 per cent. on the average. Yet success or failure does not seem to have been dependent upon the width of the gap between securities and assets. The form of capitalization, whether bonds or stock, is far more important. In every promotion the excessive prices paid to the owners of the plants placed serious burdens upon the managements at the start.

These methods of promotion called for the utmost conservatism in management. Yet in many cases the management, having an eye to the immediate advantage of the insiders and with no thought for the ultimate effect upon the financial solvency of the business, was almost criminally reckless. No adequate charges were made to depreciation on plants that demanded restoration. Dividends were frequently paid from earnings that should have been conserved, and in some cases were drawn from capital. The fatal policy of borrowing on short-time notes to meet fixed obligations was the beginning of the end. In many instances directors when examined revealed an astonishing ignorance of the actual condition of the businesses for which they were legally responsible.

But the real causes for the general lack of success are, in the author's opinion, to be found in two fundamental deficiencies: lack of a sufficiently high degree of business ability to manage large consolidations of manufacturing plants, and an inability to overcome actual or potential competition. We have heard much of the wastes of competition. It is somewhat novel to find a discussion of the wastes of consolidation which mainly arise from the inflexibility resulting from the excessive investment in specialized plant. Only when an industry has a monopoly over some essential raw material or some patent or franchise is it secure against competitive attack.

In view of the author's conclusions, that the Trust form of organization contains inherent weaknesses which it is unable to overcome—those arising from lack of personnel and of dominating power in their own fields—we may readily infer what would be his "solution" of the problem. To the controversy now raging as to whether we shall conserve the present consolidations and protect the public through efficient regulation, or whether we shall follow the policy embodied in the Anti-Trust act and compel competition through disintegration of the combinations, the author contributes the following:

> I have been impressed throughout by the powerlessness of mere aggregates of capital to hold monopoly; I have been impressed, too, by the tremendous importance of individual, innate ability, or its lack, in determining the success or failure of any enterprise. With these observations in mind, one may hazard the belief that whatever "Trust problem" exists will work out its own solution. The doom of the inefficient waits on no legislative regulation. It is rather delayed thereby. Restrictive regulation will perpetuate the inefficient corporation, by furnishing an artificial prop to support natural weakness; it will hamper the efficient by impeding the free play of a personal ambition.

AFRICA THE INTRACTABLE.

North Africa and the Desert: Scenes and Moods. By George E. Woodberry. New York: Charles Scribner's Sons. $2 net.

Morocco the Bizarre, or Life in Sunset Land. By George Edmund Holt. Illustrated. New York: McBride, Nast & Co. $2 net.

Africa remains the intractable, to the twentieth century as to all ages gone before. "Remember in whose lands you have chosen your abode!" says Sister Anna to Dido in the Æneid. "On the one hand the Getulians, invincible in war, the unbridled Numidians, and the inhospitable Syrtis; on the other the thirsty desert and the Barcæi, raging far and wide." Nor could Rome herself, at the height of her power, keep the bridle successfully on the Numidians. A short generation after the death of Virgil a rebellion broke out which kept thorns in the pillow of Tiberius for some years, and finally Tacitus tells us in his crisp way that "there were now three laurel-decorated statues in Rome, and Tacfarinas the Numidian was still harrying Africa," unmindful of those three tokens of his conclusive defeat. It takes an immense effort of the imagination even to conceive the thought of an Africa whipped into the line of current civilization.

As a factor in literature, the most interesting thing about Africa is the manifold variety of its reactions upon the minds of men who subject themselves to its influence and then attempt to describe it. Mr. Holt, who writes of Morocco the Bizarre, is a business man who has spent some years in Morocco as American Vice-Consul, Deputy Consul-General, Acting Consul-General, and in a number of other official capacities. The point in which Africa has cast its spell upon his imagination most seriously is that of the *jehad*, or holy war, in which the long-brewing hatred of Islam is to burst forth and sweep the Christian nations from the face of the earth once for all.

Of course, there has been the cry of the *jehad* here and the *jehad* there in recent years, and yet the Islamic tempest has always cooled inside the teapot of its origin. Be not lured into a false sense of security, however. Islam stands on the order of its going, and the *jehad* is orthodox only when called by the Sultan of Turkey. Let *him* say the word, and Ali Mohammed, the Moorish acrobat of New York city, will march down Broadway killing every Christian he meets, while four hundred millions of men, women, and children will be doing the same, within the range of their various opportunities. In the mysterious city of Jof, 500 miles across the unknown sands, sits

Sanussi Ahmed el-Shareef as the recognized sovereign of over fifteen millions of duly initiated members of the Sanussiyah brotherhood, "the Masonic order of Islam, veiled in a secrecy darker than that of the Solomonic fraternity," controlling without argument every Mohammedan in the northern half of the Africa continent, some two hundred millions in number. And Sultans of Turkey, holding in their hands the power to declare the *jehad*, have already gone to Jof to pay their respects to this wielder of "more power than was ever dreamed of by Cæsar or Alexander"! Let the dread omens be favorable to these desert conjurers with Destiny, and—we employ Mr. Holt's *ipsissima verba*—"from the East would come a horde that would crumple Europe like a paper bag, and Islam could cross the Mediterranean on the bodies of the Christian armies driven out of North Africa."

In the meantime you will find in Mr. Holt's pages detailed directions for making a most delightful salad, fitted to drive even the dull care of the coming *jehad* out of your brain. How happy our Hobson school of prophets are in their ability not to take themselves seriously all the time! On the side of facts observed, Mr. Holt offers much to inform and interest the reader, were it not injured in the telling by occasional descent into a cheap newspaper type of expression more often tiresome than humorous.

It needs no demonstration to prove that the Africa seen by Mr. Woodberry differs from that of Mr. Holt far more than would be anticipated from the mere fact that the latter covers Morocco, while the former deals with portions of Algeria, Tunis, and Tripoli. Mr. Holt calls his territory "Sunset Land," and yet the reader feels a suspicion that the African sunset was to him somewhat like the famous primrose by the river's brim. Mr. Woodberry's temperament and training took him to Africa far better attuned to respond to its harmonies of sky and sea, of desert, oasis, and mountain, as well as to its burden of historical lore and suggestion. If one were asked to provide a fitting mate for this volume on the bookshelf from the ranks of American writers, it would hardly be other than John C. Van Dyke's "The Desert," different as the two books are in many particulars.

There is no space here for the quotations by which one would be glad to attempt to pass to others the charm which the author has caught from his African sojourns and embodied (not buried, let us hope) in his pages. For the work of the French in North Africa he expresses a lively admiration. He sees no ruthless use of brute force in it, moved by lust of conquest, but a humane policy of penetration by pacification, showing due respect for the rights, usages, and prejudices of the natives and finding by patient experiment the line of least resistance for a civilization from which the native shall gain no less than the invader himself. "What strikes the close student of the movement most is not the military advance, but the extraordinary degree to which the military advance itself was impregnated with intelligence, scientific observation, scholarly interest, economic suggestion, engineering ambition, as if these French officers were less men of arms than pioneers of knowledge and public works."

In the innumerable scholarly publications, scientific, economic, and historical, emanating from officers in the French service in Africa during the past fifty years, he finds adequate proof of genuine devotion to a work of civilization, not of selfish conquest. In proportion to the time and numbers involved, can our own officers in the Philippines make as good a defence? Mr. Woodberry admits that the vitalizing connection between this civilization and the native blood is not yet assured. Where French occupancy has been longest there has been a softening of fanatic hatred which is good, a relaxation of native religious practice which is at least questionable, and a corruption of morals and degeneracy of racial vigor indisputably bad. And so one is still left longing for the actual demonstration that a civilizing imperialism can in any one case carry its work through and display the native population as a whole to the world as genuine beneficiaries rather than victims.

THE SPICE ISLANDS.

Java and Her Neighbors. By Arthur S. Walcott. Illustrated. New York: G. P. Putnam's Sons. $2.50.

In the dim past, according to Wallace, Nature, breaking up a vast Australian or Pacific continent, left Java, Borneo, and Sumatra flowers of the Eastern seas. The close of the thirteenth century found Marco Polo back in Europe, with his imagination fired by the wealth of Cathay. Only in the fifteenth century did the Portuguese, in the Moorish campaign, begin to suspect the sources of the wealth of the Moors in Africa and to project the navy that began to change geography. After India, it was natural that they should gaze farther East, and 1510-12 found Java and the Spice Islands at the horizon of European adventure. It was not till 1595 that the Dutch came to contest the conquest, and, though in turn harassed by the Spanish, French, and English, with characteristic stolidity there they have remained.

Just what causes the student of colonial expansion will ascribe to the failure of the Dutch in Java are uncertain. Confronted by the vagaries of nature—for the islands have never forgotten their volcanic origin—and overcome, first, by the problem of dealing with all the races of the East confined in a small area, and, secondly, by the fatal inertia that assails the Teuton phlegm in the tropics, the Dutch occupation records the failure of the European in the Malay archipelago. The notable exception is Singapore, obtained by the British in 1819, and since developed by British and Chinese industry to its present strategic and commercial importance.

That the tourist is rewarded by including them in his itinerary the author of this book has successfully shown; but it is principally by the romance engendered by Marco Polo, Magellan, Da Gama, and Drake that Java and her neighbors invite attention. A happy hunting ground for the naturalist, as Wallace has testified, these islands may still fulfil a destiny; and, as Mr. Walcott suggests, that destiny will only be realized if, after her awakening, China looses her dragons of industry and patient exploitation. Under the Dutch, thanks to prodigal Nature, Java challenges only fitfully a commercial interest.

While the subject barely enters the province of a book of this nature, yet it is to be desired that an archæological history of the ruins of Central Java may soon be forthcoming. What Fergusson did for India remains to be done for Insulinde, or "Island India," where the temples and remains of successive Buddhist, Hindu, and Mohammedan cultures are falling into decay.

Notes

Paul Elder & Co. announce the forthcoming publication of "As If," by Cora Lenore Williams, and "Bamboo," by Lyon Sharman.

The Macmillan Company will publish shortly "The Establishment of State Government in California," by Cardinal Goodwin, and "The Psycho-Pathology of Everyday Life," by Sigmund Freud.

"The Corner-stone of Education: An Essay on the Home Training of Children," by Edward Lyttleton, will be published in the autumn by G. P. Putnam's Sons.

The Century Company announces for publication in the autumn the "Complete Poems" of Dr. S. Weir Mitchell.

Ten years ago, the *Nation* characterized Prof. James Albert Woodburn's "Political Parties and Party Problems in the United States" (Putnam; $2.50 net), as "a useful, though not a great, contribution to the literature of American politics." The same description may be applied to the revised edition that has now appeared. We also noted that the table of contents gave no hint of the three parts into which the work fell. That omission is now supplied. The new matter, running to 170 pages, is mainly found in the first part, An Historical Sketch of American Political Parties, and the last, Ethical Problems in Current Politics, the middle part, American Party Machinery and How It Works, covering little more space in the present edition than in the original. It is to be noted, however, that the characteristic political developments of the last decade, such as direct primaries, and the initiative, referendum, and recall, are considered in the third part of the book. Logically, the subject of direct primaries seems to belong with that of party machinery, while direct legislation is concerned rather with government than with parties. The chief merit of

the new edition is its careful attention to the political history that has been made since 1903, although it is rather surprising to find no mention of Parker's famous "gold telegram" among the instances of disagreement between a candidate and his platform. The episode of the Panama tolls exemption plank, in the last Democratic platform, and its virtual repudiation by the Administration is probably too recent for inclusion. The book would gain by condensation, and especially by the correction of a tendency to fervency, as well as by the omission of a crisp dismissal of a fundamental matter in the sentence: "There is no reason why a judge's opinion of our constitutional rights and powers should be meekly submitted to by everybody else."

A book of another sort on politics and government is Prof. Charles A. and Mary Ritter Beard's "American Citizenship" (Macmillan, $1 net). The authors' excuse for adding it to the large number of its rivals is that it attempts to be both formal and "sociological," in contrast with the one-sidedness of most other texts. Their utilization of both kinds of material may be realized by reference to the list of illustrations, which include A Little Mother, An Event in the Lawrence Strike of 1913, and President Wilson Reading His Message to Congress. The book has three parts, entitled Human Needs and the Government, The Machinery of Government, and The Work of Government. The specific purpose of the volume is given as furnishing an invitation to teachers to introduce the subject in the first instead of the last term of the high school, and to devote to it more attention than it now receives. The book is adapted to use by teachers by various devices, such as topical analyses, lists of questions, and references for additional reading for each chapter.

The initial volume of the American College and University Series (Oxford University Press; $1.50 net), under the general editorship of Prof. George Philip Krapp, of Columbia, has to do with the institution on Morningside Heights. It is written by Dean Keppel. The book makes no pretension to originality of investigation, and frankly takes the standpoint of an observer from within. This spirit of partisanship, however, is not allowed to control the author's judgment to the extent of making him praise everything that has ever happened at Columbia. The story might have been told without comment, but this volume takes up even so delicate a matter as the recent animated discussion on the organization of Columbia. On the whole, this personal element adds interest to the tale, without impairing its veracity. The book is less a history than a compendium. It would be hard to think of any important topic that is not included in it, from endowment to the Early Eighties, and these topics are not merely named to be dismissed with a perfunctory word, but are handled with unflagging interest, however concisely. The tale of development never loses itself in statistics. Only the first chapter and the one next to the last are chronological rather than topical; the first traces the story from the beginning to the death of Barnard; the other, entitled An Academic Year, follows the round of events from the opening of the Summer School to commencement. One is left with the impression that Columbia has come up through great tribulation, but that it has arrived, and knows it. The book is an index to this progress.

Gladys E. Locke's "Queen Elizabeth" (Boston: Sherman French; $1.35 net) will prove an excellent antidote to those writers who tend to minimize the personal side of the great Queen's reign, and restrict their researches to such topics as the development of conciliar government, the progress of parliamentary privilege, and the beginnings of fen-drainage. It is a collection of historical anecdotes, rather than a biography; but the stories are well selected and well arranged, accurately told, and for the most part founded on trustworthy sources of information. There is no parade of learning, footnote, or bibliography; but a careful examination of the text will show that the author knows her subject. Elizabeth's "political flirtations" naturally occupy the centre of the stage; there are excellent chapters which deal with her visits to Oxford, with the insubordination and condemnation of Essex, and with the long delays over the signing of the warrant for the execution of Mary Queen of Scots. On the other hand, such sentences as "The country was governed wholly by the Queen, with the advice of her Ministers, and Parliament had purely legislative powers" (p. 272), indicate that there are many phases of Queen Elizabeth's reign of which the author has no conception at all. It is, however, unfair to judge this book by its few excursions into fields of which the author does not pretend to be cognizant. Those who read it for what its sub-title ("Various Scenes and Events in the Life of Her Majesty") implies will be amply repaid for their pains.

Students of Canadian economic history will welcome Mr. Gustavus Myers's "History of Canadian Wealth" (Chicago: Kerr; Vol. I) as an excellent survey of the growth and distribution of wealth in the Dominion, the more so as the literature of the subject is somewhat meagre. It will surprise even well-informed readers to learn that "it is estimated less than fifty men control $4,000,000,000, or more than one-third of Canada's material wealth as expressed in railways, banks, factories, mines, land, and other properties and resources." In this first volume of his history the author traces the influences, legitimate and otherwise, which have tended to concentrate the wealth of the country in the hands of a small group of capitalists. He discusses in a clear and interesting way the development of the fur trade, both under the French régime and after the conquest, and traces the vital connection between the great fortunes amassed in fur trading—the earliest phase of Canadian wealth—and the subsequent investments in railway enterprises, land companies, banks, mines, and factories. A series of chapters are devoted to the inception, development, and concentration of railways, and the influence of the enormous land and money subsidies granted by the Federal and Provincial Governments from time to time. The history of the growth and centralization of Canadian banks and industrial concerns is reserved for the second volume, not yet published. It is interesting to note that, apart from the consideration of native Canadian capital invested in Canadian enterprises, approximately $2,000,000,000 of British capital has been placed in the Dominion, as well as about $140,000,000 from various Continental countries, and $500,000,000 from the United States.

Emile Faguet's *précis* of the literatures of the world, a companion volume to his survey of philosophy, has been rendered into English by Sir Home Gordon ("Initiation into Literature"; Putnam; $1.25 net). It is a work which does neither the Academician nor his translator credit. M. Faguet tells us in his preface that the summary outline is "designed to show the way to the beginner, to satisfy and excite his initial curiosity." Its obvious difficulty from this point of view is in using critical terms beyond the beginner's comprehension. As a reference handbook, moreover, it is ill-proportioned, inaccurate, and full of debatable judgments. In spite of the fact that special additions were obtained for the English version, French literature receives unconscionable space—twice as much as Greek. The reader wonders why to Waller alone should be allotted as much attention as to Bacon, Sidney, Lyly, and Burton together; why Habington should be mentioned, but Smollett and Arnold omitted; why Brunetière should have more space than Shakespeare—who is called a possible collaborator of Bacon's! Wieland is scarcely the Voltaire of Germany, as M. Faguet thinks, nor is it just to dismiss Thackeray with the single phrase, "supreme railer and satirist." Withal, the topical form of the book permits no attention to the march of ideas or the growth of literary forms. Frequent typographical errors bear out the general impression of carelessness.

More fitly might "an epigrammatic history of philosophy" describe Emile Faguet's "Initiation into Philosophy," which has been translated by Sir Home Gordon (Putnam; $1.25 net). Like so many French writers, both in philosophy and in literature, M. Faguet is too transparently clear to be always quite convincing. That Plato was a kind of rhapsodist, who, from motives animistic, translated the Greek gods into ideas; that Aristotle was predominantly a rather prosy man of learning; that the Epicureans were, first of all, lovers of wisdom; that Cartesianism was founded upon a belief in God; that Berkeley was a high and dry idealist, and that Kant reconstructed all philosophy by basing it upon morality—these are statements which few students of philosophy would care to make without at least an explanatory foot-note. As summary characterizations they are misleading, and the layman who adopts M. Faguet's "Initiation" as a "frame" is likely to be in difficulty when he tries to mount the picture, though the book may conceivably "excite his curiosity." The fact is that a detailed historical initiation into philosophy cannot very well be compressed into two hours' reading.

With the publication of its "Narratives of the Indian Wars, 1675-1699," edited by Dr. C. H. Lincoln, the series of Original Narratives of Early American History (Scribner; $3 net) has attained the dignity of fourteen volumes, in itself a veritable library of early American history. At least four more volumes are to appear; on the witchcraft persecutions, the insurrections of 1688, the early Northwest, and the early Southwest, bringing the number to eighteen. Further plans have not been announced. The present volume deals exclusively with the Indian wars in New England, a limitation in the subject-matter that might well have been noted on the title page, and covers in largest part that general Indian rising of 1675 and 1676, which is known as

King Philip's War, but which involved a number of outlying outbreaks with which Philip had nothing to do. The last number in the volume and the longest narrative is Cotton Mather's "Decennium Luctuosum," or Sorrowful Decade, which was first issued in 1699, and in 1702 incorporated as a second edition in an appendix to the "Magnalia." This famous text, as is well known, covers the years from 1686 to 1699, and concerns the long-drawn-out and sanguinary struggle which the New England settlers carried on with the Abenake tribes in the territory of the present State of Maine. This conflict, here narrated in Mather's inflated and intricate style, lasted with but few breathing spells from the beginnings under Sir Edmund Andros in 1688 to the final settlement, made not in America, but in Europe, the peace of Ryswick, when Frontenac informed the Abenake that France would withdraw from the struggle. The most graphic of the narratives is that in which Mrs. Rowlandson describes the experiences of her captivity after the assault on the town of Lancaster in 1676. Her tale of suffering through several months is a thrilling one, and Dr. Lincoln has made it possible to follow the wanderings of the Indians and their captives by including a map of the several removes from Lancaster, Mass., to Chesterfield, N. H., and return, taken from an earlier edition of the narrative. For the purposes of this work, we think that most of Mather's irrelevant and uninteresting digressions might have been omitted, and we are a little surprised that the editor has not seen fit to mention anywhere in his notes Sylvester's "Indian Wars of New England," a history of many faults but of some unmistakable merits.

Mr. John Pyne's rendering of selections from the Divine Comedy in "An English Dante" (New York: Boni; $1 net) in what purports to be "the original rhythm and rhymes" raises the question as to whether the Italian *verso piano* is at all adapted to long poems in English. It is our impression that the English feminine verse tends to be slow in movement, and that it is at its best in a very narrow range of moods. Its limitations become apparent when we observe that, in spite of Mr. Pyne's ingenuity, out of 221 lines from the Comedy, 129 end in *-ing* and a large portion of the remainder in *-ed* or *-er*. The net result is that the supple and vigorous *terza rima* of Dante takes on the monotony of a mediæval French *laisse*. Doubtless, some success might be obtained for the whole poem in using Dante's rhyme scheme, but that the imitation should not be pushed to the extent of taking over the *verso piano* is evident from the translation of the Francesca episode by Mr. Pyne, which borders closely on absurdity. Why attempt to follow "the original rhythm and rhyme"? Rhyme and metre are the superficial elements in verse. It is quite possible, as Mr. Pyne illustrates, to keep these questions so carefully in mind as to miss the more vital problems of thought and feeling.

"Modern Cities," by Horatio M. Pollock and William S. Morgan (Funk & Wagnalls; $1.50 net), is a collection of facts regarding the "progress of the awakening for their betterment here and in Europe." The inferences that the authors draw from these facts are apt to be either superficial or doubtful. One is not convinced that there was a close connection between the mismanagement of English cities before the Municipal Reform Act of 1835 and our own civic corruption, although an appendix of thirty pages is given to the details of the misgovernment of the English cities. The book is written with better balance than some works on city planning, since it insists that efficiency as well as beauty must be considered in any such plans. More authoritative and detailed, although not technical, is Frank Koester's handsome and handsomely illustrated volume, "Modern City Planning and Maintenance" (McBride, Nast; $6 net). Mr. Koester speaks as the expert, whether dealing with that commonplace of discussion upon city planning, the civic centre, or such matters as arterial highways, harbors and bridges, traffic regulations, or instruments of civic culture. The extent and the tendency of the city-planning movement in this country are indicated by the description or the pictorial representation of important features of fifty American cities. Like all writing on the subject, the book points to Germany as the model. That it is possible to overpraise even German cities was shown by a German city planner, Dr Werner Hegemann, in an article in a recent number of *Landscape Architecture*.

It is hard to see why there should be a scarcity of good short stories. Certainly it is not because of a lack of books to tell how they are written. The latest of these is "The Art of the Short Story" (Scribner; $1.25 net), by Carl H. Grabo. Mr. Grabo, who is an instructor in English in the University of Chicago, goes into his subject with thoroughness, analyzes the best short stories, and presents you with his conclusions well fortified by arguments. How much anybody who yearns to write short stories can learn from the book is a problem. The author says some pretty obvious things in a serious fashion—as when he declares: "The writer upon the supernatural does not set his story in the middle of Broadway on a sunny afternoon. He seeks mysterious houses, lonely situations, night-time, and other appropriate circumstances." Nevertheless, "The Art of the Short Story" is an interesting book to any one who has ever experimented with that literary form. And does not that include nearly all of us?

Attractive both as a title for a book and as a plan of travel is "Unvisited Places of Old Europe" (Philadelphia: Penn Publishing Company; $2.50 net). The author, Robert Shackleton, tells how the inspiration came to him when he was greeted by the hostess of the inn at Liechtenstein with the words, "You are the first American to enter this principality." To find himself the original transatlantic discoverer of a free and independent principality, tucked in between Switzerland and Austria, and one which has enjoyed its present polity for two centuries, so kindled Mr. Shackleton's enthusiasm that then and there he resolved to wander over Europe looking for fresh worlds to conquer. He has not always been a pioneer; indeed, in most cases his discoveries have probably been anticipated by the ubiquitous Mr. Cook, but he has wandered into nooks of the old world that are not commonly visited by the casual tourist from this country, and he possesses the gifts of sympathetic appreciation and of picturesque description. The Scilly Islands are less unknown than Mr. Shackleton seems to assume, but the minor perils of the deep, which, in the stretch of water that separates Scilly from Land's End, are apt to be particularly distressing, undoubtedly act as a check on tourist curiosity, and the pleasant style of the opening chapter devoted to this tropical corner of England is ample justification for its inclusion. If the triumph of the discovery of Liechtenstein was never quite repeated, its inspiration at least served to take Mr. Shackleton through some interesting byways of Europe, and the tale of his travels is pleasantly told. If the author cares at any time to embark on another European expedition, he will be able to find many more places as unexplored as those he has described, and we shall wish him well of his undertaking and enjoy the subsequent account of his discoveries.

It is the fashion in these days to refer rather contemptuously to the writings of Samuel Smiles, which had such a large circulation a few generations ago. Allusions to his "bourgeois doctrines of success" have at last brought a protest from a grandson of his, in a letter to the London *Times*. Three of his books, it is pointed out, dealt entirely with the lives of men who were very poor in this world's goods—Jasmin, the barber poet; Robert Dick, the baker geologist, and Edwards, the cobbler naturalist. The titles of "Duty" and "Character" speak for themselves as to the author's ideals, "and every self-made man of whom he wrote," says the grandson, "did something, apart from the mere amassing of money, to better the world."

Mr. R. Sutherland Rattray's "Hausa Folklore, Customs, Proverbs, &c." (Oxford: Clarendon Press; 30s. net) has several features of special interest. His long residence in West Africa, some time as Assistant District Commissioner, his acquaintance with the Hausa language (he is a qualified interpreter), and his study of social anthropology at Oxford gave him a special fitness for the task of editing Hausa writings. He was fortunate enough also to obtain the services of a learned Hausa (a *malam*), who knew Arabic as well as his own language, and had collected hundreds of sheets of manuscripts written in Arabic; some of these the *malam* translated into Hausa, adding material from his own knowledge of his people. We thus have a genuine Hausa document, written in the dialect of Kano or Sokoto, which is held to be the purest, and untouched by outside ideas; the text is transliterated and translated into English by the editor.

The stories appear to rest on a fund of old animal-tales, whose characteristics are in general identical with those found elsewhere in savage Africa and in North America; there is much coarseness (reflecting current customs); the animals speak and act like human beings, the central figure being often one of small size (the spider, for example), who outwits the hyena, the leopard, and the lion. The customs of marriage, circumcision, burial, and trading are described at length, these belonging to the later settled life. Art is represented by metal casts, skilfully done. Traditions relating to the origin of the people are, naturally, of small historical value. The manuscript edited by Rattray has linguistic importance. The editor calls attention to its clearness and its minute correctness. He is able, by its testimony, to establish the existence of the definite article and other grammatical forms hitherto declared non-existent, and certain idioms hitherto unknown. He properly insists on the necessity of a thorough knowledge of the

Hausa writing for any advanced study of the language. And for various reasons, study of the Hausa people (who have long been Mohammedans) should commend itself to persons interested in Central African, particularly Sudanese, life. The editor has added notes explanatory of words and customs, and Mr. Marett, his teacher in Oxford, has contributed a commendatory preface. Mention must also be made of the beauty of the Arabic characters (which are provided with the necessary Hausa diacritical points) and the general excellence of the printing. The two volumes furnish rich material for future investigations.

NOTES FROM ABROAD.

The office of Public Trustee was instituted as recently as 1908, but the demand for that official's services has been so great that he already controls more capital than any other single person in the United Kingdom. His investments exceed $205,000,000. He is probably the biggest railway shareholder in England, for his holdings in home railways amount to more than $40,000,000. Yet the Public Trustee himself is directly responsible to no Minister in either House of Parliament, and those of his staff, receiving over $250,000 a year in salaries, are not members of the civil service. The fact is that, when the office was established, no one suspected that it would ever be more than a comparatively unimportant bureau. In view of the responsibilities and powers that are now seen to be involved, a demand is being made for the reconstitution of the Public Trusteeship as a recognized branch of the civil service under the supervision of an official board.

The international congress of the Salvation Army just held in London brought out many evidences of the approval with which its work is now regarded by the British public. Its parade through the streets of the West End to Hyde Park was greeted with so enthusiastic a welcome that it became nothing less than a triumphal procession. Note has been taken of the fact that, although the *Times* persists in its custom of referring to the head of the organization as "General" Booth, the official *Court Circular*, in recording his audience with the King, gave him his military title without inverted commas.

The force of habit is illustrated by the announcement that T. P. O'Connor, M.P., has ceased his connection with *T.P.'s Weekly*, and will be starting a new paper in October. The change has no serious meaning. It is only one of T.P.'s little ways. He has successively founded the *Star*, the *Sun*, the *Weekly Sun*, *M.A.P.*, and *P.T.O.*, and in each case has got rid of his bantling before it was out of its teens. It is really not as an editor, but as a popular writer that he excels. His style, though hurried and slovenly, is exceptionally picturesque and vivid. He has made descriptive reporting almost a fine art, and he has applied this gift successfully to book reviewing, usually making his notices much more "readable" than the books themselves. He has gained in England a large following of readers, who devour with avidity everything that is signed "T.P."

The Welsh National Library, now in course of erection on the crest of a hill overlooking Aberystwyth, is arousing as much enthusiasm throughout the Principality as the earlier movement to provide Wales with a University. In the mining valleys the colliers are setting apart small sums from their weekly wages, as contributions to the Library funds. Quarrymen, agricultural laborers, and working masons are apologetically sending in half-crowns by postal order, with regrets that they are not able to afford more. Gifts of treasured volumes are also arriving from humble homes. By the inclusion of Wales within the Copyright act, the new Library will share with the British Museum and a few other collections the right to claim a copy of every new book henceforth published in the British Isles. It has already acquired several sectional libraries of unique value to students of Welsh history and antiquities.

In Holland plans are under discussion for a wireless connection between the motherland and its East Indian colonies. Up to now the Dutch, in their telegraphic communication with Java and the other islands of the Malay archipelago, have been dependent mainly on the English submarine cable via the Cocos or Keeling Islands. For reasons both of independence and of economy, a national wireless service would recommend itself to the Dutch. Professor Van der Bilt, of the Polytechnic University of Delft, who is its chief advocate, predicts a decrease of the tariff by thirty per cent., if a radio-telegraphic connection with Java were established. The intermediate stations suggested by Professor Van der Bilt are Tripoli, Eritrea, and Ceylon. The plan is not unlikely to be realized in the near future.

The same cannot be said of the scheme brought forward by another Dutchman, Mr. Heringa, who, in a book, entitled "Electrisch Wereldverkeer" (Electric World Commerce), advocates the institution of an International Telegraph Board, which should be independent of any separate Government, and the neutrality of which would have to be secured by international agreement. The principal advantage of an institution of this kind would be the guarantee of an undisturbed telegraphic service in time of war, as every line and cable would be considered the property of a neutral body, with whose interest that of each individual Government would be bound up. As an example of how the international board would have to be organized, Mr. Heringa quotes the institution of the International Danube Committee, by the treaty of Paris of 1856, whose task consisted in regulating the free traffic to and from the mouth of the Danube, and in seeing that the sanitary regulations were strictly observed. Mr. Heringa's book deserves the attention of all who take an interest in international legislation and affords an interesting subject of discussion for future peace conferences to be held in the New Peace Palace at The Hague.

The Dutch are beginning to show an unusual interest in the home life of their great men of the past. They have restored Rembrandt's house in Amsterdam to its supposed original state; they have done the same with the humble dwelling of Spinoza in the little village of Rijnsburg, near Leiden, where almost the entire library which the philosopher is known to have possessed can now be consulted, and there is every chance that soon another house, rich in literary associations, will be added to the number of historical homes. This is the country-house Hofwijk, at Voorburg, near The Hague, which the poet Constantijn Huygens, private secretary of three consecutive princes of Orange, had erected, about the middle of the seventeenth century, as a quiet retreat from state affairs. He was a man of great gifts, poet, dramatist, musician, and statesman. His skill in versification he showed as a translator of John Donne, whose quaint mode of expression he successfully imitated. By the inhabitants of The Hague he is, perhaps, best remembered as the man to whose initiative they owe the laying of that famous avenue which connects their town with the neighboring Scheveningen. But the name of his family was carried far and wide beyond the frontiers of his country by his great son Christiaan, the contemporary and correspondent of Sir Isaac Newton, whose equal he was in the knowledge of physical science. The memory of father and son could not be honored in a more suitable manner than by turning the old country-house, where they both so often stayed, into a place of pilgrimage for Dutchman and foreigner. The house is offered for sale, and a committee has been constituted for the collection of the necessary funds.

Science

THEORIES OF MATING.

The Courtship of Animals. By W. P. Pycraft. New York: Henry Holt & Co. $1.75 net.

In a volume of three hundred pages Mr. Pycraft has given us an excellent account of his subject. In an introductory chapter he briefly discusses the nature of life, emotions, the beginning of sex, secondary sexual characters, and "hormones." He then considers actual courtship in the animal kingdom, beginning with primitive man and the higher apes, and descending through the scale of life from deer and lions to whales and then to birds, reptiles, fishes, insects, and spiders. In addition to this general treatment of the subject are two chapters of especial interest on account of their semi-philosophical point of view, The Sexual Selection Theory as Applied to Birds and Parthenogenesis and its Sequel. While the facts of courtship are narrated in an interesting way, their collated origin is apparent throughout, the freshness of first-hand observation being lamentably absent, as in the author's previous volume on the "Infancy of Animals."

Little comment is necessary on the introduction. The dramatic demand for widespread sexual knowledge is as unnecessary in a volume of this kind as it is weakly argued. As a résumé the account is good. The views of Darwin, Wallace, Weismann, and Lloyd Morgan are clearly set forth with brief discussion, in language adapted to the layman. Full credit is rightly given to Mr. Howard for his recent study of the courtship and other phases of the life of British Warblers; indeed, Mr. Pycraft has dedicated his book to this trained observer.

One of the most radical assertions of the author is a refutation of the commonly accepted theory that the courtship of animals

in general indicates a desire for offspring. "Amorousness, a word with a deep meaning, was, and is, the underlying factor which shaped, and is sustaining, human society; and is no less powerful among the beasts that perish. The motive force in this has not been the desire for offspring, but for the satisfaction of the elemental animal passion, the gratification of the purely sexual emotions which at their height are irresistible." Mr. Pycraft is correct in this statement, but merely shifts the problem to other ground. For though in many mammals and birds the early desertion by the male and a return to solitary life merits the above assertion, yet in the vast majority the care of the female and later of the young throughout their period of helplessness demands recognition either of altruism or of tropisms of very different calibre from the earlier impelling force. This new point of view is, however, one of the most significant which the volume offers, and is worthy of much more detailed discussion than is accorded it.

A considerable amount of space is properly devoted to birds, from the intricate visual and audible display of the peacock to the simple efforts of plain little warblers. Throughout the volume we are impressed with our ignorance of the whys and wherefores of courtship. After consideration of the marvels of plumage of the male birds of paradise, the author rejects environment and sexual selection as explanations. His creed is summed up in a single paragraph:

The ornamental crests and frills, and the vivid hues which so many birds display, have not arisen, as is generally supposed, as a direct result of the selection, by the females, of the most vividly colored, or ornamented, from among a number of suitors presenting varying degrees of intensity in ornamentation. Such "frills and furbelows" are to be regarded as "expression points" of internal variations in the germ-plasm, which have been free to develop along their own lines because they have not proved in disharmony with the conditions of the birds' environment. Their development is to be traced to the stimulating action of the "hormones" which control both pigmentation and structure, as is shown by the fact that both are modified by any interference with the glands in question. Such ornamental features then are the concomitants, not the results, of sexual selection.

The author very reasonably explains "hen-feathered males" as a despecialization of the masculine plumage, a reversion not to the female type, but to that of the juvenile male. This leaves "cock-feathered hens" as great a mystery as ever.

Mr. Pycraft's book is an admirable review of the general facts of courtship, and although his constant reliance on "hormones" or gland secretions for the explanation of phenomena merely begs the question, yet his correlated dismissal of the theory of æsthetic selection is a welcome advance. The treatment is as thorough and convincing as could be expected from a museum scientist. The illustrations are numerous and well chosen.

Drama

FRENCH DRAMA EXTRAORDINARY.

"L'OTAGE" OF PAUL CLAUDEL—A MINGLING OF LITANIES AND MELODRAMA—FRANCIS JAMMES.

PARIS, June 16.

It means something in Paris that the director of the State Theatre of the Odéon should take over a piece from one of the "little theatres," even to end his season. This is what M. Paul Gavault, himself one of the year's successful playwrights and the successor of novelty-hunting Antoine, has done with "L'Otage" of Paul Claudel. A whole generation ago Ibsen and Maeterlinck were introduced to Paris on similar small stages, which have their chosen public ready for any experiment. Neither has lasted in the great theatres to which they migrated for the general public, not even Maeterlinck—for the lights and decorations of the "Blue Bird" and Debussy's music set to "Pelléas et Mélisande" belong to other arts than the drama. It is likely to be the same with Paul Claudel, for the deep impression he has made belongs in large part to something that is not drama—and yet he shows dramatic qualities more than enough for the ordinary play. Meantime, an articulate part of Young France attributes to him nothing short of a mission for the moment and the environment and the race.

Robert de Flers, who is the most successful playwright of ordinary French drama, both for home and foreign consumption, says:

"The Hostage" threw me into a great state of amazement and melancholy. A few rare flashes, very vague and fleeting, and we soon fell back into frantic lyric talk of terribly over-excited personages. . . . (Yet Paul Claudel) has the vehement and exclusive admiration of the greater part of our young *littérateurs*.

Léon Blum, a reputed critic, adds, with the approval of M. de Flers:

The piece has only six scenes, two for an act. But amid these ample dialogues the system of ideas symbolized by each one of the heroes extends its front in regular and magnificent array. The drama advances like a religious procession, alternating words and responses as in a liturgical chant. It is written in language entirely original, at once rustic and subtle, archaic and innovating. From truculence as of Rabelais the tone passes to a sort of sacred emotion. In character work as in the invention of imagery, turn by turn we feel lyric ideality and strong reality, with a stout tether to earth. He that conciliates within himself such contradictions is at any rate a true artist.

After this, we are not surprised to hear from J. Ernest-Charles, who, being of the preceding generation, should be an antipode of Paul Claudel:

To speak clearly, these works seem to me better made for reading than for representation. . . . I am very sure that "The Hostage," turbid though it be at moments, is a very vast work, and a very eloquent tragedy. There is hardly another wherein the heroes live an intenser extraordinary life.

It is needful to bolster with like authorities any account of a work whose author is unknown to English readers, who lives in Germany and has a native Paris following, and whose complete works are already issuing from the press. This is the first general attention called to him as a playwright, though his "Annunciation to Mary" was given a year ago and "The Exchange" at the beginning of this season—always in these initiating little theatres of Paris. His art is, indeed, sorely puzzling at first acquaintance to foreigners not hitherto observant of this movement of a distinguished number of French intellects and hearts.

It is the everlasting return of race to its heredity after strain of revolution. Whether the movement will remain for the most part literary and artistic and limited to few, like that of Ruskin and Rossetti, or will go on to religious practice, as with those who followed Newman, time must shortly tell. Melchior de Vogüé's "new spirit," which he brought in with Tolstoy, and Paul Desjardins's "moral union" endured only for a political party's dream of "appeasement." This new "reaction" is far more thorough than either sentimentally; and, although it speaks from the stage of little theatres and in books of small sale, and not from an Oxford University church, like Newman, it is chief among that talk of faith by the new generation which, in his own words, sets Anatole France's teeth on edge.

There can be no doubt of the great beauty and emotion piercing through this new play of Paul Claudel. Even Robert de Flers, who speaks from Babylon, cheerfully confesses his feeling that "the thought is always very beautiful and very high, and able to find expression that sends its rays into our minds."

Napoleon is nearing his first fall and has ordered that the Pope—his "Hostage"—shall be sent to a safe fortress. Georges de Coûfontaine gets possession of the order and of the Pope, whom he intends spiriting away to England for the benefit of his Bourbon king in exile. The Pope, whose soul is above emperors and kings, refuses to go anywhere except to his own place, which is Rome. And here enters the play's representative of the New France in soul and honor and all the rest—Baron Turelure. He is Napoleon's Imperial Prefect, and he has guessed the secret presence of the Pope in the château of Coûfontaine, which has been bought back and restored since the destruction of the Revolution by Sygne, who is Georges's cousin and the piece's heroine. She represents Old France and Christian tradition; and, unless she takes Turelure for her husband, he will seize the "hostage"—the Pope she is hiding.

Sygne revolts in every fibre of her being. Then enters a somewhat uncertain Christ in the person of the simple priest of her parish. The critics, who very certainly are

not authorities in casuistry, find the scene and its dialogue, which is all but a liturgy of the coming sacrifice, "most magnificently Christian."

Sygne becomes Baroness Turelure, and the Pope gets away to Rome. The Allies appear before Paris, and Turelure blithely lets it be known that he will betray Napoleon, for whom he holds Paris in charge—on conditions. The Bourbons' envoy is Georges de Coûfontaine, and the negotiation is not easy—for Turelure holds out for this much of Revolution, whose son he is. The restored King must be a constitutional and not an absolute monarch, as the tradition of Old France would have it. There is another condition in which Sygne has to do the negotiating.

It should be said that Georges has lost his children, and his wife has left him. He expresses all that his cousin is to him:

> Oh! from head to foot you are a Coûfontaine and I can talk with you; and there is no feature or manner in you which I do not understand. And you have only to turn your head and there are as many images of ourselves in you as once there were portraits in the gallery of our château.

Turelure's final condition is hard. Georges must not only make the sacrifice of his principle loyal to an absolute king; he must transfer the name of Coûfontaine and all it means to the baby Turelure. Has not Sygne sacrificed her love and happiness? It is his turn.

In ultimate revolt, Georges draws his pistol against the aggressor of his King and of his own flesh and blood; but Turelure is too quick and kills him with a ball that finishes Sygne as well. As she lies dying, Turelure, who is after all her husband, pleads for pardon—but she will not even see the priest, lest he insist that as a Christian she must forgive.

This mingling of litanies and melodrama forms a more truly dramatic piece than the more poetic "Brebis égarée" of Francis Jammes. He, too, is a leader of the new movement, and he also lives far from the madding crowd of Paris in his native town among the Pyrenees. His "prologue or Gospel paraphrase" is the dialogue of a parable to frame and sustain a drama of unhistoric lives in our every-day world. It is verse which Rossetti might have signed, archaic like stained glass and easy of understanding. The "Lost Sheep" and the "Unfaithful Wife" alternate in it for more couplets than can be given here:

. . . . . .
—There was a sheep wandering far from Paradise.
—And a poor wife with evil in her soul.
—The sheep strayed and was lost in the valley.
—And the wife went to the sunshine of Spain.
. . . . . .
—The sheep left shepherd and dog and lamb.
—And the wife left her husband and her babes.
—And to emptiness the lamb held up its mouth.
—She came not when, in the night, the children asked for their Mother.
—Alas! alas! nothing to do when one wills to stray.
—How hard you make your heart! How you tame your sorrow!
—The mountain smelled of flowers and the brook of curds and milk.
—And Spain had the warm fragrance of love.
. . . . . .
—The poor robe God gave me was soon spotted with mud.
—And my cheek wrinkled and then changed its color.
—I saw I soiled the snow I trod.
—I saw pity in my lover's eyes.
. . . . . .
—I dreamed of my lamb and the dog and shepherd.
—And I of my children, I away, putting their light out alone.
—I thought of the tooth my lamb shows in sleep.
—O sovereign wretchedness of one a lover and a mother.
—O desire for home of the straying sheep!
—I was in the depths of Spain, but God crosses mountains.
(The Wife):
—The good God came and His feet were bare.
—In His hands the flower bled, which I had not found.
—In His feet—and calling me—was my children's mouth.
. . . . . .
—He has let my hair fall about his piercéd feet.
—Lead back to the shepherd's fold the sheep sore wounded.
—Bring back to her husband one that trembles and faints.
—But there were butchers saying—It must be killed.
—And women Pharisees were saying—She's but a dog!
—Then the Lord entered the shepherd's heart.
—Then Jesus Christ entered the husband's heart.
—And He said to butchers—I have come to seek it.
—And He said to evil ones—I have come to save her.
—And he said to butchers—Which of you has never fallen?
—And he said to evil ones—Which of you has never sinned?
. . . . . .
—Come back to the fold, never to stray again!
—Come back to the sorrowing home, to light its fire again!

The Wife, in twenty-seven more of these unusual couplets, tells the Gospel lesson of the very literal prose play that is now to be acted to the new "generation at the horizon."

—Over and over you must say—Spite of mock and laughter—
—You will not be happy, living far from God!

S. D.

Two more volumes, "The Misanthrope" and "The Miser," have been added to the translation of Molière which Putnams are publishing for Prof. Curtis H. Page ($1 net). The former is in blank verse; the latter, following the original, is in prose. In both the style is spirited and competent. In his brief introductory note to "The Miser" Professor Page well remarks that Molière is here "superior to his predecessors and to his followers by the overflowing power of his comic spirit. This is sometimes hardly appreciated in the reading of the play, but it always comes out with dominating force on the stage. Scenes like that of the memorandum, or 'without a dowry,' never fail of their effect; nor do those between father and son, or that of the lost strong-box, where comedy that is almost farce still seems only a step removed from tragedy." That is sound criticism, and suited to its place.

The works of the renowned Rabindranath Tagore are coming out with almost bewildering rapidity, the last to appear being a drama of mixed sentiment and humor named "The Post Office" (Macmillan; $1 net). The hero, a little adopted boy, is ill, dying in fact, and the doctor has ordered that he shall not be permitted to go out of doors or breathe the fresh air of nature. Various people pass his window, whom he questions in naïve wonder about the great outer world. One of them, the Watchman, tells him that the building opposite is the Post Office, and that through it the King sends little letters to children. Hence the name of the play; and hence the dénouement is easily guessed. Through an enemy the King hears of this gossip, and sends his court physicians to the boy—but the healing is death. The scenes have something of that affected simplicity which passes with so many people to-day for profundity, but they are very slight and will scarcely add to the author's reputation.

Music

One of the novelties to be heard in London this year is "The Golden Cock," the last opera of Rimsky-Korsakoff, which he did not live to complete.

Mascagni and Leoncavallo owed the success of their two popular operas largely to the fact that they came at the psychological moment as a sort of protest against the excessive length of the operas of Meyerbeer and Wagner. A few German composers profited by the lesson. The latest of them is Felix Weingartner. His "Kain und Abel" is the condensation of a three-act opera into a one-act opera. His mind was busy with the subject for a quarter of a century, and the libretto is as much his own as the music. The first performance, under the composer's direction, lasted only an hour and a half. After it he conducted his third symphony, which was of course, a huge mistake. The climax of the opera suggests "Die Walküre," and altogether Dr. Leopold Schmitt, of the Berlin *Tageblatt*, found this work conceived even more in the Wagnerian style than the operas of Humperdinck. Nevertheless, owing to its subject, "Kain und Abel" has turned out a dramatic cantata rather than a real opera.

Richard Wagner died a few months after the first performances of "Parsifal" at Bayreuth in 1882, and there is reason to think that the end was hastened by his exertions connected with the staging and rehearsing of the work, which, for a man of sixty-nine, were too exhausting. In all probability the "Parsifal" rehearsals accelerated the end of one of his chief apostles, too. Ernst von Schuch lived to conduct the first two performances of the opera in Dresden. His doctor prescribed absolute rest, but he refused to heed his advice, and thus fell an easy victim to pneumonia. He died at the moment when,

at the Royal Opera, the curtain rose on the sublime church scene in Wagner's "Meistersinger," which he himself had so often led during the forty-two years of his career as conductor of the Dresden Opera.

That Richard Wagner was as unhappy with his first wife (the actress Minna Planer) as he was happy with his second wife (Cosima, daughter of Liszt) is known abundantly from his autobiography and his letters to Minna, which have been printed. Of Minna's letters few have been given to the world. The June number of the *Forum* (Munich: Wilhelm Herzog) gives publicity to those written by her to the wife of the poet Herwegh. They are mostly of the year 1858-59, the time when "Tristan und Isolde" was being written. At that time Minna was furiously jealous of Mathilde Wesendonck, who is generally supposed to have been the "original Isolde"; and of this jealousy there are traces in most of the letters written to Emma Herwegh. In one of them she declares that no woman had ever been so grossly insulted by her husband as she had been. Her indignation was vented on the opera itself as well as on the woman who inspired it and the man who composed it. To her, Tristan and Isolde are "a loathsome pair." How little she understood of Wagner's achievements and ideals is shown by her referring, in 1861, to the "arias" in that opera (arias having been excluded on principle from all his operas following "Rienzi"). "Lohengrin" she understood. "I like this opera very much," she wrote. "In me he surely finds an ardent admirer of his early works; I feel as if I had helped to create them, since at that time it was my privilege to take care of him and assume all the burdens of domestic life. How very different this was in the last years that we lived together." As for "Tristan," considered purely as a work of art, she had no faith in it. While he was hard at work on the last act, in Venice, amid the tortures of ill health, she doubted whether that sort of thing (*solche Arbeiten*) would bring him luck. She hoped, however, that it would.

How Chopin composed, or rather improvised, his Funeral March is related in the Paris *Temps* by Jules Claretie in an article on the late painter Ziem:

At the burial of Ziem, Chopin's Funeral March—the march in the Sonata—was the dirge to which the mourners moved. And then I remembered that it was in Ziem's studio that Chopin had first composed it and under a kind of hallucination. Ziem and the frequenters of his studio were a wild and whimsical lot in those days, and on this particular evening they were amusing themselves with a half comic, half ghastly masquerade. Stripping the sheets from the beds and seizing any white wrapping upon which they could lay hand, they had improvised a ballet of ghosts, suggested doubtless by the phantoms of the nuns that rise from their graves in Meyerbeer's opera, "Robert the Devil."

Chopin, however, held aloof. He would not join in the frolic; he would not even smile at it. He was nervous and "shivery," and finally he sat down at the pianoforte, while the "ghosts" in their white shrouds gathered about him. They grew still, as his emaciated hands ran feverishly over the keys. Then he seemed to gather will and force; he played; and the fall of the notes was as the dropping of tears. The listeners did not renew their dance; they lost all zest for it. They did not move; they did not speak until Chopin ceased his playing and lapsed moodily into himself again. They praised him; they tried to carry him about the studio on their shoulders in honor of the improvisation; but he shook them off and went his way. The "Improvisation" was the Funeral March.

Art

Teachers and art-loving laymen alike will appreciate the English edition of the Furtwängler-Ulrichs "Denkmäler"—"Greek and Roman Sculpture" (Dutton; $2.50 net). The translation from the third edition, 1911, is excellently done by Horace Taylor. The volume is somewhat larger and heavier than the familiar German original, but there is compensation in a clearer type face. The abundant illustrative material remains the same. Furtwängler was perhaps the most stimulating writer of our time in his field, as brilliant as erratic. The necessary danger signals are set up by the collaborator, Professor Ulrichs, and the teacher may have something further to do in pointing out the difference between ingenious theory and proved fact.

A "History and Methods of Ancient and Modern Painting" (Dutton; Vol. I; $2.50 net), by James Ward, has the advantage of construing its theme broadly. The incidental polychromy of the Egyptians, Chaldæans, and Assyrians is the starting point. No attention, however, is given to the very interesting work in the neolithic caves. The succinct account of Italian fresco painting, concerning which the author has already written a book, is the best we have seen. For the rest the book is rather clumsily written, rarely cites authorities, and is padded out with general considerations of art history, which is occasionally inaccurate. The practicing artist seems to be chiefly in view. He may find a certain amusement and profit in a book the scholarly import of which is rather small. There are a number of illustrations. The second volume will carry the story from Cimabue to modern times.

With the fourth *Licferung,* plates 61 to 80, *Archiv für Kunstgeschichte* (Leipzig: Seemann) completes its first year. On the whole, it has been well maintained, but the number shows plainly the difficulty inherent in the very enterprise, that of finding a steady supply of meritorious works of art which are unpublished. Portraits rather hazardously ascribed to Hals, Licinio, and Palma are the most ambitious offerings. There is a series of mythological frescoes by Domenichino from the Lanckoronski Collection, Vienna. Of interest to specialists is a signed Birth of St. John, by Bugiardini, from Stockholm. The most impressive plate presents a contemporary marble head, artist unknown, of the militant Pope, Julius II. We believe the editors of this useful magazine would do well to offer fewer reproductions, from originals of higher quality.

Numerous well-chosen illustrations, many of superior execution, help to commend "Greek Art and the National Life," by S. C. Kaines Smith (Scribner). The text is stimulating and informed by a fine idealism which occasionally rises to eloquence. The gist of the study is that Athens was supreme in art because, as compared with the parochial thinking of other Greek city states, she thought magnanimously and acted with an eye to Hellas as a whole. Much that is said will be interesting to students, and the better chapters of the book would make excellent collateral reading for classes of college grade. The defect is a tendency to let fancy rove at large in the realm of facts. It is well enough to attempt to visualize the look of Grecian feasts and conflicts, though the attempt is perilous and variously successful, but the scope of mere guess in the field of archæology and chronology should be strictly limited. Mr. Smith solves the delicate problem of separating late Minoan from Mycenæan art by reckoning most of the fine objects of early Argive provenance as Cretan. The treatment of these early periods occupies more than a third of the space, which, for a book that deals with national characteristics, is sadly out of scale. Surely our knowledge of the national traits of early Cretans and Argives does not as yet permit of extended discourse.

When the fifth and fourth centuries are reached, the work is generally admirable, though here no sufficient emphasis is given to the athletic ideals of Hellas. Mr. Smith may well have avoided this well-worn topic as matter of common knowledge, but such assumptions are hardly safe for the public this book apparently addresses. The whole tendency is moralistic and historical. Much of the treatment of technique is either mistaken or commonplace. For example, the Pergamon frieze is not, properly speaking, well done. If technique means appropriate dexterity, these famous marbles are simply bad sculpture. Mr. Smith's notion that a thing may be splendid as technique but despicable as respects art and morals, is the usual expedient of the moralist to exalt his own criteria. The actual case will rarely occur. A clever thing may well be base, but the concepts of fine technique and cleverness do not coincide. Mr. Smith is so responsive to what was best in Athenian art and patriotism that the reader may well indulge him in occasional excesses of pictorialism and in certain rather wild surmises on matters Mycenæan and Homeric.

It is odd that since Lafenestre's excellent but superseded manual there has been no adequate brief history of Italian painting. The chapters in Michel's general History are excellent, and Ricci's little books, of which "Northern Italy" is out, have distinguished merits, but cover too much ground for the ordinary reader. The long-felt need of such a brief manual is measurably filled by Alice Van Vechten Brown and William Rankin's "A Short History of Italian Painting" (Dutton; $2.25 net). In all that concerns general proportions and characterization of particular artists the work deserves high praise. The criticism is almost always just and sometimes brilliant. It is the first popular work that does any sort of justice to the great painters before Giotto. Usually the more disputable questions are frankly stated and the views of the authors presented with becoming modesty. There is plentiful citation of relevant literature, abundant illustrations, and supplementary lists of pictures besides those mentioned in the text. The book is admirably fitted for use in college classes, but should appeal as well to the pure amateur. The printing, especially in the notes, is rather careless, but the errors are seldom of a kind seriously to mislead. A fuller use of recent discoveries might have modified the authors' views of Andrea and Nardo Clone and of Leonardo da Vinci's early work. Sometimes the ascriptions in the supplementary lists do not agree with those in the text. This is true in as important an instance as Masaccio. Such oversights may readily be amended in a second edition. One would gladly find more expression of views on general development and a closer relation of the trend of art with that

of contemporary life. Whatever is done of this sort is excellent, and to have done more would perhaps have been to hazard the brevity of the presentation. For such a purpose, however, we would cheerfully sacrifice the characterizations of minor artists and schools, though such brief mention is in itself always competent and often quite masterly. Taken as a whole, the little volume, with its admirably chosen cuts, is far the best thing of its sort in the field. Its welcome among art lovers should be assured, while to art lovers who are also teachers, it is a positive boon.

Finance

THE CLAFLIN FAILURE.

The failure of the H. B. Claflin Company, on Thursday of last week, has a broad and interesting bearing on the larger problems of the financial situation. It was the largest house in the American mercantile trade; its long and successful history had made its name almost a household word; to the general public, news of its failure was not only unexpected, but incredible. Its liabilities, according to the estimate of the creditors' committee, reached $34,000,000—a total nearly one-third as large as those under which Baring Brothers went down in London during 1890. Furthermore, both the ramifications of the Claflin business and the distribution of its indebtedness extended to almost every important commercial and financial market of the country; it was involved, through indirect stock investment and through endorsement of paper, with nearly forty interior mercantile houses.

Here, then, was apparently material for a financial shock of formidable character. The bankers who, in the earlier days of last week, were engaged in considering the application of the company for help, were probably convinced that the consequences of an actual failure would be generally disastrous. They had learned that, to save the embarrassed house, not less than $24,000,000 was required. That was too great a task. But there could hardly have been one participant in the conference who did not look for some sort of convulsion on the markets when the outcome of its deliberations should be publicly announced.

What the actual reception of that announcement was, in banking and business circles and on the Stock Exchange, the news reports of the two days following the failure told rather strikingly. No fright or panic ensued. Even the dispatches from the outside business centres, supposed to have been most heavily involved, were surprisingly reassuring as to the general effect. Announcement that mercantile enterprises, controlled along with the Claflin Company by the Associated Merchants and United Dry Goods holding companies, were in sound condition and would be protected by their banks, was accepted without question. On the Stock Exchange there had been a sharp decline in prices Wednesday, while the Claflin Company's embarrassments were still under private consideration, and there was some irregular weakness, though of no formidable sort, on the day when the failure was announced. But after a night to reflect upon the matter, Friday's stock market turned to a movement of general and decided recovery.

Matters of this sort are not settled by the action or inference of the first twenty-four or forty-eight hours. It is entirely possible that, in the present episode, the loss or tying-up of so enormous an amount as the Claflin Company liabilities will involve some unpleasant consequences. The fact, which has properly been emphasized, that the $34,000,000 indebtedness was distributed among banks, estimated to number 3,000, would result in no overwhelming average burden in such institutions. The large sum total would remain, however, and the mere fact that average bank holdings are not large does not prove that some institutions may not hold an unduly great proportion.

But all these considerations must have been equally in the mind of Thursday's and Friday's market, and the really essential fact is, that the markets received the startling news with what may fairly be described s equanimity. To account for such a result, there are only two reasonable explanations —that the Claflin failure itself, in its immediate and ulterior effects, is a far less serious matter than any one had supposed, or else that the existing general position, in the business world and on the Stock Exchange, has been proved by a most exacting test to be particularly sound and strong.

With the further work of straightening out the tangle of the company's complications, there will come up for broader consideration the question of what the Claflin failure really means, considered as an incident in the financial history of the period. At the moment, the quite unanimous comment, in both financial and commercial circles, has been that the collapse was a clear result of overextension on the basis of insufficient capital; that situation having been created by long pursuit of intrinsically unsound financial methods.

This was strongly indicated, at the very start of discussion of the failure. When the news set all interested persons to examining the reports and statements of the insolvent corporation, it was impossible to learn from any such documents what were the retail stores of which the company said, on Thursday, that it had been compelled to depend on the profits of financing them, to offset curtailment in its own proper business. It was not even possible to discover from these reports what was the basis on which such retail establishments were controlled or operated by the Claflin Company.

Yet the formal announcement of the company, last Thursday, declared the embarrassment to have resulted from the fact that, in the curtailment of profits on the wholesale trade, it had been "compelled to rely mainly on the profits from financing retail stores throughout the country"—a work for which the company's capital had proved to be inadequate. But this was perilously close to the methods pursued by the numerous new "industrial combinations" which came to grief in 1903. Combining a dozen or a score of moderate-sized business enterprises, conducted in different quarters of the country, they had reckoned on financing an amalgamated company on the same general basis that its constituent elements had pursued before—through borrowing on short-term loans from banks. The Claflin Company survived, much longer than the victims of the 1903 reaction, the dangers of such experiments; but the combination found itself in very deep water during 1907, and has had to give way in 1914.

CONLEY'S PRINCIPLES OF COOKING
By EMMA CONLEY, State Inspector of Domestic Science for Wisconsin.
Price, 52 cents
This new book for secondary and vocational schools gives to domestic science more of educational value than it has had heretofore. It offers a practical course on the planning, cooking, and serving of meals by the pupils. Each schoolroom lesson is followed by kitchen work, many valuable recipes being given. The work covers all the important principles which are indispensable to intelligent cooking. The book is furnished with illustrations and charts, and tables of the composition of foods. A chapter on Cooking in Rural Schools and a complete index close volume.

THE POLITICAL SHAME OF MEXICO

By EDWARD I. BELL
Formerly Editor of "La Prensa" and "The Daily Mexican."

Startling disclosures of the inner political ring making its last stand at Niagara, of the fantastic scheme to make Gonzales president, how our Ambassador used his power, why Limantour was arbiter of Mexico's destiny, how Huerta gained the ascendency, and how many other unrevealed conspiracies have puzzled the American nation.

The Historical Christ
or, AN INVESTIGATION OF THE VIEWS OF MR. J. M. ROBERTSON, DR. A. DREWS, AND PROF. W. B. SMITH
By Dr F. C. CONYBEARE, M.A., F.B.A.
Honorary Fellow of University College, Oxford; Hon. LL.D. of the University of St. Andrews, Hon. Doctor of Theology of Giessen
Cloth, $1.50

THIS little volume is intended as a plea for moderation and good sense in dealing with the writings of early Christianity; just as the author's earlier volumes entitled "Myth, Magic, and Morals" and "A History of New Testament Criticism" were pleas for the free use, in regard to the origins of that religion, of those methods of historical research to which we have learned to subject all records of the past. It provides a middle way between traditionalism on the one hand and absurdity on the other, and as doing so will certainly be resented by the partisans of each form of excess. . . . In criticising the Gospels it is all the more necessary to proceed cautiously, because the obscurantists are incessantly on the watch for solecisms—or "howlers," as a schoolboy would call them; and only too anxious to point to them as of the essence of all free criticism of Christian literature and history.

The Medieval Popular Ballad
Translated from the Danish of Professor JOHANNES C. H. R. STEENSTRUP, by EDWARD GODFREY COX.
An important work for students of the ballad. The author, in place of accepting all ballads at their face value, endeavors to isolate the genuine medieval features, "to know the ballads as they issued from the poet's month."
He treats in great detail the original conditions of production, the nature and purpose of the refrain, and the structure of the rhyme, rhythm, and melody. He discusses also the attitude of ballads toward questions of moral import, their feeling for religion, patriotism, and historical truth, and their use of nature.
The comparisons with the Norse sagas and the ballads of Germany, together with the plenteous use of extracts from the ballads of Denmark, all combine to set forth attractively the perplexing and fascinating question of ballad origins and distributions.

The Nation.

NEW YORK, THURSDAY, JULY 9, 1914.

Summary of the News

The internal situation in Mexico has been somewhat improved by the adjustment of the difficulties causing the breach between Villa and Carranza, which we noted last week. At a meeting of the generals of both sides to the controversy, held at Torreon, a *modus vivendi* was arrived at, by which Villa will continue to recognize Carranza as First Chief and leader of the Constitutionalists, while Villa will apparently be recognized as the supreme chief of the army of the north and second in authority only to Carranza. Plans have been resumed for the campaign against Mexico City.

While the Constitutionalists have been busy composing their differences at Torreon, Gen. Huerta has placidly been getting himself elected President at Mexico City. In the elections held on Sunday in the part of the country under Federal control, less than three per cent. of the voters went to the polls, but that proportion was sufficient to cause a landslide in favor of Huerta. Aureliano Blanquet was declared Vice-President. As the future destinies of Mexico are likely to be considerably affected by the Constitutionalists, the result of the elections cannot be said to have brought about any material change in the situation. Meanwhile, Carranza has displayed no further eagerness to send delegates to confer with Huerta's representatives, although dispatches from Washington on Tuesday were hopeful concerning his intentions.

In a dispatch to the War Department, published on Tuesday, Brig.-Gen. Funston confirmed reports of a mutiny among Gen. Huerta's forces before the American outposts at Vera Cruz. Gen. Funston reported that the Mexican commander had informed him of the uprising and of the threat of the mutineers to attack the American lines. Consequently, if the attack were made, it would not be regarded as an "attack under orders," and would not affect the existing armistice.

President Wilson last week instituted a departure from the policy which he has hitherto pursued in calling into conference with him Mr. J. P. Morgan. The interview with Mr. Morgan is understood to have been only the first of similar conversations which the President intends to have with representatives of large commercial interests in regard to business conditions. According to a statement given out by William F. McCombs, Chairman of the National Democratic Committee, on Saturday, it is the plan of the President to explain clearly to business men the significance of the legislation that is contemplated in order that the country may be able the more readily to adjust itself to the new conditions.

Any faint hopes that members of Congress might still have entertained of an adjournment before early autumn were disposed of last week, when a caucus of Democratic Senators voted to remain in session until the pending Trust bills were "disposed of." In the form in which it was originally presented, the resolution provided that Congress should continue in session until the bills were "passed," but the phrasing was considered too exacting, in view of the fact that the bills may undergo considerable modifications before their final consideration. The three measures referred to are the Clayton, the Railroad Securities, and the Federal Trade Commission bills.

Paul M. Warburg on Tuesday formally requested the President to withdraw his nomination to be a member of the Federal Reserve Board. Mr. Warburg's action was prompted by his objections to the manner of cross-examination employed by the Committee of the Senate. Comment on the matter will be found elsewhere.

According to the figures annually compiled by the Chicago *Herald*, giving the number of accidents throughout the country due to the celebrations in connection with the Fourth of July, a record of sanity was established this year. The *Herald* placed the dead at 15, the injured at approximately 306, and the loss by fire at $124,000. The figures, except in loss by fire, compare favorably with those of last year, which were, respectively, 32, 1,131, and $122,620.

Correspondence between Col. Roosevelt and Dr. Lyman Abbott, relative to the former's resignation as contributing editor to the *Outlook*, was made public on Saturday morning. We comment elsewhere on the Colonel's statement, which indicates that considerations of high patriotism demand that he should devote his time exclusively to the political situation, and, in particular, to convincing the country of the error of President Wilson's ways. Meanwhile, as we point out in our editorial columns, it is interesting to note that the Colonel's arraignment of the foreign policy of the Administration is couched only in the most general terms. The very explicit and convincing statement on the Colombian treaty by James T. Du Bois, United States Minister to Colombia under the Taft Administration, which was published in the papers of July 2, still awaits an answer from Col. Roosevelt.

The remarkable performances of Mr. George Fred Williams, United States Minister to Greece and Montenegro, on which we commented last week, were brought to an end, so far as their official significance is concerned, by the receipt of his resignation at the State Department on Monday. In tendering his resignation, Mr. Williams seems to have ignored the fact that it had been asked for by the President. As a reason for resigning he explained that he could not comment as he would like upon the situation in Albania while under the restraints imposed by his diplomatic position.

A bomb, which, beyond any reasonable possibility of doubt, was intended for the destruction of others, exploded prematurely on Saturday morning in a flat in New York city, killing three members of an anarchistic group and a woman who lived in the rooms next to theirs. A fourth man who was in the flat at the time, and who escaped alive, has disappeared, and, at the time of writing, has not been discovered. Until the evidence of this man can be obtained, it is impossible to confirm or refute the theory held by the police that the bomb was in preparation for use on the estate of John D. Rockefeller, at Tarrytown, or definitely to establish the connection of the I. W. W. with the affair. While, however, suspending judgment until the matter shall have been more thoroughly investigated, it may not be amiss to recall to mind the flood of denials, of the same general character as those issued by the I. W. W. in the present instance, that came when the McNamara dynamite conspiracy was first exposed.

The second reading of the amending bill to the Home Rule bill was passed in the House of Lords on Monday, by a vote of 273 to 10. After the division notice was handed in of several amendments providing for the absolute exclusion of the whole of Ulster from the operation of the Home Rule act and placing the province under the jurisdiction of a Secretary of State, who shall sit in the Imperial Parliament, and whose administrative orders shall require the sanction of Parliament. A more hopeful feeling regarding the prospects of a peaceful settlement appears to prevail, but meanwhile the enlisting and arming of the Nationalist volunteers goes on. According to the London *Times*, the number of the Nationalist volunteers on July 3 was 153,000, and it was reported that 200,000 rounds of ammunition had been landed on the coast of Down on the morning of July 6.

The funeral of the Archduke Francis Ferdinand and the Duchess of Hohenberg, who were assassinated on June 28, took place in Vienna on July 3. According to dispatches from Vienna, the Servian Government has been officially requested to institute an inquiry in order to fix the responsibility for the assassination, as indications are that the conspiracy was hatched in Servia.

The trouble in Albania continues, despite the good offices of Mr. George Fred Williams. A belated report arrived on July 2 that on the previous Sunday the Government troops had sustained a serious defeat at Mulkuch, just north of Durazzo, and correspondence has been interrupted on account of the cutting of wires connecting with various centres. Prince William's wife and family left Durazzo for Bucharest on Friday of last week, and reports were received on Monday that Koritsa had been captured by the insurgents.

The final heat of the Grand Challenge Cup at Henley Regatta was rowed on July 4 between two American crews, the Harvard second 'varsity and the Union Boat Club, of Boston. The former crew won by one and a half lengths, in seven minutes and twenty seconds.

The deaths of the week include: Sir Benjamin Stone, July 2; Henry Willard Denison, July 3; Dr. Nicolas Jean Baptiste Duguet, the Right Rev. John Tohill, Countess von Waldersee, July 4; Sydney Grundy, Rear-Admiral Edward P. Ashe, July 5; Frank K. M. Rehn, Mgr. Louis Albert Gaffre, Max Weyl, July 6; John A. Shields, July 7.

The Week

The President's interview with Mr. Morgan, accompanied as it has been by intimations of coming conferences of similar nature with men representing large business interests, is one of those rather unusual occurrences which are calculated to please everybody. It must be about equally agreeable to those who have been imagining that Mr. Wilson is a deadly enemy of business, to those who have been oppressed by the belief that business is possessed with a fierce desire to destroy Mr. Wilson, and to those who, without indulging in either of these fanciful notions, have yet felt that a closer contact and better understanding between the President and Congress on the one side and leading men in the business world on the other was much to be desired. Externals count for a good deal in these matters; and it must be admitted that, even apart from externals, there has been a degree of aloofness, between the political powers at Washington and the men who know the various phases of the country's business activities from the inside, which went beyond necessity and had unfortunate effects. The Administration, to use a homely expression, has been leaning over backwards in its desire to avoid either the reality or the appearance of undue influence by business interests, and Mr. Wilson appears to have arrived at the conclusion that the psychological moment has come for the adoption of a different posture.

There is another aspect to this question of the Executive keeping in touch with important financial leaders—that the interests of the Government itself frequently require something more than distant official aloofness. This is not the first occasion when a high officer at Washington has been confronted with fear about what the general public might suspect if he conferred directly with the money interests. The late John G. Carlisle, when Secretary of the Treasury in the troubled days of 1894, was deeply imbued with that feeling. Sharing his Western constituency's mistrust of Wall Street, he refused to meet the New York bankers for personal discussion of the Government loan through which the Treasury's gold reserve was to be restored. Under such circumstances, concerted action to insure the loan's success was impossible; the banks, which would ordinarily have conserved their own resources against a critical business situation, did not know what other assurances of subscription, if any, the Secretary had. As it happened, he had none; the loan came within twenty-four hours of failure, and was eventually floated only by an urgent eleventh-hour appeal to the New York banks. Let this be contrasted with John Sherman's policy in the Government's resumption loan of 1877. He kept himself in close personal contact with both home and foreign lenders, but dealt with each as an astute bargainer would deal. In the end, when the New York banks, in conference with the Secretary, demurred to the terms imposed, he had in his pocket an option for the floating of the loan through an international banking house, and when the banks finally said No, he accepted the Belmont-Rothschild offer, to the great chagrin of the New York financiers, whom he had beaten at their own game.

Civil-service reform is again wounded in the house of a friend through President Wilson's action in exempting from the rules the fourteen new commercial attachés. The positions were created for the purpose of aiding American trade in Europe and South America; and in the debate in the Senate and House no good reason was shown why they should not be filled by non-partisan appointment on the strength of fitness shown by examination. In fact, Congress finally voted that the places be kept under the civil service rules; but the President, by Executive order, has made them exempt—made them, that is, patronage. No doubt, there will be a show of special care in obtaining qualified men, and the whole matter will be minimized, with reaffirmations that the Administration intends to live up to the principles of civil-service reform; but the fact stands that the regular and wholesome way of doing the thing has been set aside, and the method pleasing to the spoilsmen adopted. It is probable that the President's private explanation will be that, in order to do a great good, he consented to a little wrong. With his heart set on a big legislative programme, he has to facilitate it by throwing sops to Congressmen and party leaders. This is what is always said, and we presume that it will be said in Mr. Wilson's behalf. Very well; let it be said openly. Let there be none of the familiar whisperings that if we only knew what a burden the President had to carry, we should pardon him these occasional lapses. If that is a sound reason for departing from the civil-service rules, let it be stated frankly, so that the public may judge of it.

Two of Mr. Wilson's and Mr. Bryan's diplomatic chickens have now come home to roost, George Fred Williams and James M. Sullivan. The latter, now Minister to Santo Domingo, has not yet left the service, but is returning "ill." It has been an open secret that an agent of the State Department has been sojourning in Santo Domingo since some of Mr. Sullivan's letters to certain contractor and political friends in New York, telling them that "the going was good" in Santo Domingo, found their way into print. Mr. Bryan's excuse for declining to appoint a colored man to this position, according to historic precedent, was that the situation called for special fitness and tact; and so Mr. Sullivan—known to fame chiefly as "Jack" Rose's counsel in the Becker case—was selected. Of course, of special fitness he had none, any more than have the new Ambassadors to Russia and France. They are doubtless estimable gentlemen, but diplomatic experience they wholly lack. When one thinks of the many able and trained diplomats Mr. Bryan and Mr. Wilson have turned out, and the calibre of many of the men substituted, it is undeniable that Mr. Roosevelt has effective ammunition here for his promised attack on Mr. Wilson's foreign policy; for our standing abroad has plainly been hurt by some of the representatives who have found their way to our legations, despite such excellent selections as those of Mr. Guthrie, Walter H. Page, Dr. Van Dyke, and Professor Reinsch.

Whatever the final fate of the Raker Immigration bill, there is strong protest against its restrictions upon Orientals coming here to study. "In our judgment," have telegraphed seven deans of the University of Iowa, "the legislation will make the entrance of Hindu students into America unduly difficult." Fourteen professors of the University of California characterize it as "unprecedented, unjust, and quite uncalled for," and as calculated to "result in the exclusion of many desirable students." Objection is not to the requirement of an English Government certificate, approved by our diplomatic agent, and subject to investigation in this country, or to vexing stipulations as to port of entry. It centres upon the provision that only students with means sufficient for maintenance may enter, thus excluding many poor but deserving who would depend on partial self-support. A considerable fraction of those now here would have been barred by such regulation; and it would lessen an influx which has lately

promised to become comparable with that from Japan and China.

Mr. Paul M. Warburg's withdrawal of his name from consideration by the Senate, if his decision is final, will be a grievous blow to the whole Federal Reserve Board undertaking. No single man in this country did more to bring about this great currency reform than did Mr. Warburg, and no one else has, along certain lines, quite his competency. Few if any other men in this country so understand the international credit market as does Mr. Warburg; it was to him that the banking world looked to establish such a credit market here. We do not blame Mr. Warburg in the least for refusing to submit to the cross-examination to which Mr. Jones was subjected on Monday. He has been only a private banker; but his peculiar fitness is known of all men, as well as his unblemished honor and integrity. The sacrifice he was making in giving up a long-established and immensely profitable business partnership, especially attractive because of the family relationships involved, seemed to us a rarely patriotic act. But to men of the type of Bristow and La Follette the unpardonable sin is to have done business in Wall Street, and so they would make Mr. Warburg's unequalled knowledge and experience not available for the Government.

The latest figures of Government receipts for the fiscal year show that instead of the expected deficit of $5,000,000—with the Panama Canal expenditures provided for—there will virtually be a surplus. To Republican Leader Mann and his followers this may be a calamity, but only to them. On the face of the figures, there is a deficit of somewhat more than $1,000,000; but income and corporation taxes still being held back under the provision of ten days' grace allowed after June 30 are estimated to reach $3,500,000; and these, although they will appear as receipts for the fiscal year of 1914-15, really belong to the year just closed. The uncertainty in estimating the effect of changes in taxation is prettily illustrated by the fact that the income and corporation tax, of which so much was hoped, fell short of expectations, although not so far short as was at first feared, while the tariff yielded a score of millions above the estimate. The revenue outlook for the coming year, when the income tax will be in full operation—that is, operating twelve months, instead of ten in its normal and three in its supertax provisions—does not afford opponents of the Administration anything in the way of an issue for the November elections.

Col. Roosevelt's Pittsburgh speech is variously described as "reactionary" and "radical"; as a "plea for harmony," and also as a declaration of war to the knife. This is a tribute to his versatility. But the question presses, What does the speech signify for the Progressive party? Mr. Roosevelt is its leader as he was its sole begetter and has been its monopolistic owner. Where is he leading it now? Frankly, into a blind alley. His address is divided into two main parts. One is his high protectionist and prosperity argument. But this brings him squarely against the wall on the other side of which are the Republican hosts. If any party is to profit by ringing the changes on the ruinous effects of a low tariff, it is the Republican, not the Progressive. For the latter there is no exit along the standpat tariff road that Roosevelt again seeks to tread. The other main section of his speech consists of attacks on the Democratic Trust legislation. But in the very act he is compelled to approve—as the Progressives in the House by their votes approved—the chief features of the Wilson bills, while his dissent from some of their safeguards is so couched as to make business men more afraid of him than they are of Wilson, and will have the effect of hastening the passage of the measures themselves. All this water flows to the Democratic mill. Thus the entire speech seems to bear out the view of the Progressive party as an essentially divisive and destructive organization. It goes against now one party, now the other, but accomplishes nothing itself; the question always being to which one, in any given electoral contest, it shall prove the greater asset.

Senator Penrose's warning gun is hardly likely to alarm the garrison at Oyster Bay. The once valued ally had every motive for opening his ammunition chest in the exchange of shots two years ago, and he has nothing to gain by waiting and threatening what he will do if he is attacked again. Besides, suppose he should publish letters that the Colonel would rather not have see the light. Does he not know in advance what would happen? He would simply come in for a vigorous denunciation, and an enlightened people would be called upon to say whether an unscrupulous boss and a hopeless reactionary was entitled to the slightest consideration. The ground would be shifted from a field where a fight might be dangerous to one where the Senator would be without defence. And to think how easily the old association might have been preserved! All that would have been necessary was for the Senator to allow himself to be inoculated with the Progressive virus that made a new man out of William Flinn. He might have gone on holding Pennsylvania in the hollow of his hand; he might have remained a reactionary on the tariff and anything else that he chose. Just a changing of the banner behind which he marched, and he would have been eligible for a continuance of his honors, besides saving himself no end of abuse.

The bill passed by the House of Representatives last week, providing for the regulation of dealing in "cotton futures," is highly technical. It has had, apparently, two purposes—one, which is entirely legitimate, to standardize the grades of cotton dealt in, so as to maintain a fair relation between the actual "spot price" and the price for future delivery, the other, much less respectable and not entertained by all the advocates of the bill, to cripple the New York Cotton Exchange. The New York cotton trade itself admits that certain serious abuses have existed in the Exchange's methods for conducting speculation, and these are corrected by the Lever bill. The fixing of the grades is entrusted to the Department of Agriculture, which is also to designate the official "spot markets"; the grades are enumerated in general terms by the bill itself. Transactions in cotton which do not conform to the stipulations are to be taxed one cent a pound—a prohibitory tax.

BURLINGAME PUBLIC LIBRARY

Mr. Root's unqualified determination to retire from the Senate upon the close of his term next March will be received with sincere and profound regret in all parts of the country, and among men of all shades of political opinion. Ability such as his, devoted as it has been for the past fifteen years to the highest tasks of national government, is too rare and too valuable to the country to permit the appreciation of it to be limited either by sectional or by party lines. As Secretary of War under President McKinley, he did a great work in the reorganization of army methods; as Secretary of State under President Roosevelt, he was directly and personally instrumental in bringing about a great advance in our relations with the South American Republics; in the Senate, he has done more than any other man during the term of his service to maintain the high traditions of that body. His retire-

ment will be a heavy loss to the public life of our country, nor does there seem to be on the horizon anybody who will fill his place.

Announcement that the National City Bank, of New York, is to open branches in Buenos Ayres and Rio Janeiro is as marked an index of our expanding South American interest as the recent activities of the Department of Commerce and the Chamber of Commerce of the United States. We are simply late in following the example of institutions like the Crédit Lyonnais and the London City and Midland. It is explained that the choice of the new field was dictated by the wide conviction of American exporters and manufacturers that none was more promising. There has been, moreover, repeated evidence from South America of a desire for branches of our banks. They should help the investment of American capital in countries whose economic development is certain to be one of the largest achievements of the twentieth century. By the information they can supply, they should be a useful supplement to the consular service. Already the National City Bank announces plans for "the gathering and distribution of information regarding trade opportunities abroad." There is no reason why other banking institutions should not do likewise, under the provisions of the Federal Reserve Act.

Both Georgia and South Carolina are very much stirred up over their backwardness in the matter of compulsory education. "It is shameful," says the Atlanta *Journal*, "that Georgia should be one of the only six States which have not vouchsafed this right and protection to children; it is shameful that she should stand among the illiterate States of the Union, when her wealth and ideals entitle her to rank among the most broadly educated." That paper quotes with cordial approval the strong language of the State Superintendent of Schools on the subject, and especially his reply to the "outworn argument" that compulsory education abridges the rights of parents. The parent, says Superintendent Brittain, "has no more right to maim a child mentally than physically." In South Carolina the Columbia *State* vigorously urges a compulsory school attendance law, and in that connection declares that by exempting the whites from the education or property requirement applying to negroes as a condition for the elective franchise, "we are taking from the illiterate whites the principal incentive that would cause them to learn to read and write." It can hardly be long before both these States will have joined the forty-two others in which elementary schooling is recognized as essential for every child within their borders.

MOBILE, Ala., July 2.—Fifty years for stealing fifty cents, is the sentence which a Hale County, Alabama, jury imposed on Frank Williams, a negro, who, in 1894, robbed another negro of half a dollar. After serving more than twenty years of the fifty-year sentence, Williams has been paroled by Gov. O'Neal, the Governor extending clemency to the negro last night.

As this Associated Press dispatch has been printed throughout the country, we trust that Gov. O'Neal will see the desirability of making public some further information on the subject. There must be some explanation of the terrible punishment imposed on this negro; for, many as are the injustices to which members of his race are subjected in the South, such inhumanity as this story, taken at its face value, would indicate, is incredible. But whatever the fact may be—whether there were or were not circumstances connected with the crime which may account for the appalling sentence—it is due both to the State of Alabama and to the feelings of humane people throughout the country, South as well as North, that the whole truth about the case be made known.

The Crescent City, whose mortality rate in 1900 was the highest of any of our larger cities, has done much to dissipate her old notoriety for unhealthiness; but the slogan, "New Orleans the cleanest city in America," has still a strange ring. It is inspired, of course, by the recent bubonic-plague scare. With the credit of the State behind the city for any sum up to $150,000, and with citizens' organizations formed in every section to clean streets, burn garbage, kill vermin, and disinfect suspicious localities, it is to be hoped she may come as near realizing her ambition as natural disadvantages permit. Her sewerage and street paving still leave much to be desired, but there is no reason why the celebration next year of a decade since the last yellow-fever epidemic should not see the city as sanitary as any that is situated on low ground in a hot climate. There is pleasing evidence that in one respect the campaign has already produced results. Colored civic leagues are being formed in each precinct to bring the negro sections up to the general standard of cleanliness; and attention has been called to the fact that in many of them garbage collection and similar measures of hygienic importance have been utterly neglected by the white rulers of the city.

With a total of thirty-six referendum measures pending in Oregon, and, in the words of the Portland *Oregonian*, "the end not yet in sight," public sentiment is for another "when-in-doubt-vote-no" campaign. In 1904, two measures were offered; in 1906, eight; in 1908, sixteen; in 1910, thirty-two; in 1912, thirty-seven. This year's extreme congestion of the ballot shows that the remedy is not likely to be automatic. The *National Municipal Review's* recent survey of the Oregon system admitted the cumbering of the ballot by self-seekers and fanatics, but held that the trouble was in a fair way to cure itself. "The increasing reluctance of thoughtful voters to sign petitions, and the very uncertain reward for the labor and expense necessary to get a bill on the ballot, operate as a pretty strong deterrent, while, furthermore, nothing so perfectly squelches foolish agitation as a huge majority against it." Nearly all of the 1910 and 1912 bills were crushed, but the 1914 roster is not lessened. Within a few years the number of initiative and referendum States has risen to eighteen. While Massachusetts was barely able to muster the one-third vote necessary to defeat an amendment carrying the innovations, it is confidently expected that North Dakota and Wisconsin will adopt them this autumn. An obvious argument against them is the extraordinary labor put upon the voters by the submission of a large number of questions at a single election.

The German Emperor has been having a little canal dedication of his own, which, if not so impressive as that to come at Panama, is none the less of vast importance to his empire. Some days ago he formally opened the new Berlin-Stettin waterway for 600-ton barges. It is an enlargement of an old eighty-mile canal, at a cost of twelve and a half million dollars, which was thus put into service; and its especial significance is that it is a first link in a waterway which will cross the entire German Empire from east to west. By skilful utilization of various rivers and existing small canals, boats will at some time hereafter be able to go not only from Stettin to Berlin, but from Berlin straight across to the Rhine, passing through some of the most important manufacturing districts in Germany.

ROOSEVELT AND WILSON.

In severing his connection with the *Outlook*—so that, as it were, the feather in his hat in the ring may no longer be mistaken for a quill pen—Col. Roosevelt makes a confession of failure. He had striven with might and main to keep out of "active politics," but finds himself unable to do so. His hope had been, on retiring from the Presidency, to be "a man entirely removed" from political struggles. But here he discovers himself, to his own surprise, forced back into them. But the really surprising thing is that he should ever have dreamed it possible to keep out. No man ever had the political instinct stronger than Theodore Roosevelt. It has been said of him that if he could not be making and unmaking Presidents and Governors and Senators, he would throw himself with equal zest into a contest over the nomination of Town Clerk at Oyster Bay. With him politics is not only second nature but first nature. He is the living embodiment of the definition of man as a political animal. And if he himself thought that he was going to retire and be a "sage," those who had long and closely observed him did not imagine it for an instant. They saw three years ago the same purpose in him as that he now admits—we refer to his announcement, on his return from Africa, June 18, 1910: "I am ready and eager to do my part, so far as I am able, in helping solve problems which must be solved if we of this the greatest democratic Republic upon which the sun has ever shone are to see its destinies rise to the high level of our hopes and its opportunities."

Whatever it may have been in the past which compelled the Colonel to emerge from his preferred still air of delightful studies, to-day his motive is avowed. He must gird himself to go out and smite President Wilson. "I am in honor bound to stand in strong opposition to the Administration." The reason is that "as regards our international relations the policy of the present Administration has meant the abandonment of the interest and honor of America."

This is roundly asserted, but no specifications are given. Mr. Roosevelt can hardly expect the country to take his word for it. He declared at Pittsburgh last week that Wilson's foreign policy had been "wretched," but still no proofs. He has, indeed, since his latest return had something specific to say about one item—the proposed treaty with Colombia. This Mr. Roosevelt gently calls the payment of "blackmail." The treaty proposes to pay $25,000,000; but Mr. Roosevelt himself, when President, offered to pay $2,500,000. It will be necessary for him, therefore, to explain to the people where the blackmail begins. Is it at the fifth million? President Roosevelt's own Secretary of State, Mr. Root, admitted that Colombia had been injured, or, at least, had had her rights and contracts impaired by the United States. Is it a manly and vigorous foreign policy for Secretary Root to take this position, but traitorous grovelling for Secretary Bryan to do it? On both these points—the proffered payment of money to Colombia in 1909 and in 1914, and the grounds assigned—we are entitled to hear further from Mr. Roosevelt. It is not enough for him contemptuously to assert that President Wilson is a poor-spirited betrayer of the nation: he must show wherein.

It is probably about the Colombian treaty that the Colonel feels most indignant. That is a sore spot with him, and it enrages him to have it touched. But there are two other matters touching the conduct of foreign relations by President Wilson which presumably inflame Mr. Roosevelt. One of them is the repeal of the tolls-exemption clause of the Panama Act. The other is the course pursued towards Mexico. In both we shall probably hear Col. Roosevelt declaiming that the interest and honor of America have been trailed in the dust. But it happens that, on the very day when Mr. Roosevelt was declaring war upon the contemptible foreign policy of President Wilson, it was receiving high and significant praise. In London, Lord Bryce attended the Fourth of July celebration at the American Embassy, and spoke in the warmest way of President Wilson's course in urging the repeal of the free-tolls clause. He said that it was an exhibition, not only of international good faith, but of the highest personal courage. Now, Lord Bryce knows what political courage is, for he has had the privilege of watching Theodore Roosevelt at close range. He also knows and loves the United States. The question is, therefore, whether Mr. Roosevelt will now resent Lord Bryce's praise. Would he have it otherwise? Would he prefer to have our nation disliked and hated rather than approved and honored?

The Mayor of Havana says that the policy of President Wilson has made the American flag to-day everywhere throughout South America the symbol of friendship and help. Does Col. Roosevelt think this all wrong? He will have to go into particulars when he sallies forth to wage his remorseless warfare upon Wilson. If he denounces the Administration's Mexican policy, he must be prepared to answer the question what his own policy would have been. Mr. Roosevelt has, in his time, expressed his scorn of the carping critics who rail at the strong man doing things. He must see that he himself is in danger of falling into that once hated rôle, unless he makes his attack upon Wilson very explicit, and is prepared to show that he would have had an alternative policy, at once clear, constructive, and infallibly successful.

JOSEPH CHAMBERLAIN.

It was a long and pathetic twilight of great powers upon which the night has just fallen in the death of Joseph Chamberlain. His almost complete disablement physically, during the past five or six years, and the consequent relaxing of his mental grasp, with rarer and rarer coming to public notice, were rapidly making the man, even while alive, a tradition. If the dead go quickly, so do men once prominent on the stage of great affairs, but condemned to years of painful invalidism in retirement. So that it is almost necessary to remind people to-day of the extraordinary political force which long resided in the dynamic personality of Mr. Chamberlain.

His career has to be taken as a whole. During his lifetime he was often taunted with the fact that he began as an extreme radical, who even preached the doctrine of "ransom" by the wealthy classes, and ended as a conservative petted by dukes and the landed squirarchy. But this kind of political recrimination is best dropped when the time comes to see a public man in his habit as he lived. He has a right to change. The change in Joseph Chamberlain was hardly more striking than that in John Bright. Neither is lightly to be accused of insincerity; certainly not of abandoning convictions in order to profit thereby. For English Liberals to persist in calling Mr. Chamberlain a renegade, who left them just for a ribbon to stick in his coat, would be to align themselves in historic judgment with the Conservatives who reproach Gladstone with having forsaken his early stern and unbending Toryism, purely out of lust for office. This sort of personal twitting and retort does not forward real knowledge of a public man's development. What we have to do is to study dispassionately the phases through which he passed, and to form our opinion of him by the qualities which clung to him through them all.

Seeking in this spirit to shape an estimate of Joseph Chamberlain, we find ourselves compelled to recognize the tremendous energy of the man. From young manhood on, he made himself felt as a power in whatever circle he touched. He had not the fascinating talent, but was surcharged with the driving quality. His lucid intellect was backed by a resolute will; and he had that ineffable thing which we call personal dominance. The net result was an application of pure individual force to political life in England such as was almost without a parallel in his lifetime. Mr. Chamberlain was the living refutation of those theorists who would reduce all political movement to the interaction of blind and impersonal forces. There are, indeed, times when the individual appears to wither; but there are also times when there seems to be nothing in sight but some one outstanding personality, whose stark vigor moulds and subdues everything. The great illustration of this in Mr. Chamberlain's case was, of course, his remarkable feat of inducing the Conservative party—at least, its leaders and voting strength—to throw over its professions for two generations and take up with protectionist doctrine. Of this astonishing performance, Mr. Chamberlain could have truthfully said, "Alone I did it." Others aided him, after he had dragged them unwilling in his train, but the idea was his own, the fight was his own, and the triumph, such as it was, no one could dispute with him. As we look back on the matter now, this whole party campaign looks like a huge mistake. Most Conservatives admit, in their franker moments, that their abandonment of free trade, at Chamberlain's imperious behest, was a main cause of their exclusion from power in 1906. But the final story might have been different if Chamberlain's crippling malady had not smitten him shortly after that defeat. Had he been able to go on in full strength, it is not impossible that he could have snatched victory later. It is idle to speculate about this. But it is not at all idle to point out that, in spite of all our writers on the philosophy of history, who incline more and more to rule out the individual, it yet remains true that in the political world there is nothing so vibrant and compelling as a man.

Apart from the fiscal controversy just referred to, Joseph Chamberlain's political career touched its high points in connection with the Irish Home Rule struggle and the South African war. As regards the former, it is a mistake to think of Chamberlain as a bitter enemy of Irish local government. The Irish Nationalists themselves, Parnell himself, long had high hopes of Mr. Chamberlain. They were more drawn to him at one time than to Mr. Gladstone. They felt that they could do business with the business man from Birmingham. Barry O'Brien's Life of Parnell shows how near to getting down to business Chamberlain was; and the letters which were published, we assume with the permission of Mr. Chamberlain, in the recent Life of Henry Labouchere, prove that it was for many weeks touch and go whether Mr. Chamberlain could be got to stay in the Liberal party and work for some form of Irish Home Rule. Throughout the Boer War he endured the early reverses with courage and firmness, and was able to help England "flounder through" to a success which we suppose that he, in common with Mr. Balfour, would have said was frittered away by that great constructive act of British statesmanship, the formation of the South African Union.

As a speaker, Joseph Chamberlain was a modern of the moderns. All rhetorical ornament and mere flourishes he religiously eschewed, and used a clear directness and incisiveness which seemed the very incarnation of the business mind devoting itself to affairs of state. He was an excellent House of Commons man, in being able to think on his legs. Formidable in attack, he was terrific in rejoinder. Yet he was able, as in the dark days of the Boer War, to rise to a fine dignity of manly utterance. It will be long before England looks upon his like again.

THE LATEST CRIMINALIST FAD.

In various parts of the country, startling discoveries are being made about the connection between crime and mental defectiveness. Startling as they are, however, they seem to be accepted by the authorities with a simple and unquestioning faith that speaks volumes for their innocent trust in whatever is put forward in the name of science by persons claiming to be experts. One of the latest of these manifestations we find detailed in the Kansas City *Star*, which tells of the examination that has been made of all the men confined in the Kansas State Penitentiary at Lansing. "This scientific examination," we are informed, "is developing the startling fact that 80 per cent. of the men within the stone walls at Lansing have the mentality of little boys—of boys from six to twelve years old." The analysis is "based on a revision of the Binet-Simon system for measuring the intelligence of children," and so conclusive are its results that "the prison may know its convict with an accuracy approaching that knowledge of a building that is expressed in the blue-prints of the architects." If this be so, there can be no doubt that four out of every five convicts in the Kansas Penitentiary have the mentality of boys from six to twelve years old; and since they number several hundred, it must be safe to conclude that a similar proportion holds for convicts in general. And, sure enough, we get a result of the same kind from Chicago. There the psychopathic laboratory organized in connection with the Municipal Court has been examining 245 criminal youths, of an age averaging nearly nineteen, and finds that 85 per cent. of them were cases of arrested development, corresponding to an average age of eleven. Something similar came a few weeks ago from the same centre of sociological activity, in relation to disorderly women. The Binet tests are all the rage, and the 80 per cent. proportion of "boy-men" among its criminals will doubtless soon be recognized as an indispensable part of the equipment of every progressive community.

That two and two is five, said a somewhat tough-minded man, you may possibly be able to persuade me; but that two and two is seventeen, all the tortures in the world will not make me admit. If these enthusiastic believers in the scientific finality of the Binet tests were telling us that 30 per cent., or 40 per cent., of the prisoners show this gross mental deficiency, the statement might pass without special challenge. But it is absurd to imagine that, in any real sense, nearly all convicts—four convicts out of five—are to be regarded as upon the same level mentally as little children between six and twelve years old. If this had been true in any sense having a real bearing upon life, it would have been discovered hundreds of years ago; it would have been matter of common knowledge among policemen, and lawyers, and judges. These people could not have gone on year after year, generation after generation, coming into the closest contact with thousands and thousands of criminals, and not become aware—if it was a fact—that nearly all of them are mere children. And this is all the more certain from the fact that there is, of course, nothing new in the idea that among criminals there is a larger proportion of persons of defective intelligence than there is in the general population. The matter has been the subject of much discussion and study; and many per-

sons whose business it is to deal with criminals would have had their attention turned to it on this account, even if it did not spontaneously thrust itself upon their notice.

Upon the actual relation between defective intelligence and crime, there is a great deal of difference of opinion among persons who have made a real study of the question; but nowhere, by such persons, is any estimate made even distantly approaching the conclusions arrived at by the machine-made methods of these Kansas and Chicago enthusiasts. Dr. Goring, in his comprehensive work on "The English Convict," regards 20 per cent. as "a maximum estimate" of the number of convicts that are mentally defective; and, in classifying the 948 convicts as intelligent, fairly intelligent, unintelligent, weak-minded, and imbecile, he finds that 65 per cent. belong to the first two categories, leaving only 35 per cent. for all grades of mental inferiority. But Dr. Goring, and other authorities who have arrived at similar results, make use of their minds to get at the realities of the case; they do not abdicate their intelligence in favor of the latest mechanical device of the psychologists, and accept its deliverance as the last word of human wisdom. A recent German writer, Dr. Max Kauffmann, in his valuable book on "The Psychology of Crime," expresses very great doubt of there being any deficiency of intellect at all among those who commit most classes of crime; and he gives some extremely cogent reasons for suspecting the trustworthiness of results derived from the examination of criminals, even upon the assumption that the scope of the examination is all that could be desired.

Precisely what questions were put to the Kansas prisoners, upon the Binet plan, we cannot say. A number of them are reproduced in the Kansas City *Star's* article, but they may not be a fair sample of the whole. Many of those given, at all events, are of such a nature as to be utterly useless as a test of the intelligence of any convict who is not plainly and obviously feeble-minded. To mark the longest word in "It rained yesterday" may be a good test for a child of six, but no grown man can possibly fail to be *able* to answer the question correctly unless he is a plain imbecile; and if he *does* fail, it is either because he chooses to answer wrong, or because he has paid no attention to the question, or for some similar reason. A little doubt of the infallible perfection of these tests might be infused into the minds of these sanguine scientists by considering the fact that, on the first introduction of the Australian ballot, distinguished lawyers and other eminent citizens have been notoriously among those who were most apt to spoil their ballots by improper marking, and who complained most about the difficulty of managing it. This whole matter of settling the question of the mental qualities of criminals by means of the Binet tests has been aptly characterized by one of the most earnest students of prison problems as a case of "get-rich-quick" methods applied to the handling of a problem which demands patience and skill, and to whose solution there is no royal road. One might suppose that the swift rise and swifter decline of the Lombroso theory of "the criminal type" would have taught a lesson of caution if not of wisdom. A dozen or twenty years ago, anybody who did not swear by Lombroso was a pitiful "back number"; to-day what is more hopelessly in the back-number class than Lombroso and his "criminal type"?

THE ABSORPTION OF THE INDIAN.

Last week occurred an event which, picturesquely celebrated at Muskogee and Tulsa, Oklahoma, may be regarded as a landmark in the record of our Indian relations: the Cherokee Nation dissolving tribal relationships. Since the war in the Carolinas a decade before the Revolution, the Cherokees have been peaceful, industrious, and more and more civilized. These 41,000 Indians hold nearly 5,000,000 acres. One of their blood sits in the Senate; they have long maintained a constitutional government and native newspapers; and they have produced more teachers than all the other tribes combined. Their chief title to notice has, perhaps, been in the alphabet invented by Sequoyah ninety years ago, and its effect on their development. Readers of "The Gilded Age" will remember the frequent proverbs in this unique charactery which Mark Twain included among his polyglot chapter headings. With the end of the Nation comes the announcement that Oklahoma will commemorate Sequoyah in Statuary Hall at Washington.

This is the first large achievement of the Government in its policy of bringing about the cessation of all tribes as individual entities—the policy worthy of the name it has had. The Cherokees were the last of the Five Nations to enter into a treaty to that end; and the record of the contentious lawsuits involved in completing the transaction is, with the tragic history of their early deportation, an epitome of much of the injustice of the United States towards its wards. The other Nations, Creek and Chickasaw, Seminole and Choctaw, which suffered equally from an "independence" in Indian Territory that attracted every outlaw in the Southwest, can rejoice that they also will shortly pass. It was the greed of Georgia for gold discovered on native lands which drove the Cherokees, in spite of the Supreme Court, on a march that cost thousands of lives. Little by little, after the Civil War, they were forced to part with their holdings, the most important sale being of the 8,000,000-acre Cherokee Outlet to the United States in 1892, for $1 an acre and a settlement of long-standing charges for the cost of their removal westward in the 'thirties. This settlement, through Congressional delay, dragged for thirteen years, when the Court of Claims found the United States liable for $4,500,000; and litigation between various branches of the Indians, and over huge fees charged by white lawyers, has lasted until a few months ago. The clearing up of their affairs and the conversion of all tribal property into cash to be distributed, thus sees a measure of final justice done a people that once claimed a vast empire. It is a first goal reached on the road marked out when, in 1887, Congress, abandoning the wretched reservation idea, enacted the Land Allotment law, authorizing the division of Indian lands into individual allotments, each to be held in Government trust until an allottee was felt competent to receive full letters patent. Such patents, carrying citizenship, have been issued to each member of the tribe.

In spite, however, of the great recent strides made by the United States, there is still no absolute guarantee that other unassimilated tribes could not parallel the Cherokee experience. If Congress decides that a certain tract of land is needed for the influx of white immigration, it has only to enact a law enabling the proper executive officers to take possession. Actually, it fixes a certain price to be paid the Indians, but such action is bounded by no maximum nor minimum. "Even where a distinct contract has been entered into," as ex-Commissioner Francis E. Leupp has just pointed out, "for the payment of so much money for the relinquishment of so much land, there is no way of compelling the Government to live up to its agreement against its will. A tribe cannot carry such a case into court unless Congress gives it permission to do so; and when permission has been granted and the tribe has carried its claim all the way from the lowest to the highest court and received

a final award for the full amount it demanded, Congress has still to appropriate the money to satisfy the judgment." Only the other day we noted an attempt to correct an old injury suffered by the Pima Indians. A more flagrant example is of certain California Indians who signed away their homes on the understanding that the Government was to provide them with others, but who were left wandering and homeless for a generation. "No power," as Mr. Leupp concludes, "can compel the settlement of a debt, or the performance of a pledge, from the Government to the Indians, except a sensitive public conscience."

What is obviously required is a more concentrated responsibility. In larger affairs it is at present diffused through the whole executive, legislative, and judicial machinery; in smaller, there are the most vexatious conflicts of authority. Attention has been forcibly called to the fact that the Secretary of the Interior is forbidden to distribute funds if the Indians have access to intoxicants; but it is the Secretary of War who is empowered to grant or refuse permits to carry liquor into the Indian country; while the expulsion of persons detrimental to the peace of the Indians devolves upon the Commissioner. Again, the Indian Commissioner and the Secretary of the Interior have separate inspectors, and those of the latter officer are to keep him informed of the conduct of the Commissioner himself. A potent cause of trouble is the antiquated body of statutes touching Indian affairs. There is now not a duty which can safely be undertaken without first running back through the records to see whether it is assigned the President, his Cabinet officers, or some subordinate.

THE REVOLT AGAINST GOLF.

We suppose it was bound to come. Signs of discontent with him have been noted for some time by the golfer wary enough to keep his eye on popular sentiment as well as on the ball. But in his most apprehensive mood he could scarcely have expected such an attack upon his favorite game as has lately broken out in England—of all places! One rash man gave the signal, and a whole volley of reviling was fired in the press. Men who had evidently been long cherishing grievances freed their bosoms of much perilous stuff. In order that our golfing readers may know the worst that can be said about them, we will cite a few of the railing accusations. Golf is no true sport; it is, rather, "the incarnation of slow-footed egotism." It is a game for selfish old men; a death-blow to real team play and *esprit de corps*. Moreover, as an Irishman writes to the London *Times*, "golf is a dull but difficult game which exercises an enormous fascination on thousands of dull-witted people." That is the great reason it is so popular in England. In that country the population is "dense," and "even dull people must try to amuse themselves somehow." The English "hate work," so "why not let them play golf?"

This may be set down to malice of race, but what answer is to be made to the charge that golfers make of their game "an inordinate religion"? Those who play it are said to be filled with a gloomy fanaticism which drives them to seek to make proselytes of non-golfers. "If the golf creed had arisen in the sixteenth century, instead of the nineteenth, an Inquisition would have been set up in every parish, and an *auto da fé* would have blazed on every green." This seems bad enough, but there is worse to come. Let every golfer who confesses to middle age consider the following indictment:

> The economic objection to golf is that it keeps alive so many people who would be better dead. Our great captains of industry reach their grand climacteric after about twenty-five years of strenuous activity. Thereafter they decline according to their temperaments along one of two main lines.
>
> Either they paralyze their businesses with an excessive caution or else they burst them up through megalomania. And as regards their family life, they are apt either to break out in unexpected scandals, or to blast the innocent happiness of their households under a rigid "Grundyism." The hopes of such men, up to now, have been in syncope or softening of the brain, and these are precisely the kind of complaints which golf in most cases is able to avert. But as golf is quite unable to restore judgment, nerve, sense of proportion, promptitude, and the other business virtues, the net result is merely to maintain in malignant activity evils which otherwise would have been mercifully quenched in a bath chair or in the tomb.

This diatribe recalls a passage in Mr. Gretton's history of modern England. It is the one remarking that along about 1890, most leisured Englishmen between fifty and sixty would have been seen sitting in club windows, sipping brandy and soda, and exchanging melancholy observations on British decadence. But in 1910, nearly all of that class of men would be out playing golf and trying to understand the slang of their grandchildren.

Naturally, the confirmed golfer, conscious of his own rectitude, will listen to all these harsh accusations with mingled wonder and pity. What an accumulation of venom is being discharged! What unsuspected stores of wrath and all uncharitableness are thus revealed in his fellow-mortals! Golfers always knew that they were envied; but they never dreamed that they could be so disliked and even hated. This staggering fact, however, ought to put them to searching their own hearts and scrutinizing their own conduct. Are they wholly without blame? Have they never given provocation to these angry outcries? One shrinks from even hesitating a fault, but is it not possible that too many have not been content to play golf, but have insisted upon talking it, whether men would hear or forbear? This would make the real complaint against, not golf, but golfers. And we think it must be admitted that, as a class, they offend by endlessly fighting over again their battles on the links. We know what is thought socially of men who are forever talking shop. But is forever talking golf any less an offence? Should not the golfer who is simply burning to explain how he missed that short putt at the fourteenth hole—it was all because a crow, in a tree a quarter of a mile away, cawed at the critical moment—wait until he finds a kindred soul into whose ear to pour his sad tale, and not try to teach in song to everybody what he has learned in sorrow?

After all, the great lesson for devotees of golf to derive from all this outburst against it is to fall back upon the philosophy which they are never tired of boasting that the game teaches. Let them take their present-day verbal drubbing in the same spirit of resignation with which they accept defeat, 5 up and 4 to play. It is pleasant to be admired and petted, but still it is possible to go through life, when supported by an unfaltering trust in golf, unloved. Even before the torrent of abuse now beating upon them, golfers should bear up. Let them cultivate a little more lightness of spirit, as well as greater care lest they offend by their golfing walk and conversation. They might perhaps be got to admit, if they gave their full mind to the matter, that their favorite game is not the whole serious business of a devoted life, but only a very valuable and highly enjoyable incidental relaxation. The golfer off the links might be wise to observe some of the rules that he knows are essential on them. If modest quiet and humility are good for one's game, they may also be for the opinion of the game formed by friends and neighbors. "Above all, don't press!" Exactly; don't press your enthusiasms and your absorptions too insistently upon a world that betrays signs of restiveness.

Foreign Correspondence

GERMAN JINGOISM—THE INTERVIEW WITH "AN AMBASSADOR" — THE FLOODS IN PARIS—TRACING THE RESPONSIBILITY.

PARIS, June 26.

The opinion of "An Ambassador" on Jingo politics in Germany has made a profound impression in France. This is not because the publication in the somewhat authoritative *Lokal-Anzeiger* of Berlin gave the idea that it represented an interview with the British Ambassador, the judicious and experienced Sir W. E. Goschen. It really gives the views of the more conservative minds, least given to alarms among those who watch the international attitude of Germany. It must not be thought that the "war scare" felt by Frenchmen has disappeared. It still lies at the bottom of much financial uncertainty which is weighing on all the world's markets. Not only in justice and fair play towards France, but for sake of the world's peace, it is to be hoped that such calm and serious judgments on the dangers of the present situation will be duly weighed.

"Certainly," says the Ambassador, whoever he may be, "we do not doubt the peaceful dispositions of the German Government—but we fear circumstances that may force it to abandon its peaceful dispositions.

"Such international circumstances," he went on to explain, "are the unstable condition of the Balkan states and the uncertain future of the Dual (Austro-Hungarian) Monarchy, with all their complicated problems; the necessity of German industry to find new outputs abroad, and the disproportion between the desire to expand of Germany, with its constantly increasing population, and the growing inability of the world to satisfy this desire and need, particularly now that the world's field of activity is becoming narrower as it becomes more occupied.

"Mere love of peace cannot be sufficient to solve such problems. Add to this that the Governments of the Triple Entente cannot have the same confidence in the German people which they have in the German Government. Jingoism has made indisputable progress in the German population. I am convinced that there exists among the German people a latent Jingoism which is much more dangerous than that of England, Russia, or France. German Jingoism recruits its partisans in the highest classes of the nation, nobility, clergy, army and navy, university and gymnasium professors and students, and the entire scholastic world."

The Ambassador explained this by the press campaigns whose echoes keep France in constant apprehension, not to speak of the continual parades of associations of veterans and patriotic societies.

"Everywhere, among the cultivated classes, it is made a dogma in Germany that the German Empire does not take its proper part in world-politics," he says. "Everywhere the great organs of public opinion spread the dangerous and irritating doctrine that German prestige is going down. And so patriots clamor for action."

The Ambassador insisted on a side of the internal situation of Germany which has already excited uneasiness in France. The political evolution of France and England has reached something like stability, for even their Socialists can hardly expect to make any great constitutional changes; and Russia is barely beginning her evolution. But Germany is in the first heat of revolt against the old order—and the directing, possessing, privileged classes are already aroused to resistance. "Such a struggle," he adds, "is not calculated to lessen the feelings of German Nationalists, who might well seek a foreign diversion for their activity."

The Berlin paper which has had the courage to publish this interview replies moodily: "The affair of Morocco is not forgotten in Germany, and we are resolved to prevent a repetition of it." The Pan-Germanistic *Post* adds: "If our necessary spread is shut off, we shall be forced to draw the sword and—Bad luck to the conquered!"

The old song, "Troy town's falling down," fairly expresses the feeling of some of us after the recent record-beating rain-storm. Without pretending that I was there all the while, I may say that two of the street squares which caved in with such loss of life are on my usual route homeward in the late afternoon; and that, in point of fact, I was in a taxicab with two others driving through the furious rain when a crowd on foot, rushing as if scattered by a whiff of grapeshot, came against us with inarticulate cries, and the next moment a single policeman jumped into the road before us, gesticulating wildly that we should turn back—which we did. Otherwise I should not now be writing this letter.

A cabman of my suburb, who had driven me three times in the last few weeks, was not so fortunate; and, before alarm was given, he landed with his fare and automobile many yards below the surface. A fireman, who crept to the edge of the abyss thus suddenly opened, could only cry, "I see a lady's hand!" It was next day before the dead bodies could be taken out. Yesterday I saw the funeral, with thousands of chauffeurs driving in ranks and displaying the red flag of discontent.

I will not go over the particulars of the accidents following one after the other through a whole quarter of congested central Paris. The cable has told them. There had been warnings for me, and, therefore, for those responsible in the city. Two weeks before, without rain torrents to loosen the ground, an automobile sank down three feet below the road-bed in front of the Church of Saint Philippe du Roule, where the street later caved in at two different points. My own tramcar a few days later stopped and refused to go further; and, indeed, the rails seemed suspended in air. A squad of workmen came and poured in sand and repaved, and traffic continued.

Then, when the waterspouts of heaven were opened, the honeycombed soil, wherein men had been burrowing like moles, sank down to unknown depths. And the disaster was solely along the line of this burrowing, for Paris has been building two thousand years on solid earth and rock, where Nature digs no hollows.

Here, just under the road-bed, were all those conduits of our civilization; channels for electric wires of light and telephones; then, gas-pipes and compressed air pipes; a little lower still, water mains and great sewer collectors; and, underneath all, the tunnels of the new subway carried through friable soil. The masonry of the subway arch was thicker than the contract with the city demanded. It is not far down in the bowels of the earth, like the London Tube; but it is as deep down as the London Metropolitan Railway, which, however, has for its vault an enormous thickness of brick, while the Paris subway has only twenty-one inches. This is more than sufficient for the ordinary strain, great as it is nowadays, with auto-buses and auto-trucks weighing many tons. But Monday was no ordinary day.

First there came the tremendous inrush of water into the sewers, and on the street surface for a half-hour such a rainfall as human remembrance does not record in Paris. The sand which had been filled in above the subway tunnel must have settled away, for the sewer pipes broke in spots where there was no support for them. And their bursting broke the pipes of compressed air and let it loose to bore its way to open day; and this broke, in turn, the gas pipes; and then there came short circuits with that other force, electricity. There was a burst of flame, an explosion, and the earth beneath the street yawned to depths of twenty, forty, even sixty feet, where subway crosses over subway.

It is not that man cannot make safe his subterranean burrowings beneath the ground he treads; not that he cannot safely weave beneath his steps channels for the forces which he has enslaved, and not that Paris engineers fail in science. Mr. Willox is chief engineer of the London Metropolitan Railway, and must be a competent judge; and he says:

"Your engineers are often admirable, and it is certain we are much less scientific. Of course, in our work we take account of theory, but we do not risk experiments which practice has not warranted. And when we find ourselves up against a doubtful problem, we are not afraid to solve it in the simplest and the surest way. Where there is question of construction, we are not afraid of using twice the quantity of materials indicated by pure science. Perhaps your engineers, even because of their great knowledge, are too inclined to rest content with pure science and do not take account enough of practice."

Perhaps—but the question most distressing here and now in Paris is to know who are the responsible engineers. Those of the city or those of the subway company? And have the two worked together? And has there been the proper supervision of their work?

There are other questions, too, in the minds of many, which are not unconnected with democracy and city government by commission and practical politics, and, most of all, the workmen's side of the case.

The first report of the Municipal Committee of control of works ends with these significant words:

"To know exactly the causes of the catastrophe we must wait till the different chiefs of the services concerned have been heard and cross-examined. Meanwhile, we may observe that a workman protested against the employment of inexperienced laborers, little acquainted with the nature of the undersoil of Paris and the difficulty of the work to be executed; and against dangerous mine explosions, causing considerable earth-falls, and thus making pockets which were all the more dangerous as they were less known. This workman also pointed out that the intensive work which was required did not allow of perfect pounding down of the earth."

The difficulties between capital and labor are sometimes more than mere talk. S. D.

THE CZAR AND KING CHARLES AT KUSTENDJE—A MATRIMONIAL ALLIANCE—EFFECT ON INTERNATIONAL RELATIONSHIPS.

VIENNA, June 24.

The recent meeting between the Czar of Russia and King Charles of Rumania at Kustendje was watched in Vienna with interest and some apprehension. The Czar has definitely decided to bestow the hand of one of his daughters upon the Crown Prince of Rumania, and his visit to the port on the Black Sea was taken for the purpose of clinching this arrangement. The marriage will probably act in the same way as the alliance between Berlin and Athens or the matrimonial connection between the small state of Montenegro and the powerful kingdom of Italy.

A certain proportion of the population of Rumania does not approve of the policy of King Charles in joining the Triple Entente. The leading papers speak of Russia's taking of Bessarabia, and say that the great Slav nation cannot be trusted. This is no doubt correct from their point of view, and Russia is so great herself that she may be compared to an autocratic father, who would hardly stop to take the rights of his children into account, if he considered the confiscation of their land was necessary for the good of the whole family. Thus the feelings of the Opposition that it is not wise to venture so far into the camp of the enemy and that past experience had shown that the aims and aspirations of Rumania and Russia have ever been completely divergent are probably correct. King Charles, however, greatly desires to ally his house with that of Russia, and for the present considers little but that. This falling away from the Triple Alliance is greatly regretted in Vienna, where it is felt that the support given to King Ferdinand was ill-timed, as the Triple Alliance thus lost the friendship of Rumania.

It would appear that the Czar of Russia and King Charles discussed the situation which is arising from the increased helplessness of Turkey and the possibility of the opening of the Dardanelles. Bulgaria and Rumania have both decided to build out their Danube fleets, as the small monitors used for patrolling the stream of the great Danube are useful and necessary, not only in time of war, but also for peaceful purposes, since they are often busily engaged in looking after smugglers and performing other police work along the stream. Both Rumania and Bulgaria are considering the necessity of enlarging their Black Sea fleets. Russia is building apace, and the small countries on the shores of the sea must at least have some means of defence against their powerful neighbor in case of an outbreak of hostilities. There also arises the question of whether the demand for the opening of the Dardanelles could not better be made by one of the small Balkan states than by Russia.

Exactly what is being projected in this matter is unknown, but it is clear that the question will be reopened at the first favorable opportunity. Meanwhile Ferdinand of Bulgaria is little likely to encroach upon his neighbor, although the irritation with Rumania, which took the opportunity of Bulgaria's helplessness to annex a large strip of her territory, is still present, taking the form of a quiet wrath that is nursed until the state of the country will permit of revenge. L. R.

Books and Men

MEASURING THE SHUDDER.

Painting the lily and gilding refined gold have long been thought the very worst of bad form. To break a butterfly upon a wheel is regarded as a brutal exercise, and the man who would analyze the rainbow is out of favor everywhere. But vivisecting the short story is a highly popular sport, and the number of persons who are engaged in measuring the shudder that dwells in detective stories, in tales of mystery and terror, is a cause for mild surprise to those who follow these enterprising experimenters.

The books designed to give instruction in the art of writing short stories would nearly fill a five-foot shelf. The authors compile an excellent list of the best stories, and print half a dozen examples. The masterpieces of Poe and Maupassant, of Bret Harte and Kipling, of O. Henry and W. W. Jacobs, are classified and compared, and finally stretched upon the dissecting table. The unerring light of an instructor in English composition is turned upon the subject, and we are informed, with ruthless accuracy, just why "The Fall of the House of Usher" or "The Monkey's Paw" makes us feel the way it does make us feel.

In the last year I have undoubtedly read more books on how to write a short story than Poe and Maupassant together read during their entire careers. And the amazing thing about these books is that they contain so much good sense—there is hardly a statement open to dispute in one of them. Not one of the writers pretends to turn the illiterate into geniuses, or to enable the average man to rival a famous author. Nearly all they say is wisdom's very self. They do not seem to get anywhere, and the greater part of each book is fairly obvious to any intelligent person who has read two or three score of the best short stories. But, with hardly an exception, they are immensely interesting.

One of the most readable of all is "The Technique of the Mystery Story," by Carolyn Wells (Home Correspondence School). In spite of many passages in fine print, I cannot imagine any one leaving it unfinished, once having begun to read it. Yet, when you see it announced as "a complete practical study of the form, with examples from the best mystery writers," you not only smile, but feel sure that the author smiled, too.

The table of contents is delicious, and the index irresistible. Chapter IV, for instance, the table tells us, is about ghost stories, and it is divided into four parts: a working classification, the ghost story, famous ghost stories, the humorous ghost story. Against attempting the last, by the way, the novice is warned. Chapter XIV deals with Devious Devices, as tracks in the snow or mud. Another speaks of footprints and fingerprints, with a note on teeth-marks. Another describes disguises and discusses the literary value of false whiskers.

Miss Wells makes some surprising statements. "A true lover of detective fiction," she writes, "never reads detailed newspaper accounts of crime." This, I fancy, is altogether too sweeping. Certainly, Sir Arthur Conan Doyle—who loves detective fiction so well that he writes a great deal of it—has become interested in real crimes, and presumably through the newspapers. The Edalji and Slater cases have occupied him at home, and during his recent visit in New York he expressed his interest in the Becker case and sought an interview with the convicted man.

It is possible to carry one's hostility to the adage "Truth is stranger than fiction" too far, and this Miss Wells does when she declares Arthur C. Train's "True Stories of Crime" dull and prosy. As a rule, of course, the fictitious is more entertaining than the true, but it is certainly unsafe to declare that this is always and invariably the case.

There was a measure of wisdom in Oscar Wilde's paradox about Nature following art, instead of art following Nature. Certain crimes seem to partake of the very essence of the detective story. The mind that loves problems, yet refuses to study a mystery because it is real, simply denies itself enjoyment. The Parkman-Webster murder, even viewed in retrospect, with the solution known, is more dramatic than some of Miss Wells's favorites of fiction. Accounts of it are surely better reading than certain novels by that master of delay and exasperation, the author of "The Perfume of the Lady in Black." The Borden murders of twenty-one years ago still puzzle and fascinate those who believe themselves, despite Miss Wells, "true lovers of detective fiction." The English case of Dr. Lamson, in which poison was administered *in the presence of a witness*, has in it the stuff which Sherlock Holmes would have declared worthy of his best efforts. There were elements in the horrible Richeson case in Boston which were like pages from Anna Katharine Green. The Slater case was extraordinarily interesting, especially as the murderer calmly walked out of the door, from the scene of the crime, past two witnesses. And on the day on which this is written the papers are full of the story of a murder whose details would delight the sensational novelist.

The newspaper accounts, it is true, of most of these cases are turgid, clumsy. But the facts of all of them, stripped of the rhetoric, hold the same fascination, the same intellectual puzzle, that minds like Poe's have sought to construct, and minds like Gladstone's and President Wilson's have been eager to solve.

Whether or not, by the way, the cool, intellectual person is the ideal reader of detective stories, he is not the ideal writer of them. Poe's mathematical mind devised capital detective stories, but his detective,

Dupin, is too inhuman to be interesting. He is the "Thinking Machine" of Jacques Futrelle in an earlier incarnation, and like him he fails to arouse sympathy. Sherlock Holmes, for all his pretended impassivity, is not only a greater detective, but a far better fellow than either. It may have been hard on Dr. Watson when Holmes refused to congratulate him on his engagement, but it was far better to have Holmes around than either Poe's or Futrelle's hero. To live with either of them was like rooming with the fifth proposition of Euclid—whatever that may be.

In an article called "Remedial Legislation for Words," printed in this column two weeks ago, I referred to Prof. Brander Matthews's essay "On the French Spoken by Those Who Do Not Speak French," as hard to obtain. Professor Matthews has kindly called my attention to the fact that the volume containing it, "Pen and Ink," has been reprinted.

News for Bibliophiles

WILFUL AND IMPATIENT POVERTY.

The source of the stanzas upon Poverty with which Chaucer prefaces the Man of Law's Tale of Constance, Gower's theme of Envy (Detraction), was long since shown by Professor Lounsbury in the columns of the *Nation* (No. 1253, July 4, 1889) to be Pope Innocent's famous tract, "De Miseria Conditionis Humanae." But the function of this Poverty prologue—a matter of much greater moment to the literary student than its origin—still awaits adequate explanation.

Two kinds of Poverty are recognized by writers of the Middle Ages. The first, "Wilful" or Willing Poverty, was a highly extolled virtue in the Church and was readily embraced by the ascetic together with the other binding vows of chastity and obedience. It is chief among the sanctimonious professions of the friar of the Summoner's Tale, but is frankly disavowed by the soulless Pardoner. Poets as diverse as Dante, DeGuileville, Jean de Meung, Langland, and Occleve chant loudly its praises, proclaiming it the gift of God, the mother of health, the source of wisdom. Its many eulogists point to the sacred precedent of Christ and his apostles, they vaunt its careless security from robbery and its happy freedom from responsibility, and they deem it ever the most salutary corrective of the Sin of Pride. "Whoso hateth Pride, loveth Poverty," says one, the devout author of the "Ayenbite of Inwyt"; "Pride in riches reigneth rather than in Poverty," affirms another, the clear-sighted Langland; "Riches of this world move men to be proud," sermonizes a third, the lofty-souled Wyclif. Hence the large space devoted by Chaucer to Wilful Poverty in his comprehensive impeachment of Pride in the proud Wife of Bath's story.

The second kind, Impatient Poverty, the theme of the Man of Law's prologue, is as much a vice as the first is a virtue. Many others than Pope Innocent illustrate its sorry state. According to the author of the "Romance of the Rose" (ll. 826 ff.), Poverty is the shamefaced spouse of Misery, wedding a man to hate and driving from him all friends and brethren. In Lydgate's translation of De Guileville's "Pilgrimage of Human Life" (ll. 22716 ff.), Impatient Poverty is an ape-lipped crone, frowning and foul of cheer, groaning and "grucching." It is this "grucching" or murmuring which characterizes every mention of the fault, whether it be in Lydgate's version of Æsop or in Occleve's "Regement of Princes," "Whoso gruccheth in poverty, forfeiteth grace."

Now murmuration or "grucching against poverty" is one of the chief phases of Envy in Chaucer's own Parson's Tale. And the poet links the Man of Law's prologue with that Deadly Sin through this envious grumbling, and through the vehement "sorrow at other men's weal" in the second stanza. The obvious bond between Impatient Poverty and Envy becomes a mediæval tradition that culminates in its dramatic presentation in the sixteenth-century interlude of "Impatient Poverty," where the sin is the servant and yet the secret foe of the title character. In this morality Envy conspires against Impatient Poverty in his brief hour of prosperity, bringing him to naught, rejoicing in the tidings of his ruin, and deserting him after his losses with the time-honored taunt, "Thieves shall not rob you, going by the way." At the close the Summoner cites Impatient Poverty as "a great slanderer and full of envy" and Peace finally bids him "forsake envy and misrule." A prologue of Impatient Poverty is, therefore, a prologue of Envy. From the mediæval point of view such a prelude of Murmuration is an apt introduction to a tale of Detraction, its sister phase of Envy.

It is no chance coincidence with Chaucer that Envy in the Elizabethan interlude makes large mention of merchants and men of law. Both of these occupations were deemed by men of the Middle Ages to be tainted with a base desire for wealth and a sovereign contempt for the poor. To cite but two examples of a score, the place of merchants in the context of our Poverty or Envy prologue is amply illustrated by the words of Wyclif in his sermon against Envy (III, 133): "And so uneven dealing of goods of this world engenders much envy among these worldly men. And so parts of this community and especially merchants move to this envy by deceit of their craft." The discussions of Poverty in the "Romance of the Rose" introduce more than once "the rich merchants who but live to gain more wealth." Chaucer's final ascription of the prologue of Murmuration and the story of Detraction to the Man of Law as an exponent of Envy is vindicated by the many mediæval illustrations of the unfavorable conception of this supposedly envious profession presented in my article on "Chaucer and the Seven Deadly Sins" in the March number of The Publications of the Modern Language Association of America.

The cry of Chaucer's envious man, "O riche marchaunts, ful of wele [prosperity] ben ye," recalls the wail of discontent at the beginning of the First Satire of Horace's First Book, "O fortunati mercatores!" Did Chaucer know the opening lines of the Horatian Satires as well as he knew the delightful little prelude to those of Persius? At our poet's "feast of scraps," beginnings are often the chief morsels.

FREDERICK TUPPER.

Burlington, Vt.

German Fiction

THE SHORT STORY AND THE DEVELOPMENT OF HUMOR.

The four volumes of stories by older German writers which have been published by the Insel-Verlag, of Leipzig, call attention to the fact that the Germans have a respectable number of excellent story-writers. The handsome edition has an introduction by Hugo von Hofmannsthal.

He sees in Jean Paul the miniature painter of all the apparent trifles, which yet are so significant, and of all the pathetic futilities of ordinary life; in Eichendorf the roving, dreamy, consciously juvenile tendency of the race; in Brentano and Hauff the folk-soul in its unadulterated purity; in Tieck and Hoffmann the mysterious lingering upon the threshold of another world; in Arnim and Kleist the masters of the story which deals with a solitary and unique experience, usually in an alien, romantic setting; and so forth to Immermann. He justifies his choice of these writers by saying that they represent a Germany which is no longer the same, and he would have the Germans remember them because the present is the subject of an idolatry which he, the very writer who struck a note of ultra-modernism in his earliest work, no longer seems to approve.

There is a slight connection between these older story-writers of Germany and a few of the new generation who have been wise enough not to discard everything that is of the past. Wilhelm Hegeler, although a contemporary of that clamorous group of innovators, has always held aloof, evidently unwilling to be identified with their wholesale holocaust of old ideals and old standards. The emotional quality, the natural simplicity so sadly absent in the work of "youngest" Germany, give his stories an agreeable flavor. Though entitled "Eros" (Berlin: Egon Fleischel), his latest book is not erotic in the accepted sense of the word. The stories it contains are built upon love episodes, refined in sentiment, varied in character, and told with a tender charm.

Otto von Leitgeb is interested in strong passions and deep sentiments, rather than in psychological moods and sensations. His book of stories, "Das Hohelied" (Egon Fleischel), presents the whole gamut of real feelings, rather than their infinitesimal *nuances*, and his insight into character is so well founded that his appeal is irresistible. He, too, has a keen appreciation of nature as a setting.

Ludwig Thoma's latest book of stories, "Nachbarsleute" (München: Albert Langen), is deeply rooted in the Bavarian temperament and in Bavarian soil. Thoma's world is small and restricted by the curious old-time conventions of a middle-class provincial society. He has seen it at close range and has overlooked none of its idiosyncrasies. He pokes fun at its petty

formalism and its antiquated prejudices. He laughs outright at its absurdities. Yet he makes one feel that he loves these people, after all, that a subconscious racial kinship unites him with these townfolk and neighbors, and his robust, healthy humor leaves no bitter after-taste.

There is a note of forced artificiality in the book of Hans Bötticher, which does not justify its title, "Ein jeder lebt's" (Albert Langen). Life is not quite as grotesque for every one of us; it is not such a succession of curious experiences. His exotic imagination lends a fanciful, unreal touch to the figures with which he peoples his pages. "Die wilde Miss vom Ohio" and "Der tätowirte Apion" would delight the lover of the weird and extravagant. On the other hand, the book contains not a few thoughtful sketches with a delicate symbolical or a broadly human meaning.

It is surprising to find a native Swiss who has perfectly mastered the matter and manner of the writers engaged in chronicles of life at European capitals. Nothing as "Parisian"—in the ordinary sense of the word—has come from the pens of native Parisians in many years as Alexander Castell's novel, "Bernard's Versuchung," which was published about two years ago, and his recent book of short stories, "Capriccio" (Albert Langen), also unmistakably breathes the accepted atmosphere. Castell's temperament is intensely dramatic—another feature which is not Swiss. The prize ring, the variety stage, the "Halles," the "Boul' Mich'," the Riviera Express, furnish the settings for his little dramas of desire; for all his men are engaged in the feverish quest of pleasure, of erotic experiences, and other adventures. Some of the stories are distinctly symtomatic of the idiosyncrasy of sex by which American literature, too, is beginning to be affected. But Castell writes from the standpoint of an over-ripe civilization; his is the cynical note of the initiated, while the naïve seriousness of our Americans proves that they are still "Innocents Abroad."

Albert Ehrenstein's book of stories, called after the initial tale, "Der Selbstmord eines Katers" (München: Georg Müller), bears no date of publication, but is too extraordinary in character to be overlooked, even if it were a trifle more than a year old. Ehrenstein belongs to the group of independents that stand outside of the "representative" literary world of Austria and go their own way regardless of the demands of the market and the need of advertisement through the press. He is a visionary, a wit, and a stylist whose pedigree might be traced to the English humorists of the eighteenth century, notably Laurence Sterne, yet he is unmistakably a type of the modern Viennese intellectual. He conjures curious moods and fancies, pictures of real life and dream life, before the reader's vision. Exotic imaginings and philosophical excursions follow in bewildering abundance. The form is always that of a chat, but the reader feels that the author needs no second, that he is content to converse with himself. A strangely self-centred but attractive personality is reflected in this book. "Begräbniss," "Mitgefühl," "Ansichten eines Exterritorialen," and others illustrate his manner.

Carl Hauptmann is in the habit of turning out a book of short stories in the interval between the completion of a larger work and the beginning of another. His "Nächte" followed upon his Bonaparte dramas, and now, only a few months after the publication of his admirable poetical play, "Die armseligen Besenbinder," and of "Die lange Jule," which had its initial performance at the inauguration of the new royal theatre at Dresden, he has sent out an interesting collection of stories, called "Schicksale" (Leipzig: Kurt Wolff). They are quaint portraits of queer country folk, of strange aristocratic eccentrics, of religious cranks, of specimens of human nature in its more extravagant and perhaps abnormal phases. He gives these people a singular vitality, making them plausible, if not convincing. "Magdalena mit der Balsambüchse," "Der Tanzmeister Grandhomme," "Der Bäcker Einhorn," "Der Evangelist Johannes," and "Fürst Gribow und seine Kinder" are as rich a collection of unusual figures and unusual experiences as one could find anywhere.

A strikingly original achievement is the first long story that has come from the pen of Alfons Petzold, the proletaire poet of Vienna, who has recently become the subject of many critical appreciations in the magazines of Germany. Petzold has been a sufferer from tuberculosis, and the scene of the greater part of the story, which is entitled "Erde" (Vienna and Leipzig: Deutsch-Oesterreichischer Verlag), is a sanitarium. The actors in the pathetic drama are patients who are finally dismissed as cured and go out into the world to set up a home for themselves hallowed by a tender affection. Then only does the tragedy begin, for the heroine's frail body is unfit for maternity, while her woman-soul longs for a mother's glory. The unusual and tragic solution of the conflict is very startling, and gives the plot an unexpected ending. But the great significance of the book lies in its philosophy, its beautiful acceptance of the inevitable, and in the author's deep feeling for nature.

Genuine humor is so rare a thing in German letters to-day that it should be doubly welcomed when it presents itself in such a fascinating form as the "Alltag eines Fröhlichen," by Robert Scheu (Albert Langen). Dr. Scheu is secretary of the Austrian Chamber of Commerce, an authority on the subject of "Kulturpolitik," which is a term of his own coinage, and has been prominently identified with a reform of the common-school education in his country. He has published a number of dramas, some in collaboration with Dr. Otto Stössl, his gifted compatriot, and is known to readers of *Simplicissimus* as the faithful chronicler of current events as seen through his temperament. Scheu has the faculty of relieving caustic sarcasm with a kindly smile, though his satire strikes right and left. The skits upon college customs, upon the policies of the press, upon official red tape in municipal administration, and other departments of public life are choice products of his pen.

One of the most striking personalities among the writers that have come to the fore through the medium of *Simplicissimus* is Gustav Meyrink. He is not a prolific writer, and although the readers of his first little volumes of sketches and tales, "Der heisse Soldat" and "Orchideen," upon which his reputation rests, are not likely to have forgotten him in the years of silence that followed their publication, the collective edition of his writings in three volumes, under the title, "Des deutschen Spiessers Wunderhorn" (Albert Langen), will be warmly welcomed. Meyrink is a representative of that new German humor which has evolved within the past twenty years, and takes its cue from the critical and heretical attitude of the younger generation. He has an exuberant imagination and a mordant irony. Meyrink has fulfilled a mission in Germany by placing a damper upon the extravagant overvaluation of Gustav Frenssen by his choice parodies upon "Jörn Uhl" and "Hilligenlei."

Correspondence

THE SURTAX ON INCOMES.

To the Editor of The Nation:

Sir: In your issue of July 2 there occurs a reference to the Federal Income Tax law to the effect that the surtax on large incomes became effective only after the passage of the bill in October of last year. I enclose a clipping from the paper wherein this reference appears. Mr. Underwood, you will see, is quoted as authority for the statement.

This construction of the law is, I believe, a new one, the Government having exacted a tax and settlements having been made upon the basis that the surtax did not differ from the normal tax with respect to time of operation. I beg to inquire, therefore, whether you will not be good enough to give me in full the basis for the statement contained in your paper, and such additional data as will be necessary to clear up the point.

Thomas S. Gates.

Philadelphia, July 2.

[The statement, though made by Mr. Underwood according to an extensive press report of his speech of June 27, was erroneous. The report of the passage in question was as follows:

There will be no falling off in the income-tax receipts next year. A large proportion of the income accrues and is payable in January and February of the year, but income tax became operative as to the normal tax in March, and as to the super-tax or additional tax not until the bill became a law in October.

In the speech as printed in the *Congressional Record* for June 29 no such statement is

made, the nearest approach to it being the following:

No one is charged for income for this last year except for income actually received during the last ten months of the calendar year 1913. The income-tax assessment upon semi-annual incomes payable in January and July only applied in 1913 to a period of four months.

—Ed. The Nation.]

DUTCH OFFICERS IN ALBANIA.

To the Editor of The Nation:

Sir: On the fifteenth of June, Major Thomson, of the Dutch Army—known as a brilliant officer and as an energetic member of Parliament—in leading his Albanian troops against the enemies of Prince William, changing a forlorn hope into an ultimate success, was shot through the breast and killed.

The real work of creative organization in Albania devolved upon a handful of Dutch officers, chosen for their intimate knowledge of the character of Mahommedan soldiery. Within less than three months they accomplished the only actually constructive work that has been done in Prince William's new kingdom, and as a reward for their labor they have been cordially reviled by the press of every nation which has present or future interests in Albania.

The simple and direct devotion of these men to a very unpleasant duty is a splendid manifestation of what the modern and intelligent officer of the small continental armies can achieve in the face of apparently hopeless odds. H. W. van Loon.

Madison, Wis., June 30.

INFLATION AHEAD?

To the Editor of The Nation:

Sir: The fundamental purpose of the Federal Reserve act is to assure to banks in times of strain a market for their loans. This was set out in a recently published article that ended thus: "And let me, in conclusion, emphasize the words 'in times of strain,' for if the system is unduly used in other times its usefulness will be seriously, perhaps disastrously, impaired."

That which I had in mind in so writing seems increasingly important as we approach the putting of the system into operation. Increasingly one hears expressions of buoyant anticipation of the better times that will come with easier credit. The banks, it seems to be thought, will lend and lend, take their loans to their reserve banks for rediscount, and then again lend and lend. And so borrowing will be easier not only in times of strain, but as well in normal times.

There is danger in that misconception of the purpose of the Federal Reserve act. We have not suffered much from lack of bank credit in normal times. We have suffered much from panics caused by bad banking in normal times. Take the last panic. From the middle of 1904 until 1907 business in this country steadily expanded from a point much below to a point much above the normal. During the same period the ratio of bank loans to deposits increased and correlatively banking resources steadily decreased from a point much above to a point much below normal. It was this exhaustion of the usable portion of banking resources that ripened conditions for the panic of 1907. And the exhaustion in normal times of the usable portion of banking resources means, in all likelihood, that there has been bad banking; that bankers, yielding to the pleas of expanding business, have loaned their demand deposits otherwise than for quickly maturing commercial and industrial purposes, have loaned them for such purposes as plant enlargement. In a word, commercial bankers have undertaken the functions of investment bankers. By their doing so, by bad banking in normal times, conditions are ripened for a panic, and when the time of strain comes, as in 1907, commercial bankers fail to perform their own functions of supplying money for the daily needs of the people and credit for the short-time needs of business.

Now it is just because business and banking, instead of moving rationally forward on a line of steady development, move emotionally upward and downward in a zigzag across the line that something like the Federal Reserve act had to be enacted. Something had to be done to help the bankers, when overtaken by the results of their bad banking, to renew their exhausted resources and so get into condition to continue the performance of their functions. If this conception of the purpose of the Federal Reserve act be held by the managers of the new system, as there is every indication that it will be, and they in so holding be supported by the public, there will be no danger of inflation ahead.

Moreover, there is little danger in any event of inflation through Federal Reserve notes. This new kind of money may not be held as reserves by the member banks, and the provisions for its redemption seem unquestionable. It is, therefore, altogether likely that the new notes will not stay out longer than they serve a legitimate purpose. We shall, in other words, probably get an elastic currency whose volume, like the volume of checks, expands and contracts in accordance with the exchanges to be effected at the time.

The way in which the inflation will come, if at all, is through the undue use of the rediscounting provisions of the act. A member bank, having loaned and loaned until it has exhausted its usable resources and consequently its right to loan, takes a bundle of its loans to its Federal Reserve Bank, there rediscounts them, and has the proceeds credited to its account with the reserve bank. By so doing, and thus increasing its legal reserve, the member bank has acquired the right, as pointed out in the *Journal of Political Economy*, to loan further to an amount (according as it is a central reserve city bank, a reserve city bank, or a country bank) more than five, six, or eight times the amount of the rediscounted loans. The borrowers from the member bank take the proceeds of their loans in the form of credits to their checking accounts. And thus, to the contrary of the notion that inflation comes only from an undue addition to the volume of money, you have, without the addition of any money, the conditions for inflation.

Probably the inflation will not come, but it is just as well to have in mind how it might come, and to do what we can to moderate this current anticipation of easier credit in normal times.

The chief reason for saying that inflation probably will not come through the operation of the Federal Reserve act is that we are likely to get conservative, competent men as directors of the reserve banks. The responsibility on them will be great, and none of their duties will be more important than to decline to rediscount for bankers who do not have the courage and the intelligence to decline to overdiscount.

No criticism of the Federal Reserve act is implied. All usable things are abusable. If the excellent piece of machinery provided by the Federal Reserve act is abused there will be danger of inflation ahead.

Evans Woollen.

Indianapolis, July 2.

COMPULSORY CANDIDACY FOR STATE LEGISLATURES.

To the Editor of The Nation:

Sir: The question raised by the editorial article in the *Nation* of June 18, "Our Precarious Public Careers," is both interesting and disturbing. If it is true, as you assert, that there is a dearth of men of ability and character in the State Legislatures, is this due to the fact that there is now "nothing in" a seat in a State Legislature, since the abolition of the free railway pass for "statesmen," the cessation of the resulting friendly relations between statesmen and big business, and the consequent disappearance from the statesman's mind of the lively sense of potentially still more pleasant and profitable relations yet to be? In a word, is it due to that inhospitality of life in a State Legislature to all selfish ambition which has resulted from the reforms and the general movement for purifying public life of the last dozen years?

If the answer is yes, what, then, are we to do? No one, certainly, would advocate a return to the old system; for it was a bad system, even though under it able and ambitious men, not too nice of conscience, were led to strive for membership in the State Legislature, and in many ways often served their State well and even unselfishly in a large part of their activity.

The situation is, nevertheless, a serious one; far too serious for us to look with much hope of relief to the influence of those amiable but now slightly wearisome celebrations of the doctrine of "service" which have been resounding from several hundred commencement platforms during the last few weeks.

The American public listens with a somewhat too indiscriminate cynicism, no doubt, when it hears of the great sacrifice being made by some man who has just accepted an office to which a very comfortable salary is attached; though it must be admitted that the not infrequent refusal of an office of this kind by a man who really does not want it lends some color to the belief of the general public that no man among us takes a public office when he does not find it in some way to his personal interest to do so. It would seem, however, that here is a place, under present-day conditions, where real self-sacrifice in the public interest is the only remedy. One dislikes to suggest such a thing as compulsory candidacy for a seat in the State Legislature; for the comparative freedom of the American citizen from the obligations of public service compelled by law and administrative authority—a freedom that has thus far been enjoyed without serious harm to the State—has not only been creditable to our public spirit as a people, but has done much to keep alive that precious sense of personal freedom without which life loses much of its charm and nearly all of its dignity. Nevertheless, if it is true that there is an increasing reluctance on the part of able and competent men to become candidates

for membership in State Legislatures, does it not seem likely that the public may, in self-defence, find it necessary to compel candidacy as an incident of citizenship, in essentially the same way as that in which it now compels jury service? Compulsory candidacy would not be an ideal way out of a perilous situation; but recourse to it seems probable, unless it comes to be generally understood that it is a deeply discreditable thing for an American citizen to refuse nomination to a seat in the Legislature of his State. R. D. O'LEARY.

Lawrence, Kan., June 30.

"NUTS," NATIVE AND BRITISH.

TO THE EDITOR OF THE NATION:

SIR: One of the most interesting features in present-day slang is the great difference between the meaning of the word "nut" as applied to a person in England and in America; and as this word has only recently been used in slang, it is not to be found in most of the slang dictionaries.

Halliwell's "Dictionary of Archaic and Provincial Words" gives a definition of "nut" which is attributed to the Yorkshire dialect, and says: "Nut, a silly fellow. This word is not applied to an idiot, but to one who has been doing a foolish action." This is the sense in which the word is used in America, but, although it is common in spoken speech, it has no literary acceptance on this side of the Atlantic, and only appears in print in the garish pages of the Sunday comic supplement.

In England the word "Nut" (applied to a person) is capitalized and is to be found very frequently in *Punch*, and also in novels with some pretence to good standing, as, for example, Mrs. Horace Tremlett's "Curing Christopher" and Justin Huntly McCarthy's "Fool of April." In the last-named book the author attempts a definition of the "Nut," as the modern representative of the Beau, the Macaroni, the Dandy, and the Dude.

It is curious to see the same word used in English and American slang with such difference in meaning and in standing. Possibly the English "Nut" of to-day may have a place in the novel of manners of equal dignity with yesterday's Beaux and Macaronis, but our native variety is unlikely to rise from the lowly position it occupies in the vocabulary in company with "boob," "simp," or similar words applied to people who do foolish things.

An attempt to trace a common origin to two fortuitous uses of a word in slang is of slight value, but it is interesting to note that in the early eighties the word "Nut" was used in Australia with an intermediate meaning, being applied to a type which considered itself the complacent man of the world, but was mocked at by the general public. Edward E. Morris, in his "Austral English," quotes an illustrative passage from A. J. Boyd's "Old Colonials": "The peculiar type of native (white) which has received the significant sobriquet of 'The Nut' may be met with in all parts of Australia, but more particularly in far-off inland bush townships. What is a Nut? Imagine a long, lank, lantern-jawed, whiskerless colonial youth—generally nineteen years of age, with a smooth face, destitute of all semblance of a crop of 'grass,' as he calls it in the vernacular." JOSEPH F. GOULD.

Norwood, Mass., June 8.

Literature

BOOKS ON RUSSIA.

Modern Russia. By Gregor Alexinsky. Translated by Bernard Miall. New York: Charles Scribner's Sons. $3.75 net.

Russia of the Russians. By Harold Whitmore Williams. The same. $1.50 net.

Behind the Veil at the Russian Court. By Count Paul Vassili. New York: John Lane Co. $4.50 net.

Interest in Russia, as a developing and changing country, apparently continues unabated. Three books dealing with the topic, each of them worthy of careful attention, but written from widely different points of view, have appeared within the space of six months.

Gregor Alexinsky, the author of "Modern Russia," is a revolutionist of university training, who, after some experience of prison life, was elected a member of the second Duma (1907), in which short-lived body he was a leader of the Social-Democratic party. The aim of his present book he defines as follows:

> I have no wish to speak as a prophet unveiling the future. . . . Nor do I speak as a political agitator; my aim is quite otherwise. I hope to speak the calm language of facts and figures and exact data. This book, in my intention, should be a small encyclopædia of Russian life in all its manifestations; an unpretending photograph, which seeks to reproduce, as faithfully as possible, the contours and the colors of reality (p. 9).

Alexinsky's performance does not correspond to his profession of faith. On the whole, his work may be regarded as a political tract in which Russian history and social conditions are interpreted by the formulas of Marxian economics. Writing with apparent haste, he shows scant ability to take the point of view of the uninformed foreigner and a typically Russian ignorance of the first principles of orderly exposition. He gives no account, for example, of the fundamental differences between the Russian nobility and that of any one of the Western countries. That Leroy-Beaulieu and Wallace have already given luminous discussions of the subject is no excuse for silence in a book that is meant to be self-sufficient. He devotes equal space, five pages each, to a description of the rural commune and to the career of the police spy Azev. He wastes two pages in expounding the axiomatic thesis that "to comprehend the political history of any country we must examine its economy" (p. 36).

Mistakes of detail are frequent; one finds astounding statements like: "The Little Russians speak a dialect which is almost the old Slav language" (p. 29), and "the apostles of Christianity in Russia, having found no ready-made alphabet, created one themselves, and then composed a special language in which the religious services were celebrated" (p. 71). More important, it is an utter perversion of history to say that the Russian monarchy "has always been dependent on the nobility, and that its actions have merely expressed the interests of the latter" (pp. 174, 175).

Yet all these failings do not prevent Alexinsky's book from being of considerable value. No other writer makes so clear the immense changes that the advent of capitalism has worked in the Russian social fabric, even though one may demur at the extreme view: "Capitalist industry is the factor that determines the character and the tone of Russian life. The conflict between town and country . . . is resolved in Russia in favor of the town. The village, despite its quantitative superiority, plays a subordinate part in the social life of the country" (p. 110). Most important, Alexinsky gives, in part unconsciously, a really authoritative statement of the ideals and of the general point of view of one influential school of Russian radical thought. One may be glad that he has not sacrificed vividness of treatment in his ineffectual striving for scientific impartiality.

Dr. Williams is a man of different type. He is a research fellow of the School of Russian Studies at the University of Liverpool, an institution that is doing much to further an enlightened interest in Russia among speakers of English, and is an editor of the *Russian Review*, the periodical published by that school. This quarterly, one may remark in passing, is now entering on its third year; it is not only valuable in itself from its articles dealing with current affairs in Russia, but is an excellent guide to the literature of the subject in English, French, German, and Russian. It is the single periodical in English devoted to a Slavic topic. Dr. Williams, as might be expected, writes as a careful, scientifically trained student of Russian conditions, not as a partisan of any political party. His book may be recommended without hesitation as the best introductory account of present-day Russia that exists in English, or, so far as the reviewer is aware, in any language. Its only rival is Wallace's third edition (1912) of his classic treatise, which was first published in 1877. But Wallace's revision is, to speak frankly, a piece of patchwork, and his temperament, which seems to have grown more conservative with advancing years, makes him an unsympathetic critic of much that is characteristic of Russia in our time.

Dr. Williams carries out, in a general way, the programme sketched and then neglected by Alexinsky. In a chapter of fifty pages on The Growth of Russia he gives an epitome of the salient features of the national history, based, as was inevitable, on the writings of Kluchevsky. Owing to its extreme compression, his section is difficult reading, but it will repay close study. There follow admirable essays on The Bureaucracy and the Constitution, The Press, The "Intelligentsia" (or educated middle class), Church and People, Peasants and Proprietors, and Trade and Industry. These are illuminating, first-hand accounts of the fea-

tures in Russian life that distinguish it from that of western Europe, and in particular from that of England. Other chapters are devoted to Literature, Music, The Theatre, Painting, and Architecture. Here, with true literary tact, Dr. Williams pays slight attention to familiar topics, while he lingers over those that are less well known but of more contemporary interest. Thus of Turgenieff and Tolstoy, information as to whom is readily accessible, he says little; on the other hand, he gives an excellent account of the writers of the last ten years, and in particular of the "modernist movement," which is practically unknown to English readers. He closes his volume with an entertaining chapter on the characteristics of St. Petersburg life.

Mistakes of detail are rare and unimportant. But one is surprised to find that Dr. Williams attributes the origin of the Dukhobors and some other heretical sects to the great schism of the seventeenth century. This is in direct conflict with all the authorities known to the reviewer, who agree in describing these sects as of a protestant character and wholly unconnected with the schism.

Optimism and sympathy characterize Dr. Williams's style; he writes of the Russians as of friends who have a great future before them. Without quite rising to the stature of Wallace or Leroy-Beaulieu he has produced a truthful but kindly book, for which every lover of the Russian people may be grateful. The volume is well illustrated with photogravures.

The question of the value of "Behind the Veil at the Russian Court" depends on its authenticity. According to a "publisher's note," the writer who is hidden under the pseudonym "Count Paul Vassili" "held an important post at the Russian Court" and died but a few months ago. The volume, which is said to have its source in Count Paul Vassili's diary, must be a compilation from that work rather than a transcript from it; the journal form is nowhere evident, and the whole book is carefully proportioned and developed to a climax with no small literary skill. It gives character sketches of most of the members of the Russian Imperial family and of many prominent statesmen and social leaders, from the decease of Nicholas I (1855) until our own day. The mental attitude is that of a conservative, though not entirely bigoted, man of society; Count Paul Vassili regards the conscientious but stupid reactionist, Alexander III, as "the best and wisest sovereign that Russia ever had," but admits that the day is past, even in Russia, for an autocracy such as he upheld. Always bright and entertaining, Count Paul Vassili's book is often, especially in its later chapters, of considerable historical importance. It gives a view of Father Gapon and the Bloody Sunday massacre, for example, which is in sharp contrast with the accounts that have been accepted by most English writers. Gapon is here said to have acted under instructions from Count Witte in stirring up the workingmen's procession that ended in so tragic a fashion, and he was himself murdered, not by revengeful revolutionists, but by Government agents who wished to dispose of a tool who knew too much. Whatever amount of truth there may be in this version of the matter, it is at least interesting if it be a true reflection of beliefs current in Russian court circles. On the whole, however, Count Paul Vassili will appeal more to readers fond of familiar gossip about high society than to serious students of Russian affairs.

CURRENT FICTION.

The Milky Way. By F. Tennyson Jesse. New York: George H. Doran Co.

This gracefully written story of sentimental vagabondage takes its title from a Provençal proverb, "He who is light of heart and heels can wander in the Milky Way." It differs from other tales of its class chiefly in its intensely feminine point of view. The familiar artist vagabonds of fiction have been men, or, like Mr. Locke's Clementina, women of rather masculine type. But Vin Lovel, who relates her adventures in the Milky Way, is a very youthful girlish vagabond; and the whole tone and quality of the book, its opinions, its impressions, its style, are as feminine as can be imagined. Even the hero, we regret to add, is open to the suspicion of being a girl in disguise. It is to be feared that the heroine deceives herself when she decides that she is in love with him. For her own part, she is a young person who amusingly combines a sort of innocent sophistication with a slightly self-conscious naïveté. The book abounds in delicate and finished bits of description, and in the sort of "coterie speech" that artists are supposed to affect. The reader feels rather surfeited before he finishes it. Even an idyl can be too sugary: and this one is also a little too long.

E: The Complete and Somewhat Mad History of the Family of Montague Vincent, Gent. A Novel by Julian Hinckley. New York: Duffield & Co.

This is a first novel which unfortunately attempts to be clever in several different ways. The sub-title, for example, suggests Mr. Chesterton. The elaborate and quaint chapter-headings betray an admirer of Mr. De Morgan. The style of the narrative is frequently brilliant, but never trustworthy. When the author (or the proof-reader) falls into foreign tongues (dead or alive), the result is too likely to be sketchy—like the "quadurpedante putrem" of p. 192. And though we fancy ourselves setting out upon an easy road of romance, it is not long before we find satire grinning in the path. Looking back from the end of all the pages, we perceive that this is intended to be an arraignment of society. When we notice that much of the action takes place in Newport, with no sparing of the Casino and the other accessories recognized in connection with that abode of vice and fashion, we are prepared for at least all that follows. Montague Vincent is a parasite, snob, and drunkard. We feel bound to express the opinion of him that the manners here recorded would hardly pass muster even in Newport. At his face value he is a person of sufficient quality to engage the interest and the patronage of aspiring plutocrats in the toils of feminine ambition. In fact, the only thing really to "Monty" Vincent's credit is his daughter Edith, known by her initial, and heroine of the story. The impossible millionaire and aristocrat who befriends her and her mother plays his difficult part as well as his author will let him. Indeed, the effect of the book as a whole is of a well-meaning and too facile writer struggling to make use of sufficiently good materials.

The Desert and Mrs. Ajax. By Edward Moffat. New York: Moffat, Yard & Co.

The first novel of a mining engineer may or may not be more interesting than the first novel (or play) of an elevator boy. The publishers of this story appear to believe that something distinctive has been done. Our complaint would be that the writer has made too trifling use of his materials. In his anxiety to avoid the conventional melodrama of the mining camp, he has provided exactly that commodity, overlaid with farce. The initial idea of a stranded circus troupe adopted by a wealthy ranchman and gold-miner is good for farce. Mrs. Ajax is the Strong Woman of the disbanded company. There are a snake-charmer, a wild man, a pair of Irish acrobats with Italian names, and, above all in importance to the tale, a trapeze "artiste," with whom the ranchman falls in love, and who turns out to be the daughter of the villain. She, being somewhat incredibly modest and ladylike, also falls in love with her host at the earliest possible moment, but he is as blind to the fact as the author requires him to be, and we are destined to read a considerable number of pages before his eyes are opened and all is well. There are a number of good farcical scenes, and the lingo spoken by the personæ is of the best "American" type. It is not, however, quite natural that the capitalist gentleman from Philadelphia, allied to the Biddles, should employ that lingo as expertly as the ranchman or Mrs. Ajax herself.

Idylls of a Dutch Village (Eastloorn). By S. Ulfers. Translated by F. Williamson-Napier. New York: E. P. Dutton & Co.

The word *idyll* is (for a wonder) well chosen to express the quality of these sketches—or perhaps one feels this because they so strongly suggest the memorable "Auld Licht Idylls" of Mr. Barrie. Here, as among the Thrums people, religion is a matter of burning importance. The Eastloorn peasants, however, are of milder, more childlike temper than Mr. Barrie's dour Scots, and their chronicler describes them with comparatively small play of humor. Their manners are of less concern to him than

their individual and composite character. The spirit of the book is religious rather than "literary." Eastloorn has two churches, the Reformed and the Dissenters. The schism is of recent occurrence; and the fact of their difference remains a sort of shame to the gentle peasants, instead of being a constant delight, as to the belligerent Scotch. Each of the congregations has an admirable man at its head, Senserff, courteous and strong, and young Walter, impetuous, generous, and prone to ignore the constraint of his cloth. And besides these good men is Wiegen, the Dreamer, a shepherd lad who dreams of a Church without rules and divisions, a Church which shall be one and the same as the Kingdom of Heaven. Its membership he finds in unlikely places, often quite unconscious of it; so, though the Reformed people and the Dissenters have only one minister apiece, Wiegen's church has them both. The sketches together make a clear picture, and a very human picture.

OLD DECAY AND A MODERN INSTANCE.

Ancient Rome and Modern America: A Comparative Study of Morals and Manners. By Guglielmo Ferrero. New York: G. P. Putnam's Sons. $2.50.

Ancient Rome has hardly a valid claim to the prominence which it receives in the title of Ferrero's new volume. The reader feels, at times, that the few chapters which really do carry him back to the Consuls, the Emperors, and the eagles are no essential part of the work, which is a comment on the dominant tendencies and possible outcome of our modern civilization.

Somewhere in his earlier writing the author has insisted that what Cato and his kind denounced as decadence and corruption was in reality only what we moderns generally regard as "progress." On a smaller scale the territorial expansion of Rome had engendered that growth of public and private wealth and those lavish habits of living which were fostered in the modern world by the discovery of the two Americas. But as the more conservative of the Romans, "the Puritan party," as he often calls them, looked with stern disfavor upon the daring innovations of the "progressives," so many to-day find only decadence in the intense devotion of the apparent majority to the accumulation and enjoyment of material wealth. Discussions as to national progress are fruitless because the two parties are too widely separated to comprehend each the other's point of view.

Ferrero's alleged purpose in this volume is rather to state the dispute than to decide it. "The author . . . has not so much confidence in his own wisdom as to try to discover whether man is really progressing or not; whether he is moving down the valley of the centuries towards a fixed goal, or towards an illusion which retreats with each step he takes in its direction." The reader who thinks that he finds such a verdict is warned to rest assured that he is mistaken. Yet we are told in an early chapter that Rome in her era of expansion and material greatness and America of to-day are in many things peculiarly alike, and we are shown in detail that this likeness applies to the accumulation and lavish employment of wealth, with its tendency to draw men together into great cities. And later on comes another chapter in which excessive urbanization, the inevitable result of the dominance of material standards, is spoken of as "that disease which corrupted the trunk of the Roman Empire, and which is beginning slowly, subtly, insidiously to eat the heart out of the modern world."

In the drawing of detailed parallels between ancient and modern institutions one may not always follow Ferrero with safety. He tells us, for instance, that the legal *injunction*, about which discussion has raged so violently in recent years, "is nothing else than the *edictum* of the Roman magistrate; the power, that is to say, which the Roman magistrate possessed, and which the American magistrate, maybe in a less degree, possesses, of making good with his personal authority the lacunæ and deficiencies in the law on every occasion when public order or the principles of justice seemed to demand it urgently." Thus the two institutions are identified by a definition which cannot be accepted as at all adequate for either one. In respect of the chapter on the Trial of Piso, the Governor of Syria under Tiberius, accused of poisoning Germanicus and committing various other offences, one might pick serious flaws in the author's dealing with Tacitus, if it were worth while. In recent times the motto of a certain class of writers on Roman imperial history might seem to be, "If you have no case, abuse Tacitus." Tacitus has his defects as an historian, defects not usually difficult to detect and discount, but he is at least entitled to be correctly represented. The statement that Tacitus did not believe in the charge of poisoning brought against Piso is correct, and we know that it is correct from statements made by Tacitus himself so plainly that it is absurd for Ferrero to add that "with his usual malice he has done all he could to induce posterity to accept it as true." And only out of his own imagination can he get a conception of the elder Agrippina, the wife of Germanicus, which could lead him to refer to her as one "whom grief was robbing of the little sense which nature had given her." With all the faults of our ancient historians, we shall hardly reach solid ground by substituting our own imaginations for their statements.

The present volume contains many references to another which has already appeared in Italy, but is not to appear in English dress until the coming autumn. Its title is "Between the Old World and the New," and it is in the form of a series of dialogues assumed to have occurred between a party of men representing various degrees of culture and casts of thought, in the course of a two weeks' voyage from South America to Europe. Its fundamental theme is the same as that of the present volume.

BEGINNINGS OF SOCIOLOGY.

The Philosophy of Giambattista Vico. By Benedetto Croce. Translated by R. G. Collingwood. New York: The Macmillan Co. $2.60.

Vico, a great intelligence of whom Michelet long ago remarked that he lived in the eighteenth century but wrote for the nineteenth, remains in the twentieth an unduly neglected figure in the history of modern thought. Of late, however, there have begun to appear increasing indications—of which the present work is the most important—that the uniqueness and significance of his historic rôle are likely hereafter to receive general and adequate recognition from the historians of ideas. The fate of his doctrines is one of the most striking among the many illustrations of the truth that a philosopher's reputation depends upon neither the originality nor the fruitfulness of his ideas, but upon their congeniality to the mind of his generation—or else upon their good fortune in chancing to be noticed by some later generation at the moment when it is ripe for them. A wide influence upon the movement of modern reflection Vico never exercised, though in one or two cases he communicated new intellectual impulsions to men who were themselves destined to exercise such an influence. In his own day he was a voice crying in the wilderness; and when, long after, certain of his characteristic ideas began to enjoy an enormous vogue, they owed this in the main to the work of men who knew little or nothing of him. His interest for the historian, therefore, is of a special sort, and, undeniably, of a secondary order. His philosophy was an isolated phenomenon from which no great effects directly followed. But it was prophetic of a momentous intellectual revolution which, beginning about half a century after his death, has lastingly altered men's habitual ways of thinking about many matters.

Of Vico's age the sacred word was "nature." The "law of nature" was its favorite name for the sum of all moral truth, "natural religion" was its characteristic faith, "natural rights" were the basis of most of its distinctive political theories, the "state of nature" was the model of social life, and the "physiocracy" was shortly to become the ruling doctrine in economics. In whatever province applied, the conception of "the natural" as the ideal had primarily two implications. It set up an absolutely rigid and universal standard, the same for all times and all peoples; thus the "religion of nature" was held to be "as old as the creation," and to have received no subsequent additions, except by way of corruption. And consequently this quest for that which is valid "according to nature" involved also an inability to see in history anything more than a long, unhappy record of deviations from the simplicity and uniformity of the natural order of things. Vico's greatness lies chiefly in the fact that he was apparently the first of the moderns to conceive clear-

ly the idea which was eventually to give to all the seventeenth and eighteenth century talk about "nature" a strange and hollow sound—the idea, namely, of an order of historical development through which all peoples normally pass, of a series of stages of culture having each its appropriate institutions and modes of life, among which the earlier were by no means better or more venerable than the later. In the twenties of the nineteenth century this idea was still so unfamiliar, at least to the British mind, that the youthful John Mill's first acquaintance with it, as his "Autobiography" tells us, revolutionized his "system of political philosophy." But it was this, in essence, that constituted the theme of the *scienza nuova* which Vico proclaimed in 1725. He thus foreshadowed that historical or revolutionary relativism which was to dominate much of the thought of the later century—the habit of making allowances for the stage of development reached by any social group, of regarding political systems and even moral values as relative to specific historic situations, and of viewing those situations themselves as continuously in process of transformation.

It was under the guidance of this general insight that Vico was led to anticipate the historical science of a much later day in those new "rules of method" which Croce briefly enumerates:

> . . . his skepticism as regards the narratives of ancient historians, his recognition of the superiority of documents and monuments over narrative, his investigation of language as a storehouse of primitive beliefs and customs, his social interpretation of mythology, his emphasis on the spontaneous development rather than the external communication of civilization, his care not to interpret primitive psychology in the light of modern psychology [*i. e.*, not to assume the mental processes of a savage to be essentially like those of an eighteenth-century *philosophe*].

And it was this methodological wisdom which, in turn, made it possible for Vico to hit upon particular historical facts or hypotheses the rediscovery of which was to be the foundation of the fame of not a few later writers. Such were the theory of the popular origin and composite character of the Homeric epics, the reconstruction of Roman history, the interpretation of the greater part of it as an economic class-struggle, the new appreciation of Dante, the doctrine (enunciated as a novel paradox by Macaulay in 1825, in the essay on Milton which established his reputation) that poetry, since it should be simple and sensuous and deal with particulars rather than universals, is the more natural expression of a barbaric than of a highly civilized age.

Yet Vico was so far the child of his time that he was unable to conceive of the phases of a people's or of humanity's history as an unbroken progression; it was for him rather a repeated cyclic process, in which three ascending stages were regularly followed by two stages of retrogression, bringing in a "reflux of barbarism." His great idea, moreover, apparently came to him as a deduction from an essentially fantastic idea. The basis of his philosophy was the principle that a mind can know adequately and with certitude only that which it has itself made. Hence Vico regarded with skepticism physical science and, still more, metaphysics—except when "revelation" supplements our natural powers. For since man did not make the external world, he cannot truly know it. But the institutions and the processes of human society are man's own work; and it was therefore in history and in what would now be called anthropology and sociology that Vico found the proper study of mankind. As so often has happened in the history of ideas, a profound and permanently valuable thought emerged as a seeming by-product of a crude and ephemeral one.

Croce's exposition sometimes presupposes an acquaintance with Vico's text which the non-Italian reader is unlikely to possess. For the most part, however, it gives a readable as well as a highly illuminating account of the entire movement of the philosopher's thought; and it will probably long remain the most authoritative treatment of the subject. In nearly all respects the book is an admirable example of the way in which the history of philosophy should be written.

A GREAT LADY.

Christina of Denmark, Duchess of Milan and Lorraine, 1522-90. By Julia Cartwright (Mrs. Ady). New York: E. P. Dutton & Co. $6 net.

This book is decidedly superior to the average run of attractively printed and sumptuously illustrated "romantic" biographies of illustrious personages of the sixteenth and seventeenth centuries, which have poured forth in steadily increasing profusion from English and American presses during the past ten years. The author is well acquainted with the period, as her numerous previous works attest; she has read around her special subject as well as upon it; she has utilized manuscripts as well as printed sources, and most of her statements are supported by accurate references to them. There are a few minor errors and inconsistencies, especially in matters of chronology; and the text and footnotes sometimes fail to show that the author has availed herself of all the information contained in the works cited in her very copious bibliography.

Considering the length and cosmopolitanism of her career, it is certainly surprising that no modern biography of Christina of Denmark has hitherto been written. She is best known to the world by the famous portrait, now in the National Gallery, which Holbein painted in 1538 at the command of Henry VIII, and with which that monarch was so delighted that he promptly fell in love with its subject, and vowed that he would have the Duchess even if she came to him without a farthing. It is in a way poetic justice that Isabella should be thus immortalized by a portrait painted with a matrimonial end in view, for her whole career is a significant exemplification of the policy epitomized in the phrase *tu, felix Austria, nube*. She was the offspring of a union arranged by the Emperor Maximilian for the purpose of introducing Hapsburg influence into the Scandinavian lands in the north—her mother, Isabella, granddaughter of the old Emperor and sister of the future Charles V, being married in 1515 to Christian II of Denmark, Norway, and Sweden. But the miraculous success which usually attended Maximilian's dynastic ventures was in this case conspicuous by its absence. Less than eight years after his marriage Christian of Denmark was deposed and driven from his realms with his wife and three children, of whom Christina was the youngest. He was forced to seek refuge at the Hapsburg court in the Netherlands, and his efforts to regain his lost throne, in 1532, ended, as is well known, with his capture and lifelong imprisonment.

Two years later his daughter Christina, at the early age of twelve, was wedded to Francesco Sforza, of Milan, in token of the latter's reconciliation with the triumphant House of Austria. The death of Francesco in October, 1535, left Christina widowed and childless; during the next six years her hand was vainly sought by various kings and princes until, in 1541, she wedded François, Duke of Lorraine, again as a measure to strengthen the position of the House of Hapsburg. The marriage was altogether happy, and three children were born of it, but, like Christina's earlier union, it was cut short by the untimely death of her husband in 1545. She never married again, but devoted herself for the remainder of her life to the administration of Lorraine, to the advancement of the interests of her Hapsburg kinsmen, and to their reconciliation with the race of Valois. She presided at the Peace Conference of Cateau Cambrésis in 1559. Her unceasing efforts for the glory and welfare of the Imperial house are the more remarkable after the Emperor's death, in view of the neglect and injustice which she suffered at the hands of Philip II during the last thirty years of her life—a treatment traceable in large measure to Christina's frank disapproval of his policy in the Netherlands and in Milan, and to her intimacy with many of the leaders of the Dutch revolt.

It is a pity that the author does not give us fuller information concerning this latter half of her subject's life. Whether it is that material is lacking, or that political and diplomatic negotiations have been deliberately sacrificed to descriptions of marriages and courtships, one somehow feels that less than justice has been done to these important years. From beginning to end, however, the book holds the reader's attention, and gives a faithful portrait of one of the most charming, high-minded, loyal, and devoted women of a period in which feminine influence was unusually predominant in political life.

Notes

The Bobbs-Merrill Company announces for early publication "Love Insurance," by Earl Derr Biggers.

"The Dons of the Old Pueblo," by Percival J. Cooney, and "Idle Hours in a Library," by William Henry Hudson, will be published shortly by Rand, McNally & Co.

On the autumn list of the Century Company are "The Lure of the Land," by Dr. Harvey W. Wiley, and "Recent American Diplomacy," by W. Morgan Shuster.

Henry Holt & Co. announce the publication to-day of two additional volumes in the Home University Library series: "Sex," by J. Arthur Thomson and Patrick Geddes, and "Wars Between England and America," by Theodore C. Smith. The same house announces the immediate publication of a vocabulary edition of Gustav Frenssen's "Peter Moors Fahrt Nach Sudwest," prepared by Herman Babson.

The University of Chicago Press announces the forthcoming publication of: Volume VIII of the Proceedings of the American Sociological Society; Part II of the Thirteenth Yearbook of the National Society for the Study of Education; "The Osteology of Some American Permian Vertebrates," by Samuel W. Williston; the Lincoln and Douglas Debates (Publications of the Chicago Historical Society). For publication in the autumn the same press announces the first two volumes in the University of Chicago Science series: "The Origin of the Earth," by Thomas C. Chamberlin, and "Isolation and Measurement of the Electron," by Robert A. Millikan.

H. C. Washburn's "Illustrated Case Inscriptions from the Official Catalogue of the Trophy Flags of the United States Navy," while intended primarily as a guide to the collection at the Naval Academy, has usefulness also for students of American naval history. The flags, 172 in number, occupying forty-one eases and twenty-three panelled spaces, are reproduced in full-page process illustrations, with the descriptions relating to them opposite. The preface gives an interesting account of the delicate and ingenious method of restoring and preserving the flags.

"In the Wake of the Eighteen-Twelvers," by C. H. J. Snider (Lane; $1.50 net), is described in a sub-title as having to do with "Fights and Flights of Frigates & Fore-'n'-afters in the War of 1812-1815 on the Great Lakes." These fights and flights are made to live again by resort to the method of dialogue, and by a vivid, conversational style throughout. The author has genuine narrative skill and an evidently congenial subject.

With no indication in the latest and twelfth volume of any approach to completion, "The Collected Works of Ambrose Bierce" (Neale) continue on their way. Notices in the *Nation* of earlier volumes have mentioned appreciatively the solid and enduring portions of Mr. Bierce's work, and deplored the judgment that has attached them to a greatly preponderating mass of ephemera. Following the principle that frozen journalism makes literature, the *édition de luxe* has still probably in the neighborhood of a million words of Mr. Bierce's newspaper-work to convert into material for a gentleman's library.

The title of Mrs. R. C. Bosanquet's book about Greece, "Days in Attica" (The Macmillan Co; $2 net), with its pleasant reminiscence of Aulus Gellius, has not been so strictly interpreted as to prevent the author from allowing the traveller in Attica to make the proper approach, historically and geographically, by way of Crete and the Argive plain. Professor Bosanquet's share in the discoveries of recent years in Crete is well known to scholars; familiarity with the conditions and results of his work and of the work of other archæologists has enabled his wife to write authoritatively if lightly of the brilliant old life revealed by excavation. Her book deals agreeably and clearly with the more obscure chapters of Attic history, Byzantine times, the days of Frankish rule when Walter of Brienne was Duke of Athens, the dark age under the Turks with the Venetian interlude, and the period of rediscovery and loot that preceded the birth of modern Greece. Each of these periods has left interesting physical records in Attica, too often overlooked. Finally, in describing modern Greece, Mrs. Bosanquet's book gives, instead of the hasty impressions of a traveller, the experience of one who has lived in the country and learned to know intimately its aspects and its people. It would be ungracious to express regret that a volume which contains so much should omit almost entirely to suggest the literary associations that make Greece a haunted land. If it had dealt with these it would have had to double its bulk. But it may be permitted to hope that in a future edition the admirable bibliography will include the Allinsons' "Greek Lands and Letters."

Tho ambitious lady who changed her name from Gubbins to the more eligible-sounding Oscroft lacked sadly the light afforded by Ernest Weekley's "Romance of Names" (Dutton; $1.25 net); for she would have learned that Oscroft was derived from some humdrum toiler by an ox pasture, whereas Gubbins, as *Gobin*, crossed the channel with the Conqueror. The reader of this diverting book (a companion to the author's "Romance of Words") must, indeed, smile at its title, for its quest of name-origins rarely leads to anything very romantic. Rather it hunts down the fiction dear to family vanity with implacably disillusioning fact. Thus surnames derived from place-names, instead of pointing to ancestral ownership, were usually acquired when the locality was left. "John Tiler leaving Acton, perhaps for Acton's good, would be known in his new surroundings as John Acton." Napier of Merchiston took the motto *n'a pier* (has no equal), "but his ancestor was a servant who looked after the napery." Seymours may derive from the aristocratic St. Maur, but only by threading their way back among numerous Seamers or tailors. Gosling, it is true, has suffered a sea-change from Joscelyn, but this fine name dwindles etymologically into "little Josse." Sometimes we are left with a choice. Boon and Bone families may stop either with *le bon* or *de Bohun*, according as they affect kind hearts or coronets. Professor Weekley has kept a middle course between a too learned and a superficially popular treatment. Although constrained by limits of space to forego the proofs of his derivations, he shows by his handling of a specimen problem in the name Rutter that he has a critical command of the sources.

Ground that has been tilled many times before is turned over again in Henry R. Norton's "The Story of California" (McClurg; $1.50 net). Mr. Norton tells the romantic story in entertaining fashion and without tiresome details, beginning with the time when the number of Indians in the region now known as California was estimated at 700,000 and ending with the great earthquake and fire of 1906. "The Old Franciscan Missions of California" (Little, Brown; $1.50 net), by George Wharton James, covers in detail a period to which Mr. Norton could give only a few chapters. It is based on Mr. Wharton's "In and Out of the Old Missions of California," and offers nothing new in the way of research, its aim being to serve as a guide to the tourists who are becoming increasingly interested in the Franciscan Fathers. "Through Our Unknown Southwest" (McBride; $2 net), by Agnes C. Laut, is concerned in about equal proportions with the scenic wonders, the climate, and the inhabitants of that fascinating region. The writer takes us through forests, telling how men became millionaires by rifling the public domain. She tells how one can travel economically here and in the land of the cliff-dwellers, the petrified forests, and the painted desert, concerning all of which many interesting details are given. A chapter is devoted to San Antonio, the Cairo of America. The book as a whole is a strong plea for the doctrine that tourists will find America quite as well worth seeing as Europe.

One knows in advance that a volume on Euripides by Gilbert Murray will be anything but dull, and one's expectations in this wise are met by the little book, "Euripides and His Age," which is among the recent additions to the Home University Library (Holt; 50 cents net, each). In the introduction is a pregnant comparison of the Victorian age with the Periclean, farther on a contrast between poets, ancient and modern, which is not to the advantage of the moderns, and always that discriminating praise of the greatness of the Athenian civilization which is characteristic of Dr. Murray. The author's vigorous taking up of the cudgels on behalf of the Sophists, his plea for a higher place than is usually assigned to Euripides, his mocking at the worship of tradition that so often bound the Greeks of that day and held them from understanding the playwright—these are but a few of the matters that make the volume as readable as it is thought-provoking. Another of this series, dealing with a literary subject, is H. N. Brailsford's "Shelley, Godwin, and Their Circle," in which the ideas and achievements of Thomas Paine, William Godwin, Shelley, and Mary Wollstonecraft are critically examined and clearly set forth. "The history of the French Revolution in England begins with a sermon and ends with a poem." In such direct, forthright sentences is the book written, but without the dogmatism that sometimes accompanies that style. We are carried into a far different region by William R. Shepherd's "Latin America," a volume that sets itself a definite task and sticks to it in the face of frequent temptation to overstep the limits chosen. The plan of the book is, not to take up the twenty countries separately, one after another, but to present phases of their civilization, speak-

ing of the individual nations in drawing comparisons and contrasts among them with reference to the topic under consideration. The first sixty pages, although analytical rather than chronological, cover the period before the struggle for independence; the remaining 180, along with what narrative account is necessary, give a picture of the economic, social, political, and cultural conditions now prevailing. The result is the best volume, for the size, upon the subject. The index is inadequate.

No timelier topic could be presented than that of unemployment, which is handled by Prof. A. C. Pigou. The comprehensiveness of his treatment is shown by the fact that he considers not only the remedies for lack of work, but also, since "not even the adoption of all of them together would avail to abolish unemployment," palliatives for this unfortunate condition. Among these palliatives he reckons as chief the device of meeting periods of depression by organized short-time work, instead of the usual dismissal of employees, and the device of insurance against unemployment. The danger of simulating inability to find a job, which makes so many persons of humanitarian inclinations doubtful of the practicability of unemployment insurance, Professor Pigou feels is warded off either by leaving it to the trade unions to manage as a private scheme, or by the development of labor exchanges, which take upon themselves the whole task of bringing together the workman and his work. In this country, certainly at the present time, neither of these methods could be relied upon to extend the benefits of such insurance to more than a very small proportion of the workers. Co-partnership and profit-sharing, which are the subjects of a volume by Aneurin Williams, are also much farther advanced abroad than in the United States. For this very reason, Mr. Williams's account of these developments in England and France ought to be of interest to us, especially as he includes in his survey what has been done in this country in those directions. His book was written before the Ford plan of profit-sharing was announced, but he has other examples of significance, notably that of the N. O. Nelson Manufacturing Company, of St. Louis, which includes its customers along with its employees in a co-partnership arrangement. Paul Vinogradoff's "Common-Sense in Law" demands closer thinking than the title would suggest. It is not a volume dealing with the demands for simplification of legal processes, but a thoughtful examination of the nature and the rules of law. Finally, we have two volumes on scientific subjects: "Nerves," by David Fraser Harris, and "The Ocean," by Sir John Murray. Professor Harris sets forth in non-technical language the place and powers of the nervous system, while Sir John Murray gives a general account of "the science of the sea," from the depth of the ocean to the life, plant and animal, that flourishes in it.

There is something Christian in the spirit of Virgil's pastorals. Victor Hugo saw that the dawn of Bethlehem had first lightened the forehead of Rome. Intuition, no less than the allegorical method, led the Church Fathers to find in the mysterious prophecy of the fourth Eclogue something akin to the Jewish hope and the Christian belief in the coming of the Messiah. That Virgil knew the book of Isaiah at first or second hand is a perfectly possible, but by no means necessary supposition; we do not need it to account for the tender, brooding mysticism of the poem and its Messianic prospect of better things to come. There we had better let the matter rest. Not so Mr. Vincent A. Fitz Simon, M.D., who, in "The Ten Christian Pastorals of Virgil" (Little & Ives), finds meanings that put the primitive exegesis of a Lactantius or a Fulgentius to the blush. The clue is a cipher, which we have studied, but do not pretend to have mastered. A table of "allotrops" shows how, by the substitution of one letter for another, the word *locus*, for instance, by "straight reading gives *rogus, varus, occus, bolus, palus, fucus, coeus, garus, lucus*, etc.," while "transposition gives *pasco, posco, equus, aulus, lator, pluma, turba, credo*, etc." It would be a dull wit that could not with such help find all the articles of the Christian faith in the Eclogues, or, indeed, in any Pagan work. The author discovered his cipher in Hesiod, corroborated it in Homer, and promises soon "The Christian Odes of Horace." We are not surprised that the Scholiasts and the Schoolmen knew the art, or that the writer of "Shakspere's Plays" (quotation marks not our own) practiced it in his works. The author knows his Virgil, the merely literal Virgil, well, and translates him into rather pleasant blank verse. A valuable by-product of a crazy theory is, not infrequently, a minute acquaintance with the facts which the theorist wishes to transcend.

The arrangement of Shakespeare's sonnets in the first edition, which was published by Thomas Thorpe in 1609, is, of course, not authoritative. Consequently, from the second edition (1640) on, various attempts at rearranging them have been made. It is incredible, however, that Thorpe's publication should offer us a mere jumble, which one is at liberty to reshuffle like a pack of cards, yet this is the implication of "The Sonnets of William Shakespeare: New Light and Old Evidence" (Putnam: $1.75 net), by the Countess de Chambrun. She offers here in her seventh chapter a reprint of the sonnets, but in a new order, "grouped by subjects." For instance, opening the book at random, we find the following sonnets printed in the order given: 53, 106, 68, 126, 37, 91, 48, and so on. This procedure results in the separation of sonnets that obviously belong together. Thus No. 72, which is the second in a group of five written in anticipation of the poet's death, is set between Nos. 90 and 92; and No. 103, which is the last of a group of three that apologize for a period of silence in praising the person addressed, is placed among the sonnets that deal with the theme of the rival poets.

The author's proposed new grouping of the sonnets throughout strikes us as highly injudicious. The first five chapters are devoted to a rambling discussion of the thorny problems that are connected with these famous poems, without adding anything new to knowledge. Most people will agree that Shakespeare's "fair youth" was very likely the Earl of Southampton, and Chapman will do as well as any other for the rival in his art whom the poet especially fears; but it takes a stronger faith than ours to believe that the "W. S." of Willobie's "Avisa" (1594) was Shakespeare, or to follow Mr. Acheson, as our author seems inclined to do, in his identification of the "dark lady" of the sonnets with the mother of Sir William Davenant. Countess Chambrun points out that in the British Museum copy of Thorpe's edition the first 126 sonnets, according to marginal indications, constitute Series I, the next 26 Series II, and the concluding two sonnets Series III. But this discovery (if such it be) has little value, for previous students of the sonnets have recognized just these divisions in Thorpe's arrangement of the sonnets. Finally, we may remark that the author does not quote quite accurately the passage from "Love's Labour's Lost": "They have been at a great feast of languages, and stolen the scraps" (Act V, sc. i). Moreover, the words are spoken by Moth, not by Biron. Altogether, the reprint *in extenso* of Rowe's "Life of Shakespeare" (Appendix I) seems to us the only valuable part of this work.

NOTES FROM ABROAD.

An important precedent has been set by the House of Commons in deciding to appoint a committee to consider the grievances of post-office employees. The committee is to consist of a representative of the department itself, two representatives of the staff, and a representative of the Treasury, with a chairman appointed by the Board of Trade. This body will possibly be the model of a permanent Civil Service Conciliation Board, to deal with every difficulty as it arises in any of the governmental departments. At present there is a good deal of concern as to the increasing pressure exercised by public servants upon members of Parliament, especially in those constituencies where there are large bodies of voters of this class. Some kind of independent committee seems desirable for the control of matters relating to conditions of work and labor in Government employment—of course, with Parliament still retaining the authority to prescribe the general conditions under which it will act.

Addressing a recent meeting of the Associated Booksellers of Great Britain and Ireland, Sir W. Robertson Nicoll took a hopeful view of the prospects of English literature. In his warning against pessimism he recalled how, in 1859, Cardinal Newman said that the canon of classical literature was closed and that no more great books had been produced. "Has Cardinal Newman's prophecy been fulfilled?" he asked. "I will mention a few names just as they occur to me: Swinburne, Meredith, Thomas Hardy, the two Rossettis, and Robert Louis Stevenson, and I could give names from the roll of the living."

Pleasant memories hover round the paintings in the collective exhibition of his work which René Ménard is giving in Paris. His pictures are for the most part classical Greek idylls which might illustrate Theocritus; and, in spite of his original color-scheme, their stretches of blue sky and bluer waters, with hillsides where cattle graze and heroes and goddesses foregather in the shade, might well be Sicilian landscape. There was Greek in the family. Among the pictures, the State has lent from the Luxembourg galleries the well-known portrait of the painter's uncle, Louis Ménard. He was called "the last of the Pagans," but might better be named the first of a Renascence of that which is as lasting as Grecian hills and seas. It was he who was Anatole France's master in Greek and Paganism.

For ten years, this Louis Ménard also painted and had his pictures hung in the annual Salons. Then he retired within himself, known only to the elect few who listened to his discourse as Plato and Alcibiades to Socrates, or Hawthorne and Margaret Fuller to Bronson Alcott. One day he said to Heredia the poet: "I have a dove, let us sacrifice it to Venus." "I don't like pigeon!" was the poet's Modernist reply. Towards the end of his long life in the high solitudes of the Latin Quarter, some one ventured to inquire the fate of his paintings. "Come with me," said Louis Ménard, with his most esoteric air; and leading to his waste room, he pointed to his entire art production—paintings all unsold. The war drew him for a time from his hermitage and he wrote a letter of note to the London *Daily Telegraph* in defence of the Parisian people. He would have been of the Commune like his friend Vallès, but for a providential pleurisy. The Imperial University had long since rejected his doctor's thesis to show that "Polytheism must be the best religion since it ends inevitably in the Republic!" The son of the great Berthelot, who with Renan was of his inner circle, has gathered his literary [illegible] in a little volume, which is already hard to find.

A scant compensation for the upsetting of the world in the transformation of Turkey is the opening up of New Rome to our curiosity.

Come and see
The cypress, hear the owl, and plod your way
O'er steps of broken thrones and temples.

What Byron sang and Hubert Robert painted in the first fever of Roman excavation is again to be seen in Constantinople. Beside the sea of Marmora, the palace of the Persian Hormisdas, which was the dwelling of Justinian before he was Emperor, has long lain in ruins beneath figtrees bending with fruit and rose baytrees in flower. Its construction and decoration by the cleverest artists of Constantine's reign were known from history. René Mesguich, who is an architect issuing from the Paris Beaux-Arts, has been entrusted by Alil Bey, director of the Imperial Ottoman museums, with the task of exploring the ruins. Otherwise, they were bound to disappear under modernizing Young Turkey. He is already advanced enough in his work to be able to offer a series of marvellous photographs to the Académie des Inscriptions. They show the noble architectural features which he has found, arcades and terraces and colonnades and sculptures in relief—mutilated by time, but still preserved by enwrapping Nature. The plan of the great palace has been restored entirely. The "Society of Friends of Stamboul" has taken it in hand to avoid the destruction of the remaining ruins. M. Mesguich is now working, with full hopes of success, at the complete reconstitution of the building which was a glory of Byzantine art.

The little town of Fiesole, near Florence, has always been a rich mine of Roman and Etruscan antiquities; the Roman theatre is one of the best preserved in Italy, and excavations from time immemorial have brought to light many valuable finds. Some forty years ago a few architectural fragments, discovered in clearing the ruins of the theatre, were collected in a warehouse in the Palazzo Pretorio; four years later other objects obtained from public bodies and private persons were added to the collection. In 1910 important excavations were made, and the objects unearthed were so numerous that the old quarters proved insufficient to house them. It was decided, therefore, to erect a new museum. The building, which was begun in 1912, has now been opened, and forms an important addition to the attractions of Fiesole. The Museum Faesulanum is in the style of an Ionic temple with a colonnaded pronaos and elegant decorations in the classical manner. The architect is Sig. Ezio Cerpi, while the arrangement of the collections is the work of Sig. Edoardo Galli, who has also provided a useful guidebook to the antiquities of the town. Among the many funereal steles here exhibited is one which had been lost 150 years ago, and was rediscovered by Sig. Galli himself; it is adorned with a hunting scene and two Elysian scenes—a dance and a banquet. Among the Roman objects one of the most important is a marble sarcophagus decorated with a scene of the chase of Meleager, a fine specimen of Greek art of the second century. Among the objects of especial interest for Fiesole are the fragments of a bronze wolf discovered in 1882 and the marble frieze which had decorated the *pulpitum* in the orchestra of the theatre; on it are represented a youthful Dionysus with a panther and Eros, while at the sides are heavenly and marine monsters, satyrical masks, and winged genii. Sig. Galli believes that the nucleus of this piece of sculpture formed part of the temple of Claudius, who had restored the theatre, which dates from the days of Sulla, and that it was afterwards altered during the reign of the Emperor Septimius Severus, who rebuilt the theatre. There are also many fragments of a huge temple discovered between the theatre and the Acropolis, of which little is known. The objects of the Barbarian age are of trifling importance.

In connection with the Berne exposition, a meeting was held at the Swiss capital, attended by Russian professors, newspaper men, and diplomatists from various parts of Europe, to discuss the proposal to found a Russian university in western or central Europe. It was decided to establish in one of the larger European cities a university for Russian students who, prevented for political or other reasons from obtaining higher education in their own country, are forced to apply for admission at the German, French, and Swiss universities. Of late the German authorities have been discouraging this immigration, partly because many of those matriculated entertain revolutionary ideas, and partly because the German students themselves complained that the foreigners took up too much room in the lecture rooms and laboratories. As a consequence of this, the Russians passed on to Switzerland. Until the new university building was opened a few months ago, the Slav invasion caused much crowding and inconvenience at Zürich. At Berne, Lausanne, and Geneva, the same conditions prevailed. It has not yet been decided whether the new Russian institution shall be independent, or established as an annex to some university already existent. It seems probable, however, that it will be situated at Geneva, that it will be associated with the University of Geneva, and that its students will be admitted to the courses of the Swiss university, although they will have a building of their own, with professors of their own nationality.

THE PSYCHOLOGY OF STAMMERING.

Stammering and Cognate Defects of Speech. By C. S. Bluemel. New York: G. E. Stechert & Co. $5 net.

Any physical theory of stammering, according to the author of this book, is thrown out of court by the fact that the stammerer does not always stammer. Consequently he approaches the subject on the psychological side. Following what he takes to be accepted psychological doctrine, he teaches that the speech organs are controlled by mental images. A word must be present "in mind" before it can be spoken; either its sound or the feeling of pronouncing it must be recalled to mind in order to give the speech organs their proper cue for action. The consonants, he believes, are usually recalled by their feeling and the vowels by their sound. Now some individuals have little power of "auditory imagery," *i. e.*, of recalling sounds to mind, and they are likely to be brought to a halt in speaking, for lack of the auditory image of some vowel. They come to a halt upon a consonant, not from any difficulty with the consonant itself, but because they cannot remember how the following vowel sounds nor how the mouth feels in uttering it. The author believes that he has thus laid bare the fundamental cause of stammering, though he recognizes that aggravated forms of the trouble are superinduced by fear, nervousness, and auto-suggestion.

It is to these latter causes that the best modern authorities are inclined to attribute the whole disorder; but the author holds that such a theory does not go to the root of the matter, nor explain the origin of the trouble, which usually occurs in early childhood. "At this age the child is not addicted to reflective self-analysis. He is not an introspectionist; he is an animal leading a sensory-motor life. The child does not reflect upon his own idiosyncrasies; and at an early age his peculiarities of speech pass unnoticed." The author underestimates the reflective powers of children. At about the age of four, the child is rather attentive to his speech, and is subject to considerable criticism from his elders and from other children. If he stumbles or mispronounces, some one is pretty sure to pass remarks and perhaps laugh at him, or urge him to try harder. Thus embarrassment and undue effort are excited and the stammering may become a habit. We have observed this process in boys of four, have seen their evident fear of words on which they had previously stumbled, have heard them say that they "couldn't say that word," and have even found them resorting to that familiar device of the stammerer, circumlocution, in order to avoid a troublesome word. But we have also seen them cured in a few months by simple reassurance and avoidance of ridicule and exhortation.

It must be said, then, that the author does not successfully combat the theory that

stammering is produced by nervousness, fear, and auto-suggestion. For his own theory, he brings forward no direct evidence, although he is able to explain by it much of the paradoxical behavior of the stammerer. He derives his theory from what he regards as accepted psychological principles, but many psychologists would to-day be very dubious about the important rôle which he assigns to mental images. If the fluent speaker has a succession of verbal images running through his mind, ahead of the spoken words, these images are too elusive to be observed, and the probability is that speech follows thought directly, without the intervention of images. Also, there is no evidence that the stammerer is deficient in verbal imagery in comparison with the fluent speaker.

While the author's positive theory is thus open to doubt, his presentation of the facts of stammering is eminently sane and illuminating; and the same can especially be said of his second volume, in which he summarizes and criticises the numerous devices that are practiced upon the stammerer with the promise of curing him. Merely to pass in review the bewildering array of "cures" that have been invented from time to time, and are continually being put forward as new discoveries, with exaggerated claims, is to conceive a hearty distrust of the whole fraternity of "speech specialists." The author's statistics show that, although a majority of the pupils in "stammering schools" receive some temporary relief, not over two to five per cent. are permanently cured. The stammerer has been for many years the easy prey of the charlatan. This is not to deny the existence of a few sincere and scientific students of the matter; but the author does well, in the interests of stammerers, to show to what an extent they are exposed to humbug and commercial exploitation.

Dr. Frederick W. True, zoölogist and assistant director of the Smithsonian Institution, who died on June 25, was born in Middletown, Conn., on July 8, 1858. He graduated from New York University with the class of 1878, and in 1881 he took an M.S. degree. In 1897 New York University conferred upon him the honorary degree of LL.D. He was custodian of the collections of the United States Fish Commission at the Berlin Fisheries exhibition in 1880, and from 1881 to 1883 was librarian of the National Museum. From 1883 to 1892 Dr. True was curator of mammals in the same museum; he was executive curator 1892-9, and head curator of the department of biology 1897-1911. He was appointed assistant secretary of the Smithsonian Institution in 1911. Among his publications are: "Review of the Family Dephinidæ," 1889; "The Whalebone Whales of the Western North Atlantic," 1904; "An Account of the Beaked Whales of the Family Ziphiidæ," 1910, and also numerous short papers on fossil cetaceans and other mammals. Dr. True was a member of the American Philosophical Society and of the Academy of Natural Sciences, Philadelphia, a fellow of the American Association for the Advancement of Science, and a corresponding member of the Zoölogical Society of London.

Drama and Music

BJÖRNSON IN ENGLISH.

Plays by Björnstjerne Björnson. Second Series. Translated with an introduction by Edwin Björkman. New York: Charles Scribner's Sons. $1.50 net.

The present volume, forming the second series of three plays by Björnson which Mr. Björkman has translated, contains "Love and Geography," "Beyond Human Might," which is the second part of "Over Evne," and "Laboremus"—all interesting and significant dramas, no one of which, we believe, has been rendered into English before. The first play is a comedy which ultimately breaks down into sheer farce. A writer on geography becomes so thoroughly possessed by his work that he completely sacrifices his family to his mania for maps. He sends his daughter off to boarding school so that he can have more room for his charts. His cumbersome notes and geographical apparatus encroach more and more upon the rest of the house and drive his wife into smaller and smaller quarters. At last she revolts against his selfishness and leaves home for an extended vacation. In the second act the scholar appears at first delighted with his freedom, then bored, and finally distressed and overwhelmed with loneliness. Thus far the play is full of spirited fun and arouses really thoughtful laughter. It is an exceedingly good study of the nervous irritability and dependent egotism of a high-strung scholar.

The third act is a wild and incoherent romp. The geographer seems to be really in Bessarabia, but his ghost haunts the house and frightens the loutish servant into meaningless horse-play. Ultimately, the scholar is chastened and humbled so that his family can be reëstablished upon a sane basis. This last act is characteristic of much of Björnson's dramatic composition. The creative energy with which he begins a play often seems to fail before he has finished it. One feels that he sets to work with fine poetic enthusiasm, but that before the piece is finished the impulse is spent and he is compelled to express other than the artistic elements of his personality. He finishes this play, begun as a comedy of character, only by drawing heavily upon his almost boundless sources of animal gayety.

"Beyond Human Might" is the second of two plays called "Over Evne." Mr. Björkman published a translation of the first play in his previous volume under the title "Beyond Our Power." It seems a little unfortunate not to have called both dramas by the same name. To be sure, it is not necessary to read one to understand the other; but there is a vital connection between the central ideas of both tragedies. The hero of the first play is a certain Pastor Sang, who deceives himself into believing that he has achieved supernatural power of healing through prayer; the hero of the second play is a son of the clergyman, who is also under the tyranny of the supernatural in a different form. He, too, has something in him that carries him beyond his power; his will is as extravagant in its ambitions as that of his father. He is interested as a philanthropist in the workmen's side of a colossal industrial struggle. He believes that their cause can be really advanced only by some splendid act of martyrdom. Accordingly, in a plot intended to destroy by dynamite a great number of employers assembled in conference, he takes the part which devotes him to death. The plot succeeds; he is killed, and with him every one of the capitalists except their inexorable leader. But the catastrophe only injures the cause of the laborers. Their courage shattered, they are more servile than ever before. One who attempts action beyond human might delays human betterment. The tyranny of the supernatural is inimical to social progress. This idea permeates much of Björnson's later work.

The play during the first three acts, though occasionally melodramatic, is an absorbing and powerful tragedy. The last act shows the author's customary loss of creative ardor. It is a kind of fantastic epilogue in which two young people, Credo and Spera, play important parts. They are the heirs of the obdurate capitalist, who sympathize, nevertheless, with the plans of the martyr's sister for social reform. Their names are fair indications of their nature. They are clearly allegorical figures who serve to express the nineteenth-century worship of the future merely because it is the future. Björnson as clearly as any of his contemporaries believed firmly that the solution of all social problems would be found by letting the great world spin forever down the ringing grooves of change. Partly because we have begun to see the shallowness of this blind worship of the god of flux, much of Björnson's impassioned preaching seems to-day rather hollow.

"Laboremus," a play published as late as 1901, shows no diminution of the author's power, though it seems much less charged with excitement than his earlier work. It is a psychological study, made clearly in the manner of Ibsen, of the influence which a young musical adventuress, Lydia, exerts upon mankind, and particularly upon a young composer. Her influence is ultimately nullified, however, by another woman, who insists that the egoistic, erotic æstheticism of Lydia yield to an art cognizant of moral values. The play is one of the most charming and most skilfully constructed of all Björnson's dramas.

It is not entirely pleasant to students of Björnson to have him introduced to American readers through Mr. Björkman's imperfect English. The translator has not yet rid himself of certain disagreeable Teutonisms, and does not appreciate the difference between colloquial idioms and downright vulgarisms.

"The True Adventures of a Play" (Mitchell Kennerley), by Louis Evan Shipman, is a little

book full of useful information and warning for inexperienced and sanguine young dramatists, although it offers little that will seem new or strange to the initiated. It sets forth in detail all the author's negotiations with managers, actors, and agents in the effort to dispose of his comedy, "D'Arcy of the Guards," which, in the end, brought considerablo profit to himself and its producers. It cost him three years of continuous disappointment to get a hearing for it in this country, and nine more to secure a London opening. Over and over again in these periods the cup of promise was raised to his lips only to be dashed aside at the critical moment. He tells his story humorously, and it is well worth reading, but the moral of it all would have been more significant if the play itself had been of more distinguished merit. After all, he had better luck than some others, better luck, for instance, than poor Hart Jackson, who vainly hawked "The Two Orphans" about everywhere until, sick and poverty-stricken, he was glad to sell it for a few hundred dollars, while the purchaser made a fortune.

Mr. Edwin Björkman need make no excuse for including the "Five Plays," by Lord Dunsany, in the Modern Drama series (Kennerley; $1.75 net) which he is editing, although they are of uneven quality, and the best of them scarcely deserves the glowing eulogy of his preface. They exhibit, nevertheless, fantastic imagination of an uncommon and powerful order, and are written admirably, in vigorous prose, of almost classic purity. Actually, they are dramatic episodes rather than plays, being very brief, while the virtue in them is descriptive rather than constructive. As Mr. Björkman observes, they belong to no particular category. They are fairy tales, spiced with social and political reflections, charged with cynical insight and a keen sense of theatrical situation. For dramatic effect and satirical humor, "The Gods of the Mountain" is, perhaps, the most striking of the series. In this piece, Agmar, a masterful old beggar, with six associates, impersonates the seven green jade gods, who are the tutelar deities of the city of Kongros and dwell upon the distant hills. For several days they grow fat upon the offerings bestowed upon them by the fearful citizens, ready dupes of their imposition. When the report comes that the stone gods have left their ancient seats and are coming to town, the scoffing Agmar, equally contemptuous of gods and fools, refuses to believe it, but presently the stone images march in upon him, and he and his horrified confederates are petrified where they sit. This preternatural vengeance is out of harmony with the whole tone of the play, but it is ably stage-managed, with all the apparent sincerity of veritable tragedy, and the arch-impostor, Agmar, who is so signally punished for his irreverence, is a vital and original sketch.

"The Golden Doom," also a satire on priestly inspiration and superstition generally, is a clever conceit, ingeniously developed. A little boy, desiring a new hoop, scribbles a nursery rhyme on the iron door of a mighty king's treasure house, and so starts a panic. The high priests solemnly decide that it is a portent from the stars, whose worship has been neglected. Nothing, they say, can avert calamity from the kingdom, save the sacrifice of that which is dearest to the King, his pride. Thereupon, the monarch humbly deposits his crown and sceptre before the door as a peace offering to the gods. These the little boy secretly appropriates to use them as hoop and hoop-stick, and upon their disappearance there is great rejoicing, because clearly the wrath of the gods has been appeased. The tale is told with imposing gravity, picturesque imagination, and a rich under-current of satirical humor. Original in idea, fresh and dramatic in treatment, it has both literary excellence and dramatic point. In "King Argimenes and the Unknown Warrior" there is less originality of theme, but the narrative is exceedingly vivid. The sense of atmosphere, that of far Oriental antiquity, is strongly marked. Argimenes, deposed and enslaved by King Darniak—an abject wretch, glad to gnaw the bones of a dead dog—finds in the dirt an old sword, which inspires him to head his fellow slaves in revolt, and enables him to slay and supplant his tyrant. In the moment of triumph his first thought is of bones and water. On the surface, this is a story of the Arabian Nights, but the real theme is the readiness of submerged masses to rise against their oppressors whenever they can find a leader, and it is illustrated with trenchant speech and much picturesqueness of detail. The other two plays, "The Glittering Gate" and "The Lost Silk Hat," are clever in their way, but may be dismissed briefly. The first, in which two criminal ghosts find the reported joys of Heaven to be fictitious, belongs to a somewhat cheap order of grotesque irreverence, while the other is a clever bit of farcical nonsense. But the volume, as a whole, reveals the author as a writer of lively, powerful, and sometimes poetic imagination, with revolutionary ideals and real literary ability.

Sydney Grundy, the dramatist, who died in London on July 5, was born at Manchester, England, on March 23, 1848. He was educated at Owens College, Manchester, and became a barrister in 1869, practicing his profession in Manchester until 1876. He was unmarried and was a member of the Dramatists' and Garrick Clubs, in London. His first play was a one-act piece which he called "A Little Change." It was produced at the Haymarket Theatre in London, and received favorable notice, although it was not conspicuously successful. His next attempt, "Mammon," a three-act comedy, was produced in 1877, and obtained the approval of W. H. Vernon. Then followed "The Snowball," in three acts, in 1879, and "In Honour Bound," in one act, in 1880. Mr. Grundy wrote the libretto of "The Vicar of Bray" in 1882, and in 1892, after having been successful with several other plays, he wrote the libretto of "Haddon Hall" for Sir Arthur Sullivan. Other plays were: "A Pair of Spectacles" in 1890, "The Degenerates," 1899; "Frocks and Frills," 1902; "The Garden of Lies," 1904; "Business Is Business," 1905, and "A Fearful Joy," 1908.

The operas selected for the opening week (September 14 to 19) of the Century Opera Company, in the renovated Century Theatre, are Gounod's "Roméo et Juliette" and Bizet's "Carmen," both of which have been unduly neglected in New York in recent years. Each week an opera will be added to the repertory, alternating with one of the preceding week. Thus, in addition to the two works named, during the first four weeks "La Bohême," "William Tell," and "Traviata" will be produced.

In view of Mr. Dippel's intention to end his season at the Century Theatre next spring with a series of Offenbach, Lecocq, and Planquette revivals, it is of interest to note that in Paris these composers are still in favor. The Gaîté-Lyrique gave, last year, seventy-eight performances of "Les Cloches de Corneville" (known in America as "The Chimes of Normandy"), sixty-five of "La Fille de Mme. Angot," and forty of "La Fille du Tambour-Major."

A striking illustration of the saying that there is always room at the top is to be found in Dresden, where the late Ernst von Schuch's place as chief operatic conductor is not to be filled at present because, as the official announcement states, there is no first-class authority available to take his place.

Although singers and players are now able to obtain better pianists to accompany them than at any previous time, the death of Erich Wolff, a year ago, was felt as a great calamity. One reason why he was able to accompany songs so sympathetically was that he composed good songs himself. Shortly before his death, in Berlin, he made arrangements with the representative of an American publisher to have his songs printed with English texts.

On looking at the official figures of the performances of the Paris Opéra in 1913 one would conclude that Richard Wagner is the favorite opera composer in France, for seven of his operas received forty-eight performances in all. Verdi came next, with thirty-two performances of two operas; Gounod's "Faust" was heard twenty-five times; Massenet was represented by his "Thaïs" and "Roma," which, together, were sung eighteen times. At the Opéra-Comique, however, five of Massenet's other operas had, altogether, ninety hearings, while at the Gaîté-Lyrique twenty-three performances of his "Don Quichotte" and "Panurge" were given. This record makes Massenet, with 131 representations of nine operas, decidedly the favorite composer in Paris. Yet in London Massenet has hardly yet been discovered! Next to him, the most popular composers at the Opéra-Comique were Puccini, whose "Bohême," "Tosca," and "Butterfly" had fifty-eight performances; Charpentier, whose "Louise" and "Julien" together reached the figure forty-five, and Bizet, whose "Carmen" was heard forty times.

Edgar Poe's "The Bells" has been set to music by the Russian composer Rachmaninoff. Its first performance was conducted by the composer himself at Moscow, where it aroused much enthusiasm, as the correspondent of the London *Musical Record* relates. It consists of four movements, the first expressing the sheer delight of living; the second, the awakening of love. The third part presents a tone picture of a great fire, with alarm bells and the attempts of men to fight the conflagration. A funeral march is heard throughout the final movement, with tolling bells and other mournful sounds.

Bell sounds are coming more and more into vogue in concert pieces and operas. Wagner and Grieg showed the way. It was no doubt Grieg's "Glokkenklang" (which Anton Seidl arranged for orchestra) that suggested to Debussy the musical possibilities in the overtones of bells. Now comes Leo Ornstein, whose "Deux Impressions de Notre-Dame" a London reviewer calls "the most interesting studies in bell tones which have yet been heard."

Art

THE ANGLO-AMERICAN EXPOSITION.

LONDON, June 25.

For the first time, a representative exhibition of American art has been made in London. An excellent show was held by Americans in Paris in 1900, a second a few years ago in Berlin, and a third in Rome. But London hitherto has seen little of American art save the work of American artists who live there. Now, however, at this summer's Anglo-American Exposition, at Shepherd's Bush, London has at last given the chance Paris, Berlin, and Rome gave, and advantage has been taken of it. Work comes from American artists at home, from American artists on the Continent with headquarters in Paris, from American artists in Great Britain. I do not believe that ever, in New York or Philadelphia, Chicago or St. Louis, have these three groups joined together in a more characteristic collection. America sends paintings by Alexander, Chase, De Camp, Henri, Cecilia Beaux, Vonnoh, Dewing, Tarbell, Arthur B. Davies, Alden Weir, Childe Hassam, by Reuneld, Gardner Symons, Metcalf, Schofield, Dougharty; also drawings in a variety of mediums by almost all the better-known illustrators. Paris contributes examples of the older painters there—MacEwen, Dannat, Alexander Harrison, Melchers, Elizabeth Nourse—as well as of the younger men—Frieseke, Richard Miller, Maurer, Hawthorne, Max Bohm, Walter Griffin, Ullman, Van der Weyden, Hopkins. London is well to the fore with Whistler and Abbey among the dead, and with Sargent, McLure Hamilton, Pennell, Mark Fisher, Mura, Muhrman, Clifford Addams, MacLaughlan, Charles Henry White, Wehrschmidt.

The names alone will give some idea of the quality of the collection. It would be useless to describe the work in detail, for most of it has been exhibited more or less recently in American galleries, at the Paris Salons, and at different exhibitions in London. Besides, in any case, the present interest would be, above all, in the opportunity of seeing it under one roof with a collection of British work and of studying the comparative tendencies and accomplishment of the two countries. I ought in justice to add that on the British side the opportunity is by no means as complete as it should and might be. The British, on these international occasions, usually succeed in giving an official rather than a representative show. Nothing else could be expected when the matter is left to the Royal Societies under the auspices of the Royal Academy. Within these limits, the committee no doubt have spared no pains, the British section no doubt comes fully up to their ideals; they have even borrowed from the past to strengthen the present, according to their ideas of strength. But if men of yesterday, like Millais, Watts, Cecil Lawson, Buxton Knight, Albert Moore, have a place; on the other hand, among the absent are men like Nicholson, Clausen, John, Lavery, Brangwyn, Orpen (though himself on the committee), Ricketts, and far too many members of the younger and more independent bodies, as well as the more independent Academicians—artists who, if not exactly masters, are at least far more representative of the accomplishment and tendencies of British art at the present day. However, a fairly suggestive comparison is still possible.

The first thing that strikes one is the difference in the arrangement of the two sections. The walls in the British section are a decided improvement on the walls in the Academy, but, then, the old Academic method of hanging has found rebels within the Academy itself, as one of the rooms there this year proves, and overcrowding, now that every other country has learned the mistake, is beginning to go out of fashion even in England. But merely not to overcrowd is not to make beautiful walls. Something more is needed, and this something more, which the British section does not provide, the American does. The three American groups remain distinct in the galleries and the catalogue: the work from home under the charge of Hugo Reisinger, chairman of the American committee, kept together; the work from Paris, hung by Frieseke and Van der Weyden in its special rooms; and so also the work from London, arranged apart by McLure Hamilton and Pennell. Painters often are not the best hangers, but in the rooms of the Paris and London groups there is feeling not only for space, but for balance, for pattern, for decorative harmony. The tone of the background has been considered. The result is that the walls impress one with a sense of beauty, color, design, before a painting or drawing is looked at for itself; and I know of nothing more charming in its way than the long narrow room in which, under a velarium, against silvery white lines, divided into panels by the black woodwork and a gilt moulding, the lithographs, etchings, pastels, and water-colors of the Americans in London are hung: for each, a separate series that does justice to the artist and his work.

That all work must gain from good and sympathetic hanging there can be no question. But it is not simply because of the arrangement that the American section is so great a contrast to the British. To pass from the British galleries into the American is to find one's self in a new atmosphere. It is impossible for the least observant not to be conscious of the difference. But for almost a month the London critics held their peace. Within a fortnight of the opening of the show only two notices had appeared. Now that others are getting into print, the silence is broken by the faint praise that is worse than loud abuse. It must be confessed that this is a disappointment to all who have worked to make the exhibition the distinguished success it is.

With the exception of one or two critics who have been genuinely interested and not ashamed to admit it, the few who have ventured beyond the most perfunctory notice have had but the same criticism to make. American art, they say, owes its inspiration to France, is but a reflection of French art, has developed no national characteristics. But Americans, to oblige the British critics, could not at the start have forgotten the centuries of tradition they carried with them from Europe in order to take over the aboriginal traditions of the Red Indian; nor could they object in recent years to study in Paris, since it has been the chief artistic school for Europe and America both. It would be quite as true to say that British art as seen at Shepherd's Bush shows French influence, for many of the British artists who are represented have also imported methods from Paris. France alone cannot be held responsible for the enormous difference in the work of the two countries; neither is it a difference that can be attributed altogether to subject. Americans paint much the same kind of subject as British artists, though, unless painting for illustration, they are less addicted to anecdote, and though, of course, detail has its American character.

But it is in their attitude to their subject that they differ—in the greater life and vitality, the keener concern for technique, the fresher vision, the more independent point of view they bring to it, and to their treatment of it. This may not invariably mean greater accomplishment. The fact is, there are many things which, for the credit of American art, might better have remained at home. But there is no question that as a whole the collection gives an impression of life and energy not found in the work of British artists, whose philandering with French methods never quite frees them from their inherited restrictions and dull technical routine. The American artist may be dealing with a problem appropriated from other lands or other schools—a problem making no claim to originality—but he approaches it with a zest, an energy, a straightforwardness all his own that forces you to look with interest at the result he gets from it, no matter if you do not always approve. He gives you the same comfortable assurance of a vitality equal to the problem that I have so often pointed out as the chief merit of Sargent's paintings when they hang in the midst of anæmic Academic commonplace at Burlington House.

If the subjects of the American artist do not differ very materially from those of the British artist, he paints them under a very different light and in a very different atmosphere. The Englishman who has never been in America and knows nothing of its high luminous skies, its pure brilliant sunshine, its clear distances, its delicate foliage, may see affectation or sheer invention in many of the American landscapes and studies of light. The illumination in Childe Hassam's canvases, for instance; the radiance that fills the sky in Redfield's snow scenes, the tender purity

of Alden Weir's night, these effects are as American as are the details in Pennell's Panama, Philadelphia, and New York lithographs. It is for this reason that the landscapes strike one as still more distinctly American and more original, perhaps, than portraits painted in the even studio light which is much the same in all countries. Portraits by Alexander and Miss Beaux, Henri, and Wiles might have been painted in London for anything characteristically American in the lighting.

If the landscape painters use their eyes to see the landscape before them as it is, and not as a convention to which they think it should be reduced, one or two have a trick of looking at it almost as if through a camera. It is hard to understand why they should, for this photographic vision betrays itself in the canvases of some of the most accomplished and brilliant painters who are too sound draughtsmen to be in need of the prop of a snap-shot or to be bothered with it. It is probably a defect of the eyes which, if not corrected, might in the end mislead the painter almost as hopelessly as the use of the *camera lucida* eventually ruined the vision of Rico and other Spaniards of his day.

To few artists of late years has been given such a chance to devote themselves to mural decoration as to the Americans. It is a pity that it was impossible to include examples of their work. The decorative intention may be obvious in the paintings of men like Frieseke, Richard Miller, Ullman, but these as obviously were not designed to fill any definite wall space. The only compositions done frankly for decoration come from two artists living in England: Mrs. Sargent Florence, who shows the big cartoons for her frescoes in Oakham Old School, and James M. Willcox, who exhibits, I believe, for the first time, and whose panel, though there is no mistaking the source of its inspiration, gives decorative promise both in color and line. The illustrations, contributed by the American Society of Illustrators, extremely well hung and grouped as they are, prove, with a few exceptions, a disappointment. They are mostly the elaborate oil paintings and color designs in vogue to-day, when American editors and publishers seem to be forgetting the high standards and splendid work of the last quarter of the last century. Of that period there are a few fine reminders in the rooms of the American artists resident in London, where Abbey's pen drawings for "She Stoops to Conquer" and some of the Old English Songs hang together with a beautiful series of Timothy Cole's engravings and a few fine examples of Henry Wolf's.

Another cause of regret is that, because of the difficulty and expense of transport no doubt, there is scarcely any American sculpture. But whatever the omissions and mistakes may be, the collection is one of unusual interest, presented to the public with a dignity that is an honor to American art. N. N.

Finance

IN THE NEXT SIX MONTHS.

It is a tradition of the markets that the middle of the year is a milestone of much importance in the financial movement of the twelvemonth. New influences then begin to assert themselves—notably the harvests. The season of greatest activity in trade falls in the last half of a year. Its requirements from the money markets test the question whether financial conditions generally are sound or not.

A year ago this present week, it was the commonplace of mid-year financial comment that not only did the ending of the first half of 1913 complete a very extraordinary period in the financial markets of the world at large, but that those markets were entering on a second six months' period which was in some ways surrounded by more perplexity than any similar period in many years. The same statement would apply with equal exactness to the present moment.

The first half of 1913 had included the Balkan Wars; the acute and prolonged uncertainty as to whether the larger Powers would be drawn in; the failure of a series of large Government and corporation loans to find a market, and the consequent tying-up of underwriters' resources. On the markets these events, with the very high money rates and very low bank reserve at Paris, and with our own impending tariff and banking legislation, had led to the repeated prediction that the result was sure to be an "autumn panic."

Nothing could have been more astray from the actual results than such prediction. The fighting definitely ended. Outpour of new securities at London and Paris halted, and underwriters who had been "landed" with 70 or 80 per cent. of older issues gradually sold what they had to the general public. The French market eased; the Bank of France gained $40,000,000 gold. Not only did no "autumn panic" happen, but in July the New York stock market began to rise; it was up 10 or 15 points for active stocks by the middle of September. When the advance ended, the market fell into dulness, followed, however, by what was called at the time the "bull movement" of last January. Not least remarkable, all this happened in the face of failure of the Southwestern corn crop.

The half-year which has now just ended has been a period of financial stagnation, trade dulness, and extreme confusion of financial opinion; and that description applies no more to the history of the period in the United States than in Europe, Canada, and South America.

The one common characteristic has been the desire by each market to blame the Government in its own particular country, for all that happened or that did not happen in finance and trade. London has ascribed its unsatisfactory conditions to the "Ulster controversy"; Paris, to the Socialist activities in the Legislature; Berlin, to the "relations with Russia and the Balkans"; New York, to the "Trust legislation" and the "uncertainty about the rate decision."

How far the political unsettlement has itself been a consequence of business disturbance, and how far that disturbance has been due to entirely other causes, with the financial public adopting the always convenient plan of blaming the Government for bad times—these are topics for endless debate. What is not open to debate is the fact that, instead of the stringent European money market of 1913, that of the past six months has been exceptionally easy.

The three greatest Continental banks have built up their gold reserves to by far the highest figure in their history, and the European money markets have ruled at normal figures. On the other hand, our own export to Europe of a sum of gold unprecedented for the period has been received in the American markets with entire calmness. The reappearance of an "import excess" in our monthly foreign trade returns was hardly discussed at all, outside of Congress.

How, then, about the closing half of 1914? The outlook is just a little singular. First stands the enormous wheat harvest in this country, coming at a time when Europe's wheat supplies are unusually low, and promising, therefore, both to reverse the recent movement of foreign exchange against us, and to give food at fair prices to the world at large. Next is the coming introduction of the new banking system which cannot fail in time to exert a potent influence; certainly not in the direction of continued forced contraction. What will be the nature and result of the Congressional elections is a question of much importance, to a community obsessed with the idea that present political conditions have caused all its ills. No doubt, something will depend on the form in which the "Trust bills" reach enactment—if they reach it at all this present season—and on the nature of the "rate decision."

But, meantime, the situation is that a windfall of agricultural wealth is descending on the country, at a time when stocks of merchandise of all kinds are admittedly very low. That is one problem which must be worked out, and which will certainly affect the finances of the period. At the same time, France has this week placed its long-deferred public loan upon the market, and England must, within the next few weeks, settle the Ulster trouble. And if so, what then? It is not very difficult to say what would be the natural result, in an ordinary period. But is this an ordinary period? The next six months should largely settle that. They ought also to determine what was really the significance of the as yet mysterious outburst of world-wide financial enthusiasm, at the beginning of 1914—a market forecast which has thus far been singularly unfulfilled, in this country or in Europe.

Nantucket
A History
——by——
Dr. R. A. Douglas-Lithgow,
Author of "Heredity: A Study," etc.
8vo. Illustrated. Map. $2.50 net

This is a book of far more than local interest. In a most entertaining manner the author has told the story of this quaint island world, so sufficient unto itself from the time of the earliest settlements to the decline of the whaling industry; and even now retaining its delightful individuality, although as a popular summer resort, overrun each year by a horde of "off-islanders."

Aside from the reading-charm, this history—one is tempted to write "biography," such a distinct feeling of *personality* is awakened—has a very real value as a record of events and customs.

KAFFEE HAG

PERFECT COFFEE

95% OF THE CAFFEINE REMOVED

When the caffeine is removed from Kaffee HAG, everything else that is not coffee: the oil, wax, dirt, etc., are also removed—this allows free action of the boiling water and when you make Kaffee HAG you get a stronger cup of coffee than ordinary coffee produces. Kaffee HAG is a refined coffee, refined in much the same sense that sugar is refined—nobody today ever thinks of using crude brown sugar on the table.

The Medieval Popular Ballad

Translated from the Danish of Professor JOHANNES C. H. R. STEENSTRUP, by EDWARD GODFREY COX.

An important work for students of the ballad. The author, in place of accepting all ballads at their face value, endeavors to isolate the genuine medieval features, "to know the ballads as they issued from the poet's mouth."

He treats in great detail the original conditions of production, the nature and purpose of the refrain, and the structure of the rhyme, rhythm, and melody. He discusses also the attitude of ballads toward questions of moral import, their feeling for religion, patriotism, and historical truth, and their use of nature.

The comparisons with the Norse sagas and the ballads of Germany, together with the plenteous use of extracts from the ballads of Denmark, all combine to set forth attractively the perplexing and fascinating question of ballad origins and distributions

BLANCHARD AND WADE'S FOUNDATIONS OF CHEMISTRY

By **A. A. Blanchard,** Ph.D., Associate Professor of Inorganic Chemistry, Massachusetts Institute of Technology, and **Frank B. Wade,** B.S., Head of Department of Chemistry, Shortridge High School, Indianapolis, Ind.

$1.25

A modern course which teaches *real* chemistry and stimulates original thinking on the part of the pupil. It has the educational advantage of being presented in a logical, scientific way, and at the same time contains a wealth of material, showing the applications of chemistry to the industries and everyday life. The topics treated and the order of their arrangement make the book suitable for college entrance preparation, for high-school students who do not go to college, and also for many college elementary classes.

NEW YORK, THURSDAY, JULY 16, 1914.

Summary of the News

Rumor with regard to the Mexican situation has spoken with more tongues even than usual during the past week. Gentlemen who formerly adorned Gen. Huerta's Cabinet have fallen into the habit of arriving at Vera Cruz with authoritative but wholly contradictory reports as to the Dictator's intentions. From the protocol which Huerta addressed to the newly assembled Congress on July 8 it was understood that he intended shortly to retire from the Presidency, and the appointment on Saturday of Dr. Carbajal as Minister of Foreign Affairs was thought to indicate that he would be Huerta's successor. The fact remains, however, that Gen. Huerta is still the ruling power in Mexico City, and as we write there comes yet another report from Vera Cruz that he has asserted to the Senate that he has no intention of withdrawing from the Presidency.

There seems to be less reason than ever to suppose that Gen. Carranza will appoint delegates to confer with those of Huerta on the question of the Provisional Presidency. The present intention of the Constitutionalists is obviously to come to terms only in Mexico City itself, and the plans of the principal leaders appear to be going forward for a simultaneous advance on the city. Guadalajara was captured by the troops of Gen. Obregon on July 9, and Guaymas, the most important seaport of Sonora, was abandoned by the Federals on the following day. Preparations are now being made for an attack on San Luis Potosi, and with the fall of that place the way will be open for the final combined march of the three armies, under Gonzales, Villa, and Obregon, on Mexico City.

Rumors have persisted of continued difficulties between Villa and Carranza, and there have been frequent reports that the former was about to set up an independent republic in northern Mexico, but these reports have lacked substantiation, and it seems improbable that any differences that may still exist between the leaders will be allowed to interfere with their plans. An interesting statement by Gen. Carranza was published in the papers on Sunday, in which he reviewed the entire situation and outlined his future policies. At the same time a statement was given out by his private secretary affirming the re-establishment of complete harmony among the Constitutionalist leaders.

As a result of the unsettled conditions in Hayti and Santo Domingo, the Administration on Monday announced that 700 marines would be sent to Guantanamo, Cuba, to be held there in readiness for a movement into either country. The official announcement of the dispatch of this force explains that it is sent in case of emergency, so that it shall be available for the protection of life and property. Emphasis is laid on the fact that the measure is purely of a precautionary nature.

A resolution was passed by the National Education Association on July 9 recording its belief in the principle of political equality for both sexes.

On July 9, Mr. Page, the United States Ambassador in London, announced in a speech that a new treaty was being concluded between this country and Great Britain whereby a commission was to be set up to which either Government might refer any question arising between them.

The bill providing for a new form of territorial government for the Philippine Islands was laid before the House on Saturday. The bill, which does not set any specific date for the independence of the islands, provides for the creation of a Filipino legislature consisting of two branches, which may pass laws for the government of the islands, but shall not have power to pass any legislation affecting trade regulations, tariff revenues, or currency, nor shall it legislate concerning the disposal of public lands or of mining rights, except with the approval of the President of the United States.

The report of the Interstate Commerce Commission on the affairs of the New York, New Haven & Hartford Railway was handed down on Monday. The Commission holds the old management of the railway to have been criminally negligent and subject to prosecution under the Sherman Anti-Trust and other laws. It estimates that between $60,000,000 and $90,000,000 was lost through reckless financing, and has referred to Attorney-General McReynolds a complete record of the testimony taken before the Committee. Comment on the matter will be found elsewhere.

The part which Col. Roosevelt will play in the election of a Governor of New York State appears, after all, not to have been definitely settled by his thrice repeated denial that he himself would be a candidate. Neither Mr. Whitman nor Mr. Hinman possesses, in the Colonel's estimation, the ideal qualities which alone can deserve Progressive support in a fight for the Governorship, and there seems to be at least a possibility of the discovery being made that only one man in the Progressive party is the fortunate possessor of those attributes. Should the Colonel, after all, be persuaded to present himself as a candidate, he can rely on the support of ex-Gov. Sulzer, who declared recently that he would not be a candidate if Col. Roosevelt should enter the field, adding that he would not "do anything to hurt the Colonel."

The Boston Circuit Court of Appeals, on July 9, handed down its decision in the Dolan case, concerning which we publish elsewhere an informing letter from our correspondent in Paris. The Court of Appeals reversed a decision of the United States District Court in Boston, sentencing Henry Munroe, a banker doing business in New York and Paris, to ten days in jail and a fine of $250 for refusing to produce checks filed with his firm in Paris by Miss Dolan, a dressmaker, who was accused by the customs authorities of undervaluing certain goods purchased in Paris. The interest of the case lies in the fact that had the banker complied with the demand of the Treasury and produced the checks his firm in Paris would have violated the French law under which it carries on business.

The report of the Commission, under the presidency of Lord Mersey, which has investigated the sinking of the Empress of Ireland by the collier Storstad, in the St. Lawrence River on May 29, was published on Saturday. The Commission finds that the Storstad was to blame for the disaster, the collision having been brought about by its change of course during the fog. The action of the third officer of the collier in changing the course of the vessel without instructions from his superior and in failing to call the captain when he saw fog coming on is characterized as "wrong and negligent."

Speaking in the House of Commons on July 10, Sir Edward Grey issued a warning to China that trouble is likely to result from its refusal to sign the convention in regard to what territory shall compose Outer and Inner Tibet which was reached recently at Darjeeling. "If China does not sign," said Sir Edward Grey, "but resorts to an aggressive policy, the consequences must be disastrous for China."

The situation in Ireland, on which we comment elsewhere, remains unchanged, and the celebration of the anniversary of the battle of the Boyne, which took place on Monday, passed off without any untoward incident. On the same day Mr. Asquith announced in the House of Commons that he could not say when the amending bill to the Home Rule bill, which left the House of Lords yesterday, would be introduced in the Lower House.

The new French loan of 805,000,000 francs, which was issued last week, according to a statement of the Ministry of Finance, was over-subscribed forty and one-quarter times.

The French Chamber of Deputies on July 8, by a vote of 461 to 35, passed the appropriation bill for 2,000,000 francs to cover the expenses of an official French exhibit at the Panama exposition.

Prince William of Wied is still Mpret of Albania, but his position appears to grow daily more unenviable. The Mussulman insurgents have been almost uniformly successful and on Monday, following close on the taking of Koritsa last week, news came of the capture of Berat, an important town thirty miles northeast of the port of Avlona.

Elections for the Upper House of the Danish Parliament, held on July 10, resulted in an assured majority for the Government on the question of the amendment of the Constitution on a democratic basis.

The deaths of the week include: Ex-Senator Edwin Bailey, July 8; Henry R. Emmerson, Fred A. Busse, Brig.-Gen. Garrett Lydecker, July 9; Prof. Julius Rodenberg, Lady Hardinge, Melville E. Ingalls, July 11; Justice Horace H. Lurton, Capt. Edwin V. Gager, July 12; Earl of Ellesmere, July 13.

The Week

There was much jesting about Secretary Bryan's "peace treaties" with Salvador and Denmark; but it is now his turn to be amused. One can imagine the gratification with which he looks forward to showing honest scorners that the list runs from Salvador to Great Britain and France. "These documents to which M. Jusserand and Sir Arthur Spring-Rice have just set their hands —is there anything ridiculous about them? They enunciate the identical principle on which your despised little Salvador joined me." The cabled editorial comments of the London *News*, the feeling at the peace centenary meeting at which Ambassador Page last week announced the virtual conclusion of the new treaty, supplementary to the old arbitration agreement, must indicate a general British sentiment towards it and its spirit. Certain of the weeklies have inclined to question its worth. They call attention to the fact that the "peace treaty" provides for no arbitration; that it merely binds two nations to refer to an investigating commission, for one year, any question not affecting national honor; and that even the report of this commission is not binding, although it is to be published to the world. They ask whether so weak an agreement will halt excited nations. But others are favorable, and John Bassett Moore, whose erudition was so set off against Secretary Bryan's amateurishness, pronounces the treaties an advance on anything before them.

Mr. Bryan's statement of the Colombia situation is a simple, direct, and in the main effective presentation of the case in favor of the pending treaty. What he says about the form in which the expression of regret is made cannot be said to be of much force; the expression is unfortunate, and the fact that it is "identical in meaning and almost identical in words" with that in Mr. Dubois's memorandum has little to do with the question. But the facts bearing on the substance of the treaty are quietly and concisely set forth, and any objection to the treaty is bound to take cognizance of them. That Colombia is anxious to submit the question to arbitration; that, as we will not arbitrate, we are in honor bound to satisfy fully any just claim on her part; that she has "suffered great financial loss in the separation of Panama from her"; that what we offered Colombia before separation was not only $10,000,000 down, but in addition $250,000 a year for one hundred years, the capitalized value of which annuity may fairly be set down at $7,500,000; and that this total of $17,500,000 was offered for the canal route only, Colombia retaining the State or Department of Panama—these are the elements of the case, as Mr. Bryan states it. And he concludes with an appeal for the settlement proposed in the treaty on the ground not only that it is just, but that this nation "can afford to be generous in the settling of disputes, especially when by its generosity it can increase the friendliness of the many millions in Central and South America with whom our relations become daily more intimate."

The troubles in Santo Domingo and Hayti are evidently very serious, and such as to justify our Government's sending of a considerable body of marines to Guantanamo, to be ready for an emergency. "The United States," says a Washington dispatch, "is particularly interested in the affairs of the Dominican Republic because of its present capacity as receiver and disburser of Dominican customs and revenue." For several years, the custodianship of the Dominican custom houses by the United States seemed to operate as a sovereign specific for the disease of revolutionism in Santo Domingo; but it has now for some time been apparent that this policy has not the infallible virtue predicted for it when it was adopted. The experience is significant in relation to other disturbed regions in which we may be tempted to adopt a similar course upon the inducement offered by its supposed ease and simplicity.

In order to understand the nature of the Interstate Commerce Commission's report on the finances of the New Haven Railroad —especially the conclusions regarding civil and criminal liability of the directors in office during the period reviewed—it is necessary to recall the Congressional instructions under which the investigation was pursued. In the Senate resolution of February 7, the Commission was directed not only to make public facts in its possession regarding the New Haven's financing in that period, but to reopen its inquiry into the company's affairs "with a view to ascertaining" these four points: "First, what became of the funds of said company invested in the various enterprises and corporations" with which, or through which, the New Haven had operated; "second, whether the person or persons authorizing such investment of the funds of said company, and the person or persons receiving the benefit thereof, are liable to punishment under existing laws; third, whether under existing law such funds so invested can be recovered on behalf of the stockholders of said company; fourth, what legislation, if any, is necessary to prevent the recurrence of similar transactions." It will be seen from these citations that, in its recommendations as to suits against the then existing directors—the part of the report which seems to have startled Wall Street—the Commission merely followed explicit instructions. When the full text of the report is examined, in the light of these instructions, it will be seen that its information as to what became of the funds expended in the various undertakings is somewhat fragmentary. The Commission submits, as a "reasonable estimate of the loss" to the New Haven "by reason of waste and mismanagement," a sum "between $60,000,000 and $90,000,000." This loss is specifically assigned to the acquisition of the Boston & Maine, the purchase of the various Massachusetts, Connecticut, and Rhode Island trolley companies, and the New York, Westchester & Boston deal.

In its summary of the facts in this unhappy New Haven matter, and in its very severe arraignment of the Mellen administration, the Commission merely repeats in greater detail the conclusions drawn by all thoughtful readers of the recent sensational testimony. Mr. Mellen is not spared; the Commission rightly refuses to permit him to hide his responsibility behind the imposing figure of the late Mr. Morgan. There is no blinking the grave responsibility of the powerful Wall Street interests on the company's board, and, in face of the evidence, there could not be. But Mellen was both director and president; the practices of his management extended not merely to the "Westchester deal" and the "Rhode Island trolley purchase" (for which he voted, though declaring his disapproval of the terms), but to the devious financial methods exposed in every direction, to the expenditure of the company's funds for subsidizing the press and "educating public opinion," to the payment of unitemized vouchers, to the Billard legerdemain, and, finally, to the bold and publicly avowed purpose of establishing a transportation monopoly in New England, regardless of the laws which Mellen perfectly well knew stood on the statute books. Under such circumstances, his comment that the Commission's findings are "the report of a political tribunal, made for political purposes," is nothing short of impudence.

We regret to have been led by an erroneous Associated Press dispatch into doing President Wilson a serious injustice. We spoke of civil-service reform having been "wounded in the house of a friend" through President Wilson's order exempting from the rules the new "commercial attachés." The dispatch on which our comment was based was very explicit, speaking of "the fourteen commercial attachés authorized by the new Legislative, Executive, and Judicial Appropriation bill." The fact is that the fourteen posts to which the President's exemption order refers are not those of commercial attachés abroad, but those of commercial experts in the Department of Commerce, which have nothing to do with the positions about to be created in the Appropriation bill. And we learn that the reason for the exemption of these posts is that the experts required for the specific purposes in question could not be procured under the civil-service examination, and that there was no list of eligibles. As for the new commercial attachés, if we had had clearly in mind the history of the Appropriation bill we should have remembered that these places were—much to our regret—not placed under the civil-service rules, but expressly put outside the classified service, and made subject only to examination under direction of the Secretary of Commerce.

The Jones bill, reported Saturday, not merely follows the Democratic pledge that independence be granted the Philippines as soon as a stable government could be established in the islands. It looks to effective steps to bring about conditions that will permit the severance of political relations with the United States. The substitution for the Commission of a popularly elected Senate follows naturally the action of the Administration last autumn in giving the Filipinos a majority in the upper appointed body. The new bicameral Legislature, with full powers of legislation except as regards tariff, currency, and public lands, and the restriction of a Congressional veto, will give the islanders full room to demonstrate their governmental capacity. The suffrage is also enlarged. Under Governor-General Harrison, and with the admirable order that has characterized the Filipinos in the recent uncertain months, the development of a stable government should be rapid. Friends of the Philippines, as well as advocates of caution, may be glad that the eight-year date for independence proposed in the first Jones bill has been dropped. As Commissioner Quezon, who accepts the new grant of autonomy as "a step forward," remarked two months ago, a definite date is not necessary to show that the United States is acting in good faith, and "an indefinite date, if sincerely held in mind, is a great deal better than the establishment of a fixed date which may or may not be thus sincerely held."

Judge Lurton's death, at the age of seventy, closes a career of only five years in the Supreme Court of the United States. The decision with which his name is most conspicuously connected is that of the famous mimeograph case, in which the control of a patentee over the conditions of sale of a patented article was upheld in an extreme form. The Court divided four to three, Chief Justice White being with the minority and declaring the most emphatic opposition to the doctrine laid down in the majority opinion, which was written by Justice Lurton. Such division of the Court has, however, during the past few years been very rare, instead of being the rule in crucial cases, as had seemed to be the fact for a number of years before. What with this change, and the very remarkable contrast which the condition of the Court's calendar presents to what had long been customary, a vacancy in the Supreme Court does not carry with it the disturbance either of mind or of court business which was once associated with it. The Court has so energetically disposed of the cases before it that hardly anything is left unfinished; and, whoever may be chosen to succeed Judge Lurton, there will be little or no speculation as to the effect of the appointment on the decision of any particular case.

Democrats may feel concerned over the impending party losses in Louisiana, but we see no signs of the enthusiasm which the prospect of the corresponding gains might be expected to inspire in the ranks of the "Onward Christian Soldiers." Nor is it likely that such enthusiasm will be successfully manufactured on any great scale, even if the insurgent Louisiana Democrats should succeed in sending to Congress several Representatives labelled Progressive. It is perfectly natural that Louisiana men who have been hard hit by the sugar clause of the Underwood tariff—incomparably the most severe cut suffered by any protected industry—should revolt against the party responsible for it; and everybody knows that it is solely on account of this grievance that the Louisiana men have seceded. That it is "bully" for the Colonel is undeniable; indeed, such an accession, however fortuitous, would be welcome to any party leader, to say nothing of a leader—and an ex-President of the United States—who welcomes the *American's* support of his position in regard to Colombia with a "Bully for Hearst!" But as for the new departure being any sign of the advance of the Progressive party's principles in Louisiana, that is not asserted even by those who cheerfully acclaimed Flinn's Progressivism as a pure and beautiful change of heart.

In the *Delinquent*, a monthly publication of the National Prisoners' Aid Association, Dr. William Healy, director of the Psychopathic Institute of the Juvenile Court of Chicago, gives some leading results of a five years' study of offenders that have been dealt with by that court. Both the spirit of the paper and the statistical results recorded are in striking contrast with current easygoing pronouncements in similar matters. Dr. Healy has made use of the Binet tests as an aid in the inquiry where they seemed desirable, but he recognizes the sharp limitations to which their utility in this field is subject. The transfer to adults of tests proper in the case of children is characterized as scientifically unwarranted; and Dr. Healy further remarks that "we must remember that no one as yet has given us the results of these tests as applied to hundreds of ditch-diggers, or section hands, who in their lowly spheres form most useful members of society." As for the statistical data, the most interesting are those concerned with 1,000 recidivists, whose average age was about fifteen years. These, says Dr. Healy, have been graded by mental tests most carefully, with the result that 3 per cent. are found to be "considerably above ordinary in ability," 55 per cent. "ordinary or fair in ability," 9 per cent. "poor in ability," 8 per cent. "mentally dull, but suffering from defective physical conditions, or disease, or bad habits, which may be the cause of the dulness"; after which follow the "subnormal," the "feeble-minded," etc., the aggregate of all these classes being 25 per cent. This is very different from the 80 per cent., and 85 per cent., of adult delinquents which have, in certain quarters, been glibly assigned to the class of morons or worse, as the result of a mechanical subservience to the supposedly infallible dicta of the Binet tests. When science applied to human affairs goes hand in hand with a sober and cautious exercise of the thinking faculty, it does not deliver judgments which fly in the face of common sense.

More evidence that new depression is but old psychology, writ large, comes out of the Middle West. Mr. Ford was duly enthusiastic after his White House interview the other day, but the unnamed Chicago manufacturer who has furnished the President with such a handsome testimonial goes him one better by giving "instructions to immediately increase operation at one of our plants from 75 to fully 100 per cent. capacity." Other plants under the control of the same manufacturer will be operated at maximum capacity "just as quickly as improved conditions permit," but the one plant first mentioned does not need to wait for mere conditions; its paralysis has evidently been psychological. Political opponents will be quick to see in the circumstances of such a conference an admission by the President of responsibility for the state of business health. But all that can really be charged up against him in this respect is confession of responsibility for psychological depression; and with reference to this malady he is displaying all the conjuring power of a medicine-man, provided only he can be brought face to face with the patient in private. As soon as he can develop a method of absent treatment, the Republicans and the Progressives will find one of the historic arguments against Democratic success hopelessly shattered.

Salem is hoping to rebuild her burned section in such a way that, like Chicago and some other cities, she may be able to speak of "the fire" as not altogether a calamity. Beauty as well as safety is to be sought. "Three-deckers," which formerly lined the shore, are to be placed under restrictions which will make them unprofitable; and the land along the harbor line is to be converted into a parkway. Streets are to be widened, according to the plan of the City Engineer, and hundreds of shade trees planted. The City Council has adopted an ordinance requiring all roofs to be of slate or other non-combustible material. Arrangements are being made for an additional supply of water. In this connection the deputy chief of the State Police told the New England Fire Chiefs' Club a day or two ago that Boston or Lynn might be found not to have a water supply adequate to cope with a great fire. He was also of the opinion that a good sprinkler system in a certain building would have averted the conflagration in Salem.

The *Unpopular Review* for July-September confirms the welcome impression given by the preceding issues. In days when shallow dogma and gossiping statistics are uttered with solemnity, it is refreshing to turn to the philosophic breadth, the culture, the poise of most of these essays. Reactionary they will be called by many, which is only another way of saying that they are deliberate. They assert the rights of property, resent needless inroads into the liberty of the individual, exalt the claims of a classical education, and defend other principles which the undiscriminating humanitarian to-day belittles. The vigor and conviction with which they are written furnish encouraging evidence that "high-browism," properly directed, may yet become the truly radical attitude in this country. If the present-day confusion of terms is ever dispelled, it is quite possible that progressives will identify themselves with such energetic protest against headlong propagandas as is evident in this issue of the *Unpopular*.

If theatrical managers took any interest in the opinions of either writers or critics of plays, they would find something worthy of attention in a recent interview with Henry Arthur Jones. In response to an inquiry as to the future of Shakespeare on the English-speaking stage, Mr. Jones was not hopeful. Despite the 139 performances of Shakespearean plays in this city during the past year, he feels that the hold of the great dramatist is likely to grow less and less. The trouble is not that we have swung away from Shakespeare, but that we have failed to keep up the art of speaking blank verse, and have tried to compensate ourselves for this loss by elaborating the scenery. "If we should have great actors speaking blank verse," thinks Mr. Jones, "that would tend to draw the public." But why haven't we great actors, or at all events actors who can speak blank verse? Here our English visitor is inferentially unkind to our managers, for he suggests repertory theatres "where a succession of the best works can be played throughout the season." This, he believes, would tend to raise the standard of both the drama and the acting. "It is only by constant acting in the best plays that great actors and actresses attain the summits of their powers, and it is only by seeing a constant succession of the best dramas that playgoers can have their tastes formed and steadied." Mr. Jones thus again adds his voice to that of the serious-minded dramatic critics in this country. Like them, he is old-fashioned enough to think that it is better to develop great actors than great managers.

With an American winner of the French official prize for the best invention in aeroplane stabilization, and with W. L. Brock victor in the London-Paris and return race, our country has growing cause for pride in its airmen. One reason for the comparative paucity of our records in aviation is the advanced state of European military aeronautics, provision having been made only within the month for the development of our own corps. The race which took place on Sunday was an impressive showing of the ease with which great feats are now accomplished. Of four competitors whose machines gave genuine promise, two completed the trip, one was halted when nearly through by the fatigue of a woman companion, and the fourth was on his last lap when a mistake caused by fog dropped him into the Channel. A journey of above 500 miles is thus to be undertaken with all but nonchalant expectation of success. And the last few weeks have been replete with similar achievements. On June 23 a German, Herr Basser, raised Moulinais's duration record of 14 hours 20 minutes to 18 hours 10 minutes, and a week later it was again raised by Herr Landmann, of Berlin, to 21 hours 49 minutes. Since that time a French army dirigible, the Admiral Vincenot, has remained in the air for 35 hours 39 minutes, the previous record having been thirty-one hours, established by one of the Zeppelins.

The celebration in Ulster of the 225th anniversary of the battle of the Boyne passed off without the disorder that had been feared. The celebration, indeed, is stated to have been the quietest held in recent years, the "armies" of both sides having assisted the police in maintaining order. The whole situation appears to be in the highest degree paradoxical. Sir Edward Carson has taken a further step forward in having delegated to him by the provisional government of Ulster the power to decide the moment when armed resistance to Home Rule shall begin, and he has reiterated his oft-repeated warnings to the Government of a day of reckoning soon to come; yet at no time apparently within the past year has there prevailed a greater feeling of hopefulness concerning the outcome of the situation. This hopeful feeling was reflected in a speech delivered on Saturday by Augustine Birrell, the Chief Secretary for Ireland, in which he declared that, although the situation in Ireland was grave, he was never more sanguine than now that a reasonable and proper settlement would be reached.

THE PRESIDENT AND THE SENATE.

Events have already shown that it was premature to declare last week that the long-predicted break between President Wilson and the Senate had come. Thus far, it is more of a flurry than a war. It is not the Senate as a whole that is arrayed against the President. Still less is it the Democratic majority in the Senate. To be precise, it is only the Banking and Currency Committee—or, rather, two Democratic members of that Committee, joining with five Republicans to vote to reject the nomination of Mr. Jones as a member of the Federal Reserve Board. The elements of a pretty quarrel are here, confessedly, but we are still very far from anything like war to the knife.

Sharp issues between various Presidents and the Senate have not been infrequent during the past thirty years. Grover Cleveland had something like a fight with the Senate early in his first term. The majority was then Republican; and, skilfully led by Senator Edmunds, sought to make trouble for the new Democratic President in the matter of furnishing papers relating to removals from office. President Cleveland firmly stood his ground; and had little further trouble with the Senate until his second term, when it was tainted with free-silver heresies and sought to thwart his financial policies. President Roosevelt locked horns with the Senate on the question of his railway bill. At first defeated, he was later victorious. These and other breaches between the Executive and the Senate had a good deal of prominence given to them at the time. They take their place, along with minor differences and petty controversies of which the public hears little, in the continued struggle between two powers in our system of government, to determine which is the stronger. One seems to be at one time, another at another. Until the present, Mr. Wilson has been able to work so well in harmony with the Democratic majority in the Senate that he has had the appearance of successfully imposing his will upon the upper house. It is probable that he has yielded in small matters—given away, for example, in details of patronage—more often than most people know. A well-timed sop to a Senator often helps him to see more clearly the merits of some large measure. However that may be, President Wilson has been remarkably successful, until now, in winning the Senate over to all the main features of his policy. It is that fact which makes the vote of the Senate Banking Committee last Thursday seem like his first important check. The correspondents speak of it as a "blow"; but that depends on how it is followed up, and on the question whether any blows are struck in return.

If there is to be a real fight between the President and the Senate over the nominations of Messrs. Warburg and Jones, it must be said that Mr. Wilson is fortunate in the choice of both place and cause of battle. For here is not a case where Presidential "usurpation" can be charged. There is no infringement of the rights or dignity of the Senate. Nor is there even any dispute about an unfair distribution of patronage, as between parties or localities. President Wilson was charged by law with the important duty of selecting the five appointed members of the Federal Reserve Board. He took his time about it, stated that he should regard these highly important nominations as entirely outside the political field, and finally made nominations which commanded almost universal approval. Three of the nominees were soon confirmed, without any fuss. But for some reason the Banking Committee singled out two of them for all kinds of irrelevant and annoying inquiries. Hence the whole trouble. Hence the President's public statement that he stands by the two nominees, and that he expects the Senate to confirm them. With or without an adverse report by the Banking Committee, his position is that the Senate should have a square vote on Messrs. Warburg and Jones, so that the country may know if a man of the peculiar fitness of Mr. Warburg, at least, is to be kept off the Federal Reserve Board for motives which Senators dare not avow.

Was this a genuine *casus belli?* We doubt it. With neither side spoiling for a fight, a way of reasonable adjustment ought to be found. In the case of Mr. Warburg, he has already made sensible and dignified answers in writing to the questions addressed to him by the Banking Committee. If it had any other really important inquiries to make of him, we presume that he would have no objection to responding further in the same way. He simply declines to go in person before the Committee for the purpose of unlimited cross-examination; and in that attitude he has the hearty backing of President Wilson. In the end, it may be hoped that reason and good temper will prevail. Senators who keep their weather-eyes open can hardly fail to conclude that this is an instance where their discretion will be the better part of valor. For the manifestations of public opinion have already been such as to show that, if there actually is to be a fight over the nomination of Mr. Warburg, the great mass of sound sentiment in the country will be on the side of the President.

THE WOOING OF BIG BUSINESS.

Big Business might be excused for falling into the hackneyed "This is so sudden," in presence of the amorous advances which President Wilson made to it last week. It is so long since anybody has thought of it as a beloved object! For years it has suffered not merely neglect, but contumely. It was not permitted to be even a wall-flower in the room where the merry dance of popular agitation was going on: it was shut out of the ball entirely. And now the very master of ceremonies comes up to make proposals of marriage. It is not strange that Big Business blushes with pleasure. So dreary a time has it been since any prince drew near to sigh and look and sigh and look again.

In all seriousness, men of large affairs must have rubbed their eyes as they read President Wilson's statement. Issued primarily in connection with the nominations of Messrs. Warburg and Jones as members of the Federal Reserve Board, it runs far beyond this immediate occasion. It points to an attitude on the part of the President which, if not new, he has not hitherto assumed, and to a party policy which, so far as he is able to dictate it, will be something like a radical change for the Democrats. After all the vehement denunciations of large business companies and their managers, we now have it, on the President's word, that "the vast majority of the men connected with what we have come to call big business are honest, incorruptible, and patriotic." Can such things overcome the heads of corporations like a summer cloud without their special wonder? But more is to come. The President distinctly speaks of an alliance. Not only must the Democratic party be thought of as no enemy to business, big or little, but it is now the duty of statesmen to seek in every way to coöperate with business men of ability and character, with the aim to use "every force for the upbuilding of legitimate business." If Big Business asks more than that, it must be hard to please. As a matter of fact, the reception given to the President's words, both by public men in Washington and by business men everywhere, shows that, if Mr. Wilson's declaration is sincere, it will not be with him a case of unrequited affection.

Mr. Wilson speaks of our having reached a "turning point in our development" which

demands the adoption of such a policy as he suggests. The phrase is vague. Probably he left it so purposely. It might mean the stage of legislation by Congress which has been reached. It might refer to the trade situation and the agricultural promise. It might have political bearings. Either one, or all together, the result is much the same. The President who has so long been charged with austerely shunning the visits and the counsels of men engaged in the great industries and in commerce, who has been accused of knowing nothing and caring less about business, has now made what is, in effect, a new departure. He invites and welcomes aid from the very class of men on whom, it has been said, the doors of the White House have been closed. Doubtless, Mr. Wilson's friends will protest that this means no real change in him. But it will be received by the country as a radical change. It will be thought of as an obvious political *coup*—fairly Rooseveltian—and the motives and effects of it will be everywhere talked about.

Plenty of reasons for the President's move lie on the surface. Business has been checked for some months, and the result has been, as was inevitable, to make the Administration unpopular. The thing could, to be sure, be explained. There has been something like a world-wide depression. American business has been no harder hit—probably it has suffered less—than business in Germany and England and France and South America. But an impatient people doesn't want explanations; it wants remedies. Moreover, the political calamity-howlers were abroad in the land. The Colonel heard the dismal notes, on his return, and promptly joined in the wailing. A wretched failure of an Administration, this, that couldn't assure prosperity, and see to it also that prosperity was "passed round"! President Wilson has taken no public notice of these ululations from the Colonel, but we may be sure that he has not overlooked them. In laying down broadly his new programme of coöperation with Big Business, he may be thinking of a "turning point" in the sense that the time has now come to turn and rend his political enemies.

The chief question to ask in connection with the President's policy of seeking friendly relations with Big Business is whether it is in itself sound and right. On this point there can hardly be two minds. Prejudice may dissent from the policy, but real thought cannot. A millionaire is a citizen for a' that. The fact that interests are large should not debar them from consideration by a government that is built upon the conciliation and union of all interests. In all this, the President is walking on firm ground. But will he succeed? This is the second and minor question which many will be debating. There can be no sure answer to it except the event. Already Mr. Wilson has succeeded to this extent, at least, that he has shown to the country that he has an open mind. To some people he will have revealed, also, that he is no child in politics. That his Administration is at present unpopular, he must be fully aware. Whether he can recover his popularity, we shall see. It has been said of English statesmen that they are often able to overcome an intense temporary unpopularity, provided that the public has faith in the stanch sincerity of their character. Whatever else Americans think of Woodrow Wilson, they believe he is honest.

RHAPSODY AND REVOLUTION.

The leading place in the *Atlantic Monthly* for July is given to "A Message to the Middle Class," by Seymour Deming. Assuming that the initials "E. S.," attached to the appended article, "A Reply," are those of Mr. Ellery Sedgwick, this place is assigned to Mr. Deming's article not because the editor regards the "Message to the Middle Class" as a sound one, but because it is eloquent, moving, and calculated to arouse emotions which, as "E. S." says, "should make us better men and women." Certain it is that many of those who read Mr. Deming's appeal will be profoundly stirred by it; and they will be helped in recovering their mental balance by the reply of "E. S.," which pits eloquence against eloquence, emotion against emotion. On the largest lines, too, it arrays facts against facts; for over against Mr. Deming's idealization of the movement of the have-nots against the haves, and belittling of all that characterizes "middle class" standards and ideals, "E. S." sets the ugly and sordid aspects of the one and the high attributes and the priceless historic achievements of the other. He does not, however, enter upon any discussion of the general truthfulness of the picture Mr. Deming draws, or of the intellectual integrity of his comments upon it; and it is the lack of such truthfulness, and the absence of such intellectual integrity, that constitute the most essential weakness of the article. We may be swept off our feet for a moment as we read it; but we presently realize that what we have been listening to is not an eloquent presentation of the truth, but a rhapsody poured out by an enthusiast.

Mr. Deming's message, in a word, is that the "middle class," instead of allowing themselves to be ground to powder between the upper millstone of the plutocracy and the nether millstone of the laboring classes, and instead of vainly striving to make themselves part of the selfish and tyrannous little circle of the rich, cast in their lot frankly and whole-heartedly with the vast, human, kindly army of the poor:

> Does it ever occur to you that if your pity drew you to take sides with the oppressed, your unlooked-for reward would be a sudden and overwhelming power to end oppression? Does it ever occur to you that, once you joined forces with the poor (who, you have been told, cannot help you), together you would be suddenly invincible and need no longer dread each other—nor the rich, nor poverty?

Throughout the article, the "middle class" is represented as in a condition bordering on the desperate. Physicians, lawyers, teachers, persons employed in the various forms of salaried work of all kinds, persons engaged in business on their own account upon a moderate scale—all these classes of people are depicted as being shoved to the wall in merciless fashion. Yet there is not the slightest reason to believe that anything of this kind is true. It is true that the birth-rate in the "middle classes" has greatly declined; but that is quite as easily explained—in so far as the explanation is economic—by a rise in our demands for comfort, or ease, or luxury, or culture, or pleasure, as by a fall in the disposable means. As for the "high cost of living" upon which Mr. Deming lays as much stress as upon the declining birth-rate, it never occurs to him, or to any of the writers of his type, that this matter of high prices is an extremely recent phenomenon, that nobody knows how long this phenomenon may last, and that there is no reason to suppose that incomes in the "middle class," as elsewhere, will not adjust themselves to it. Karl Marx is proved to have been diametrically wrong in his predictions of the rapid disappearance of the middle class, made three-quarters of a century ago; but his error, based on broad and deep, though mistaken, considerations, was respectable. What the rhapsodists do is to make the same kind of prediction on the basis of loose assertions which hardly rise above the rank of tittle-tattle.

But it is not in regard to the economic facts that the looseness which characterizes the rhapsodists is most seriously manifested. They represent the society around them as hopelessly degraded, intellectually and

morally; a position which they find it easy to prove by the simple process of assuming that everybody who does not promote the revolution which they regard as necessary for the world's salvation is either a knave, a coward, or a fool. "The ministers, poor fellows, are bursting with this message—if you would only untie the gag"; so much for them. "If your paper ventured to tell you" this, that, and the other which, of course, Mr. Deming *knows* to be true, "you would stop a paper which printed such seditious blasphemies." As for the colleges, "to expect them to assume a moral leadership which would instantly pitch them into conflict with the rich testator whose favor they are obliged to win is to expect fire to be wet." That preacher, or editor, or college professor may actually be quite honest and intelligent, and even courageous, though taking a different position from his on the state of the world, does not seem to occur to Mr. Deming's mind as a possibility.

How this state of mind interferes with the capacity to see anything straight may be illustrated by two instances. Mr. Deming complains that "the radical clubs in the colleges were started, not by the faculty, but by the students"—a remark absurd enough in itself, since the faculties do not start either conservative or radical clubs; but still more absurd when one considers that the movement towards economic radicalism among the educated classes in this country—and especially among the students themselves—has been in very large measure created by university professors. And speaking of newspapers, Mr. Deming says: "The prophet Isaiah might speak to them with the tongues of men and of angels, and the morning papers would record that 'the prophet Isaiah also spoke.'" Well, we don't know how much space the newspapers might give to the prophet Isaiah; but if we were called upon to name the person who, next to the President of the United States, has been getting most space in the newspapers in the past few months for anything he might happen to say, we should be inclined to guess that it was Upton Sinclair.

OUR MILITARY PROPAGANDISTS.

President Wilson's taking Gen. R. K. Evans to task for indiscreet post-prandial remarks is in line with his rebuke to the officers who took part in the famous Carabao Society dinner. The indiscretions of our generals in their public utterances are not, we believe, paralleled anywhere else. They do not realize, or at least many of them do not, that a man who dons the uniform thereby forfeits many of the privileges of the free-born American citizen; he has to submit to discipline, to being ordered about by others no better than himself; he virtually forfeits his right to vote and to take part in politics, with the right publicly to criticise our Government. These things may be hardships to some natures, but no one is compelled in this country to be a soldier. If one voluntarily enters the profession, he must take the disadvantages with the advantages.

Just how far an officer may go in his public utterances is everywhere a difficult question. In Germany the rule seems to be that if you wear the "gay coat" you may say with impunity pretty much everything you want to, provided you criticise others than your own class and the army. You may call a Socialist any kind of name you please, and all will be well; you may even run your sword through a civilian after you have exasperated him into striking you; all will still be well. It is only when one begins to find fault with the service, or to doubt the wisdom of the existing social order, that disciplinary measures are encountered. Even if one is merely a retired officer, punishment follows speedily. There is complete license to be as autocratic and as militaristic as one chooses. No officer can go too far to suit the powers that be in upholding the military caste, or in demanding more and more sacrifices from every other class in the nation, in order that the military may be supported in greater and greater state and power. In the name of war and peace, national honor and greatness; by the fear of other people's greed and ambition, the doubters are put down and the public lulled into stupid acceptance of it all by the assurance that these military overlords are specialists alone competent to judge what is best for the country.

How shall it be in a republic? What shall be the attitude of the American army officer who believes that the country is bound straight for perdition because, instead of 500,000 men under arms, we have only 80,000; who feels that we are courting national disaster because we do not have at least half a million regulars, a National Guard of 150,000, a reserve of 100,000 graduates of the regulars, military drill in every college, and rifle clubs in every hamlet? Must he choke down his emotions? Is he to be treated like Cassandra and have his dire prophecies of evil entirely ignored, or suppressed, when he can see a frightful *débâcle* like that of Sedan so plainly ahead of us? Or shall he be allowed to agitate, to express his views on all public occasions, to publish his beliefs in special organs, to carry on a propaganda for this, to him, all-important reform? Is the army officer not an expert? Is he not alone competent to advise, like a doctor on medical matters, a lawyer in things legal, an engineer in his particular field of knowledge?

These questions are by no means academic, for we are witnessing at Washington the rise of a most powerful army and navy clique, and a determined effort to rouse the military spirit in this country. There is being carried on in such publications as the *Infantry Journal* a vigorous propaganda for more men, more regiments, more brigades. There is an effort being made to influence the writing of American history so that it shall be treated from the military point of view; and the American Historical Association has fallen in line to the extent of offering a prize for military essays. The nature of the agitation for a huge navy, through the Navy League and in dozens of other ways, is well understood by those who follow its course. Our undergraduates are being drawn in through summer camps; a National Guard lobby of great influence with the press has arisen. And some of our generals, like Leonard Wood and Tasker H. Bliss, go up and down the country urging publicly more men, more arms, more withdrawals of men from productive employment.

To our mind, Mr. Wilson could not easily render a greater service than sternly to check all this militaristic campaign. The indiscretion of Gen. Evans anent the Monroe Doctrine seems of slight importance compared to the systematic efforts to aggrandize the military and naval establishments. The expert argument must not be allowed to prevail. Nearly every army or navy officer stands to profit by every increase in his service, or its power, and no experts that we know of are so uncertain of their science and dissatisfied with its every advance as these. Nobody ever heard of an army or navy officer who thought any nation had troops or ships enough; if there are exceptions, they are too few to count. Germany enormously increased her army last year, but her generals cry for more troops to-day. No other experts are so curiously out of touch with the constructive civilian life of a nation as the military; they care not what the Treasury burden for wars past or present may be; if it is 70 cents out of every dollar, as with us to-day, why, theirs is still the cry of the daughters of the horse-leech.

If necessary, every other cause may suffer; they wish hundreds of millions each year to prepare for war. For scientific war-prevention in other ways they care not at all; and while their doctrine is peace by virtue of being armed to the teeth, consciously or not it is war that the majority desire (fewer in our army than any other), because it is through war only that imperishable military reputations are made. It would be unjust to cite Capt. Hobson as a typical military prophet, for he has been so wild and unbalanced as to write himself down a joke, or worse. Yet he sees eye to eye with our military propagandists, to whose determined efforts to exalt their own class Mr. Wilson's attention should be directed. He would be thoroughly justified, in our judgment, in rebuking the big-army campaigners among our generals, besides stopping their militaristic propaganda and that of their subordinates.

COUNTING THE COUNTRY'S WORKERS.

That Truth is at the bottom of a well is a saying much older than the United States Census; but it certainly derives added significance from the difficulties which one necessarily encounters in grappling with that vast apparatus of statistics. Nor do we say this in a fault-finding spirit, though we do believe that by devoting more earnest attention to those things which make for facility in the use of the statistics the value of the Census publications might be very greatly increased. The difficulties we have more especially in mind at this moment are those expressly arising from the very effort of the Census authorities to improve their work from year to year, and decade to decade; an effort that is clearly praiseworthy, but which nevertheless carries with it the tremendous drawback of often making comparisons—sometimes comparisons of the most fundamental sort—either meaningless or impossible. Perhaps no part of the Census is of greater and more general interest than that relating to the occupations of the people, classified in all the various ways that are pertinent; and our interest in all this lies chiefly in whatsoever may indicate the tendencies of the time. To know what percentage, for example, of females are engaged in "gainful occupations," or in a particular division of these occupations, is interesting; but of far greater interest is the question how this percentage compares with what it was ten years, or twenty years, ago. And if the classifications, or the instructions given to the enumerators, have materially changed, one must walk extremely warily in making the comparison.

In the brief summary issued for the press of the results of the census of occupations for 1910, it is stated that in that year the number of children from 10 to 15 years of age engaged in gainful occupations was 1,990,225, being 18.4 per cent. of all children of those ages, while in 1900 the number was 1,750,178, or 18.2 per cent.; and the following important remark is added:

> The increase from 1900 to 1910 in the number, and hence in the proportion, of all children 10 to 15 years of age engaged in gainful occupations was confined to children engaged in agricultural pursuits, where the increase was 369,283, or 34.8 per cent., for both sexes; 166,394, or 19.5 per cent., for the males; and 202,889, or 97.9 per cent., for the females. There was a marked decrease from 1900 to 1910 in the number of children 10 to 15 years of age engaged in non-agricultural pursuits. This decrease was 129,236, or 18.8 per cent., for both sexes; 77,666, or 19 per cent., for the males; and 51,570, or 18.5 per cent., for the females.

So far as the question of child labor, as usually understood, is concerned, this is sufficient to prevent false conclusions from being drawn—sufficient to indicate that, so far from child labor being on the increase in non-agricultural callings, it has diminished by a large amount absolutely and by a most impressive amount as a matter of proportion. For it must be noted that this decline of 19 per cent. in the number of child workers was made in the face of an increase of more than 20 per cent. in the population; which means that the proportion of workers from 10 to 15 years of age to the whole number of children of those ages was only two-thirds as great in 1910 as it was ten years earlier.

But turning to the big volume on which the summary is based, we find that the introductory statement clearly and candidly points out that the apparent increase in the figures for the agricultural occupations is so largely due to a change in the method of taking the Census as to make it in the highest degree doubtful whether there was any real increase at all; and this remark applies with even greater force to the enumeration of women in agricultural pursuits than of children in those pursuits. We cannot go into details; suffice it to say that the matter turns chiefly on the greater strictness of the instructions given to the enumerators for the present Census to include all women and children engaged in farm work on their home farms. Thus it turned out that the number of "female farm laborers" in 1910 showed an increase of 129 per cent. over 1900, a result manifestly impossible as a matter of actual fact. The whole subject is treated with entire fairness in the Census report, and an attempt is made to estimate the correction which ought to be applied so as to make the comparison accurate. In the domain of manufactures, trade, transportation, etc., this cause of error does not operate to any serious extent. In enumerating persons who work for wages, or are otherwise regularly employed upon a business basis, there is little room for uncertainty.

Of the whole body of workers for gain in 1910, according to the tables, 21.2 per cent. were females, as against 18.3 per cent. in 1900; and, in spite of the allowances of which we have been speaking, these figures probably represent with a fair degree of correctness the actual increase that has taken place in the proportion of woman workers. Of individual items of interest there is a great multitude. Thus, one is struck with the fact that under the general head "Domestic and Personal Service" there are set down 2,620,000 females in 1910, as against 2,095,000 in 1900, an increase of half a million, or 25 per cent., while the country's population increased only 21 per cent.; but this does not mean a sudden rush into the ranks of female domestic servants, whose number has increased by only 140,000, or 11 per cent. Under professional service, the number of females rose from 828,000 to 1,152,000, or 39 per cent.; and the separate heads under this are of more than ordinary interest. The most striking showing is that of the women physicians and surgeons, who have almost doubled their numbers, being nearly 14,000 in 1910, as against somewhat more than 7,000 in 1900; lawyers are only 1,300, but their gain in the decade was 33 per cent. Of architects we find 302 set down for 1910, as compared with only 100 in 1900. Along with this goes the astonishing increase in "Designers, Draughtsmen, and Inventors," from 941 to 2,828; but when one casts his eye upon the corresponding figures for males, and finds that the jump there was almost as great—from 18,943 to 46,485—one suspects that the classification imp has been at work at this point. It is with the Census figures as it is with so many other things in this troublesome world—if we wish to be sensible, we must steer a course between taking a thing at its face value, and incontinently throwing it into the ditch. The Census is valuable, indeed it is invaluable; but in using it we must constantly keep about us both our judgment and our conscience.

Foreign Correspondence

THE EXODUS FROM LONDON—THE INFLUENCE OF THE AUTOMOBILE—WOMEN'S PAPERS—LORD BRYCE AT OXFORD.

LONDON, July 5.

The more London grows, the smaller it becomes. For it expands nowadays by sending its own citizens over the border into neighboring counties, and thus reducing its population figures. Within the decennium 1901-1911 there was a net loss of more than half a million persons by migration from the administrative county of London. During this period the region immediately outside London recorded a net gain by migration of 363,000.

These figures are given in a remarkable collection of London statistics just issued by the London County Council. It is the sort of book which every one who makes arithmetic his hobby will take with him to the seaside for his holiday reading. It tells him how many volumes are lent every year by the public libraries, how many meals are supplied free to necessitous children, how much seating accommodation is provided by the theatres, how many persons take a dip in the public baths, how many weights and measures are examined by the inspectors, how many hours of sunshine London enjoys week by week, which of the metropolitan boroughs has most bachelors, and which of them the fewest widowers.

In spite of the density of population, nearly 9 per cent. of the total area of London is occupied by parks and open spaces, but the proportion varies greatly in the different boroughs. More than 25 per cent. of Westminster is open space, whereas congested Shoreditch has less than 2 per cent. The County Council adds notably to the attraction of the open spaces under its control by providing music during the summer. Every Thursday evening bands employed by the Council are playing in twenty-five different parks and recreation grounds. On Sunday evenings the number rises to thirty-three. Most of these bands are hired, but three of them—two military and one orchestral—are kept up by the Council itself.

Not only is the central London of a few hundred years ago rapidly disappearing, but even the suburbs of the early Victorian era are being destroyed. This week the home of Ruskin's childhood at Herne Hill has been in the hands of the housebreaker. The house was bought by Ruskin, senior, when his son John was four years old. The room below the nursery was the study in which the first volume of "Modern Painters" was written. Even within his own lifetime Ruskin deplored the vulgarization of this district by the erection of crude villas in place of the fine old merchants' residences with long gardens.

Of late years the automobile has immensely accelerated the disappearance of houses like Ruskin's. The business man who is prosperous enough to afford a residence of this type looks for it many miles further away from the city. Not only Herne Hill, but Denmark Hill, where the Ruskins lived later, and the whole of the region round the Crystal Palace, are being completely changed in character through the same cause.

The hotel-keepers and tradesmen of Henley are beginning to realize the difference the automobile is making during the regatta week. Formerly visitors to this great river festival made their home in the town itself for a few days, and exorbitant prices were paid for rooms. It is now the fashion to motor out from London day by day, returning each evening after the last heat has been rowed. The houseboat, where little groups used to be entertained during the Henley week, has seen its best days. The motor launch is now far more popular—except with the local shopkeepers.

It is remarkable that, although so many Englishwomen have taken up journalism as a profession, there does not exist in this country a single woman's paper of the first class. If one were to make a list of the dailies and weeklies that are conspicuous by their literary ability or by their influence on public opinion, no woman's paper would be included. This deficiency is the more notable when one thinks of the great vigor and enterprise of the suffragist propaganda, which emphasizes the doctrine that women have important public interests of their own. No daily paper in the United Kingdom takes its editorial policy from a woman's direction. Women journalists are frequent contributors of special articles, but editorially their influence on the daily press is less to-day than when Harriet Martineau was a leader-writer on the *Daily News* and Frances Power Cobbe on the *Echo*.

Among the weeklies, there are a few women's papers, published at sixpence, that have a large circulation and are paying properties. But if they fairly represent the quality of women's thinking on public questions, the strongest anti-suffragist disbelief in women's political capacity is amply justified. At the end of the week one may often see in some of the daily papers a column of extracts from editorials in the new issue of the *Spectator* or the *Nation* and other papers of that type. It is never thought worth while to reproduce what any of the women's papers is saying on any serious topic of the hour.

Dissatisfaction at this "failure of the woman's press" was voiced last week by a woman correspondent of the *Times*, who complained of these papers for representing the woman of to-day as "a poor thing, devoid of industry and enterprise, utterly without influence on her time." The complaint has received so little support that one may doubt whether the discontent is shared by more than a very few women readers. Indeed, one of the ablest of women journalists, who writes for the *British Weekly* under the pseudonym of "Lorna," comes boldly to the defence of the women's papers for neglecting serious problems. "What do we really require," she asks, "from the ladies' papers? Speaking for myself, I want, first, attractive, well-illustrated advertisements." She then goes on to tell how, supposing she has bought a new evening dress of pink brocade and wants a pair of brocaded shoes to match it, she turns to the current number of one of these weeklies, and finds a full page illustrating the latest evening shoes, the prettiest buckles, the daintiest and most economical styles. She declares point blank that "the *raison d'être* of the ladies' weeklies is to cater almost entirely for the practical requirements of women."

The Oxford honorary D.C.L. degree would seem to be an eminently fitting recognition of a public career like Lord Bryce's. That distinction, however, is one that can never be his. Such is the penalty of a too successful youth. He won the Oxford D.C.L. in the ordinary way at the age of thirty-two, and the same university cannot confer the same degree on the same man a second time. On his admission to the doctorate in the faculty of law, a candidate receives from the vice-chancellor the privilege "legendi, disputandi, et cætera omnia faciendi quae ad statum doctoris in eadem facultate pertinent." That authority cannot be conferred upon him again later. It would be like the re-ordination of a clergyman. So it happens that while other British universities, as well as universities in America and Australia, can inscribe Lord Bryce's name on the list of their honorary D.C.L.'s or LL.D.'s, his own alma mater—in which he was for nearly a quarter of a century a regius professor in that same faculty—is debarred. Luckily the modern degree of D.Litt. has provided a means of overcoming this disqualification in some measure. If it had existed forty or fifty years ago, no doubt Lord Bryce would have taken it, and thereby stopped up that avenue to future academic recognition. As he had not that opportunity, the University has been able, at this year's Commemoration, to show its regard for one of its most eminent sons by conferring upon him the honorary degree of doctor of letters.

H. W. H.

THE INNOCENT AMERICAN ABROAD—HIS RIGHT TO PAY INCOME TAX AND TO PROTECTION—ANOMALIES OF THE STATE DEPARTMENT'S ATTITUDE.

PARIS, July 5.

That the Government at Washington should have a way of its own—different from the rest of the world—in carrying on its foreign relations, is not wonderful; but the results to individual American citizens are sometimes as good as a play. The latest case was brought before the Paris civil courts on the first of this month, with particulars so extraordinary that they were at once cabled over and have already received surprised and puzzled comment and answer from New York. What has not been cabled is the fact that our Government has been steadily increasing its claims to exercise powers in a foreign country which foreign governments have never recognized; that it applies these claims to foreigners living in their own country, as well as to American citizens living there, and that this goes along with a more general contention that residence abroad on the part of American citizens, if not a criminal offence, at least gives the Washington Government the right to diminish and even abolish utterly the citizenship of these Americans.

The former cases concern the United States Treasury; the latter the Department of State. The former raise questions of international law, particularly whether one government can exercise police powers in the territory of another without the latter's consent; the latter suppose that the American Government can read into its powers over American citizens something that is not mentioned in the American Constitution. And all these governmental assertions of rights and powers which other governments do not enjoy have been steadily growing in the policy of Washington since William Marcy and Lewis Cass and other authorities of a time when it was

still more important that we should exist nationally than internationally. Of course, we all start from the general principle which the poet Coleridge noted in the rising republic:

This Yankee nation
Is the biggest in creation!

The present is a Treasury case, and it involves an American judge ordering an international banker, under penalty of fine and imprisonment for contempt of court, to do in Paris something which the Paris judge may punish him for doing as contrary to the French code. This legal wrangle may be compromised; or the American who has been imprudent enough to try to do banking outside of America may have to pay the penalty. That is comparatively unimportant, though the bank in question has been established in Paris—under French law—for sixty years or more, to the great convenience of Americans travelling abroad. This will naturally not appeal to the Congressional authority who declared: "Good Americans stay at home!"

The contention of the United States Treasury goes wider and deeper. A poor American dressmaker buys gowns in Paris, imports them into the United States, and insists on paying customs duties only on the prices stated in the certificate which she has been careful to obtain from the American Consul in Paris. The agents of the Treasury begin by asserting that these certificates do not declare the genuine cost of the gowns—and so the Treasury Department has to turn itself into a detective agency in France to find out what the real cost was. It finds out that the dressmaker paid her bills at the Paris branch of the American bank—and it demands of the American banker in New York that he produce the lady's bank account of Paris. The Paris bank is a separate institution in French law and is not allowed by French law to do anything of the kind. Thereupon the United States Treasury brings suit in America and the American judge orders the banker in America to produce his Paris books, which teaches him that he may have erred in thinking he could do business outside of his own country in the way citizens of other countries are allowed to do. What is more important is that the agents of the United States Treasury have been trying to teach foreigners themselves a similar lesson. How it has been received may be judged from extracts of an article in the *Journal of Swiss Employers' Associations:*

Since the beginning of the year, St. Gall (capital of the Swiss canton and an exporting centre of embroidered cotton goods) has had a Commission sent by the United States Treasury to proceed to an examination of the business books of the exporters of the city—in virtue of paragraph U (section 3) of the new American Tariff law. Lately, in a "friendly conversation" with the principal representatives of the embroidery industry and export trade of St. Gall, the president of this American Commission drew the attention of those present to this fact: "They would do well to hand over their business books and papers to the Commission, keeping nothing back—for any refusal might become harmful to their interests!"

I have not space to relate the ignoring and neglecting at Washington of the interests of Americans themselves when they wish to do export trade, resulting from ill-made commercial agreements in consequence of such tariff laws. But a similar original and regardless way of treating American citizens who exercise their natural rights as men to live abroad, often while working for American interests, may be noted in the policy of the United States Department of State under all Administrations.

First, the expatriated American was decitizenized—on the ground that the Constitution allows no difference to be made between naturalized and native-born. An exasperated American in Paris once scattered widely visiting-cards with this monumental inscription from a letter of William R. Day, then Secretary of State, and now Associate Justice of the Supreme Court of the United States:

"Americans voluntarily residing permanently abroad forfeit all right to the protection of this Government!"

In all countries of Europe, it is only after due process of law—and then under most explicit restrictions—that any business man can be obliged to produce his books and papers, and that for judicial examinations only—yet here were the agents of a foreign treasury demanding the production of books and accounts of this kind unconditionally and under threat of penalties. Naturally, the Swiss Employers' Association remarked: "We very much doubt whether the president of such a Commission would dare to use such language in Paris and Berlin." Probably not in Berlin, but in Paris diplomatic complaints have already been formulated on the part of the French Government. In 1907, an entirely new regulation was issued by the State Department, this time based precisely on this distinction between naturalized and native-born citizens—but it was still denied to native-born American citizens, whom will or necessity constrained to continuous residence abroad, that they had constitutional rights to protection from the Government at Washington as American citizens. From time to time, instances of the application of this power of the State Department to diminish or annihilate the citizenship of Americans have been made known, some comic and others pathetic and sometimes even tragic.

Clearly, other governments cannot acknowledge that American residents are men without a country by virtue of a decision of the United States Department of State—and certainly the American Constitution, while it speaks of naturalizing citizens, never mentions a power of decitizenizing them. This gives all the more zest to the latest pronouncement in the shape of a letter from Secretary Bryan in answer to the American Chamber of Commerce of Paris. The latter "wrote to the State Department at Washington, in the hope of determining, with as much precision as possible, the question of the status of Americans having a foreign residence." To this Mr. Bryan replied (March 18 of this year):

You inquire particularly: "Will the fact of their having paid such tax (the income tax) and the receipt therefor be considered as evidence of American citizenship, and entitle them in foreign lands to the protection of the United States and the delivery to them on demand of a passport?" Your letter appears to relate to both native and naturalized Americans. . . . The payment of this income tax will also be considered in deciding the question of the right to the continued protection of this Government in cases of *native* American citizens who have resided abroad for a period so long that the natural presumption may be held to have arisen that they have abandoned this country!

"Natural presumption" against a written Constitution! No wonder that, alone among the nations, canny Germany has just accepted for the United States the John Quincy Adams interpretation of the "most favored nation clause"!

S. D.

Civil War Literature

By CHARLES FRANCIS ADAMS.

[We begin this week the publication of a series of four articles, by Mr. Adams, suggested by Lord Newton's recent Life of Lord Lyons.*—Ed. The Nation.]

I.

Lord Lyons has pressed a point, and the easiest way for Mr. Seward to dispose of it is to yield what is asked. . . . To a mortifying extent Lord Lyons shapes and directs, through the Secretary of State, an erroneous policy to the Government. This is humiliating but true. . . . Lord Lyons is cool and sagacious, and is well aware of our *premier's* infirmities, who in his fears yields everything almost before it is asked.

Thus wrote Gideon Welles, at the time Secretary of the Navy in the Cabinet of President Lincoln. The statements relate to events occurring in 1862 and 1863, the critical period of the Civil War. That they are in all respects historically correct, or that the belief expressed as to the excessive influence of the British Minister in Washington at that time on the American Secretary of State is justified by the facts, few will credit who have made a study of the records. It nevertheless admits of no question that the presence of Lord Lyons in Washington during the first three years of the Civil War was of vital moment for the Union cause. Indeed, it might not be unsafe to say that, had Lord Lyons been a diplomat of another character, and differently disposed—taking, for instance, that view of the situation and exercising that influence on the Government of Great Britain which actually were taken and exercised at the time on the Government of Louis Napoleon by Mercier, the French Minister—it is not unsafe to say that, in such case, the development of events now become historical would have been seriously affected. We cannot, of course, tell exactly how or to what extent they would have been affected; nevertheless, a thorough study of the situation as it existed from the episode of the Trent down to the stoppage of the Laird Rams in September after Gettysburg, can hardly fail to cause grave doubts whether, had another than Lord Lyons—some diplomat of Mercier's type—then filled the position occupied at Washington by him, intervention by European governments in our struggle would not in some form have been inevitable. If attempted, such action could hardly have failed to result in a breaking of the blockade, and by allowing to the Confederacy the egress of cotton and the ingress of arms and munitions, would have affected the situation and its outcome to an extent now impossible of measurement.

Any life of Lord Lyons would, therefore, hardly fail to be of interest as part of our Civil War literature; and it so chances that for reasons little understood, but presently to be explained, Lord Newton's Life has a

*Lord Lyons: A Record of British Diplomacy. By Lord Newton. London: Edward Arnold. 2 vols. 30s. net.

peculiar interest, as also historical value. It affords a glimpse, at once suggestive and provoking, of a wealth of historical material, a knowledge of which we are as yet almost wholly without. Of it Lord Newton gives an instalment—an instalment merely; but it is an instalment the significance of which has not been appreciated.

It comes about in this wise: We hear a great deal, from those interested in historical research, of public archives and access thereto, and of dates arbitrarily fixed by the various Foreign Offices at which those archives have been, or are to be, laid open to the investigator. It is, however, somewhat surprising to learn, as we do learn from Lord Newton's book, that, so far at least as the Foreign Office of Great Britain is concerned, the papers there to be found are of somewhat secondary importance. A knowledge of the true inwardness of any given situation of a certain sort must be looked for elsewhere. The papers on file in the Foreign Office are even intended at times to deceive. The statement is somewhat startling. How, then, did such a state of affairs come about? The explanation is curious—English!

For at least two centuries now—indeed, ever since the British Foreign Office took its present form—a singular custom as to correspondence has prevailed in connection with it—a custom in no wise generally understood. As Parliament, far back in the eighteenth century—during, in fact, the Walpole epoch—gradually assumed the large state-functions it has since developed, the practice grew of calling on those constituting the Ministry for papers relating to events connected with foreign affairs, especially correspondence. The modern Blue Book thus gradually assumed shape. As this practice grew, its inconveniences made themselves felt. Both the Secretary for Foreign Affairs and those with whom he was in correspondence wrote under a sense of restraint. As the British diplomatic service was constituted, this, not unnaturally, resulted in two forms of correspondence and sets of records—first, the usual official exchanges, including instructions and dispatches subject to Parliamentary call, and so at any time likely to be made public through the Blue Book. Meanwhile, on the other hand, a private interchange of letters, frequently familiar in tone as between old friends and perhaps relatives, would be going on between the British representatives at certain of the foreign courts and the Secretary of Foreign Affairs. This was the case more especially in time of exigency. The formal dispatches, constituting the great mass of the correspondence—95 per cent. of it, perhaps—were regularly filed in the official archives of the Foreign Office; and there they are now. The private communications, however, coming from the more important embassies and relating to critical situations, were considered as belonging to the Chief Secretary for the time being. This gradually became a regular and recognized system; and these private communications, often colloquial and intimate, and invariably written with his own hand by either Secretary or Minister, did not come under the eyes of subordinates. No copies of them were, as a rule, kept; and they were looked upon by both writer and recipient as altogether personal and confidential. The Minister or Ambassador, therefore, had his own private files, separate from the official files of Embassy or Foreign Office. The Secretary also had his similar files; and, when each retired from office, he carried his private files with him. Not belonging to the Public Offices, these files were, nevertheless, affected, so to speak, by a public interest; and, while the originals could only be found either among the private papers of the whilom Foreign Secretaries or Ambassadors, it was, and is, distinctly understood that no historical use can be made of this material except with the consent and approval of both the family of the Minister or Ambassador in question, and of the Foreign Office.

Such were the British usage and understanding. Such they now are. Referring to it, Mr. Julian Corbett, in recently editing the private papers of the second Earl of Spencer, First Lord of the Admiralty between the years 1794 and 1801, speaks as follows: "Intimate as they are, going deeper into the well-springs of history than do the regular official documents, such papers seldom or never find their way into the public archives of the kingdom, and but for the action of the Society and the public spirit of their owners would remain almost inaccessible to students."

The Lyons papers, including the personal correspondence between Lyons, while in Washington, and Earl Russell, then Foreign Secretary, were, though sixty years later, similar in character to those referred to by Mr. Corbett. In his care of papers, also, Lord Lyons was most systematic. Unsparing of himself in the matter of labor, his habit was to make copies in his own hand of his more intimate letters to those at the head of the English Foreign Office during his long political career. Lord Lyons died in London, at the residence of his nephew, the Duke of Norfolk, on December 5, 1887, and his papers are now in Norfolk House. Lord Newton, the second bearer of the title, and an Oxford man—then known as "Tom" Legh—entered the diplomatic service under Lord Lyons at Paris in 1880. Now an active member of the House of Lords, he is somewhat noted for the humor which he at times injects, in a way peculiarly his own, into the proceedings of that essentially sedate body. A suggestion of this crops out in his "Life of Lyons," where he prints a brief note from his principal to a brother diplomat, reading as follows: "I have settled that Legh is to be at Berne on the 28th, and I hope you will like him. He is clever and well informed, though some people think he does not look it" (II, 220). The future Lord Newton, coming thus to know his chief personally, grew to entertain a most profound and sympathetic respect for him. Familiar with his official habits, he has had free access to his voluminous but well-ordered papers in the Norfolk House receptacles. Upon them, and not on blue-books and official formalities, his biography is based. Hence the importance of this publication in connection with the inner diplomatic history of our Civil War. Of course, for such use as he has made of these intimate, semi-official papers, Lord Newton had the sanction of the British Foreign Office.

Unfortunately, Newton was not associated with Lord Lyons during the latter's American experience. That covered what was, from an international point of view, the most diplomatically interesting period in our entire history; and the position held by Lord Lyons was the most important in the diplomatic service. It is this which makes a Life of Lord Lyons, based, not on blue-books or official documents, but on the private papers left by him, a noticeable addition to our Civil War historical material. The single difficulty is that, unlike the Diary of Welles in this respect, we here and as yet get only excerpts and glimpses. These are, however, suggestive. In fact, so far as it goes, Lord Newton's book is of first-class importance in its bearing on the Civil War.

Belonging to a distinguished naval family, the Second Baron and First Viscount and Earl Lyons was at the age of ten serving as an honorary midshipman. Nature had, however, obviously meant him to be a bureaucrat; and his maritime life fortunately came to an early close. A kindly fate decreed that he was not doomed to live his life out a round peg in a square hole. Going then to Winchester School, he subsequently, in 1838, took a degree at Christ Church, Oxford, being apparently, as Lord Newton says, at that period, "a quiet, well-behaved, hard-working youth, living carefully upon a modest allowance, and greatly attached to his parents and family." Appointed first an attaché to the Mission to the Papal Court, he seems from the beginning to have been, for some reason, probably a family one, a favorite of Lord John Russell, subsequently, during our Civil War, Earl Russell, and at the head of the Foreign Office. Remaining at Rome or at Florence until forty-one years of age, he was, in 1858, offered by Lord Clarendon, then Foreign Secretary in the Derby Cabinet, the American Legation, "an offer which, with characteristic modesty, he accepted with considerable misgivings as to his competence." In the same month, through the death of his father, he succeeded to the peerage. On April 12, 1859, he presented his letter of credence to Mr. Buchanan, then President. Lord John Russell two months later assumed charge of the British Foreign Office, representing the Palmerston-Russell Ministry, which in June, 1859, succeeded that of Lord Derby. Lord Lyons continued to hold the Washington position, with Russell as his chief, until early in December, 1864, the time of Sherman's march through Georgia. Failing health then compelled his

resignation. Lord Lyons thus represented Great Britain at Washington during what was, so far as relations with foreign countries were concerned, the whole critical period; for, at the time of his resignation, the collapse of the Confederacy had practically become a question of time. A diplomatic life at Washington, covering the delicate and dangerous period from April, 1859, to the December preceding the surrender at Appomattox, was necessarily trying to the British Minister; for, as Lord Newton somewhat innocently observes:

It was difficult to discover an adequate explanation of the bitter feeling which, at that time, actuated the majority of the American people against England; and it was still more difficult to combat it, because it was largely unreasonable and quite regardless of facts and arguments. In reality it resulted from the exasperation caused by the civil commotion which constituted the first check to a previously uninterrupted course of progress and prosperity, and the Americans, mortified and angry, found it a relief to vent their ill-humor upon England, against whom they had an old grudge.

Belonging himself to a subsequent generation—being, in fact, only eight years of age when our Civil War came to its close—Lord Newton manifestly is not familiar with the attitude and utterances maintained during that struggle by the English class to which he belongs. It is also now a thing of the past. Had he been better acquainted with the tone of the London press and the peculiarly British social bearing during that period, he would have a more realizing sense of what might pass for a sufficing explanation of the feeling referred to. That attitude and tone can best be expressed by a recurrence to the vigorous figure of speech once addressed by the late Baron Mawle as a rebuke to Sir Richard Bethel, subsequently Lord Westbury, for his demeanor and language towards his professional opponents; he would, Mr. Justice Mawle observed, do well to remember that they were vertebrate creatures, while Sir Richard's bearing towards them "could not be considered otherwise than offensive if assumed by the Almighty in contemplation of a black beetle." The tone and attitude at that time habitually used in England are, both to English and Americans, now simply inconceivable. They were those of unrestrained and studied insolence. Though in no way personally familiar with that particular phase of what Tennyson termed the "stony British stare" and accompanying speech, Lord Newton himself in the course of his diplomatic experience came in contact with a not altogether dissimilar situation, which he describes with that saving sense of humor already referred to—the Franco-Prussian feeling towards his country during the war of 1870:

Upon the whole, it is not surprising that our attitude provoked excessive irritation on their part, for we were continually harping on and deploring the iniquities of war, while perfectly ready to make a handsome profit out of it by selling anything to the belligerents. The late Sir Robert Morier admirably described the British attitude as it appeared to German eyes. "We sit by like a bloated Quaker, too holy to fight, but rubbing our hands at the roaring trade we are driving in cartridges and ammunition. We are heaping up to ourselves the undying hatred of this German race, that will henceforth rule the world, because we cannot muster up courage to prevent a few Brummagem manufacturers from driving their unholy trade." It is only fair to add, however, that German censure was confined to England; the Americans, who exported arms in just the same way, were never denounced, but possibly this was due to the fact that they assumed a less self-righteous attitude (I, 344).

Books and Men

THE ONE SUBJECT.

A woman was standing at the street-corner, holding up a book so that every one could read the title. She had other copies of the same book in her left hand, and balanced in the crook of her elbow was a placard bearing the title, the name of the author (also a woman), and the price of the book. The woman's face wore a rather defiant expression, as if she might say: "You think this is unconventional, do you? It shocks you—now, doesn't it? Prudes! Hypocrites! I dare to bring you the truth—do you dare read it?"

She was in the full glare of the sun, which was very hot even at that late hour of the afternoon. The heat steamed up from the asphalt, but the woman had a martyr's spirit, and she kept the hand holding the book high above her head, like Liberty with her torch. I watched her for a few minutes, until I had to hurry for my train, but nobody bought the book, nobody gave to it or to her more than a passing glance. Yet ten or twenty years ago the same book, had it been written then, would have attracted a small crowd, even if exhibited in a shop window. Probably no woman could have been found to sell it on the street. The indifference of the passers-by marks the distance we have gone in a dozen years.

If there was silence, prudishness, a conspiracy to ignore the facts of sex, it has all been thoroughly dispelled. A blatant screaming has succeeded, and the subject is tiresome, past telling. A man who had one evening to spend in New York last summer picked up a newspaper with a view to determining what play he should see. After a while he put down the paper with a groan. "There's nothing I care about," he remarked, "nothing but white-slave plays and poison-needle dramas."

From the foolish extreme of silence the rush was made to the equally foolish extreme of noisiness. Children were distressingly ignorant once; many of them are becoming painfully scientific. The conversation of some of them sounds like excerpts from an obstetrical journal. As for the adults—

"I sought refuge in conversation with the woman on my left," says a man in a skit in "Vanity Fair," by Anne O'Hagan. "She looked like the kind I used to know—pretty, vivacious, smartly dressed. We got along all right for a while, and by-and-by we came to the place when it seemed seasonable to say: 'Why didn't I know you before? Why didn't I know you in time to enter the lists, at least?'

"She laughed, but she didn't say 'flatterer,' or any of the old things like that. Instead, she remarked:

"'Speaking of sex-attraction, were the tribes in the part of Africa you have been in polygamous or polyandrous?'

"That's what she said, 'speaking of sex-attraction.' We weren't speaking of sex-attraction at all. I wouldn't speak of such a thing to a woman for the world! Tell me—we're old friends—we've known each other since we were little shavers. Tell me what's happened to this town? What's happened to the women? What's happened to conversation? To recreation? To the little arts, and graces, and follies of life? To flirtation?"

"'What has happened,' I informed him, 'is the awakening of the social conscience.'"

Seven or eight years ago it was that sex must be eternally discussed in fiction and in the drama for reasons connected with art. Puritans were trying to stifle art. Then the same subject had to receive literary expression for sociological reasons, to preach and to teach. Less was said about the stifling of art. Now, the extreme novel and play of this type seem to be passing; the heroine shudders on the verge of the disreputable, but clings to doubtful respectability. The wanton goes out, and the *demi-vierge* enters. A novel of the moment, which its publishers insist everybody is talking about, describes for several hundred pages how nothing really happened to the heroine. And its author—a full-grown man—completes the picture by gravely discussing the women's costumes which dressmakers are planning to name after his heroine.

"The fault of the French comic paper," writes Mr. E. V. Lucas, "is monotony. Voltaire accused the English of having seventy religions and only one sauce; my quarrel with the French is that they have seventy sauces and only one joke. This joke you meet everywhere. Artists of diabolical cleverness illustrate it in colors every week; versifiers and musicians introduce it into songs; comic singers sing it; playwrights dramatize it; novelists and journalists weave it into prose. It is the oldest joke, and it is ever new. Nothing can prevent a Parisian laughing at it as if it were as fresh as his roll, his journal, or his petit Gervais. For a people with a world-wide reputation for wit, this is very strange; but in some directions the French are incorrigibly juvenile, almost infantine. Personally, I envy them for it. I think it must be charming never to grow out of

such an affection for indecency that even a nursery mishap can still be always funny."

That one subject may become monotonous, even when that subject is sex, does not seem to occur to a number of novelists and playwrights. Because once the world did not talk about it enough, now it must talk of nothing else. There is a good deal of inverted cant about this, as Sir Arthur Conan Doyle has pointed out. A certain class of critics would infer that there is some subtle connection between immorality and art—"as if the handling of the lewd, or the depicting of it, were in some sort the hallmark of the true artist. It is not difficult to handle or depict. On the contrary, it is so easy, and so essentially dramatic in many of its forms, that the temptation to employ it is ever present. It is the easiest and cheapest of all methods of creating a spurious effect. The difficulty does not lie in doing it. The difficulty lies in avoiding it."

The masters of the frank and realistic novel, from Fielding to Eden Phillpotts, are thoroughly understandable. Outside the pale of decency, but still no hypocrite, is the writer of intentional pornography. He is not a humbug, at any rate. But the man or woman of little or no power, who forever harps upon one theme, and insists that it must always be harped upon—this person is neither an artist nor a social reformer, but simply a bore.

EDMUND LESTER PEARSON.

Poetry

A SOLDIER POET IN FRANCE.

Capt. Alfred Droin, in active war-service, during enforced vigils beneath his tent, has written out, in verse responsive to the environment and the race with which he is in new contact, his impressions of Morocco, where he is fighting. This is perhaps very French; and it is also French that he should entitle his *poésies* "Blood upon the Mosque" ("Du Sang sur la Mosquée"), and that his General—Lyautey, "conqueror and peacemaker"—should accept the verses' dedication in a letter for a preface:

Night came—orders were given, each to his post of combat—there was nothing but to wait.

It was then we read your verses—do you remember? We—all of us—remember that serene and kindly reading amid the cannon, under the balls.

True, Gen. Lyautey is himself of the French Academy, which, moreover, had crowned one of the three volumes of poems previously published by Capt. Droin; and the first volume had been guaranteed to be poetry by a preface of Sully-Prudhomme, who was a Nobel Prize poet as well as an Academician.

The sample translated here tries only to keep the visual imagery, with fidelity to the language and its original flow. Ten stanzas from twenty-five have been chosen for the sense:

MOON OF ISLAM.

I.

Far out and slow is quenched the sheen of ocean;
Here, hour on hour, the city darkens, too:
'Tis the sun's death and the nightfall's emotion—
The bright no more, no more the blue.
In Islam's plains, on hillsides and the mountain,
The sleepless couch is haunted by vague fear:
Genii in troops are witching tree and fountain,
And plotting Demons gather near.

Is God to-night this Earth of ours forsaking?
A dog is howling—Night brims o'er with grief:
And in his cries my heart, my heart is breaking,
Sadder and lone this night without relief.

II.

Lo, sudden rays of limpid light
—Witchery eyes that doubt a-tickling—
Filter through breaks in the night
Like white milk from black bottles trickling.

Slow is Time a-whiling
Across the cloudland streams,
Till the spell's beguiling
Drips down gold of dreams.

. . . . . .

Pearls the lilies dazing,
Snow upon the snow,
All the heavens are blazing
In the spell's downflow.

Light all Space refining,
Splendors that glide and glide,
Queen with an army shining,
Holding the heavens wide—

On the vast azure resting,
Rainbow-hued and round,
Moon, in thy calm pure questing,
Earth's primal dawn is found.

. . . . . .

III.

Moon of Morocco, silent friend,
Whose floating robe wraps round my heart,
I—at calm adoration's end—
Feel, too, thy lightsome blessing's part.

. . . . . .

As yon white city to the sky
Lifts up its vaporous mystic grace,
So, Moon, my soul in ecstasy,
Flies up to thy eternal face.

These lines are among the first poems of the book, centring in "Rabat the Victorious," which has also a gentle sonnet with much local color:

This hour incense is breathing from the mosques:
The eve of beauty dies—.

A second part is of "Fez the Holy," with more smell of powder, as in the sonnet on "One that was slain":

The barley waves—a poppy smiles. A stork,
Straight on the battlement, clicks her hard beak.

The third, more exotic still, is of remote "Marrakech the Red," with the Blue Brothers' "Call to the Holy War":

The French are come, more numerous than the flies
On camels' corpses.—

Alfred Tennyson

PERSONAL NOTES

By SIR HENRY LUCY.

Tennyson, born on the 5th of August, 1809, was, as the almanac counts, not quite five months older than Gladstone. But in respect of vitality he was at least five years more worn-out. A friend who visited him a year before his death was surprised to find how shrivelled, withered, and frail he seemed to be. A few scanty locks were all that remained of the abundant hair once the most striking feature in his appearance. His face was brown and wrinkled. One touched tenderly the thin nervous hand he stretched forth, lest peradventure it might be crushed in the grasp. Although it was early autumn and there was a fire in the room, Tennyson sat on a couch with a rug over his knees, and round his shoulders the familiar old cloak fastened at the neck with a brass frog. In the early editions of his works graced with his frontispiece he wears a cloak similar to this. Regarding the faded frayed garment, the thought struck the visitor, "It may have been the very same."

I have an engraving of the earliest published portrait of the poet. It is from the crayon drawing of Samuel Lawrence, and bears a facsimile of the poet's signature, "Ever yours, A. Tennyson," with the initial A picturesquely set above the T so that a loop from it serves to cross the letter. The portrait is not dated. It looks like that of a man of thirty-two—a strong face with an underlying touch of sadness, the abundant unparted hair hanging over it till it meets the high black stock and broad collar of the coat closely buttoned across the chest. He had not at this time begun to grow the beard which in later life grew wild about his face.

It is Rossetti's sketch that made Tennyson's appearance familiar to the world at large. This was done, I think, in 1855, about the time "Maud" was published. It presents to view a tall, stooping, dark-bearded man in a cloak and broad-brimmed hat. Elsewhere we get a glimpse of him in the very prime of life, when, still a bachelor, he lived at Twickenham.

"It is very possible you may come across him in a country inn," William Howitt notes under date 1847, "with a foot on each hob of the fireplace, a volume of Greek in one hand, his meerschaum in the other, so far advanced towards the seventh heaven that he would not thank you to call him back into this nether world."

At this time, though he would not live nearer town than Twickenham, Tennyson was a frequent visitor to London, not unknown at the Cock in Fleet Street, where he was accustomed to take his "perfect pint of port" from the hand of "the plump young waiter." Even in recent years he used to run up to London and wander about the streets and parks. He avoided human-kind

in London as he did at Haslemere and at his fortress in the Isle of Wight, both residences being as jealously guarded from intrusion as if they were seraglios. Wherever he was met, whether in quiet country lanes or amid the turmoil of London streets, none failed to turn round and watch the strange figure.

The only time I saw him in London he was walking in the park, not by the Row, where men and women congregate, but in a bypath under swelling trees that might remind him of his home at Farringford. A notably tall man in spite of his stoop, growing somewhat stout, still walking with long strides, he carried a stout stick, but did not seem to feel necessity for its assistance. A long unkempt beard obscured the lines of his face. It was further disguised by a pair of uncompromisingly large spectacles. In supplement of these there dangled over his closely buttoned cloak a pair of gold-rimmed pince-nez, probably used for reading, while the spectacles served for distant sight. He wore a broad-brimmed, time- and weather-worn felt hat, slightly slouched, trousers guiltless of gloss or fashionable cut, with gaiters buttoned over thick-soled boots. Looking at him, one could understand the contempt with which, half a century earlier, he turned upon Bulwer Lytton, "the padded man that wears the stays":

> What profits now to understand
> The merits of a spotless shirt—
> A dapper boot—a little hand—
> If half the little soul is dirt?

These verses, which appeared in a number of the then newly born *Punch*, will not be found in any of Tennyson's collected works. He was angry when he wrote, Bulwer having in his "New Timon" made a ferocious attack on the then budding poet. "Schoolmiss Alfred," he called him, "Outbabying Wordsworth and outglittering Keats." The sting of the verse lay in the line where Peel was flouted, forasmuch that he "with pudding plumps the puling Muse, And pensions Tennyson whilst he starves a Knowles."

This insinuation, with its unpardonable rhyme, refers to an interesting episode in Tennyson's life. He had published his "Poems, Chiefly Lyrical," which were hailed with enthusiastic applause by a circle of critics, not including Christopher North, the "musty, fusty Christopher," whom Tennyson, hot-blooded then and quick to hit back, sharply prodded. An effort was made to obtain for him some provision that should enable him to devote his time to the cultivation of his genius free from sordid cares. Carlyle, rarely enthusiastic about his contemporaries, warmly championed the cause, besetting Monckton Milnes with entreaty to see the thing done. Wemyss Reid had a story related to him by Monckton Milnes of a conversation between Carlyle and Milnes that throws a flood of cheerful light on the men and the times as far as the latter affected Tennyson.

"Richard Milnes," said Carlyle one day, withdrawing his pipe from his mouth, as they were seated together in the little house in Cheyne Row, "when are you going to get that pension for Alfred Tennyson?"

"My dear Carlyle," responded Milnes, "the thing is not so easy as you suppose. What will my constituents say if I do get a pension for Tennyson? They know nothing about him or his poetry, and they will probably think he is some poor relation of my own and that the whole affair is a job."

Solemn and emphatic was Carlyle's response:

"Richard Milnes, on the Day of Judgment, when the Lord asks you why you didn't get that pension for Alfred Tennyson, it will not do to lay the blame on your constituents. It is you that will be damned."

When Milnes at last conveyed the request to Sir Robert Peel, he found the Premier as ignorant of the works of Tennyson as at a later period Lord Palmerston confessed himself to be of those of the poet Close. Milnes sent him a copy of "Locksley Hall" and "Ulysses," with the result that Tennyson got his pension of £200 a year, which he enjoyed to the end.

When he once began to move he went fast. His average receipts in the way of royalty from his first publishers are understood to have reached £1,500 a year. When he transferred his connection to Messrs. Strahan, they made arrangements which, during the five years the contract ran, brought him £31,000. His contract with his latest publishers included on their part an engagement to pay him £4,000 a year, with special arrangement for any new book.

In one respect Tennyson was the despair of printers and publishers. He could never leave his work alone—was always polishing it. I have seen the original manuscript of "The Princess," recently sold in London. Looking through it I came upon an emendation that will be fresh to the public. It is in the song that Lilia sings, commencing:

> Thy voice is heard thro' rolling drums
> That beat to battle where he stands;
> Thy face across his fancy comes
> And gives the battle to his hands.

In the original manuscript the first two lines are written:

> When all among the thund'ring drums
> Thy soldier in the battle stands.

Which shows how, once at least in verse-making, an emendation was an improvement.

Shortly before Tennyson died there came upon the market the manuscript of portions of his earlier work, and some original editions containing interlineations by his pen. He was exceedingly wroth at this incursion upon his privacy, the more so as he was powerless to prevent it. What made it the more painful to him was the recollection that the manuscripts and volumes had been given to intimate friends. That they should now be offered for sale, like old chairs or tables, was a circumstance peculiarly calculated to vex the poet's soul.

He took the best possible means of preventing his memoirs being written, keeping no record of his correspondence, much less building up a diary.

"I will take good care," he said to a friend permitted to join him in the companionship of a pipe, "they shall not, when I am dead, rip me up like a pig."

Rarest among the treasures of book collectors is a copy of the first edition of Tennyson's "Poems, Chiefly Lyrical." This is the first work to which Tennyson put his name, and it bears the date 1830. The peculiarity about it is that it includes a number of poems by Arthur Hallam, whose name will live for ever, since it is written between the lines of "In Memoriam." When Tennyson and Hallam were young men they projected a joint publication of their verse. It was actually carried out, as this volume testifies, but only a few copies seem to have been printed. In a note to one of his verses Hallam writes of "my friend whose name is prefixed with mine to this volume." Oddly enough, Arthur Hallam's name does not appear in the imprint, but some one has written with pen and ink after Tennyson's name "and Arthur Hallam." The same hand writes at the head of the second part of the little volume, "Poems by Arthur Hallam, Esquire." Many of Hallam's poems, like Tennyson's, were addressed to anonymous persons or to friends, whose names are indicated by initials. The touch of a vanished hand, doubtless that of Arthur Hallam himself, the original owner of the volume, fills up in one or two places the initials, spelling out the names—Sir F. H. Doyle, J. Milnes, Gaskell, Richard Milnes.

While Tennyson was habitually resentful, even to rudeness, of the approach of strangers, he made surprising exceptions. Mr. Phelps, sometime American Minister at the Court of St. James's, told me of one:

A gentleman of Omaha called upon him with the modest request that he would assist him in obtaining a number of autographs of eminent Englishmen. This visitor was, indeed, not insistent upon exclusion of eminent English women, and if Mr. Phelps could obtain for him a few friendly lines from the Queen, they should have an honored place in his native Town Hall, on whose behalf he had undertaken the commission. Mr. Phelps was struck with the quiet pertinacity of the man, and helped him to a good many valuable autographs.

Appetite growing with what it fed upon, the gentleman from Omaha declared he could not go back without obtaining a specimen of the Poet Laureate's handwriting. Mr. Phelps said he did not know Lord Tennyson personally, and, from what he had heard of him, thought he was not approachable on the subject.

"But," he said, "you write to him yourself in your own way; tell him your business here, and what you want from him."

The gentleman from Omaha obeyed the instruction, and after a few posts there reached him a manuscript copy of the first page of "In Memoriam" in Tennyson's own handwriting, signed by his name.

At one time Tennyson and Gladstone were on terms of intimate friendship, a happy relationship shattered, as in many other cases, by the explosion of the Home Rule question. The two were companions on one of the yachting trips on a big Castle Liner provided by Sir Donald Currie for the statesman's recreation.

Just "befoh the wah" in South Africa we sailed in the Pembroke Castle for Cape Town to pay a visit to Cecil Rhodes at Groote-Schuur. On the eve of starting I received from Sir Donald Currie the following letter giving interesting particulars of the company on this famous expedition:

"Garth, Aberfeldy, Perthshire. Dec. 14, '93. Dear Mr. Lucy: I am sorry you are not going out by one of the fast Mail boats. You will return by them. But as a devoted disciple of my old friend, Mr. Gladstone, solace yourself with the remembrance that you are to sleep in the room he had when I took him the famous trip round the West Coast of Scotland from Barrow (where she was built) on to Norway and to Copenhagen.

"In the saloon, remember 29 Royal personages, young and old, lunched on the 18 Sepr. 1883, and in the Smoking room Tennyson read some of his poems to these distinguished people.

"At the luncheon Mr. Gladstone had head of the centre table. Mr. Tennyson had the portside table, and I had the other. There were present the Emperor and Empress of Russia; the Tzarewitch and all their children; the King and Queen of Denmark and family; the King and Queen of Greece and children; the Princess of Wales and the Royal family of this country; the Hanover family; the brothers of the King of Denmark, Admirals, Generals, Ambassadors, 45 in all. . . .

"My best wishes to you and Mrs. Lucy. Sincerely, Donald Currie."

Far out on Southern seas, sitting in the deck cabin of the Pembroke Castle, where it happened, I heard of a droll incident. It was the habit of Mr. Gladstone and the other guests to assemble after luncheon or dinner, and Tennyson read, or rather recited, some of his verse. Among the guests was the lady who is to-day the wife of the English Prime Minister. The Poet Laureate was much attracted by this bright personality, and as she generally sat near him while he read, he fell into the habit of holding her hand. On the occasion of the luncheon at Copenhagen referred to by Sir Donald, the Empress of Russia sat at the right hand of the Poet Laureate in the little cabin which inadequately serves the purpose of smoking-room on board the Pembroke Castle. Tennyson selected "Maud" for the subject of his reading, and, as usual, became absorbed in his work. When he reached the well-known lyric, "Come into the garden, Maud," his right hand dropped at his side. Finding another there, he, accustomed to the companionship of the fascinating Margot, seized it, and, it was obvious to the shocked lookers-on, squeezed it.

The Empress was naturally a little startled, but made no sign or motion that interrupted the reading.

Later Tennyson asked his confidante how she thought the Empress liked it.

"I fancy she liked the reading," the girl laughingly answered. "But I noticed she looked a little surprised when, having possessed yourself of her hand, you several times squeezed it."

Tennyson was greatly abashed, and was with difficulty dissuaded from explaining matters to the Empress.

News for Bibliophiles

THE DISCOVERY OF LA VERENDRYE'S INSCRIBED LEADEN PLATE.

The Chevalier de La Vérendrye, one of the famous family of Western explorers, and himself a true son of his gallant father, in his report to Governor de Beauharnois of the expedition of 1742-1743, says that on March 15, 1743, "we arrived among the people of Little Cherry. They were returning from their winter hunting, and were two days' march from their fort, which is on the bank of the Missouri. We arrived on the 19th at their fort, and were there received with demonstrations of great joy." La Vérendrye later adds: "I deposited on an eminence, near the fort, a tablet of lead with the arms and inscription of the King, and a pyramid of stones for the Monsieur the General. I said to the Savages, who did not know about the tablet of lead which I had placed in the ground, that I was erecting these stones to commemorate our arrival in their land."

The explorer buried the tablet referred to on the site of the present village of Fort Pierre, South Dakota, and it remained undiscovered almost precisely one hundred and seventy years. A young girl named Harriet Foster, who was playing (February 16, 1913) with other children on a hill near the Fort Pierre high school, found this historically important leaden plate (measuring six by eight inches, and one-eighth of an inch in thickness) protruding from the earth. The plate forthwith came into the possession of George O'Reilly, a boy of fifteen years, whose father deciphered the Latin inscription. It was found to read:

"Anno XXVI Regni Ludovici XV Prorege Illustrissimo Domino Domino Marchione de Beauharnois, MDCCXXXXI. Petrus Gaultier de la Verendrie posuit."

The following translation of the inscription is given in a paper (p. 146) on "La Vérendrye's Farthest West," by Mr. Doane Robinson, secretary and superintendent of the South Dakota Department of History, soon to appear in the "Proceedings" of the Wisconsin Historical Society for 1913:

"In 1741, the twenty-sixth year of our most illustrious Seigneur Louis XV, in the time of his Viceroy, Monseigneur the Marquis de Beauharnois, Petrus [Pierre] Gaultier de Laverendrie deposited [this]."

As 1741 is the year of the departure of the expedition from Canada, it is reasonable to assume that it is also the date of making the tablet, which bears the arms of Louis XV, and fleurs-de-lis in the corners. Rudely scratched on the reverse side are these words:

"Pose par le Chevalyet de LVR Lo Jos Louv La Loudette A Miotte le 30 de Mars 1743."

The editor of the "Proceedings" appends in a footnote (p. 147) this rendering and comment: "'Placed by the Chevalier de LVR [La Vérendrye] Lo Jos [Louis Joseph, his brother] Louy La Loudette A Miotte [the two employees] the 30th of March 1743.' This rude inscription was apparently scratched with a knife, a nail, or an awl, upon the reverse of the plate at the time it was deposited. . . . The identification of the second name (that of the younger brother of the La Vérendrye family) is the editor's conjecture."

Not only does a romantic interest attach to the discovery of the La Vérendrye tablet, but it also settles definitely a question which has long vexed historians—namely, the point reached by the explorers on the Missouri upon their return from the farther West. Mr. Robinson, a careful student of Western history—particularly in its aboriginal aspects—is of the opinion that the "farthest West" of the younger La Vérendryes was "on the Cheyenne not far from the forks." He arrives at this interesting conclusion by allowing six miles for each of the twenty-two days of actual travel between the Western limit of the journey and the arrival of the explorers at the Missouri (Fort Pierre), March 19, 1743.* Many historians, especially the French, have credited La Vérendrye with having reached the Rocky Mountains at some point in Montana. If Mr. Robinson's contention is correct, the Frenchmen stopped far short of the Rockies.

Mr. Robinson submits that, from time immemorial, the Arikara resided at Fort Pierre, and that the chieftain Little Cherry was an Arikara; that the Bow Indians built forts and planted grain, and were allied with the Pawnee-Arikara bands, and that the Kiowa, then occupying the Black Hills, were the hereditary enemies of the Pawnee-Arikara. From these premises, Mr. Robinson suggests the following conclusions:

(1.) That the Vérendryes in their wanderings joined on the upper waters of the Cheyenne a party of Arikara, who united with other allies in a war upon the Kiowa in the Black Hills.
(2.) That upon the return within the time limit, they could not have travelled farther than from the Black Hills to the Missouri.
(3.) That the Vérendryes were not at any time West of the West line of the Dakotas.

The Champlain Society of Toronto will shortly issue the "Journals of La Vérendrye," with an English translation, edited by a competent Canadian scholar, Mr. Lawrence J. Burpee. Mr. Burpee has studied the history of Western exploration with care and understanding, and much good work stands to his credit. In his admirable "Search for the Western Sea" (New York, 1908), Mr. Burpee credits the younger La Vérendryes with having at least reached a spur of the Rocky Mountains. It will, therefore, be interesting to learn if riper study of the subject has borne fruit in the form of changed opinions, or whether he is still at variance with the views expressed by Mr. Robinson in the brief paper of which I have here been privileged to give a foretaste.

JOHN THOMAS LEE.

*In considering this rate of travel, it should be borne in mind that the La Vérendryes were encumbered by the presence of many Indians and their families; that the ground was in all probability heavily covered with snow, and that the explorers were compelled to live off the country.

Correspondence

THE ARMING OF IRELAND.

To the Editor of The Nation:

Sir: The Irish Home Rule bill has safely survived the threefold ordeal inflicted upon it by the machinery of the British legislature, supplemented by the provisions of the Parliament act, and will, therefore, shortly be placed on the Statute Book. All, however, is not yet well with Home Rule. The amending bill, lately introduced in the House of Lords, will annul some of the essential provisions of the measure, and is more than likely in its final form to contain clauses providing for the exclusion of certain counties of Ulster, and possibly of the entire province.

It is a significant fact that the passing of the bill roused little enthusiasm in Nationalist circles. It would be a mistake to suppose from this that the desire for Home Rule has weakened. On the contrary, it is to-day more widespread and imperative than ever before. The real reason of the lukewarm feeling is the fear that the trouble is not yet over. Moreover, preparations are hot afoot of a nature that tends to distract Irish public attention from the doings of the Parliament at Westminster. The Irish people are making ready to take the conduct of affairs into their own hands.

Since the days when the Fenian movement shook to its foundations the well-built fabric of British statesmanship there has been no movement more significant in its progress and motives than that of the Irish Nationalist Volunteers. Started in the historic Rotunda in November last, it has spread with amazing rapidity throughout the length and breadth of the land. Its programme is the defence of the rights and liberties of the Irish people, and it professes no antagonism to the Volunteers of Ulster. At the outset it was received with scant favor by the leaders of the Parliamentary party, but the people flocked to the standards newly raised, and forced the recognition of all parties. To-day priests, people, and politicians are joining the ranks, and the tread of marching men is heard from Malin Head to Bantry Bay and from Dublin to Innismurray.

There are to-day, leaving out of the reckoning the followers of Sir Edward Carson, 150,000 Volunteers in Ireland, and every week sees the number growing larger. The proclamation against the importation of arms and ammunition into the country is, for all practical purposes, a dead letter, for munitions of war are being steadily imported both in the north and the south. Drilling, rifle practice, route marching, and all the details of the trade of the soldier are going on day and night in all parts of the country, and it is not the intention of those who are at the head of the movement that all this effort should go for nothing. They are working towards a well-defined object.

There is, in fact, an ambitious scheme afoot in Ireland, and this is neither more nor less than the establishment of a standing army in Ireland, composed of Irishmen, and intended to further the ideal of "Ireland a Nation." To the people of this country it may come as a shock of surprise to learn how far forward the work has been pushed, and how comprehensive are its details. Every portion of the country has been mapped out, and arrangements are in course of completion that will provide for the defence of every county and district in a manner in keeping with the latest in military science.

This plan provides for the establishment of an Irish National Army, with a minimum strength of 200,000 men. Of these numbers 50,000 will be required to secure the larger towns and defend ports from attack from within or without, and so maintain the public confidence and national credit. The remaining force, it is planned, will be free to act as a mobile striking force wherever it may be needed.

The organization of the Irish National Volunteers will proceed, as closely as possible, on the following lines:

48 Brigades of Infantry—4 battalions each—192 battalions.
64 Regiments of Light Horse.
64 Field Batteries Artillery.
16 Field Companies of Engineers.

The peace and war establishments of the rank and file may be summarized thus:

	Peace.	War.
Battalion of Infantry	750	1,000
Regiment of Light Horse	350	470
Battery of Artillery	130	146

The peace establishment will be formed by enlistment, for a definite period, after which men will pass into the National Reserve, the war strength being formed by calling up the Reserves. Reserves will be formed of all rank and file who, being efficient Volunteers, have completed seven years' service.

The organization of the National Army will be:

48 Brigades of Infantry, forming 16 divisions of 3 brigades each.
64 Regiments Light Horse, forming 16 brigades of 3 regiments each, and 16 divisional regiments, one to be attached to each infantry division.
64 Field Batteries, forming 16 brigades of 3 batteries each and 16 light batteries, one per Light Horse Brigade.
16 Field Companies of Engineers, 1 company per infantry division.

The details of an Infantry Division will be:
General Commanding and Staff.
1 Regiment Light Horse.
1 Brigade Field Artillery with 3 batteries and ammunition column.
3 Batteries of Infantry (3 battalions each).
1 Field Company of Engineers.
1 Field Ambulance.

The army will be organized on the following system:

(a) Each province will provide:
4 Divisions of Infantry.
4 Brigades of Light Horse.
4 Brigades Field Artillery.
4 Batteries Horse Artillery.
4 Companies Field Engineers.
4 Companies Commissariat Corps.

(b) Each county will provide:
1 Brigade of Infantry, while 16 Brigades of Infantry will be allotted to certain counties or areas according to population.

(c) Batteries of infantry, regiments of cavalry, batteries of artillery, etc., will be drawn from parishes or adjacent parishes.

(d) Companies of infantry, squadrons of cavalry will be drawn from townlands or adjacent townlands.

Even from the rough outline given above some idea will be gained as to the nature of the scheme that is now being put into operation. It may be said that a force such as this can never be raised in Ireland, but those who are in touch with the movement not only believe that it can be done, but that something much bigger will be evolved. The Irishman's love of arms is proverbial, and there can be no mistaking the fact that the arming fever has seized upon the people and that an army of some sort will be the result.

Whether, as is anticipated in many quarters, the placing of the Home Rule bill on the Statute Book will see the Irish Party and the English Liberals free to deal with the amending bill remains to be seen. But it is at all events certain that some steps will be taken to embody the concessions already offered to Ulster and rejected, and upon the strength of the Irish Volunteers will depend to a great extent the ability of the Irish leaders to deal effectively with the new situation. Whatever happens, Ireland will not willingly submit to the partition of the country, and will never again go back to the old position she occupied under the English Government.

There is a new spirit abroad in the land, a spirit of renewed nationality that is not going to submit to the splitting up of the country even in the sacred cause of peace. The Irish Volunteers wish no quarrel with their brethren of the north, who they recognize have as much right to the country as those of the south and west, but to whom they deny the right to dictate terms to the rest of the country. All that they wish is that the Orangemen will put aside the old spirit of intolerance and the groundless fears of oppression at the hands of their countrymen. Their help and wit are needed for the building up of the nation, and the Volunteers are anxious only that all parties join hands for the furtherance of this object. If, on the other hand, the northerners decide to stand where they are to-day, the Volunteers are prepared to defend the rights of the majority of the people against all comers.

Neither is it intended that the force newly called into being should act as a menace to England, provided that England leaves Ireland free to deal with her own affairs as she thinks best. The Volunteers, moreover, will not submit to the treatment meted out to the Volunteers of Grattan's day, when the Irishmen were deprived of their arms, and then disbanded. Instead, they will insist that their arms are a necessary adjunct to their new constitution, inasmuch as the granting of freedom without the means to defend it is a mere trifling with the liberties of a nation.

Frank P. Jones.

New York City, July 2.

THE PRICE OF SUGAR.

To the Editor of The Nation:

Sir: In your issue of June 25 you refer to a statement by the Federal Sugar Refining Company showing "the direct connection between tariff reduction and sugar prices," and indicating "a saving of .58 cent per pound, which means an annual reduction of more than $48,000,000." As I possess a fairly sweet tooth, to alleviate insistence of which my family is kind enough to do a good deal of jelly-making, I proceeded to call for congratulation upon this bright spot in a time of general gloom, when I was shown on the last grocer's charge, "June 19th, 10 lbs. Sugar, 50 cts." That did not seem so very bad, but, on the contrary, was extremely

good, when it was considered that last year's 10 pounds must have cost 55.8 cents. The family, however, was not so sure of last year's price, and so it was looked up, and found to be "10 lbs. Sugar, 50 cts."

Now, I knew it must be that the country grocer was imposing upon the summer resident, and I prepared to confound him with my displeasure. I turned to the Boston *Herald* for June 26, 1914, and, in the price lists, under Refined sugar, granulated and fine, I found "Wholesale grocers quote 4.60c. for less than 20 bbls." I then visited the Boston Public Library and in the files I found the *Herald* for June 25, 1913, with this advice: "Wholesale grocers' price for granulated and fine 4.60 for less than 20-bbl. lots."

I haven't as yet made any expressions to my local grocer, but I should like to ask an editorial suggestion as to the recovery of my share of that $48,000,000.

JAMES P. TOLMAN.

Shirley, Mass., July 3.

[The wholesale price of sugar throughout the world is affected by many causes. The statement made by the Federal Company was based, as we stated, on a comparison between the price of refined sugar in the American market and the price of raw sugar in bond. This difference, according to the figures given in that statement, is now 1.78 cents, whereas during the average of a number of years preceding the lowering of the tariff it was 2.41. The lowering of the difference by .53 cent—which is the figure the company should have given, instead of .58 cent—can hardly be ascribed to anything but the tariff. We see no reason to suppose that, under the old tariff, the price would not now have been .53 cent higher than it is, even if the price on June 25, 1913, did happen to be just the same as on the same day in 1914.—ED. THE NATION.]

"THE LATEST CRIMINALIST FAD."

TO THE EDITOR OF THE NATION:

SIR: In forming an opinion on the topic of your editorial article, "The Latest Criminalist Fad," one really ought to bear in mind that persons of any age who pass the Binet-Simon test for thirteen years are rated normal.

This being the fact, such adult jailbirds as stuck at twelve, and the younger set who showed a mental development "corresponding to an average age of eleven," so far from exhibiting the "gross mental deficiency" on which you dwell, are actually only one or two school grades below the general mass of voters. In other words, they are about as far below normal as a child who enters high school at twelve is above. From that, of course, they trail down to the obvious mental lack which everybody has always recognized. Or, to put the same thing in another form, what the Binet test shows is that some 80 per cent. of criminals are the adult forms whose larvæ are marking time in the upper grades of the grammar school course, waiting till the law lets them out, but who cannot for various reasons pass on to the abstractions of algebra and the subtleties of Latin grammar.

Now your own authority gives 20 per cent. as a possible ratio for the "mentally defective" in the old, pre-measurable sense, which corresponds to 8, 9, or below of the Binet scale; while you yourself concede that "30 or 40 per cent. might pass without special challenge." But so far as I can discover, even the most "innocent" of your "sanguine scientists" does not claim to have found more than 10 or 20 per cent. of old-fashioned imbeciles in any group of delinquents. They get their "80," "85," and occasionally 100, per cent. of subnormals by counting, as they are careful to explain, persons whose minds are retarded no more than one, two, or three years. In fact, a normal "Gaussian" distribution of the very cases which you cite would give only about 5 per cent. of persons who can by any stretch of words be said to have any "gross mental deficiency." The rest are the vastly more dangerous group whose deficiency is confined to the higher human qualities.

When all is said, however, the statement that a certain adult, whether in jail or out, has a memory span that can cover six digits —seven being normal for a child of twelve— is the statement of a measurable fact. It can, then, be refuted only by more measurable facts—not dismissed with "if this had been true in any sense having a real bearing on life, it would have been discovered hundreds of years ago." E. T. BREWSTER.

Andover, Mass., July 10.

[We did not dispute the correctness of any statement of "measurable fact"; what we objected to was the significance assigned to it. We were trying to put a foolish and mischievous fad where it belonged; and, so far as we can see, there is nothing in our correspondent's letter that has the slightest tendency to show that we failed to do so.—ED. THE NATION.]

COLLEGE FACULTIES AND THE TIME-CARD.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of June 11 you object to the application of "the yard-stick," the "time-card notion of management," the "efficiency-idea" to our universities. Such application you hold to be a "manifestation of philistine stupidity and arrogance." "It is not more management," you say, "but less management that is wanted in our universities." "The men who make the greatness of a university will be unspeakably repelled by this whole apparatus of observation, and inspection, and tabulation." "The one thing in which that career [the university career] offers attractions not to be found in most other callings is the opportunity for the free play of one's individuality." "The material rewards in it are small."

A brave position, this—to be held by every ideal university where the faculty thirst only for knowledge, scorn the thought of pay, and measure time only as they attain "the free play of their individuality." But what member of what factulty does not know that this ideal university is, alas! not his? The Platonic Academy *fuit;* but where is it now in our land?

Turning, then, to things as they are, we shall find, I think, that in our huge faculties of many hundred members there are indeed some whose ideals are of the highest and who "make the greatness" of their university; but that there are also others, and more, who make the smallness of their university. For the former—the apostles of learning and research, the St. Pauls—there is no need of time-card or questionnaire; they will work in season and out of season. But for that innumerable choir of lesser angels (whether graded as instructors, full professors, or presidents), is the "efficiency-idea," after all, so bad? Does a show of interest in their performance on the part of department-head or president or State do them harm?

In these latter, who make the smallness of their university, the thirst for knowledge is not the only thirst, and the "free play of their individuality" leads much to play with the golf-sticks, the billiard-cue, and the card-pack. It is these rather than those solitary ones who "will be unspeakably repelled by this whole apparatus of observation, and inspection, and tabulation." It is these whose ideal of efficiency is reached when they enter their lecture-room twenty minutes after the hour, leave it a quarter-hour early, forget at times to come at all, excuse their classes from the drudgery (to all concerned) of written examinations, vote for holidays on every pretext, ask for promotion every semester, sail for Europe three weeks before commencement every other summer, etc.

There is also another group in every faculty that will be "unspeakably repelled" at having the employment of its time called in question. It is composed of those who are indeed busy, but busy with research on the length of a flea-jump or on the inhibition of the apperception of the infinite with special reference to—heavens knows what (but not the reader). These industrious Faust-Wagners are always writing monographs, journal-articles, and books, with statistical tables equal in bulk to the census or with a nebulosity of thought beyond that of original chaos. How can these be expected to take thought for their pupils' advancement and individuality when so centred upon their own? The most they can do is to issue frequent bulletins to the college paper and the president concerning their publications and the papers they will read before some learned society.

It is perhaps with a knowledge of these facts and a desire to realize so far as possible that other and ideal university of which you write, that the State of Wisconsin has undertaken its university survey and wishes to set "efficiency" as the goal of university striving.

For, in truth, academic liberty unwatched is as seductive as any other. The price of it is eternal vigilance, without which vigilance monastic liberty went to sleep. And, be assured, under the cloak of academic freedom hides many a descendant of the dormiculous jovial monk of the bad old times.

It was bad enough that the ignorant Middle Ages should have been saddled, under the sacred name of religion, with the institution of monasticism. But would it not be worse and more inexcusably ignorant for a modern State, with the monastic warning before its eyes, to saddle itself voluntarily, under the now sacred name of Universal Education, with a huge institution exempt from accountability wherein the beneficiaries of that State may give "free play to their individuality" by repose in sleep or a Dervish dance of self-centred activity?

Therefore, to me it seems not "philistine stupidity and arrogance," but highest political wisdom, that the State of Wisconsin should undertake its university survey. If the State be an organism, then a torpid brain is surely no less an evil than a paralyzed hand. May the survey be made with the microscope (in search of hidden germs of disease) quite as

much as with the telescope (in search of wider horizons)! L. L. Forman.

Rome, Italy, July 2.

[To reply to the *argument* in the above would be to repeat the original article; but as to the matter of fact, the class of professors who *are* "unspeakably repelled" by the proposed apparatus of so-called efficiency does not in the least answer to our correspondent's description.—Ed. The Nation.]

THE MEN WHO ARE THE COLLEGE.

To the Editor of The Nation:

Sir: In the *Evening Post* of June 26, Senator Root, as chairman of the board of trustees of Hamilton College, is reported as announcing a change of policy, in these words:

"The trustees have adopted a plan of graduated increases [of salary] for the professors. On that plan we shall work, and will press forward toward making the professors, *the men who are the College,* feel that they are appreciated."

Italics are mine. Surely, our doughty Senator and Hamilton College are old fogies. Nowadays, in most of our seats of "learning," the men who "are the college" are the directors of athletics, the managers of student "activities," "stunt" performers, "smoker" panegyrists—in short, anybody and everybody but the humdrum professors, who merely try to teach and to learn. M.

June 30.

THOMAS TUSSER'S POEMS ON THE LIFE OF MAN AND WOMAN.

To the Editor of The Nation:

Sir: In the Harvard Library last summer I ran across, in the works of Thomas Tusser, two very interesting poems on the life of man, and a poem, even more interesting, on the life of woman. Tusser's works—first published in 1557 as "A Hundred Good Pointes of Husbandrie," later amplified by "A Hundred Pointes of Huswifery," and still later enlarged to "Five Hundred Pointes of Good Husbandry United to as Many of Good Huswifery"—were exceedingly popular. Between 1557 and 1600 no less than fourteen editions of these strange poems on farming and life in general appeared—an average of a new edition every three years for almost half a century. Shakespeare must have been familiar with the poems, though there is no striking similarity between his famous lines in "As You Like It" and the poems referred to above.

Tusser's poem on the life of woman made a rather strong appeal to me, perhaps largely because of its oddity. It may be found in Mavor's edition of Tusser's works (London, 1812), p. 282. I quote the poem with its title:

The Description of a Woman's Age
By Six Times Fourteen Years 'Prenticeship
With a Lesson to the Same

Two first seven years, for a rod they do whine,
Two next as a pearl in the world they do shine,
Two next trim beauty beginneth to swerve,
Two next for matrons or drudges they serve,
Two next doth crave a staff for a stay,
Two next a bier to fetch them away.

Albert Cranberry Reed.

Louisiana State University, Baton Rouge, July 2.

Literature

MEDIÆVAL ENGLAND.

The Genesis of Lancaster. The Three Reigns of Edward II, Edward III, and Richard II, 1307-1399. By Sir James H. Ramsay of Bamff. Two volumes. New York: Oxford University Press.

England in the Later Middle Ages. By Kenneth H. Vickers. New York: G. P. Putnam's Sons.

Almost simultaneously in England two publications have appeared treating of the later Middle Ages, one by a veteran writer, who in extreme old age has completed a self-imposed task begun many years ago, the other by a newcomer in the field, who is making his first printed contribution to history on any large scale. The first work, forming the fifth and sixth volumes of the author's "The Scholar's History of England," is not designed for the general public; the other, forming Volume III of Oman's "A History of England," is plainly intended to meet a popular demand for something readable. The two works taken together may be expected to represent in scholarly and readable form the best that is being done in England at the present time for the history of the period.

Sir James Ramsay, an English baronet possessed of leisure and ample means, began his work nearly fifty years ago. "It has been," he says, "my standing occupation since the outbreak of the Franco-Prussian War. My grown-up children do not remember when it was not in progress." The first volume of the series, covering the last years of the Middle Ages, was issued in 1892. Four others, carrying the narrative from the foundations of England to the end of the reign of Edward I, were added in the decade from 1898 to 1908. Now the last gap has been filled, the period from 1307 to 1399, and the work stands complete, a history of England from the earliest times to the accession of Henry VII, in eight volumes, a monument of industry and critical skill, sober, accurate, and giving full references. The author, now in his eighty-second year, may well look on such an accomplishment with satisfaction, as a task which, though begun in the prime of life, has been pursued into those years that are commonly associated with the leisure of old age. The issue of eight volumes by any writer after he has attained the age of sixty is an event that may well give pause to those who deem a man's work ended at sixty, and the names of Ranke, Waitz, James Gairdner, Henry C. Lea, and now Sir James Ramsay are a witness to the vigor of old age among the historians. Sir James Ramsay's performance is the more remarkable in that his history is not of the arm-chair variety, but one based on a personal inspection of original sources wherever found, and personal visits to the scenes of battles in Great Britain and France that come within the scope of the narrative.

While intending to give the reader a picture of the time, and so following to a considerable degree the path that has been made plain by previous investigators, Sir James has laid particular stress upon two phases of his subject, military affairs and domestic finance. To these subjects he contends that he has contributed a larger array of drier facts than has ever before been communicated to the public. This seems a pretentious claim, in view of the number of dry histories already in existence, but it is probably justified, if monographic literature be excluded from the competition. "The Scholar's History of England" is a thoroughly dry history. The author, with a kind of grim humor, has filled his pages and appendices with facts and figures that can be deemed interesting only by those who find pleasure in statistics. Nevertheless, the conclusions drawn are always valuable. It is worth a good many pages of demonstration to be shown "the utter untrustworthiness of chroniclers' estimates, whether of men (in mediæval armies) or of money (in mediæval estimates), and the undue readiness of modern writers to accept their value," and to be convinced of "the very modest dimensions of all things mediæval except the castles and the cathedrals." At Bannockburn, for example, Sir James will allow only 14,000 or 15,000 men in Edward's army, instead of the 30,000 of Mr. Round or the 60,000 of the chroniclers. In matters of revenue, also, Sir James overturns a good many estimates. He has made substantial contributions to our knowledge of that most intricate of mediæval problems, the customs revenue, and has summarized his pages of statistical analysis in a number of generalizations easily comprehended by the reader, like the remark that "more money could be squeezed out of Normandy alone than out of the whole of England." The chief defect of the work as a whole lies, not so much in its annalistic or strictly chronological form of treatment, as in the entire omission of all reference to the life and activities of the people at large. The history is mainly concerned with the interests of the feudal and governing class.

Mr. Vickers's volume is a book of narrative and description, dealing with events and personalities and lending itself to elaboration of details. It is well written and readable, but five hundred pages of continuous narrative about people that are not very interesting and about events that are not very inspiring tend to grow monotonous, and we doubt if many will be enthusiastic enough to read the work through. The difficulty of Mr. Vickers's method of writing history is that it offers no real opportunity to study the period. The tale runs along the surface and might have been continued indefinitely, as long as the facts held out. Indeed, Mr. Vickers complains in his preface because the general editor reduced his copy by one hundred pages in order to make it fit the series. The facts are well organized and the chapters are well proportioned, but the work as a whole lacks

symmetry and the treatment lacks depth. Little effort is made to gauge the place of the period in English history or to determine the transforming and evolutionary characteristics of the era, a neglect the more serious because of the transitional nature of the events narrated. Too much attention is paid to personalities and too little to social forces; kings and feudal lords fill the scene to the exclusion of burgesses and villeins, and battles bulk larger than religious revolts or peasants' uprisings. The subject matter of the book is well handled as far as it goes, but much that is the object of inquiry by students of England's Middle Ages at the present time is passed over by Mr. Vickers with little or no consideration.

CURRENT FICTION.

The League of the Leopard. By Harold Bindloss. New York: Frederick A. Stokes Co.

Harold Bindloss has forsaken the great Northwest for the African jungle in his adventure-mongering, and his readers will find his heroes as much at home in their new environment as on the prairie. Instead of fighting fearful blizzards and prairie fires in an effort to grow wheat, their combat is with sun and fever, and the object of their search is gold. From the coast they plunge into the dense forest, their way lying through the leopard country, so called by a league of natives who allow no one to invade their territory, and harass and kill those who make the attempt. Action multiplies in every chapter, and the hair-breadth escapes will keep awake the most jaded reader. The inevitable love-story ends with inevitable happiness, although the death of one of the two adventurers casts a shadow over the return of his comrade.

The Letters of a Woman Homesteader. By Elinore P. Stewart. Boston: Houghton Mifflin Co.

The strong personality behind these letters is shown in a robust observation of Wyoming life, and an unconventional wielding of homely English. Into the former enters one strain that will surprise readers who take as a matter of course a humorous sense of character and a dramatic sense of incident—the writer's appreciation of neutral beauty. "Fancy to yourself," she exclaims upon arrival at her new home, with an eye for color too vigorous for delicacy or accuracy, but genuine, "a big jewel-box of dark-green velvet lined with silver chiffon, the snow peak lying like an immense opal in the centre, and over all the amber light of a new day." Spontaneity is the keynote of all the narration. The homesteader is writing informally to an understanding friend, and her pen enters racily into the doings of Mormons, Christians, and outlaws, of her Scotch employer, the Frenchman Gavotte, and the outdoors-loving, assertive Mrs. Louderer and Mrs. O'Shaughnessy. The limitations are those natural to a humdrum, day-to-day chronicle, which sometimes drops into very small talk, indeed. All her sincerity is once or twice needed to redeem patches of gossip. A style abounding in colloquialism is perfectly suited to the matter; while to Mrs. Stewart must be granted an uncommon knack with the vivid adjective, falling into a place where the literary craftsman's hand might put a more colorless word.

Stories of Russian Life. By Anton Tchekoff. Translated by Marian Fell. New York: Charles Scribner's Sons.

These twenty-four stories afford a survey of the ironist's work which, while emphasizing the profound sadness of his later periods, does not leave unrepresented the gay loquacity of his first two volumes. "The Death of an Official" is a vaudevillian description of the agony of a functionary who sneezes into his superior's neck at the opera, and, finding his apologies waved off as troublesome, dies of misunderstanding and grief; "Over-seasoned" tells how a surveyor, driven over a lonely road by a moujik, is struck with apprehension lest he be overpowered by the burly fellow, and makes so many references to the arms he has hidden on his person that the countryman springs into the wood in terror, forsaking him in a trackless waste. But the majority of the stories, rough sketches typical of diverse social classes, are as cynical and depressing as the dramas which have familiarized Tchekoff to the English-reading public. "In the Ravine," the longest, may be read as exhibiting evil and injustice in characteristic ascendancy, driving a set of ignorant people into misery and barbarity with whip and balloo. The life of industrial classes and peasants is a twilight materially and spiritually haunted by hardship and oppression, obsession and prejudices; the solemn moments in this existence are chosen without greatly humanizing the scene. Yet the method of the author is not violent: He observes gently and dispassionately, blocking his characters out with salient lines and expressive traits which leave a certain softness of tone over the studies.

Full Swing. By Frank Danby. Philadelphia: J. B. Lippincott Co.

The curious distinction of this book is a heroine whose perversity it was always to sacrifice her heart to her conscience—a Brutus of a woman. The author commiserates with her in her abnormal nobility, and explains that "Agatha had ever a sense lacking"—not the power of loving, but the power of expressing it. When occasion called for display of affection, Agatha invariably labored under a mysterious inhibition. She refused the man who would have made her happy, being at a loss how to accept him, and married a roistering Irish lord, presumably because his wooing did not wait on her sanction. The art of winning a child's affection was, of course, quite beyond her, and she had no instinct to combat her son's infantile preference for his dissipated father's society. She adored him when he grew up, but her passion took the form of excessive self-blame for permitting an imagined development of paternal tendencies. As faultless a youth as ever lived, she nevertheless saw in him a budding Lothario; and when he fell in love with a cousin who had filled a daughter's place in Agatha's heart, she sent him off to the Boer war to save the girl from the son of such a father. These are only a few of her blunders, but the author sees to it that all this lofty virtue does not go unrewarded.

Love and the Soul Maker. By Mary Austin. New York: D. Appleton & Co.

Mrs. Austin here attempts to discuss frankly and fully one of the most hazardous of themes. She sets out from a human text in the person of one Valda McNath, who has had an unhappy but by no means rare experience. She has failed twice in her search for "mate-love" (to use a recurrent phrase); first in marriage, then outside. Her husband, a flabby prig, she left after a dozen years, "simply because she couldn't stand him." Her lover, a Social Reactionist, after a short experience with her of the free love which he devoutly advocates, has "retired into a wobbly little pinnacle of a situation that, since he no longer loved Valda, he couldn't do her the disrespect to pretend that he had any obligation beyond his own susceptibilities." Poor Valda, deserted but not debased, is, we are to understand, left spiritually upon the writer's hands, and these pages are a response to her forlorn cry for "a book about it—a believable book"; about, not her own instance, but the whole problem of mate-love from the woman's point of view.

If, to speak to the whole world as one may speak to an intimate of one's own sex is indecorum, this book is indecorous. For herself, Mrs. Austin puts the gist of her treatise (it is a treatise and not a story) in an early paragraph:

> Too many people have got into the way of thinking that to speak of sex experience is to mean something illicit. It is, in fact, the most precious part of our human equipment. I want to say—I don't know why I shouldn't—that I have always found it so, and I wish more than anything else to show you how it derives its importance in our lives from this quality of its preciousness, and not from the effect of disturbing any other set of behaviors we may have agreed upon as moral.

Mrs. Austin is accomplished in the various terminologies of love. In language now cold, now touched with mystical fire, she seeks to analyze or interpret, in the light of the past, the relations of men and women as beings of sex. She says many startling things—or says many things in a way which, out of the context, would be merely startling, as that "it is immensely more important that a mating pair should relish kissing together than that they both should be Presbyterians." But it is clear that she has no wish either to be sensational or to avoid the suspicions of prudery. The upshot

of her teaching is that marriage is the normal but not sole setting for mate-love; that marriage at its best "is one of the activities of woman and not a set mould into which womanhood should be poured"; that the initial function of mate-love is not to produce children, but to inspire to the highest degree of usefulness. "If children are your best, your supreme contribution, let us have them; in any case, children or no children, let us have the best of you." In fine, she wishes love to be recognized as an active principle apart from its phase of race reproduction, apart even from its phase of legal marriage.

RECORDS OF TWO PIONEERS.

Ten Thousand Miles with a Dog Sled: A Narrative of Winter Travel in Alaska. By Hudson Stuck. New York: Charles Scribner's Sons. $3.50 net.

Mountaineering and Exploration in the Selkirks: A Record of Pioneer Work among the Canadian Alps, 1908-1912. By Howard Palmer. New York: G. P. Putnam's Sons. Illustrated. $5 net.

The directors of the mission work of the Episcopal Church made no mistake when they sent Hudson Stuck into the wilds of the Yukon. A man of intrepid courage and endurance, with wide open eyes and mind and the knack of putting the results of his observations in attractive form, his heart warm with affection for the natives to whom he is sent, his title of Archdeacon of the Yukon has been as nobly earned as it is modestly worn. As a record of dog-sledding amid the snow and ice and countless deprivations of the Alaskan wilderness, the present volume is worthy of high rank in the literature of its class, but its interest from the philanthropic point of view is still greater. Our defective and inattentive provision for the civil government of Alaska, with its tragic results to the helpless natives, has made a deep impression upon the author, and the "faint hope" which he expresses that drawing attention to these evils may hasten a remedy may be taken as the primary motive of the volume. Alaska is not lawless in the sense of being the scene of frequent and unpunished crimes of violence. Its native population is timid and not generally provided with dangerous weapons. But the laws unstintingly passed by Congress for the protection of the natives, especially from the effects of intoxicants, are allowed to become a dead letter through inadequate means for their execution. Justices of the peace, unremunerated except by fees too scanty to furnish a living, and United States deputy marshals, appointed under political influences, are but a poor recourse for that rigid administration of law and order which alone can save the native Alaskan from threatened extinction.

Dr. Stuck's ideals for his people are thoroughly practical. Such a rudimentary English education as may be imparted to them is well enough in its way, but an honest, industrious, and self-supporting Indian with no knowledge whatever outside the limits of his native tongue is far preferable to one who can read and write English, but who lacks the will or ability to do anything else. The spread of tuberculosis, the worst foe of the native next to alcoholic liquor, is greatly accelerated, he thinks, by the unwise adoption of "civilized" methods of housing and clothing. However unsanitary the huts in which the coldest part of the winter was passed, it was still true that under former conditions the natives lived out of doors for a large portion of the time. At present an ill-ventilated and usually overcrowded cabin shelters them almost the entire year, while the substitution of cotton and shoddy for the skin garments of earlier times leaves the surface of the body exposed to sudden and violent changes of temperature. Recent legislation temporarily prohibiting the sale of beaver pelts has caused the beaver coat and cap again to appear among the natives, and Dr. Stuck very pertinently suggests that if this law was justifiable for a season in order to save the beaver from extinction, it may be justifiable permanently to save the native. Among the possible dangers of unwise philanthropy the system of free rations is, above all, to be avoided. Some would recommend this as making possible a compulsory school-attendance law, but Dr. Stuck's answer is irrefutable:

> With free rations there would be no more hunting, no more trapping, no more fishing; and a hardy, self-supporting race would sink at once to sloth and beggary and forget all that made men of them. If it were designed to destroy the Indian at a blow, here is an easy way to do it.

It is to be hoped that this volume will be widely read, for it is desirable to keep in mind that there are other important interests in Alaska besides coal veins, gold mines, and the building of Government railways.

The interest in Mr. Palmer's book is wholly that of the geographer and the mountain climber. During the five summers here covered he ascended more than thirty peaks of the Selkirk group, fifteen of which had not previously been climbed. As over twenty of these peaks exceed ten thousand feet in elevation, the task required an immense amount of vigorous exertion. It will readily be seen that the record involves a certain amount of inevitable monotony, but this is relieved by a profusion of remarkably successful photographic illustrations. Mr. Palmer argues with reason against a tendency to depreciate the Selkirks from the standpoint of scenic grandeur and beauty. It is not absolute height that determines mountain grandeur, but the suddenness and amount of elevation above a point of view not too far away. In this respect the Selkirks compare well with the Rockies, in spite of the greater absolute height of the latter. "With the single exception of Mt. Robson, so far as the writer is aware, there is no mountain of the Rockies which some one of the Selkirks will not equal in respect to uplift above the base."

Early explorations in this region by the Government of British Columbia, with a view to the promotion of immigration, together with the engineering operations undertaken in process of locating the Canadian Pacific Railway, are succinctly described in the opening chapters. As becomes the work of a Fellow of the Royal Geographical Society, the volume is copiously supplied with appendices stored with information too technical to be woven into the web of the story. The vegetation of the Selkirks is discussed by Prof. F. K. Butters, of the University of Minnesota, a companion of the author in most of his explorations. Prof. E. W. D. Holway is also a contributor to this portion of the volume, and has to his credit a considerable share in the fine photographic work already mentioned. Mr. Palmer's expeditions began as vacation rambles, but the opportunity for more serious work presented itself too forcibly to be disregarded, and the result is an important contribution to the geographical literature of British Columbia. The Geographic Board of Canada has officially sanctioned more than forty local names which he has suggested, and the substance of certain chapters of his book has appeared in geographical periodicals of the highest standing, on both sides of the Atlantic. To the reader who may be tempted into the Selkirks for recreation we commend the following remark of one of Mr. Palmer's men, uttered under the stimulus of five days of soaking rain: "And they call this 'Sunny British Columbia!' Bah! A man's got to carry a slicker, a linen duster, and a fur overcoat wherever he goes."

THE COLLEGE PULPIT.

University Sermons. By Henry Sloane Coffin. New Haven: Yale University Press.

To a volume entitled "University Sermons," whose preface declares that they were preached in some thirteen of the foremost universities and colleges of America, one turns with the thought of discovering what kind of religious instruction is acceptable among college faculties and students, rather than with the purpose of estimating a particular preacher. If Dr. Coffin's discourses may be judged to be representative, we gather that college sermons need not be especially distinguished by learning. Simple preaching, in the sense of doctrine easily understood and expressed in plain language, seems to be demanded. One need not be a master in speculation, nor even a novice in the questions with which present philosophy is busied, in order to follow readily these university sermons. The problems of Eucken and Bergson are not their problems, and the burdens of the men who are striving to bring order and peace out of the confusion and struggle of our modern unrest are not their burdens.

Neither can it be said that college audiences demand eloquence or literary excellence. A matter-of-fact, every-day way of talking is sufficient. The level of discourse is distinctly lower than was deemed appro-

priate by the generation of Channing or Robertson, and one misses the elevation of the sacred eloquence of a Martineau or a Chalmers. After reading these easy sermons, one wonders what an American college audience would make of those high discussions of the loftiest themes which compose the classic volume of "University Sermons," that of Cardinal Newman.

In certain other respects one may derive from these discourses a more favorable view of academic religious audiences. It is clear that he who preaches to them must be sincere, candid, and thoroughly persuaded of the truth he utters. He may not have thought his problem through, but he must have made a bold attack upon it. The attitude towards truth is cordial, and towards life earnest. There is no deliberate avoidance of hard tasks or unwelcome facts. The religious inquirer has marched forth into the world to discover things as they are, even if he is not very keen in their discovery or very deep in his probing. This is not to condemn Dr. Coffin. He knows his audiences, and he has provided what they were able to receive. But one may hope for a better day for religious teaching in American colleges, when, without losing any of the frankness and sincerity which are now current in these circles, their teachers and leaders may assume a deeper thoughtfulness, and both the willingness and the ability to attend to religious discussions with the earnestness which their importance in human life demands.

A MEDICAL MISSIONARY.

Pennell of the Afghan Frontier. By Alice M. Pennell. New York: E. P. Dutton & Co. $3 net.

A picturesque side of British imperialism which Kipling has exploited is the regular recurrence of family names that, in various arduous walks, have been consecrated to service. It is more than likely that in India to-day we should still find a Rivett-Carnac, a Lawrence, a Hornby, or a Gough listed somewhere in the administration, ranging from an isolated frontier post to the vice-regal staff. And the virtue of this fine tradition is that nepotism has so far not besmirched it. Nowhere is it more exemplary than in the mission field. The names of Wilson and Judson involuntarily come to mind, and to these the future will add that of Pennell, medical missionary and educator to India's hinterland on the River Indus. Mrs. Pennell, the author of this interesting record, also belongs to a family intimately connected with welfare in India. On the western coast, where her race first made its home, the Parsee family of Sorabji was an early convert to Christianity, and is a name well known in the Zenana mission work.

Dr. Theodore Leighton Pennell, after a brilliant medical career at University College, London, began his twenty years of service in India by selecting a field unknown to missionary endeavor, and little known to the Indian Government, because it lay in the territory adjoining the political "buffer state," Afghanistan. At Bannu, with his mother, and later assisted by his wife, he made his headquarters, far from official Peshawar, at a time when British control over the marauding tribes on the frontier was first being felt. The punitive expeditions of the past thirty years constitute the tale of its turbulent history. Gifted with remarkable patience and tact, and with the courageous qualities that alone commend themselves to these lawless "sons of Beni Israel," Dr. Pennell slowly won their confidence. No tribute can be too great to pay his courage in pushing his faith among these fanatical followers of El Islam. After acquiring the Pushtu dialect of the Pathans, as the frontier tribes are generically known, he opened a school and dispensary at Bannu; he adopted the tribal dress and food, and, unarmed, he made long pilgrimages and boldly preached in the hostile bazaars. The following passage is characteristic:

> We say diamond cuts diamond, and so I have found that it requires a converted Pathan to cope with a Pathan bazaar audience. Even the appearance of a group of dishevelled, fierce-looking Waziris from the hills is often sufficient to make the down-country catechist suggest that he thinks there has been enough preaching for that day; while when, as sometimes happens in a village, they are armed with Martini-Henrys and pistols and swords, goods are packed up at once for removal. A common Pushtu proverb corresponds to our "Tender-handed hold a nettle, it will sting you for your pains; grasp it as a man of mettle, soft as silk it then remains," and describes the treatment best for themselves; for anything like showing the white feather in the bazaar soon renders further preaching impossible.

Many amusing incidents are narrated showing the conflict between Western medical practice and Eastern superstition, anecdotes that should prove valuable to the profession at large and the medical missionary in particular. Ethnological differences have been observed and recorded, and these, with the folklore, descriptions, and illustrations of a little-known region, present to the student, in an informal manner, the results of a trained and varied experience. It was one of the ambitions of Dr. Pennell that he should some day preach in the bazaars of Cabul, the Amir's capital, and it is to be hoped that, at no distant future, an enlightened Amir will welcome the establishment of a medical mission, particularly one devoted to Zenana work. Since the death of Dr. Pennell, in 1912, the mission hospital at Bannu has become a permanent institution. The profits on this book, and a previous one by Dr. Pennell, "Among the Wild Tribes of the Afghan Frontier," will be devoted to the Afghan Medical Mission. Further evidence of the closeness of family and service in India is shown in the fact that the introduction is contributed by Field-Marshal Earl Roberts, who won fame in the Afghan Campaign by his march to Khandahar, and who was related to Dr. Pennell. In a valuable appendix is a glossary of words used in this region, and uncommon in India.

TECHNIQUE OF MODERN TACTICS.

A Study in Troop Leading. By Majors P. S. Bond and M. J. McDonough. Menasha, Wisconsin: The Collegiate Press, George Banta Publishing Co.

This book is addressed to a special class, not so much of readers as of students. It is not in any sense a textbook; that is, it does not pretend to present in a specially ordered form the principles of its subject, but is rather a formulary, so to say, bearing a general relation to any textbook or treatise whatsoever, or, better, to the general subject of troop-leading. Hence, this book makes no appeal to the civilian, who may wish as a matter of general information to know what the military world to-day is doing in the domain of tactics. It is first and last a book for officers, and chiefly, we take it, for officers of the regular army, since but few volunteers, militiamen, or National Guardsmen will have had the time or opportunity, even if they have had the inclination, to lay the foundation that alone can make the book useful. But to the officer, whether of regulars or of volunteers, who knows his Griepenkerl and the Field Service Regulations, who has solved, or helped to solve, problems both on the map and on the terrain, this book will unquestionably be of profit, because it states concisely the principles that govern, or ought to govern, the various situations that may present themselves.

With this object in view the authors have given us chapters on the usual subjects of patrolling, advance guards, marches, the special tactics of artillery and of cavalry, combat, and so on. They have offered a touchstone by which a student may test his results as he advances. Under these conditions, qualities of style are not to be expected, nor that gradual development of theme without which a professed textbook would be sadly in fault. But this work is so far from being a textbook that its chapters are almost susceptible of separate and independent existences as brief presentations of the subjects treated. This statement should in no wise be taken as detracting from its merits; in our opinion, the authors intended no other thing than this independence of treatment. Since the entire book contains barely 340 pages, it is clear that but little space has, or can have, been devoted to any one subject. Take, for example, the chapter on patrolling: this important matter is treated in little more than eight pages; to conclude from this that the treatment is inadequate would be to commit a serious error, for any commander of a patrol who accurately carries out the prescriptions of this short chapter will have given a good account of himself. The other subjects, of course, are more fully treated; for example,

Outposts and Combat, to each of which some forty pages are given.

The chief characteristic of the book is its compactness, obtained by the complete omission of everything that is unessential. In fact, it is but seldom that one encounters a text so free from anything that would tend to divert the attention of the reader from the real issue. The authors would be the last to claim originality for their effort, but certainly they have succeeded in giving the service a plain, practical, business-like aid in the study of a subject that is likely to grow in importance in our land. Wherever the nature of the subject has permitted it, following the modern practice, they have given examples of orders to be issued. Owing to the special audience addressed by this work, we may pardon the sparing use made of diagrams and the almost complete lack of maps. But it is impossible to pardon the absence of an index; should a second edition be called for, the authors owe it to their readers to make good this deficiency.

DEFENSIVE AGGRESSION.

Roman Imperialism. By Tenney Frank. New York: The Macmillan Co. $2.50.

Professor Frank has given us in this volume a readable and reasonable account of the territorial growth of Rome, the motives by which it was prompted and controlled, and the reactions of accomplished imperialism upon the centre about which it grew. It is constantly insisted, and correctly so, that the spirit of conquest for its own sake was not a Roman trait at all. The ancient fetial law, treated by the Romans with sincere reverence, regarded war as abhorrent to the gods unless waged to repress aggression from without. It need not be contended that Rome was always accurate in her decisions as to where aggression began, but in the border wars that led her gradually to the absorption of the Italian peninsula the evidence that her action was sincerely felt as essentially defensive is abundant and satisfactory.

The view that economic considerations were a controlling motive in the destruction of Carthage and Corinth in the second century B. C. is effectively combated. The Romans had as yet no vital interest in foreign commerce. Puteoli, one hundred and fifty miles from the city, was allowed to remain the chief harbor for foreign trade, and it was not until 42 A. D. that the sand bar at the mouth of the Tiber was dredged and jetties built so as to provide adequate facilities for large vessels. Evidently, Professor Frank concludes, the "shippers' lobby" had not been an effective force in the Roman Senate. The earlier additions to the empire outside of Italy, both west and east, came rather in spite of the inclinations of the ruling Senatorial oligarchy than in accordance with them.

It is only with Pompey that expansion became for a time a dominant principle. At this period the Roman knights had large investments in the East, and Pompey was one of their own number. By effecting a shrewd coalition of the knights and the democracy Pompey had gained the consulship, and when the chance came of succeeding Lucullus in the East, the handling of extraordinary military power in the interests of the capitalistic class which had made its bestowal possible was the natural result. Julius Cæsar, too, was an aggressive expansionist, but through motives of personal ambition and not because he was pushed on by expansionist sentiment at home, or felt in his own heart that the interests of Rome demanded such additions to its territory as he made. But for the tragedy of the ides of March, the author is of the opinion that he would have gone on, in the spirit of an Alexander, as soon as the necessary reorganization at Rome should have been effected.

The closing chapter sketches briefly the later additions of territory, leading up to the time when "finally the overgrown empire imposed a burden of rule upon the conquerors that levelled the whole state to a condition of servitude." If one had more reason for confidence in the effect of history as "philosophy teaching by example," this volume might be hopefully recommended to those who see in present circumstances a call to our own Government to enter upon a course of expansion southward.

Notes

"Oscar Wilde and Myself," by Lord Alfred Douglas, will be published to-morrow by Duffield.

The following books are included in the August list of Frederick A. Stokes Company: "Perch of the Devil," by Gertrude Atherton; "Every Man His Own Mechanic," by John Barnard; "Some Sporting Dogs," by F. T. Barton; "Dogs, Their Selection, Breeding, Etc.," by F. T. Barton; "Art," by Clive Bell; "The Contented Mind," by Thomas Burke; "English Literature Through the Ages," by Amy Cruse; "Thistledown," by Robert Ford; "The Complete Boxer," by J. G. Bohun Lynch; "A Day in the Moon," by the Abbé Moreux; "Messmates," by Edward Step; "British Painters," by J. E. Staley; "The Life and Adventures of Arminius Vambery," by Arminius Vambery; "Operas by Richard Wagner"; "Insect Biographies," by J. J. Ward; "The French Revolution," by H. F. B. Wheeler; "Garden Trees and Shrubs," by W. P. Wright; "Short Cuts to Sketching," by Hayward Young.

"Who's Who in America" (Vol. VIII, for the years 1914-1915) has come to us from the press of A. N. Marquis & Co., of Chicago. The present issue of this convenient work adds 4,426 new life-sketches, making a total of 21,459. It is hardly necessary for us to point out the high claims of this publication as a book of reference.

We have also received the English Who's Who for 1914, published in London by Adam & Charles Black and imported by Macmillan. This is its sixty-sixth year of issue. As it aims to include the names of notable persons the world over, its convenience for reference is evident.

Readers who wish to keep abreast of current articles on the Italian Risorgimento will regret that the Italian National Society for Risorgimento History has changed the title of its official organ to *Rassegna Storica del Risorgimento* (Città di Castello: S. Lapi). Its editor is Prof. G. Gallavresi, of Milan. The former review, *Il Risorgimento Italiano*, of which seven volumes have appeared under the auspices of the Society, has now been taken over by Sig. T. Palamenghi-Crispi, who, to judge from the first two issues, intends to make it the mouthpiece of his personal opinions (Turin: Fratelli Bocca). Both journals are bi-monthly; but members of the Society receive, besides the *Rassegna*, a monthly *Bullettino*.

With the exception of Green's "Short History of the English People," "all the comprehensive histories of England which could by any possibility be printed in one volume in legible type have been written as classbooks for use in schools, or have at least been composed primarily with a view to the needs of the youthful reader." This condition, coupled with the belief that there might be a place for a one-volume history "of the British nation, not confined to the English people," is the explanation offered by A. D. Innes for his "History of England from the Earliest Times to the Present Day" (Putnam; $3.50). Although it appeared in England some time ago, its importation into this country coincides with the appearance of the first volume of his four-volume work on the same subject, noticed in these columns on March 26. The book is bulky, but is attractively printed, readable, trustworthy, and full of pictures, maps, and plans. It should not only "appeal to that vast public who do desire to know the history of their native country, but are repelled by the classbook," but also find readers in this country.

In "Some World-Circuit Saunterings" (San Francisco: Elder; $2), by William Ford Nichols, Bishop of California, "The chief concern is religion," as the compositor irreverently has the author declare. The sly rogue elsewhere makes the pious ecclesiastic describe the bodies at Pompeii as "distorted and writhing *in extremus*." Possibly he did not expect to be found out, as the volume is intended as a souvenir to those who celebrated the Bishop's twentieth anniversary by presenting him with a trip around the world. Naturally more than a quarter of the space is devoted to tarryings during an Easter season in the eastern Mediterranean countries, and all of the sightseeing is done with a cleric's eye. The personal recitals and the momentary infusions of pulpit eloquence render the account edifying for the heavenly-minded.

A second edition of Henry Osborn Taylor's "The Mediæval Mind" has just been issued by Macmillan ($5). The book was reviewed in these columns (July 6, 1911) upon its first appearance. The work has increased little in bulk, the chief addition being a chapter on the towns and guilds of the crusades. There are many minor alterations in statement and in style; all that have come to our notice are distinctly for the better. In its improved form, the book should long remain, with its

sympathetic and discriminating analysis, an indispensable guide to the spirit of the Middle Ages.

The best account of John Woolman supplementary to his Journal has hitherto been the memoir by that other great American Quaker, Whittier, written in 1871; a study acutely critical and sympathetic, though slightly disordered as to perspective by Whittier's inclination to trace too much of the original impulse for the abolition of human slavery to the earnest Jerseyman. To this memoir W. Teignmouth Shore, in "John Woolman: His Life and Our Times" (Macmillan; $1.50), has added only by deepening the picture of the provincial society in which Woolman lived, and collecting a few new scraps of information on his life from Quaker repositories in Pennsylvania and Yorkshire. The bulk of the volume is a reprint, with thin comment, of chronological selections from the Journal, those only being chosen which further the direct narrative action. For a portrait of the heart of the devout tailor, of the inner being of this "schöne Seele," the reader must revert to the complete autobiography. The Bunyan-like struggles between Woolman's youthful exuberance and piety, his slow-maturing protestantism against an unequal social system, his misgivings when his shop became too profitable, his ministrations from a sense of divine impulse, express a character which can be rendered only by his own sustained narrative; and Mr. Shore manifests little talent for the religious and psychological analysis which Woolman so strongly invites.

The chapters on The People Called Quakers, The New Jersey Quakers, Woolman and the Negroes, Philadelphia, and Other Friends are the ones in which the book attempts its service in setting the Journal against its background of time, place, and social and intellectual environment. The material, collected from many sources, is none too well digested. Research, of necessity, was of a generalized, not a localized character, and we see less of what specifically touched Woolman's life than of what was known to be characteristic of his people and province. A praiseworthy picture might have resulted, had the author held to a clearer point of view; but a weakness in the selection of materials results in a disregard of proportion. Thus the chapter on Woolman and the Negroes dismisses ministerial tours along the Jersey coast, in New England, and in Pennsylvania with a few lines each, but includes apropos of an unimportant visit to John Smith, of Burlington, a long description of that town, extracts from Gov. Belcher's journal, B. de Warville's account of the life of the neighboring farmers, Smith's relation of a fire in the meeting-house ten years previous, and a description from a manuscript of a fine day in the meadows near by. Assuming that the author's aim was to present a smooth and comprehensive picture of colonial Quaker life, his jumble of long direct quotations is often inexcusable. It is not mentioned by Mr. Shore that George Fox and William Edmundson, visitors to the Barbados in 1671 and 1675, respectively, fifty years before Woolman's birth, initiated the crusade which regarded slavery as incompatible with Christianity, and which thereafter, as Letters and Petitions show, grew fast among Quakers. Nor does he trace the reformer's difficulty in meeting the two schools of Quakers, one the liberal followers of Penn, the other those of the more ascetic Fox. The humility of Woolman was able to fill the need for cautious tact in dealing with the wealthier Quakers without abatement of his inner zeal; and the instinctive modesty of his narrative makes necessary a careful re-definition of his performance, which this account fails to give. On the other hand, Mr. Shore's appreciation of the beauty and simplicity of Woolman's character is adequate, and these qualities are happily illustrated by anecdotes from the *Friend's Review* and elsewhere.

It is the ironic fate of the Greeks, who were the least sentimental of men, to inspire a modern literature—chiefly English—in which our strong sentimentality blooms unashamed. Pater made this respectable. When he wrote of the Greeks you could see nothing but the whites of his eyes, and his style rose to its highest expression of restrained hysteria. "The Greek Spirit," by Kate Stephens (Sturgis & Walton; $1.50 net), bears internal evidence of not having been written by Pater, but it is executed in his mood of chastened emotion. In its matter it is a good little book; the author cites no authorities, but she is plainly familiar with the recent discussions of scholars, and uses good judgment in her selection among rival theories. Her account of Orphism and the mystery religions is particularly to be commended for its presentation of new theories with a discretion that avoids their most debatable corollaries. She discusses in the light of modern scholarship the Argean civilization that preceded the Hellenic, the heroic age, and the age of personal and political democracy, dwelling on the religion, the art, and the view of life dominant in each. But her sensible judgments are clothed in a style distractingly droll, especially in comparison with the laws of prose in vogue among the people she is speaking of. Of the austere virility of Pericles's funeral oration, she says that "it glows with the amethystine light of a people's grief." In deploring the brevity of the great period, she says, "The centuries the spirit of Greece dured in splendid triumph are as the flight of a bird thro' a summer garden." Her constant violation of Aristotle's canon that prose is one thing and poetry another may unhappily do for her book what she says the poverty of the soil did for Greece, keep out "cupidious inraiders."

The volume which Henri Cordier, member of the Institut, and professor in the School of Oriental Languages of Paris, calls "Mélanges Américains" (Maisonneuve & Fils) comprises twenty-eight papers, ranging from a report on the meeting of the Eighth International Geographical Congress at Washington in 1904 to a description of the exhibits in secondary education at the St. Louis Exposition, and to a non-controversial notes on Peary and Cook. The lay interest of the collection is confined to these last two contributions, and to a travel sketch of Buenos Ayres and Argentina. For the historian there are slight memoranda on unpublished Paris documents relating to Père Marquette, and on recent investigations of Columbus's life. But the author is chiefly concerned with the Congrès des Américanistes and its researches into New World archæology and ethnography. To tributes to Dr. E. T. Hamy and Gen. John Read, and digests of the 1910 and 1912 meetings, are added his own incursions into the field—bibliographical essays, and a refutation of the theory that the Chinese legend of the land of Fou-Sang argues early knowledge of North America. Much that is chaff from any point of view might profitably have been omitted. M. Cordier's aim seems to have been to reprint from scientific periodicals anything and everything he has written for a decade relating to America.

A comparative study of constitutional development and present-day administration in the United States, Canada, Australia, and South Africa, entitled "The Federal Systems of the United States and the British Empire" (Little, Brown), is written by Arthur P. Poley, an English barrister of imperialistic leanings. About a third of the book is devoted to historical surveys; the remaining chapters deal with questions of public law and contemporary government. The author's method is to outline the government of each federation in turn, emphasizing points of similarity and difference as he goes along. The outcome is far from satisfactory. Superficial resemblances among these federations there are in plenty, as every student of political science knows; and superficial differences, too. But to reiterate them all in scrappy paragraphs is not to "break new ground," as Mr. Poley imagines. What we want to be told is whether all these things are merely superficial or whether they vitally affect the course of daily administration in the different lands. The experienced student of political science has long since found out that similar legal machinery turns out a different product on two sides of an ocean or at two ends of a continent. Mr. Poley has missed most of his opportunities by not carrying his study beyond the limits of merely textual comparison. The judgments meted out upon men and measures are neither sure nor suggestive. Here, for instance, is the summary estimate of Durham's great work in Canada: "His two mistakes were the passing of the ordinance deporting the prisoners and a proclamation to the people of Canada justifying his acts. His success has been justified by time" (p. 185). Surely the great tribune of colonial autonomy is entitled to a more enlightening epitaph than this! The volume makes dull reading and the author's logic is not always better than his style. "The United States," he tells us, "broke away from their Mother Country, introduced a federal system, and has prospered amazingly under it, there seems no reason, therefore, why the three Imperial Federations should not meet with at least as great a measure of success" (p. 445). Even the much-maligned American undergraduate does not often shamble his thoughts into their clothes more clumsily than that.

In Madame N. Jarintzoff's "Russia: the Country of Extremes" (Henry Holt; $4 net), we have a valuable study of a fascinating and apparently inexhaustible subject. The book had its nucleus in a number of articles published in the English reviews, yet, oddly enough, these original chapters are the least pertinent. It is in padding out her material to volume size that the author has given us her best work, and come closest to justifying the title of the book. The original articles were historical in nature, and interesting enough in a rather academic fashion. It is the chapters dealing with the Russia of to-day that give us a vivid picture of a land and a people of extremes—a land of great cruelties and enormous sensibilities, a land of despotism and extraordinary individual liberty, a

nation of illiterates swayed by doctrinaires of the book, a people of that extraordinary emotionalism which we have learned to think essential to the "Slav spirit," yet given to the remorseless application of logical principles. Excellent is the introductory chapter, The Country of Extremes, in which the author states her thesis and supports it with happily chosen illustrations. But better still is the chapter Agents Provocateurs, in which Madame Jarintzoff retells the amazing story of Father Gapon and the terrorist police spy Azeff. Even now the complete facts about these two tragic figures are inaccessible, but so far as the story can be told the writer has told it. The reader will form his conception of the land of extremes from this amazing chronicle of revolution and absolutism in a struggle in which human motive attains a complexity that is almost of the madhouse. It is difficult to say even now whether Gapon and Azeff were police spies or revolutionary agitators, because it would have been difficult for these men themselves to say what they were, so hopelessly complicated was the game which they attempted to play. In these men the extremes of the Russian nature attain a dæmonic climax.

A new book by H. Fielding Hall, "The Passing of Empire" (Boston: Houghton Mifflin; $2.50), is not altogether a wail of despair, though it certainly embodies a counsel of perfection. Mr. Hall, whose previous books on Burma have shown his sympathy with the people and contempt of received opinion, believes that the British Government suffers from fixed ideas, and his laudable object in this work is to overthrow these ideas before the ideas overthrow the empire. The government of the village should be restored to the village fathers; opium should not be prohibited entirely, as it is a useful and at times a necessary drug; local option should go "by areas and not races" (at present in the same area a man of one race is fined for that which one of another race may do). The courts, civil and criminal, are the battlefield of contending perjurers, and law is "mainly a denial of humanity and justice." What won India was English (British) personality, not ability; but nowadays all personality is swamped by education. The Indian civilian should be a good sport rather than a good scholar; this would cure him of priggishness. The district officer should be taught to "try to avoid work as much as he can"; at present he is an officious busybody. The first rule of successful government is to understand the people, and that rule is now ignored. All this is what the Indians nearer home call "good talk," and Mr. Hall's illustrative stories, gleaned from his own wide experience, are capital reading as well as striking evidence in favor of his views.

Disappointment awaits the reader of Charles W. Domville-Fife's "Guatemala and the States of Central America" (Putt; $3 net). Attractive in appearance, coming at a time when our interest in the countries of the Caribbean is greater than ever before, fairly well provided with illustrations, and apparently comprehensive in scope, it is all the more annoying to find, in the first place, that the illustrations do not illustrate the text, and in the second place, that the spirit in which the book has been written is not that of "truth at any price." Beginning with a quotation to the effect that "the lands under the political dominion of the Latin-American nations may be equalled in fertility, natural wealth, and abundance of mineral deposits elsewhere on the surface of the globe, *but they are nowhere surpassed,*" it may fairly be claimed that the note of warning is struck at once. Nevertheless, one is not prepared for such excessive praise and adulation of Estrada Cabrera, coming from the pen of an English writer, even though he did once cause universal surprise by including Guatemala in his book on "The Great States of South America." To any one who has followed the course of the Central American states during the past decade it will certainly be refreshing news to learn that Guatemala "has assumed a thoroughly settled political condition." Of course, a truculent hoodlum on whom a tyrannical schoolmaster is sitting may perhaps be said to have assumed a "thoroughly settled" position.

The author has quoted at unnecessary length from the sacred book, "Popol Vuh." He touches lightly on the Spanish conquest; although he finds space to emphasize the barbarities of the Spanish adventurers, which included "burning, dismembering, the roasting alive of children, the hanging of children by the neck to their mothers' waists, hanging above a fire, disembowelling, flogging, impaling on stakes, and mauling by dogs." These barbarities, which are pictured in the English translation of Las Casas, are accepted by Mr. Domville-Fife, as by so many of his countrymen, at their face value. It is a great pity that Professor Bourne could not have been spared a few years longer to continue his work of counteracting, in the interests of scientific history, the exaggerations of Las Casas. Mr. Domville-Fife lays great stress on the "fêtes of Minerva," with which President Cabrera has been amusing himself for several years past. That Estrada Cabrera's campaign to persuade foreigners that Guatemala is in the forefront of modern progress has not been in vain, is evidenced on nearly every page of this book. Indeed, one almost suspects that the volume must have received official sanction.

To the Biblioteca Classica Italiana Prof. Michele Scherillo, the well-known scholar of the Milan Accademia, contributes an edition of Boccaccio's "Decameron," intended for "cultivated persons" and for schools. Having these readers in view, the editor omits those of the *Novelle* which he deems too coarse; but he summarizes the omitted novels without referring to their objectionable passages. His own general introduction of over seventy pages is full of erudition, and may be recommended to mature students of literature. For this excellent series Professor Scherillo has already edited Alfieri ("La Vita Nuova"), Leopardi ("I Canti"), Manzoni (plays and poems), Parini and Pellico (Milan: Hoepli; lire 4).

An illuminating view of several important periods of religious history is given in Vol. VI of the "Encyclopædia of Religion and Ethics" (Scribner; $7 net), containing articles Fiction-Hyksos. Among the most interesting of the lower tribes mentioned are the Hottentots (whose origin is still an enigma), the Hawaiians, the great Huron group, and the pagan Huichols of Mexico. On a higher level there is a brief but well-considered account of the Hyksos. The article "God" attempts, not unsuccessfully, a survey of the theistic beliefs of all the known peoples of the world; but to the present reviewer it seems a pity that in the opening section of this composite article, entitled "Primitive and Savage," Andrew Lang has repeated at some length his favorite view that the idea of a supreme being, an All-Father, often self-existent, creative, and ethical, is widely diffused among savage peoples—his argument, giving a one-sided picture of early life, can hardly fail to be misleading, an unwelcome attachment to his great services to the early history of religious conceptions. There are short articles on various subordinate deities and other mythological figures. The history of Christian thought is illustrated by a number of separate studies, condensed but clear. The article "Gospels" sets forth some leading principles of Gospel-criticism, but its conclusion must be checked by consultation of fuller discussions. There is a convenient outline of Gnostic teaching, and a welcome sketch of the constitution and present condition of the Greek Orthodox Church, supplemented by accounts of Humanism and Gallicanism. It will be a surprise to many to find the Gypsies included among Christians, but the documents cited cannot be ignored. In the excellent description of the varied fortunes of the Huguenots the importance of the political element, especially under Richelieu (the unity of France), might perhaps be brought out more prominently. The complicated question of the Holy Grail is fairly treated.

The article "Hinduism" may be called an admirable feat of organization. To give an intelligible sketch of the vast mass of religious thought in the India of the last dozen centuries requires not only minute knowledge of customs, but also perception of their organic relations and historical development; and the article furnishes much desired information about the actual religious life of present-day India. To the literature on the Granth (the Sikh sacred writings) should now be added M. Bloomfield's paper on "Studies in the History of Religions presented to C. H. Toy." The Iranian religion is represented by the articles Fravashis, Gabars (the remnant of the Persian Zoroastrians), and Haoma; in the last-named it would have been well to state clearly, for the benefit of the general reader, that the origin of the name of the plant, referred to on p. 506 f., from the alleged pious sage Haoma, is merely a bit of folklore. For the religion of the Hittites there is a well-considered summary of the details now accessible. A very useful sketch is the article "Greek Religion," which gives the elements of the Hellenic cultus, and traces its development, by periods, down to the disappearance of Greek independence; it is an authoritative introduction to the more extended discussion of the subject. The less-known Græco-Egyptian religion is treated also in an illumining way—the rôle of the Sarapis cult (though its origin is still obscure) is well brought out; the limits of the article exclude the later history of the Isis cult.

In addition to these studies of the great religions, many important early customs are described, among which may be specially mentioned the widely diffused custom of human sacrifice. There is a considerable list of moral and religious qualities, holiness being treated as originally a form of taboo; and, as bearing on the moral culture of the

community, the Mendelian theory (in the article "Heredity") is expounded at length, with a timely warning against rash "eugenic" legislation, especially the attempt to control marriage. Not a few fundamental questions (First Cause, Free Will, Good and Evil) in the sphere of philosophy are treated in detail, and generally freely and cautiously, and philosophers from Heraclitus to T. H. Green receive due mention. Account is taken also of such writers as Goethe, Heine, and Herder. The article "Fiction" gives a substantially full survey of works of fiction, with estimates of their literary value, in all parts of the world from the earliest times to the present, and a few sentences are devoted to those of them that discuss religious questions; but more space might be given in this Encyclopædia to the contributions made in many modern novels to the history of actual religious and moral life, apart from dogma and speculation, under the conditions that confront men and women in ordinary experiences.

One of the best books called forth by the Federal Income Tax law is that edited by Henry Campbell Black, and published by the Vernon Law Book Company, of Kansas City, Mo. Like others of its class, its primary purpose is the prœmption of this field of legal literature, while the editor is waiting for Federal decisions which shall give an authoritative construction to this somewhat novel piece of Federal legislation. The "watchful waiting" character of the book is attested by the Appendix, constituting about one-third of the volume and containing not only the Act of 1913, but all prior Federal income tax statutes, as well as the various State enactments on this topic. Mr. Black holds the opinion that all of this legislation will be treated by the Federal courts *in pari materia;* and that the judicial decisions interpreting the earlier statutory provisions will have value as precedents, when similar provisions of the Federal act are to be construed and applied. The author has gained an excellent reputation as a writer upon constitutional law and the interpretation of statutes, which will secure respectful consideration for the views which he presents on the new Income Tax law. Many of the principles to be applied in controversies under this statute have been worked out by English courts and by some of our tribunals. These are presented with clearness by the author and supported by abundant citations. Treasury decisions under the act of 1913 have been carefully analyzed, and the treatise shows every indication of desire and ability on Mr. Black's part to make it a serviceable and trustworthy hand-book on income-tax law in the United States.

NOTES FROM ABROAD.

A correspondent of the London *Tablet* warns publishers against the delusion of supposing that the public craves "vest-pocket" editions in small print on India paper. The question arises in connection with a 48mo edition of the Breviary, in which, it is alleged, the type is undesirably small, while the paper is so fine in texture that the keenest razor is too blunt to separate two pages stuck together. The critic maintains that the day is past for squat little books of this kind. People do not really want publications that will go into the vest pocket. They much prefer editions after the model of the Dent classics, whose vogue is largely due to the handiness and attractiveness of their format. An essential to real portability is a certain slimness of form, which allows a book to lie evenly and unobtrusively along the person.

The Congress of Ethnology and Ethnography, which lately met at Neuchâtel, was largely attended. It is needless to say that Switzerland presents a field of extraordinary interest to specialists in these departments. There is probably no other country which presents so completely and so variously the *monumenta* of past civilizations—lacustre, Helvetic, Roman, and mediæval. They are piled one upon the other like the geological strata in the Alpine rocks. Consequently, at the present time, when old Switzerland is fast disappearing on account of the exploitation of the country for the benefit of foreign tourists, it is felt that no time should be lost in studying with increasing zeal the peculiarities, archæological, anthropological, and ethnological, which are everywhere in evidence. Even on the surface, the characteristics which distinguish populations living shoulder to shoulder, like those of Grisons, Valais, and the Bernese Oberland, are plainly marked. Not long ago the Swiss Institute of Anthropology was founded at Geneva, which has lately begun the publication of a review: *Archives suisses d'Anthropologie générale.* Hitherto, the publications on this subject by Swiss authors saw the light only in foreign periodicals.

The valuable mural paintings which are so numerous at Bâle are engaging the attention of conservators of art. Among these paintings, the best are to be found in the Münster, in the Predigerkirche, and in the Peterskirche. Some of these artistic treasures at Bâle date from the early Middle Ages. Some were injured in the earthquake of 1356; others have been damaged by the artificial heating of buildings, or by the infiltration of moisture. It is proposed, not to undertake the restoration of the paintings, but only to preserve the colors and to prevent further decay.

The question, what is Switzerland to do with its already large, and always growing, foreign population is discussed in a short treatise entitled "Un Problème National. La Population Etablie en Suisse." The author is Albert Picot, a well-known Geneva advocate. He examines his problem from every point of view, presents interesting statistics as to the peaceful foreign invasion of Switzerland, points out the dangers, and suggests certain remedies. The subject has already given rise to discussions which are to be found in official reports and in pamphlets. To counteract the denationalization of Switzerland, caused by the influx of strangers, M. Picot, following the opinion of the Government commission appointed to inquire into the matter, recommends: (1.) Conservation of the *jus sanguinis* (the nationality of the parents attributed to the children) for foreigners who remain only temporarily in Swiss territory. (2.) Adoption of the *jus soli* (the attribution to the child of the nationality of his birthplace) for children whose father is a native of Switzerland, for children whose mother is a native of Switzerland, and for children whose father or mother has lived in Switzerland for ten years. (3.) Opportunity granted to foreigners to acquire full naturalization (nationalité) if they have been born in Switzerland or have been resident there for fifteen years.

Students of representative government will find much that is interesting in the debates of the Swiss National Council this summer on the question of proportional representation. The system, already adopted in certain cantons, seems to have worked well, especially in preventing certain unnatural alliances between political parties in the minority which were not favorable to political ethics. The debates, while they have not presented much that was new or profound from the scientific point of view, have been serious and on a high plane. The testimony as to the workings of the system of proportional representation, given by practical politicians, furnishes interesting reading.

Science

MORRIS LOEB.

The Scientific Work of Morris Loeb. By T. W. Richards. Harvard University Press. $2 net.

Under this title Professor Richards has edited all of Dr. Loeb's publications on scientific topics, and parts of several essays found in manuscript, adding a few prefatory pages which contain a fitting appreciation of the life and character of the author. The volume is published as a memorial to a man of rare gifts and of many-sided activities, and the papers are of interest as the thoughtful and suggestive contributions of one of the American pioneers of the new physical chemistry. One of the papers, on "The Fundamental Ideas of Physical Chemistry," is of especial significance, as it forms one of the very first presentations of the subject on this side of the Atlantic, and is by a chemist fresh from the inspiring instruction of Ostwald and Nernst. Among the other papers are: "Das Phosgen und seine Abkömmlinge," Loeb's inaugural dissertation for his doctorate at Berlin in 1887; "Coal Tar Colors," an encyclopædia article; "Osmotic Pressure"; "Electrolytic Dissociation"; "Atoms and Molecules," a popular address; "Hypothesis of Radiant Matter"; "Sir Isaac Newton"; and "Oliver Wolcott Gibbs." There are also an address on "The Conditions Affecting Chemistry in New York," the presidential address at the opening of the Chemists' Building, and a number of papers giving the results of various investigations.

Morris Loeb graduated from Harvard in 1883, and afterwards studied under Hofmann in Berlin, where he took his doctor's degree in 1887. He then spent some months in Heidelberg and Leipzig. On his return to this country in 1888 he was so thoroughly imbued with love for science that the brilliant financial position open to him in his father's banking house was ignored, and, after a short time as voluntary private assistant to his former teacher, Wolcott Gibbs, he became docent at Clark University, and two years later professor of chemistry at New York University. This professorship he held for fifteen years, resigning in 1906,

not from loss of interest in chemistry or teaching, but because of the pressure of many outside demands and the responsibilities which came to him at this time.

He always maintained a private laboratory where he continued his investigations as opportunity permitted. In 1908 he was appointed one of the committee of the Harvard overseers to visit the Chemical Laboratory, and it was on his initiative and through the gift of $50,000 from his brother and himself that the Wolcott Gibbs Memorial Laboratory for research was founded at Harvard.

Another enterprise which took much of his time was the Chemists' Club of New York, and it was largely through his exertions and generosity that the dignified building on Forty-first Street, with its admirable library, its laboratories, and its various provisions for comfort and service, was erected. The large plan for usefulness to the chemists of the country which has been carried out in this unique chemical centre reflects Dr. Loeb's broad-minded attitude of service to his fellows. The Chemists' Club is much more than a clubhouse for local members; it contains an auditorium for scientific lectures, a large and increasing chemical library administered in the interests of all who care to use it, and well-equipped laboratories for private rental.

Dr. Loeb did much to stimulate interest in the notable Eighth International Congress of Applied Chemistry, held in Washington and New York in the summer of 1912, and contributed largely to the success of the meeting. The illness which caused his death on October 8, 1912, is believed to have been due to his over-exertion in welcoming at Washington the delegates to the Congress.

Morris Loeb was a man of high ideals, of keen sympathy, of unselfish and generous devotion to the improvement of the lot of the poor and unfortunate; and his large charitable work, his liberal benefactions, and helpful acts were so modestly carried out that they were almost unknown by the general public.

From among the many tributes to Dr. Loeb's memory which are collected in a memorial volume privately printed by the Chemists' Club, we may quote the following as summing up the general appreciation of his life and character:

> Morris Loeb, chemist, investigator, educator, upright and useful citizen, altruist, philanthropist, generous patron and benefactor of art, of sciences, and of all good works, ever ready to bear more than his share of the burdens of the community, and always to be found on the side of righteousness, justice, and truth, lived his life of quiet power without arrogance or display. Always modest concerning his own distinguished career and many accomplishments, with charity towards all and unkind criticism of none, he was ever a courteous, genial, and polished gentleman of high ideals, whose chief aim and purpose was to be of assistance to his fellow-men, and who realized to the full that the highest reward of service is the privilege of having been of service.

Drama and Music

A SUCCESSFUL ITALIAN DRAMATIST.

SEM BENELLI'S STAGE ARCHITECTURE.

Sem Benelli has enjoyed a fair success on the stage of the Metropolitan Opera in New York. What shall we say of the extraordinary enthusiasm he awakens in the Italian public? The reception of the "Cena delle beffe" ("The Practical Joke") was comparable only to that of Rostand's "Cyrano" in Paris. His latest triumph, "La Gorgona," the seventh now that he has witnessed, shows that whatever may be the scope of his genius, Sem Benelli has at least caught the secret of moving his contemporaries to a degree that few dramatists of the day have attained.

Sem Benelli's friends have been quick to point out in his verse a rhythm new to the tradition of the Italian classic stage. He has, they say, recreated the eleven-syllable line, bringing it back to conversational reality, freeing it from artificial transpositions, from a general tone of conventionality. Academic criticism is prone to refer to such technical causes phenomena that are really deeper and more vital. If there be in Sem Benelli's poetry a naturalness hitherto lacking to the Italian verse drama, surely it is not merely a question of the position of a cæsura. His alleged superior naturalness must be due rather to a clearer view of reality itself. The objectification of that vision may perhaps demand a modification of inherited poetic conventions. But to understand his art we must do more than isolate these superficial characteristics, which are not the cause but the remote results of his distinctive individuality.

To get a candid view of Sem Benelli, we must brush aside some of the fustian he holds out to his public and possibly to himself. "No people," he says in prelude to "La maschera di Bruto" ("The False Patriot"), "continues in legend the life of its ancestors as does the Florentine," the Italian. The cult of the past is, in fact, one of the great motives in Italian life and letters; that is why Futurism is predominantly an Italian question in art, one extreme producing another. Sem Benelli means to avail himself of this interest in ancient things. He lays his "Love of the Three Kings" in the times of the barbaric invasions. His Rosmunda harks back to Belisarius. The Medicean court of the Renaissance suggests two of his plays; academic life of the sixteenth century another. And now his "Gorgona" utilizes memories of mediæval Pisa. I say utilizes; for in the "Gorgona," as in the other plays, the rôle of history is merely that of a device. It lends probability to various mechanical assemblings of situation out of which emotions may be made to spring. It arouses a sense of vagueness, abstracting the audience from the pressure of immediate associations. Sem Benelli, if he were frank with himself, would admit that to what is not real in his constructions he gives the mask of reality by submerging it in the hazy atmosphere of the past, an atmosphere as hazy as possible. In no one of his plays does he raise an historical question, or reintegrate an historical figure. Not even his Lorenzino requires the author's assurance that "he has lived in his spiritual companionship"; for no one cares, artistically speaking, whether Lorenzino dei Medici was a false patriot or not. Sem Benelli's history is a pose: in this phase of his work he illustrates an hypocrisy common enough in contemporary Italian art to furnish a pretext for the Futurist revolt.

The words "art" and "poetry" are frequent on Sem Benelli's lips. He is proud of his "mesta poesia," that lingers so willingly around love and death, that strikes, indeed, a note of yearning melancholy here and there, but that always struts with an air of self-consciousness. In it, too, much is fustian. His love-making never rises above romanticist banality. There is the expression of passion, then the expansion of it in the customary imagery of the flower, the star, the dream. It is in the "Mantellaccio" ("The Comedians") that Sem Benelli's pose as well as the limitations of his verse become most apparent. There the Novice, a fading echo of Cyrano, wins Sylvia, who recalls Roxane, with the sincerity of his poetry, thrown into contrast with the academic drool of the Ardente. After all, Sem Benelli but substitutes the platitudes of neo-romanticism for the platitudes of the Seicento: "Well I know the silent palpitation of thy fair green," the Novice says to the Emerald mask, "the living image of the placid life that is born of dreams from mountain top to deep of sea. Thy garb of emerald recalls to me the joy of my freedom, when, lost in the open fields, I followed my own fancies, forest birds that forever eluded me, and I found the infinite charm of jewels like unto thyself and thy companions. . . ." "Oh, let me leave thee," says Lamberto to Gorgona, "let me leave thee with my lips' thirst quenched with the warm fragrance of thy breath. Thy kiss, thy kiss, oh dear one, is now more sacred than the limitless love of all that lives. . . . Thou smilest more sweetly than the isle that bears thy name mid the waves of the tempest. . . . Oh the infinite, inexhaustible caress of thy wild voice, thy torrential voice, thy voice of night, thy voice of prayer. Thou didst sing to me thy burning love: it awakened me, it soothed me to sleep. . . ."

It may mean little to say that every schoolboy in Italy has been doing this for a century past. But surely a public that has known a Carducci and a D'Annunzio will not ratify the journalistic criticism which heralds in such work the rejuvenation of Italian verse.

We cannot, of course, dissociate Sem Benelli's characters from the language they speak. The vacuity of the one is the vacuity of the other. If there be one serious attempt at psychological analysis in his work,

It is in the Giullano of "La Tignola" ("The Bookworm"). Here is a case of the proletarian who has read too much; before the mind of a book-store clerk unfold the glorious visions of Socialism and revolution. On the back of a politician he rises within reach of power. At the crucial moment, when he is called upon to make a hypocritical campaign speech, his flight fails. "For you," says the Duke to Giuliano, "I am an adventurer. I spur you to action. I urge you to overcome certain scruples, certain sickly reluctances. And you accuse me of insincerity. I will tell you one thing: your uprightness is a poor justification of your weakling's soul. You like the small, the insignificant, the cosey nook by the fire with the musty odor of books, the painful sacrifice, useless precisely because performed in the dark. You abhor the spotlight, you prefer to gnaw away in obscurity. On that puny background, on the background of your bookstore, you, like so many others, appear heroic. You made a mistake in leaving it. It was your natural element."

Sem Benelli has an interesting problem here: what are the psychological restraints that confront the "academic" temperament in the struggle with affairs? There are in this play a variety of situations, of which I have given the Duke's interpretation. That interpretation should have come from Giuliano himself. The only modern subject in Sem Benelli's plays, as well as his single prose production, the "Bookworm," has been also the least successful. It lacks the distinctive element in Sem Benelli's special power.

This, I have said, is not in history, nor in poetry, nor in character-building. When Sem Benelli's friends have wearied of foisting upon him a literary eminence he does not deserve and cannot sustain, they will recognize in him a scenic artist of unusual skill and daring. It is daring, for instance, to kill the heroine in the third act of "The Love of the Three Kings." In Butti's "Castle of Dreams" there is the same stroke; but Butti fell back on the "House of Usher" of Poe, and produced a resurrection. Sem Benelli surmounts the difficulty in the figure of the blind king, whose uncanny determination to discover the lover of his son's wife sustains interest to the end. Will Rosmunda destroy Alboin? There is no doubt of that from the second act. But it is daring to shift the emphasis from Alboin to Elmichi, as Sem Benelli does in rapidly developing the part of the subaltern towards the end of the play. Stripping "La Gorgona" of its dross, we get back to a perfect bit of stage mechanism: a tangle of unyielding sense of honor in Marcello, of feminine sensibility restrained by an ironclad vow in Gorgona, of intrepid passion in Lamberto. Lamberto must die, of course, but in an unforeseen way. There is simple vaudeville fun in the "Cena delle beffe" and in the "Mantellaccio" ("The Comedians"); an audience will crowd even to a picture-play to see a man undress inside a barrel, and to see a philanderer tied helpless in a chair at the mercy of his victims. If, as in "The False Patriot," a poet, in love with his aunt, kills his uncle, something exciting is sure to happen. No one knows this better than Sem Benelli. These artificial situations are dressed for public parade with a perfect sense of stage effect: historical "atmosphere," romanticist commonplaces unrolled in a fluent verse, and if this is not sufficient, music itself, are brought in to detract attention from the unreality of the wax and sawdust mannequins that people Sem Benelli's artistic world. His name has been used too often as a parasol for D'Annunzio. It could better serve as a refutation of the old saw that Italians have no control over dramatic technique.

ARTHUR LIVINGSTON.

The mad race for something new, which lately prompted the Russian composer, Scriabine, to call perfumes and colors to the aid of his symphonic music, has resulted in Paris in an equally odd experiment, by the opera composer, Isidore de Lara, in uniting speech and operatic song with moving pictures. This "poetic and musical fantasy" is called "Don Juan," and at the performance it was preceded by the playing of Massenet's "Don Juan," the recitation of Baudelaire's "Don Juan," and the singing of airs from Mozart's opera of the same name. In De Lara's "fantasy" three young women, who are unhappy though married, tell one another their adventures with a strangely fascinating man who made love to them in turn in the park. The cinematograph pictures the details. Then this irresistible man appears on the stage. The three husbands run on, too, rapier in hand, and ask who he is. He replies, in "a song of much dramatic power," that he is the immortal Don Juan, the genius of the species. The husbands lunge at him, and he vanishes, while the three wives, who have appeared in the background, burst out laughing. Isidore de Lara frankly admits that he is the librettist and moving-picture arranger, as well as the composer, of this curiosity.

The playwright who arranged "Sumurun" has written a libretto which is to be set to music by Paul von Klenau, the composer of the opera "Sulamith." The hero of this forthcoming opera is one of Holberg's most amusing characters, the peasant Jeppe.

One of the novelties of the next opera season in Boston is to be Weingartner's new opera, "Cain and Abel," which will be given under his own direction. He is to be the chief conductor through two months. "Parsifal" is to be added to the repertory.

According to the most trustworthy of all musical books of reference, Riemann's "Musiklexikon," Paganini was born October 27, 1782. In the latest biography of this famous Italian violinist, by Julius Kappe (Berlin: Shuster & Loeffler), the date is given as February 18, 1784; but the author does not give his authority therefor. Kappe calls this biography of Paganini "The Romance of His Life," and there is no lack of curious incidents to justify this sub-title. The book includes an estimate of the famous Italian's art by the most popular of present-day teachers of his instrument, Sévczik.

The Harvard *Musical Review* tells a harrowing tale of the difficulties in the way of maintaining an orchestra in a university. The Pierian Sodality is an ancient and honorable organization, dating back to the time when its name probably did not seem ridiculous; yet it will never rival its neighbor, the Boston Symphony Orchestra, if only for the reason that every year one-quarter of its members depart and are replaced by freshmen. A still greater drawback lies in the fact that the conductor never knows how many of the different kinds of instruments will be at his disposal. For instance, during the past term there was a dearth of certain wind instruments, the orchestra having to do without horns or oboes, but being well supplied with flutes, clarinets, trumpets, and trombones. In other years the situation has been reversed. "One year there will be a perfect balance between the sections, and the next there may be a complete absence of inner parts, necessitating an elaborate system of *culing* among the violas and 'cellos."

For less than two dollars it will be possible this summer to hear Wagner's four Nibelung operas in Berlin, as presented in the Theater des Westens by the ensemble of the New Opera of Hamburg. Before the expiration of the copyright, an invasion of this kind would have been impossible. The enterprise is managed by the "Neue Freie Volksbühne," or People's Theatre, an organization which has for one of its objects the gratification of those who cannot afford to patronize the regular theatres or opera houses. It numbers at present about 50,000 members. The initiation fee is twenty-four cents, and the average price for an operatic or theatrical performance is about the same.

Art

THE LAVERY EXHIBITION.

LONDON, July 3.

A retrospective exhibition is a test from which many artists shrink. But John Lavery can face it with the courage of a man who knows that the stage of success and popularity he has reached makes everything he has done and may do acceptable in England. In the catalogue of his show recently opened at the Grosvenor Gallery, is a list of the honors heaped upon him at home and on the Continent. In the Gallery his large royal group, exhibited last year at the Academy, holds the most important centre and serves as a reminder that he has attained the distinction perhaps most craved by, certainly most useful to, the fashionable portrait painter. Altogether, he can afford to be sure of himself and his place, and, in this pleasant confidence, he has withheld next to nothing from the present collection.

The earliest painting dates back to 1879-80, the latest from the present year; in between is a long series, though by no means exhaustive, filling the four rooms and the entrance hall of the Grosvenor Gallery: an amazing proof of his industry and facility. It is this that strikes one first—the enormous amount of work he has accomplished in the last thirty-four years, and also, it should be added, the excellent level of workmanship he has managed to maintain. But

one is even more struck with the fact that his most interesting work is his earliest. In it his development can be traced through the various influences under which he came. There are paintings which seem to show him lingering before the shrine of Bastien-Lepage, still the great master when Lavery was young. There are others, a far larger number, from the time when he, as one of the little group of men who called themselves the Glasgow School, exhibited with them at the old Grosvenor Gallery—the last exhibition given at the old Grosvenor—when they took London, or rather critical London, by storm. One by one, I see again the familiar canvases—the Ariadne, the Tennis Party, the Dawn after Langside, 1568, the often-painted Bridge at Grez, the numerous portraits—that appeared in the now famous Grosvenor exhibition, or at the shows of the then youthful New English Art Club, or in his own first "one-man" show at the Goupil Gallery.

The painters of the Glasgow School were the first to tell you that their masters were McTaggert—now as then all too little known outside of Scotland—the Japanese, and Whistler; indeed, they did more than tell you, they insisted with a good deal of emphasis upon the recognition of their artistic genealogy. It is difficult to trace McTaggert in Lavery, but his debt to Whistler and the Japanese is not far to seek. From them he learned to respect decorative value in his design, to appreciate the manner of placing a subject on his canvas, and the importance of a definite decorative scheme.

Much may always be learned by following the growth of the student, or the young artist, through the successive influences to which he has willingly, even obsequiously, submitted. But the survival of interest depends upon the success with which he realizes his own individuality in the process and expresses it after he has ceased to be the student or the disciple. This is the point, the honest must admit, where Lavery's work begins to be less stimulating. He long continued to be influenced by others. One later portrait suggests de la Gandara, another Courtois, and a third to-morrow may recall somebody else. But all the same, in the 'nineties he began to be unmistakably Lavery—and Lavery arrived does not quite fulfil the promise of Lavery studying and struggling to arrive. He has never forgotten the decorative truths taught to him by Whistler and the Japanese. It is seldom that his figure or his composition is not well placed on his canvas—one reason why his paintings are at a first glance usually so pleasing. But in emancipating Lavery, he evolved Lavery mannerisms. One after another of his later triumphs, belonging to the period when the Glasgow School had ceased to be more than a memory, are included: Spring, Father and Daughter, lent by the Luxembourg; R. B. Cunninghame-Graham, lent by the Corporation of Glasgow; The Lady in Pink, lent by the municipality of the City of Venice; many others lent by national or municipal galleries, innumerable portraits of himself, his wife, his daughter, a long succession of women of fashion. The names of his sitters and his patrons in the catalogue alone explain the popular eminence he has achieved, the official patronage he has received. But you cannot see so many of his paintings together without realizing the monotony of color, the artificiality of pose, the reduction of life and character to a formula, the subserviency to the fashionable sitter, which are now the chief characteristics of his portraits. Of late he has been working in Tangier, there painting marines and landscapes full of reminiscences of Whistler, and it may be that, in the end, this healthy escape from the London studio will help him to free himself from the heavy yoke of fashion to which only the genius among portrait painters never bows the neck. N. N.

We have received the "Catalogue of Books Relating to Architecture, Construction, and Decoration in the Public Library of the City of Boston," which has now appeared in a second edition, with an additional section on City Planning. It is published by the trustees of the Boston Public Library.

The most "lyrical" of the year's paintings in Paris is the work of a woman. Mademoiselle Hélène Dufau has long painted decorations for orders that men successful in the art might well envy—at the Sorbonne, for the house of the poet Rostand, and others of like spread. From her beginning with a Marie Bashkirtseff in 1895, she had a succession of high honors until, in 1909, the state knighted her in the Legion of Honor. This year she exhibits a mural decoration "not made to order"—presumably to content herself. It is Eros and Psyché in an Earthly Garden. Like most earthly things, the garden is very solid, and it is shimmering in splendor, and the figures are very light and ethereal and pagan as Love and the Soul are apt to be, and there is animated Nature rich with tigers and nymphs.

The work contrasts with the numerous and vast mural paintings of male artists—which have been ordered—and which seem to show that these Latin countries of repose are losing, with men at least, their artistic emotions under modern pressure. An exception—and even he won his first honors thirty-one years ago—is Ernest Laurent, who may still stand for New Art in portraits, though he seems utterly a stranger to Americans. The truth is he gives no sign of commercial sense, but he has had votes from brother artists for the grand Medal of Honor. His work is discreet, intimate, of affection that runs not the streets nor turns the home into a stage for those whose pleasure is excitement and publicity—portraits of what the French call the "interior," with gentle lights and dainty colors for furnishings as of some hidden house of life. Rochegrosse, who was once the coming master, frankly acknowledges this dying out of poetic emotion in the title of his big picture, The Death of the Purple. Amid the smoke of factories, a figure radiating light from purple drapery, lies prone, clutching a lyre—and a man in coarse brown modern coat stands sobbing. And some say it is the death of Poesy in our material age, and others that it is Nero or whosoever represents Culture and Power.

The collections of the Duc d'Aumale at Chantilly, known as the Musée Condé, are described by Mrs. J. P. Richter in a sumptuous volume with profuse and excellent illustrations, under the title "Chantilly" (Scribner; $6 net). The text of the work is rather agreeable than important, and consists of two parts, a gossiping account of the history of Chantilly and a desultory description of the treasures housed there. But as a picture-book it is full of delights. The Musée Condé is famous, in particular, for its specimens of the French primitives. It contains the "Très Riches Heures du Duc de Berry," by Pol de Limbourg and his brothers, the Book of Hours executed for Etienne Chevalier by Jean Fouquet, and numerous examples of the work of their successors in French portraiture, culminating in the drawings of Jean and François Clouet. While presenting examples of the wide range of the collections, from an archaic Greek bronze Athena to a blatant Détaille, Mrs. Richter has wisely concentrated on early French art, and has rendered a service by making thus accessible a group of admirable reproductions of work too little known by the general public.

Finance

OUR GREAT WHEAT CROP.

There were two points on which interest and curiosity converged in last week's monthly Government crop report—the height to which the estimate of wheat yield had been raised and the initial indication of the corn crop. For the wheat crop—of which the greater part is now practically harvested—the Department of Agriculture's figures are most extraordinary. The average condition assigned to the winter-sown wheat is not only 12½ per cent. above the July condition of last year's record-breaking winter crop, but nearly 14 per cent. above the ten-year average.

Never but once in the thirty-five past years has the present condition been exceeded in July, and then (in 1891) the acreage under winter wheat was smaller by 25 per cent. than it is to-day. When a veteran wheat operator in Chicago, after the Government's April estimate, predicted a total wheat yield of 900,000,000 bushels, or 18 per cent. above the previous maximum, he was looked upon as a dreamer. But the Department itself last week foreshadowed a total crop of no less than 930,000,000.

The great Southwestern drought of 1913, with a resultant loss of 420,000,000 bushels from the July estimate on the corn crop, and the smallest yield in eleven years, left something for 1914 to correct. How much of the interior trade depression, since last autumn, was a consequence of this harvest shortage, it is impossible to say. Farm communities which, instead of having a huge surplus of their staple product to sell, are compelled to buy corn from elsewhere to feed their own cattle, are not very likely to be heavy purchasers of Eastern merchandise. Every one knows into what depths of depression the

failure of the corn crop in 1894 plunged the United States.

Last week's estimate on the corn crop was the first of the present season. Its condition, 85.8 per cent., was 1 per cent. above the July average of the past ten years, and the present indicated yield would, if fulfilled, be exceeded only by the harvests of 1912, 1910, and 1906. On the other hand, condition, acreage, and indicated yield were all higher still in July a year ago; yet the crop in the end ran disastrously short. But even when that July report of 1913 was being published, the cornfields of Kansas, Missouri, and Nebraska, long ill-supplied with moisture, were beginning to wither in the drought. Last month's abundant rainfall made it possible for the Government, in its weekly bulletin of June 30, to say that conditions in that section were "in the main ideal," and to add, a week ago, that "the crop is in excellent condition."

Early in the present year, an eminent financier, noted as one of the most astute and successful forecasters of the movements of finance, had this to say of the American situation: The January rise on the Stock Exchange and the February spurt of recovery in trade were quite false starts; there was much to be liquidated and overcome, in our own and the foreign markets, before any genuine trade revival could begin. The framework was already sound and strong in its fundamentals; but we must not delude ourselves into thinking that a period of gloom and despondency, between then and the middle of 1914, could be avoided. When that psychological moment should arrive—so the forecast proceeded—everything would depend upon the harvest. If we had crops of average magnitude, the real recovery would begin.

The middle of 1914 has arrived, and Nature has certainly done her part. It has been as nearly perfect a season for the fortunes of the great winter wheat crop as the vicissitudes of seasons can permit. The richest production has fallen to the lot of the very section which was hit hardest and which suffered longest by the corn shortage of 1913. The long blanket of heavy winter snows, which prepared the ground and helped along the summer rainfall for the early-planted wheat, has done the same service for the corn crop. If complaint is made that the quite unparalleled magnitude of the wheat harvest is forcing down the price, the answer is that records have been broken, not only in the total yield, but in the average yield per acre. This means that the wheat which an individual farmer has to sell has increased in an unusual ratio—not that his market for an ordinary supply from his own farm is taken away by other competing producers.

Undoubtedly, there is left the question whether, even so, the price of wheat will hold on a basis remunerative to the farmer throughout the season. That depends mainly on two things—his financial or physical facilities for selling his product gradually, so as not to overwhelm the market all at once, and the season's harvests in the foreign wheat-producting states, which will regulate European demand for our own great export surplus. The harvest is of such utterly abnormal magnitude that the first of these considerations is more perplexing than usual. The second must be largely left for later developments.

One of our greatest competitors in the world's wheat-consuming market—India—has run 44,000,000 bushels short of last year's production, which would leave her much the smallest yield in half a dozen years. Of Hungary, the fourth largest European wheat producer, the Liverpool and Vienna trade dispatches report the outlook as distinctly unfavorable. It seems already certain that Russia cannot possibly duplicate its great crop of last year, and meantime the reserve of old wheat in the world's storehouses and ocean grain fleets is 28,000,000 bushels under last July. All these are influences which will operate favorably towards finding a market for our own huge wheat crop.

But it is still too early to be sure what will happen to the rest of the foreign harvests. These shortages may yet be made up elsewhere; one is not apt to learn the full facts as to the international harvest until far on in the summer. Even in such years as 1897 and 1879, when our own bumper wheat crop came to market in a European famine season—with remarkable results on American commerce and finance—it was August before we really knew what had happened in the foreign grain-fields.

It is not, however, too early to direct attention to the manner in which the Western farmer greets the news of the record-breaking harvest, as contrasted with the attitude of the Southern planter when his bumper cotton crops of 1904 and 1911 began to move. No one has heard of Kansas farmers holding conventions to propose that somebody make a bonfire of his wheat. No conventions of wheat growers are being held, and no conclaves of United States Senators from the grain belt, to insist that Congress do something instantly to insure the maintenance, in a full-crop season, of the prices reached in a famine year.

"Hello, Agin"

Tommy Asks for A Square Deal

HE lives in New York's stuffy tenement district, the most congested spot in America.

No trees, no grass, not even a whiff of fresh air,—in the only world Tommy knows. Ash cans are his background, and the rattle and roar of traffic his environment.

Tommy's widowed mother is broken with worry; his sisters and brothers are as pallid and frail as he. The winter struggle has sapped their vitality.

They need to breathe something pure and fresh,—a taste of sunshine and outdoor freedom,—an outing in the country or at the seashore.

But between Tommy and his needs stands poverty, the result of misfortune. He must suffer just as if it were all his fault.

And this is why Tommy appeals for a square deal. Nor does he wish you to forget his mother, or his "pals" and their mothers,—all in the same plight.

SUGGESTIONS

A lawn sociable by your class, Sunday School or Club.

A card party at your summer hotel or camp.

A subscription among your friends.

This Association every summer sends thousands of "Tenement Tommies", mothers and babies to the country and to Sea Breeze, its fresh air home at Coney Island. A dollar bill, a five dollar check, or any amount you care to contribute, will help us to answer Tommy's appeal.

Send contributions to Robert Shaw Minturn, Treasurer, Room 200, 105 East 22nd Street, New York City.

ESSAYS IN EXPOSITION
Edited by BENJAMIN P. KURTZ, Ph.D., HERBERT E. CORY, Ph.D., FREDERIC T. BLANCHARD, and GEORGE R. MacMINN, of the University of California. Price $1.30.
This book comprises in one volume all the materials necessary for a precise, practical college course in exposition. The Introduction, of about fifty pages, takes the place of the usual rhetoric and is followed by over five hundred pages of selections from representative authors.
The Introduction, by reducing all the possible varieties of expository statement to a few types, supplies a method for the definite and thorough analysis of expository thought, to be applied in the student's own oral or written expression and in the analysis of essays. It contains also a brief, practical treatment of the simpler effects of style.
The authors represented in the selections which follow are John Stuart Mill (3 selections), Cardinal Newman (3 selections), Matthew Arnold (3 selections), Ruskin (3 selections), Spencer, Huxley, Fiske, Froude, Macaulay, Bagehot, Dowden, and John Addington Symonds.

NEW YORK, THURSDAY, JULY 23, 1914.

Summary of the News

Events have moved rapidly in Mexico. On July 15 Gen. Huerta announced his resignation of the Presidency in a remarkable and characteristic statement in which he challenged comparison of his own honor as a "gentleman" with that of the "Puritan" President of the United States and arraigned "the manifest and decided protection which a great Power of this continent has afforded to the rebels." Immediately after Huerta's abdication Dr. Carbajal, the recently appointed Foreign Minister, took the oath as Provisional President. Gen. Huerta, accompanied by Gen. Blanquet and other followers, left Mexico City for Puerto Mexico, and on Monday evening the ex-President, Gen. Blanquet, and their families sailed from that port for Kingston, Jamaica, on the German cruiser Dresden.

The first part of the Administration's Mexican policy, the elimination of Huerta, is thus accomplished. Dr. Carbajal has frankly recognized that his office is temporary and has stated that he holds it only for the purpose of maintaining order and until an agreement can be reached whereby the Government may be turned over to the Constitutionalists. It is in arranging the terms on which the transfer of authority shall take place that difficulties, in which the Government of the United States cannot avoid being concerned, are likely to be encountered. The Constitutionalists have so far displayed no disposition to grant an amnesty to political offenders, but on the contrary have expressed their intention of bringing to trial any of the leading followers of Gen. Huerta who may be suspected of having been concerned in the overthrow of Madero, and they have further announced that the financial obligations incurred by the Huerta régime will not be recognized. The possibilities of complications with foreign Powers, should these intentions be carried out, are obvious.

Secretary Bryan stated on Monday that the Administration would not approve or support claims arising out of any action by Huerta since October 10, 1913, the day on which he dissolved Congress and assumed dictatorial powers. Mr. Bryan also announced that he had received information from American agents at Monterey that Gen. Carranza would receive delegates sent to him by Provisional President Carbajal to arrange for the transfer of Government. It was stated on Tuesday that, on being notified that such a commission had been sent to effect the unconditional surrender of Mexico City, Gen. Carranza would issue an order suspending hostilities.

The French chargé d'affaires, M. Clausse, in the absence of the Ambassador, M. Jusserand, on Monday requested a personal interview with President Wilson for the purpose of laying before him the views of the French Government concerning the Mexican situation, and, in particular, concerning the killing of two French priests at Zacatecas.

Tentative suits for restitution against the former directors and directors' estates of the New York, New Haven & Hartford Railroad were filed last week by minority stockholders. The amount involved was said to be $306,000,000.

The conferences that have been held between Attorney-General McReynolds and a committee of the New Haven directors with a view to settling the questions at issue between the Government and the line have terminated unsuccessfully, and on Tuesday it was announced that the Attorney-General was ready to present to the President and the Cabinet his plans for filing the Government's civil suit to separate the New Haven from its subsidiaries.

There is a good prospect that the services of Mr. Paul M. Warburg may yet be obtained for the Federal Reserve Board. As a result of a conference with Senator O'Gorman, it was stated on Tuesday that Mr. Warburg had agreed to meet the members of the Senate Committee with a view to coming to an understanding and to giving them any reasonable information that they might desire. The opinion in Washington is said to be that Mr. Warburg's confirmation is assured.

Disturbances have continued in Hayti. Mr. Blanchard, the new United States Minister, reported to the State Department on Sunday that while the attempt to overthrow the Government in Port au Prince had been suppressed for the moment, it had been necessary to declare the city under martial law. On Monday an attack was made by the rebels on Cape Haytien, but was repulsed by the Government troops after a sharp fight. James M. Sullivan, American Minister to Santo Domingo, is on his way to Washington to report to the State Department.

The compulsory retirement from the navy, as a result of action by the "plucking board," of Capt. John Henry Gibbons, who was in command of the Utah at Vera Cruz, has come under investigation by the House Committee on Naval Affairs. A bill for the relief of Capt. Gibbons has been introduced, and if it is found, as a result of the Committee's investigations, that any captain has been allowed to remain on the active list whose record is not so good as that of Capt. Gibbons, it is probable that the bill will be reported to the House. The affair has led to severe criticism of the principle of the "plucking board," and there seems to be some prospect that this highly unsatisfactory method of facilitating promotion, and incidentally of working grievous injustice to efficient senior officers, may be superseded.

It is difficult as we write to say whether the Home Rule question has been complicated or simplified by recent developments. Discussion of the bill to amend the Home Rule bill, which was handed down from the House of Lords last week, and which was to have been brought before the House of Commons on Monday, was postponed by Mr. Asquith, who announced that King George, "in view of the grave political situation, has considered it right to summon a conference of the representatives of the political parties, both British and Irish, to discuss the outstanding points of the problem of Irish government." The conference, which met on Tuesday and adjourned till the following day, is presided over by the Speaker of the House of Commons, the Right Hon. James Lowther, and is attended by Mr. Asquith and Mr. Lloyd George, representing the Government; Mr. Bonar Law and Lord Lansdowne, representing the Opposition; Mr. Redmond and Mr. Dillon, representing Nationalist Ireland, and Sir Edward Carson and Capt. James Craig, representing the Ulster Unionists. The summoning of the conference has called forth criticism of the constitutionality of the King's action, an aspect of the matter on which we comment elsewhere.

The trial of Madame Caillaux, wife of Joseph Caillaux, Minister of Finance in the last Government, for the murder of Gaston Calmette, editor of *Figaro*, on March 16, was begun in Paris on Monday. Madame Caillaux's defence is that the shooting was accidental and unpremeditated.

President Poincaré, accompanied by the French Premier, M. Viviani, arrived at Kronstadt on Monday on his state visit to the Czar. After the visit to Russia is concluded M. Poincaré will return the recent visit to Paris of the King and Queen of Denmark.

The French budget, which had been bandied back and forth between the two houses, was finally adopted on July 15, after which Parliament adjourned. The principal cause of the difficulty between the two houses was the clause empowering the Ministry of Finance to collect arrears on payment of income tax if on the owner's death it should be discovered that fraudulent returns had been made. On the Senate refusing to accept this clause it was finally abandoned by the Chamber, with the understanding that it would be replaced later.

News from Albania has been scanty during the past week, but an interesting statement was printed in the London *Daily Telegraph* on Tuesday and cabled to the New York *Sun*, that an offer has been made by Rumania to pacify Albania if all the Powers invite her to do so and send small contingents to assist in the work.

A bill was submitted to the Russian Cabinet on Saturday to abolish some of the restrictions at present existing on emigration and of the penalties attaching to unauthorized emigration. In particular, the bill which is about to be introduced to the Duma is said to contemplate the abolition of the expensive passports which have hitherto been necessary and to substitute a permit in their place which will cost only 10 cents.

The deaths of the week include: Sir John Swinburne, Col. William W. Bennett, Fernand Desmoulin, July 15; Montgomery Schuyler, Rear-Admiral Henry B. Robeson, July 16; Brig.-Gen. Albert Lee Myer, Dr. Lemuel C. Grosvenor, July 17; Sir Christopher John Nixon, Samuel G. W. Benjamin, Rear-Admiral Francis M. Ramsay, July 19; James McCutcheon, July 20.

The Week

The compromises arranged at a White House conference on the Adamson General Dam bill point to the prompt passage of a measure meaning much to the development of water-power. Washington dispatches have outlined the points of debate: the difficulties of jurisdiction over water-power projects between the War and Interior Departments, and the contention of conservationists that one of the clauses in the bill leaves a dangerous loophole. They could not show how important the right settlement of these issues must be. The total development of stream-flow power in this country amounts to about 7,000,000 horsepower—a gain of one-third since 1908. The potential development is variously estimated at from 40,000,000 to 65,000,000, and should in large part be realized in the next few years. New York, with Niagara Falls, leads in horsepower, Pennsylvania in the number of developments; while Georgia has 1,600 developed projects, Alabama 1,300, and Massachusetts and Vermont are not far behind. Yet this is but the beginning. The question of jurisdiction should be easily settled. Congressman Smith has a bill for establishing a water-power commission, consisting of the Secretaries of War, Commerce, and Interior, to compose differences.

With the opening of the Panama Canal and the natural pressure of the older nations for new fields to develop, it is improbable that incompetent peoples will much longer be permitted to despoil a rich area which other peoples are competent and willing to make productive. Upon this natural law, together with its own vital interests, the American policy in Hayti and Santo Domingo is based, and there is absolutely no doubt of the final outcome.—[Washington Dispatch in New York Sun.

Thus is the true inwardness of our humanitarian solicitude about Hayti and Santo Domingo made plain, in an elaborate dispatch which doubtless reflects pretty accurately the sentiment of those who are behind the present movement. What the opening of the Panama Canal has to do with "the natural pressure of the older nations" to get hold of an island on the hither side of the canal, it would puzzle any one to say, were it not that this kind of nonsense-reason to justify robbery is so ancient that it has apparently acquired a sort of prescriptive right to pass current. Æsop did not invent the attitude of the wolf towards the lamb; he only crystallized for all time, in a simple and telling form, an experience which had even then been familiar for ages. But old as it is, this kind of false pretence is still found offensive by honest men; nor is their disgust with the obvious wolf-and-lambishness of the Panama Canal argument lessened by dragging in that other hoary humbug, "vital interests."

The strike threatened by the employees of various Western railways has been averted by a reconsideration of their refusal to accept the services of the Federal Board of Mediation. They explain that their refusal was based upon the idea that acceptance meant acceptance of the principle of arbitration, which, owing to bad faith on the part of railways in repudiating awards of arbitration, they would have none of. However this may be, they now welcome mediation, and the record of the Board in cases in which it has had a chance to try its persuasive powers is such as to give great hope of a real settlement of the matters in dispute. It must have been obvious to the more intelligent, at least, of the engineers themselves that this was hardly a time to choose for a strike. Neither the financial condition of the roads nor the sympathy of the public is favorable to such a move. The important question in the railway world is rather whether rates must not be raised to meet increased expenditures. And in any case, the rights and wrongs of the disagreement are sure to be more fairly ascertained by the Board of Mediation than by an industrial war.

In one feature of penal reform the London *Times* commends the leadership of the United States to the country that has in some things been a pioneer in that work. This is the matter of juvenile courts. "Very young children who break the law are not to be sent to prison—that is now axiomatic," it remarks; and it suggests that the greatest change which Howard would note if he were to come to life and visit England's modern prisons would be the absence of this class of law-breakers. But there still remains the separation of the children's court from the police court, "both in place and as to procedure." Upon this point, the *Times* concedes the superiority of the arrangements in "Chicago, Manhattan, and elsewhere in the United States." It is good to feel that we have led the way in some phases of penal reform, but nothing should blind us to the fact of our backwardness in other respects, as displayed in particular ugliness at Sing Sing.

Now that Charles Sumner Bird is out of the race for Governor of Massachusetts and Samuel W. McCall is in it, the Republicans may well pluck up hope of making an interesting contest, even for Gov. Walsh, whose renomination by the Democrats is assured. Real progressives will have no trouble in voting for Mr. McCall, and hence there will doubtless be a determined effort by the Republicans to turn the Progressive defection which may be confidently expected, with Mr. Bird's name off the ticket, into a rout. Mr. McCall shows tactical skill in his choice of fighting ground. Massachusetts is next only to Pennsylvania in devotion to high tariff schedules, although she has shown a disposition to wabble in this respect that will necessitate the use by the Republican candidate of something more closely resembling facts and reasonable inferences than is yet requisite in the bailiwick of Penrose. Then the former Congressman's fling at Government ownership of railways has a special sting: "I do not believe it wise that the commonwealth should own and operate a railroad within her own limits, and still less, if possible, do I believe that she should own and operate a railroad situated in other States." The reference to the Boston & Maine will be appreciated outside of Massachusetts. It must be admitted that if the Republicans try to "come back" under the leadership of such men as Mr. McCall, their chances will brighten wonderfully.

The outstanding thing in the figures on the cost of governing American cities, just published by the Census Bureau, is its enormous per capita increase. In 1902, in cities of over 30,000 inhabitants, per capita payments for expenses other than "public utilities" amounted to $13.02; in 1912 they totalled $17.34. Taken by years, only one of the decade—1909—failed to show an increase in per capita outlay; taken by items, courts, education, police and fire departments, and sanitation all showed a uniform rise in cost. An obvious remark is that cities increasingly undertake functions once performed privately, or not at all. It is also evident that the average size of our municipalities has greatly increased, and their wealth has increased much faster than their size. The more extended a city becomes, the greater the per capita cost of government, but the smaller the cost according to true wealth. A Minnesota Commission recently showed that the cost of governing the largest cities in that State was, per head, $16.65, and per $10,000 valuation, $107.20; of her second-class cities, per head, $12.01, and per $10,000 valuation, $127.10. The Census bears out one

part of this comparison, for cities of over 500,000 population cost $21.24 per head to govern; cities from 200,000 to 500,000, only $19.99. But no figures are given as to cost per true valuation, and only upon these, or comparisons of cities of the same class, can valid conclusions be based.

In many quarters of the Middle West the Progressive party is evidently on the ebb tide. And the chief cause is said to be the tariff. Western farming has suffered along with other occupations. Such importations as have occurred of agricultural products, especially corn, butter, eggs, cattle, and meats, have been "played up" for more than they are worth. Every adverse circumstance has been seized upon in working up general alarm over "Democratic free trade." As Western Republicans put it, the Democratic plan is "free trade—for the farmer." And the farmer has been educated and drilled in the protectionist faith. Add the fact that Western farmers never have taken to the theory of free raw materials. Nobody can be expected, when the production of raw materials is in his line of business, to appreciate its logic all at once. Of course, the effect on parties is easily seen. If the farmer's business seems to be placed in jeopardy by the tariff policy of the party in power, then he has no time to experiment with the amateur reformers of a new party. The shortest cut to get the terrible Democrats out is the road for him, and he is inclined to agree with the Old Guard orators that that road is the good old Republican turnpike. To this feeling the Progressive party's loss of ground in the West is probably owing in good part. Much less certain is it that, if the Republican Old Guard should enjoy an early return to power, a revival of high protectionism would be tolerated by these same farmers any more than by the manufacturers who are endeavoring to adjust business to lowered duties.

The retirement of Rear-Admiral Southerland, who owes his distinction of being the last Civil War veteran to leave the active list of the navy to the fact that he was a naval apprentice at thirteen, leaves Col. John L. Clem, of the Quartermaster Corps of the army, the sole Civil War survivor on active duty. He was a drummer boy at twelve, and still has a year of service before he retires with the rank of brigadier-general for Civil War service. All of this was to have been foreseen. What is surprising is the way in which the Spanish War veterans are leaving the active list. Of the approximately 1,900 officers of the navy's line, only 450 were wearing the uniform in April, 1898, and all of them hold the rank of lieutenant-commander or above. In the army only a hundred and odd of the captains were commissioned when the battle of Santiago was fought. None of the generals who achieved fame in Cuba remain, and only two, Gens. J. Bell and Frederick Funston, who became well known during the Filipino fighting of 1899-1901. As to Rear-Admiral Southerland, besides having a long and useful service to look back upon, his coming into the news at this time is particularly valuable when the President and Secretary Daniels have done so much to encourage warrant officers to aspire to the quarterdeck, and have just obtained legislation providing for the appointment to Annapolis yearly of a number of seamen providing they can pass the examinations.

Chicago, July 15.—Nine defendants accused of using the mails to defraud in connection with the Barr and Widen Mercantile Agency were found guilty to-day by a jury before Federal Judge Landis. The Government charged that more than $1,000,000 had been realized by the company through its methods.

We often wonder what the advocates of the notion that the State has no right to punish, and that the only justification for depriving a criminal of his liberty is the desire to reform him, think when they come across an item like this. Do they imagine that the general manager, the superintendent of agents, etc., of this concern—the nine precious specimens, in short, who were found guilty in this case—have not counterparts by the hundred who are saved from the many and varied temptations to get rich through fraud by the knowledge that to do so would mean to invite the danger of imprisonment? And if this is so, is it not the duty of the State to protect the community by adopting such measures as are calculated to prevent these crimes? What those measures should be is a question purely of judgment, based on experience and expediency. The minimum of harshness consistent with attainment of the object, the maximum of chance for the reformation and rehabilitation of the guilty, by all means; but to declare that the reformation is the only, or even the primary, object is simply to hug a delusion.

The value of automatic sprinklers is strikingly illustrated in the way in which they operated in the elevator of the Cleveland Grain Company, at the recent fire in that city, of which an accurate and highly instructive account is given in an illustrated report issued by the National Fire Protection Association. What happened to the grain elevator is stated as follows:

> This elevator was in the direct path of the fire, was equipped throughout with automatic sprinklers with automatic water supplies. The flames leaped three hundred feet and attacked the elevator at the top. A number of windows were open in the upper floors, through which the flames reached the sprinklers and operated them. The water required by the sprinklers to wet the interior down caused but a small property loss, and enabled the fire department to protect the exterior of the building from the river. The fact that the building was iron-cladded on the outside no doubt prevented the same from catching fire before the fire started in the interior.
>
> This elevator undoubtedly would have been destroyed had it not been for the sprinklers. It stood in the direct path of the fire and beyond it were located other valuable districts which were saved by its intervention.

The last point is of cardinal importance. It should never be forgotten that the whole community is deeply concerned in this safeguard against fire, and not only the persons whose property, or whose lives, are immediately affected. What happened in Cleveland was still more acutely manifested in the great Baltimore fire of 1904. In that case, one or two large factory buildings and stores that were equipped with automatic sprinklers checked the spread of the conflagration in certain directions, and there is no telling how much more extensive would have been its ravages had it not been for the provident policy that had been adopted by a few enlightened business firms.

Political as well as commercial interest attaches to the sailing north of the first steel power-barge that the Mississippi has known. One of a projected fleet, there is hope in New Orleans that it will justify the costly harbor and dock improvements that the city has begun. The *Item* takes local merchants to task because this vessel had to proceed to Natchez for freight. "Some of those business men who have been using strong language about the treatment accorded New Orleans by the railways, and the need for reviving the use of the river, might have joined in making it typically a New Orleans experiment." "Senator Burton," as the *Globe-Democrat* remarks, "has for several years been insisting that there is a channel of eight feet at all seasons . . . with six feet as a minimum, and that, as practically no use is made of this stage of water, he objects to further appropriations beyond the point of maintaining the channel already made." Since the barge draws six feet, the new line, if suc-

cessful, will furnish a practical test of the need for improvements in navigation. The boats cannot, as the steamboats of Mark Twain's day were said to do, run upon a heavy dew. But the main question will remain that of business support.

One device for beating an opponent to the finish-line—taking the wind out of his sails—is exemplified by the Massachusetts Committee on Social Welfare. Its record of service to the State and the Republican party now stretches over a year. A creation of the 1913 Legislature, after the Progressive rupture, it was designed to show that the most wickedly inert of political organizations was not asleep. No less than 150 distinct matters have been in its hands during the session just closed, and it has, in the words of the Springfield *Republican's* Boston correspondent, "done some things of importance." The Commission on the so-called white-slave trade reported to it. The problem of pensions for public employees was carefully studied, and a general retirement plan outlined, of which more will be heard. Extension of the law relative to local planning boards, to cover cities of less than 10,000 inhabitants, will mean much to small towns with the requisite money and energy. Study of further legislation on the probation system and dependent mothers' pension system resulted in the killing of pernicious measures—evidence that the committee is not ultra-radical—and in the substitution of better plans. In short, for the tool of an organization of bosses and reactionaries, the body displayed a wise activity that only the most carefully sustained hypocrisy can explain.

A novelist or playwright looking for a plot should turn his eyes to Hosmer, British Columbia, and turn them quickly. For a town that on one day believed itself to be one of the most thriving communities in its region read its doom the next day in a notice from the Canadian Pacific Railway that the mines, upon which rested all its hopes, would be closed and the place abandoned. While it has rallied to the extent of demanding from the railway and also from the Government statements of the condition of the company, justifying its decision, there is an ominous air of hopelessness about the demand. The Fernie *District Ledger* points out that the inhabitants of Hosmer were warranted in disregarding any rumors of its fate because of the action of the railway in recently adding new machinery and in painting offices and houses. The unexpectedness of the notice is shown by the fact that the fire department of the town had just completed the installation of an automatic fire alarm system. Mine workers who had spent their savings and borrowed money in order to buy homes are apparently to lose their all, along with persons who were prosperous hotel-keepers or owners of other property. All must now begin life over again.

President Wilson and the Underwood tariff have been playing the devil with British trade, too. The report of the Board of Trade for June shows that exports went off 7 per cent., the loss for the month, as compared with last year, being about $15,000,000. Moreover, the figures show a declining trade, both export and import, for the entire six months of the year. Despite the fact of which our stand-pat Republicans have "taken judicial knowledge," that English textiles have been flooding the American market, and that the only prosperity created by the new tariff was in the mills abroad, Lancashire reports a falling off in cotton-goods exports of 20 per cent., and the mills are to be shut down three weeks in order to prevent over-production. All this falls in with the reports of American bankers and business men returning from Europe, that the depression over there has been rather worse than in the United States. It all merely shows, of course, what a thorough job of it President Wilson made. While bringing his own country into distress, he impartially hit England and made Germany and France groan.

The conference on Ulster "commanded" by the King is rather amusingly interpreted in opposite fashions. All parties seem to be afraid of it as a scheme by which the other fellows will get the advantage. The Labor party is most explosive about the affair, partly, it may be, because it has no representative at Buckingham Palace. Naturally, the Irish Nationalists are suspicious. Sir Edward Carson and Bonar Law explain their acquiescence in the meeting as due to their excessive "loyalty"; they would never think of disregarding a "command" of the King. On the other hand, the radical Liberals fear that they are on the eve of a usurpation of royal power over Parliament. The Unionists, however, are saying that it is all simply one more skilful manœuvre by Asquith to gain time, to wear out the patience and exhaust the funds of the Ulstermen, and to get the Opposition into an awkward place. The question whether the step was taken on the King's own initiative seems to have been answered in the negative by Lord Crewe in the House of Lords. He declared that there had been no departure from Constitutional practice. This would mean that the King had acted on the advice of his Ministers. With so many conflicting views, it is possible that still another one may prove to be correct—namely, that both sides wish to find a way out of the deadlock, and that the King had been called in to furnish a device by which the thing can be done. If he should lay a royal command upon Ulster to assent to a compromise, it is hard to see how the men in the North of Ireland who have been pledging their undying devotion to the Crown could say King George nay.

A French correspondent, writing about Albania, remarks that Europe always has to have an *enfant terrible* on her hands, and that Albania is now simply playing the rôle. It had been previously taken by Bulgaria and by Greece. Morocco was for a time the uproarious and squalling child that nearly broke up the European nursery. Little by little, the business of the other irreverent and disturbing children has been settled, and Dame Europa would scarcely know what to do if Albania had not taken a turn at demanding attention. This view was expressed by the French writer before our short-lived Minister in Athens, Mr. George Fred Williams, had undertaken to do the necessary disciplining for the Powers. If the correspondent in question had known of Mr. Williams's antics, he would doubtless have made a different identification of the *enfant terrible*.

It may have been a bit embarrassing for Switzerland to have to make some reply to the letter presented by our Minister, inviting her to participate in the naval display in connection with the Panama Exposition, but worse things have happened. At the conclusion of the war with Spain, various cities arranged "peace jubilees." One of the most elaborate of these was planned for Chicago. Invitations were sent broadcast, and by an unlucky chance one was addressed to the Spanish Ambassador at Washington. Explanations and apologies were poured out, the fact being that the lists were made up by the wholesale, and nobody thought of the attitude of the representative of the country with which we had just been at war towards a celebration of our victories. The error had the appearance of being a studied insult. Yet in this case, as in the matter of supposing that Switzerland had a navy, we meant well enough. The only trouble was that we were stupid.

EXIT HUERTA.

On February 19, 1913, Gen. Victoriano Huerta telegraphed to President Taft: "I have overthrown this Government. The army is with me and from now on peace and prosperity will reign." That brute assertion of military despotism it has taken seventeen months to set in its final true light. In the interval many changes have come. Huerta himself has changed, or appeared to. He displayed more political skill than he was credited with. Drawing to himself able lawyers, he conducted his diplomatic correspondence with dignity and force. He was successful in identifying himself for a time with Mexican national pride. In seeking to maintain himself he showed great resource and some admirable personal qualities. But in the end even his proud and fatalistic spirit saw that his power was but as a rope of sand. His armies had suffered a series of crushing defeats. In his own country the forces of rebellion were proving to be too strong for him. But the chief cause of his downfall was perfectly clear to his own mind. He avows it in his parting attack upon President Wilson. The soldier had been pitted against a scholar. Arms yielded to ideals.

This is really the deep significance of Wilson's triumph. He early laid down a Mexican policy based on sheer idealism—fantastic idealism, it was sneeringly called. Its essence was that he would not recognize a Mexican Government based on usurpation and murder. For this there is no warrant in international law, it was said, and there is not. Precedent was against it, so it was charged, and the charge was true. Nevertheless, the idealist clung to his position through good report and through ill. His appeals to Huerta were brusquely rejected by that chieftain. But the scholar-President did not waver. Reporting to Congress Huerta's refusal, and the flat failure of the mission of John Lind, he calmly left the whole issue to time and the slow grinding of the mills of the gods, asserting that "the steady pressure of moral force" would break down the barriers of pride and prejudice, and that "we shall triumph as Mexico's friends sooner than we could as her enemies—and how much more handsomely, with how much higher and finer satisfactions of conscience and of honor!" This day is that saying fulfilled in the ears of his countrymen.

Nothing succeeds like success, even when it is an idealistic success. Pin-pricking attacks may be made upon Wilson's Mexican policy, but the public sees the large fact, and will not long listen to men who say that it had no business to come about in that way. The country will speedily admit, what the outside world has already admitted, that Wilson's Mexican policy, boldly conceived, steadily maintained, and supported with patience and resourcefulness—the one great objective being always the retirement of Gen. Huerta—has marched to an astonishing success.

This is not saying that the President's Mexican troubles are over. His mind must already be looking forward to the enormous difficulties yet to be wrestled with. The first steps following Huerta's withdrawal promise to be comparatively simple. It is taken for granted on all hands that full power will soon be turned over to Carranza and the Constitutionalist troops. The man chosen to succeed Huerta temporarily, Señor Carbajal, appears to be acting in full consciousness that he is only a transfer agent. It can be but a short time before Mexico City passes under the control of the revolutionist army, and the government of the whole country is taken over by the victorious Constitutionalists. Then will come the grave questions of amnesty, of guarantees to foreigners, of the organization of a claims tribunal, of preparations for an orderly election of President and Congress. In all these matters, the Wilson Administration cannot but feel the most active concern. It is a continuous obligation in Mexico which the President has assumed—an obligation partly international in its character—and the ways and means of seeking to execute it, delicately but with effect, will need to be carefully thought out. The country, however, will little heed these things at present. It will be inclined to believe that the smaller matters go with the greater; and that a President who, without a war, has succeeded in enforcing his original demand on Huerta, can be trusted to deal successfully with the various sequels as they arise.

About the political effects of the President's triumph there will be eager speculation. Will the Colonel leave off talking about Wilson's foreign policy as a "wretched" mixture of imbecility and nervelessness? Will the prestige of the Democratic party, as well as that of Mr. Wilson, be heightened? No man can say. It is so easy *not* to prophesy. But this can be said confidently, that the Mexican success is so clear a proof of the President's tenacity and relentless will power, and also, if you please, of his luck in getting what he goes after, that schemers within his own party, along with political opponents generally, will see that he is not a man to be whistled down the wind.

AGAIN THE BIG POLICEMAN.

With the Mexican strain greatly relieved, the Washington Administration is confronted with troubles in Nicaragua, in Hayti, and in Santo Domingo. These are not of its own seeking. Like the problem of Mexico, they came to it as an inheritance from its predecessors. But it is one thing to inherit difficulties due to blunders, and quite another to persist in dealing with them in the old blundering spirit. Take the case of Nicaragua. How many Americans are aware that the existing Government is propped by American bayonets? Yet a competent and credible witness, when asked last week by the Senate Foreign Relations Committee how long the present Diaz régime would last in Nicaragua, in case the American marines were withdrawn, replied: "Just long enough to catch the last car of the first train out of the capital."

This is a state of affairs of which nearly everybody in this country was entirely in ignorance. A few people remembered dimly that President Taft used our military forces to put down a so-called Liberal revolutionary movement in Nicaragua. They also recalled that a treaty, involving an American protectorate, was negotiated with the puppet Nicaraguan Government. But it was not ratified by our Senate, despite the urgings of Secretary Knox and President Taft. So the matter dropped out of sight and out of mind, for the great majority of Americans, until suddenly it was revived by Secretary Bryan's renewal of substantially the same treaty. Then the press and public began to wake up to the fact that the country was about to assume delicate and indefinite responsibilities in Nicaragua, all based upon a treaty with a Nicaraguan Government sustained by our arms alone. Vigorous protests have come from Salvador and Costa Rica, which republics feel that their rights are disregarded or imperilled by the treaty, but the Senate is asked to go ahead and commit the country to a leap in the dark.

The whole is in the idea of which Mr. Roosevelt was so enamoured when he was President—the idea, namely, that the United States should act as the Big Policeman of this hemisphere. In a letter to Sir Harry Johnston, of which Mr. Roosevelt but partially denied the authenticity when it was indiscreetly published, he went much further than he ever did in a public utterance. He said that if he could have his way, this Government would promptly take hold of every weak and "chaotic" country

in Central and South America, clean it up, and make it orderly and stable. Public opinion in the United States, however, he admitted to be too dull and laggard to make such a policy feasible just yet. A satisfactory beginning was made, nevertheless, in Santo Domingo; and to what was done in that republic, under the treaty of 1907, Mr. Roosevelt has frequently pointed with great pride, evidently thinking it an example which we should follow in other places.

The United States as Big Policeman was to make an end of "chaos" in Santo Domingo. The word occurs again and again in President Roosevelt's messages and speeches relating to the Dominican treaty. And it was his positive assertion that the plan adopted would certainly prevent revolutions in Santo Domingo. He had a neat little logical demonstration of it. All Dominican revolutions were struggles to get possession of the custom-houses. But with these in charge of honest and efficient American collectors, revolutionists would have no *point d'appui*, and consequently revolutions would cease to exist. But the hard facts have no pity for Presidential logic. Santo Domingo is to-day as chaotic as if the chaos-preventing treaty had never been heard of, and American war vessels and marines are on their way to guard our interests in the island. Mr. Roosevelt may say that this unhappy result is due to the ineptitude, or worse, of the American Minister whom President Wilson sent to Santo Domingo, and has now virtually recalled. That this is a partial explanation of the trouble, we do not deny; but it is really the whole Dominican treaty arrangement which has broken down.

The whole question, as it presents itself to President Wilson, is confessedly one of great difficulty. He cannot entirely brush aside past commitments. The treaty with Santo Domingo is still in force, and we are bound to try to make it work. It is said that various unspecified foreign nations are bringing alleged "pressure" to bear upon our Government, in order to lead it to take a firm stand with Hayti, for example. This is a very ancient and tattered bogey. Appeals to Americans to rush into Spanish-American complications, lest, if we don't do it, Europeans may, are nearly a hundred years old. Whatever policy the Administration decides upon should be shaped in very small degree by this kind of argument. If it is an American question at all, it should be dealt with in the American spirit and in accordance with American ideals.

Only one of these need be mentioned for present purposes. It is the one which President Wilson has, in effect, been guided by in his general attitude towards Mexico, and which has, at all events, been written into the Mexican peace agreement. This is, in a word, that the republics are to settle their own affairs. We speak glibly of their "chronic" state of revolution, overlooking the fact that they have often, when left to themselves, enjoyed long periods of tranquillity. Americans do not like their ways, but we must not forget that they do not like ours. In all our short and easy methods of prescribing for them, it is of the first importance to bear in mind that, as Cromwell warned, we may be mistaken. It is, in any case, a prime duty of the Wilson Administration not to act in this threatened embroilment so as to give real point to the protest of prominent Dominicans, when Roosevelt swung the Big Policeman's club at them, that "the United States has taken advantage of the ignorance of some of the members of the Dominican Cabinet and of the treachery of others to prepare a treaty nominally for the purpose of aiding the republic, while in reality it in no way favors Santo Domingo, is in every respect beneficial to the United States, and is a mask to the sinister designs of the American Administration upon the national integrity of the Dominican Republic."

THE CASE AGAINST MR. JONES.

A great deal of mystery—unnecessary mystery—has been made of the opposition to Thomas D. Jones, of Chicago, President Wilson's "personal" choice as a member of the Federal Reserve Board. Stories were afloat in Washington of the awful nature of the facts brought out at the examination of Mr. Jones by the Senate Banking Committee. The impression was somehow given—or sought to be given—that he was a kind of unnatural monster of monopoly and money-greed. In view of all this, it was highly desirable that the Senate Committee should remove the seal of secrecy from the Jones hearing. He himself requested that this be done; and the document is now available. We no longer need to depend upon "leaks" from the committee-room and the guesses of correspondents. Here is the entire record of question and answer, which every person interested may read for himself to discover what manner of man Mr. Jones is.

What, then, is the case against him? It is stated, with vehemence and exaggeration, by Senator Reed, of Missouri; with greater moderation, by Senator Weeks, of Massachusetts. Both boil down the charge to a single item: the fact that Mr. Jones has been and is a director of the Harvester Company. There was, at first, another ground of complaint. Mr. Jones, through a Wisconsin zinc company, acquired an interest in the New Jersey Zinc Company. This concern has, two or three times within the past ten years, paid dividends of 40 and 50 per cent. That was naturally horrifying to certain Senators. But Mr. Jones's explanation, first of the way in which he had saved the Wisconsin enterprise from bankruptcy, and then of the high profits of the New Jersey business as dependent upon owning the only mine of the kind in the world, though it may soon be exhausted and the big dividends disappear, was so convincing that all this matter has been tacitly dropped by his opponents. They now confine their attack to Mr. Jones's connection with the Harvester Company. That company is being sued by the Government as a combination in restraint of trade; and Senator Weeks puts the objection to Mr. Jones, temperately but with much seeming force, when he says that it would be highly unfortunate if a member of the Federal Reserve Board should be a director of a company which the Supreme Court were to decide to be in violation of the law.

Few could dissent, if that were the whole of it. But it is not. An attentive reading of Mr. Jones's examination will show in how different a light his case may fairly be looked at. The Government suit against the Harvester Company is based mainly on the charge that its very organization was criminal. The assertion is that it destroyed competition by combining competing companies. Now, the Harvester Company was organized in 1901 or 1902. Mr. Jones did not become a director till 1909. Plainly, he could have had nothing to do with its organization, asserted to be illegal. As for its acts and contracts since the time he became a director, he affirms that none of them have been in conflict with the law, or have even been charged with being so. Senator Reed plaintively asked him why he had not, during his directorship, labored with his associates to induce them to alter the organization of the company so as to make it conform to the Anti-Trust law. To this Mr. Jones's answer was admirably simple. He did not believe, in the first place, that the organization was obnoxious to the statute. That was for the courts to decide. If they held that it was an illegal combination, then there would be nothing to do but submit to the judicial decree and break up the combination. Reasonable men could hardly ask a reasonable man to go further at present.

On one point the Senate investigators displayed particular curiosity. Mr. Jones must have made a lot of money out of the Harvester Company, and they were determined to find out. They did. Mr. Jones owns $100 worth of stock. He got the usual fees for attending directors' meetings. That was all. But this was staggering to the pure mind of Senator Reed. He said:

I am a little at a loss, Mr. Jones, to understand—I am asking this question with the greatest respect, in order to try to get at the facts—how it came about that a man of your standing and property, as I understand, was willing to devote his labor to this enterprise, in which you had no real interest—financial interest.

In answer, Mr. Jones told a plain tale. He had long been a friend of the McCormicks, and they asked him to fill a vacancy on the directorate. "They were good enough to say that they thought possibly my judgment and experience might be of help to them." Ah, suspected Senator Hitchcock, then Mr. Jones was put on the board "as a concession to Mr. McCormick"! Not the slightest reason to think so, asserted Mr. Jones. "But you had been in business enterprises with Mr. McCormick?" "No." "In no other way?" "In no other way whatever, sir."

It is not necessary further to sample the Senate hearing. It betrayed a violent initial animus against Mr. Jones, which beat in vain upon his cool imperturbability and straightforwardness. The essential facts in the charges against him are as we have stated. Let every man form his own judgment of the nature of the attack upon him. Our own opinion is that, so far as this official report shows, it was prejudiced and unwarranted.

THE OBSESSION OF MONOPOLY.

Whatever other elements went into the making of that distressing chapter in American railway history which is reviewed in the Interstate Commerce Commission's report on the New Haven road, it cannot be understood without reference to the state of mind that underlay the policies which have suffered such disastrous shipwreck. Turn where one will in the talk of the men identified with those policies, one finds evidence of that kind of domination of their mental processes by a single overshadowing idea which is designated by the term *obsession.* This idea is that of the supreme virtue of monopoly, as a source of economic accomplishment; and, as a corollary to this, the certainty that anything that stands in the way of monopoly is a pitiful survival, doomed of necessity to speedy extinction. Nor will it do to forget that this state of mind, which to-day has so far disappeared that it must itself be regarded as hardly more than a survival, was not a thing peculiar to this particular group of men, but was so prevalent not many years ago in the business world that any one who did not fall in with it was regarded as hopelessly behind the times.

In *Everybody's Magazine* for July there is an article by Mr. Garret Garrett setting forth Mr. Mellen's views of the various aspects of the New Haven policy with which his name is identified. The article is entitled "An Interview," being based on a series of conversations had with him by the writer for the purpose. And this is Mr. Mellen's view of the true inwardness of the situation of things in New England:

If he were to predict the next great crisis in this country he should say it would be a severing of political relations along economic lines, and that New England would be the first of the great divisions to secede. It seemed to him to be not only desirable, but absolutely necessary to the preservation of New England's ancient supremacy, that there should be a transportation monopoly able at every point of contact with the world outside to say: "We will give you this business for that business, this freight for that freight," and dictate the terms of exchange. Otherwise the rest of the country, being so much stronger than any one of a number of independent railroads in New England, would be always taking more than it gave, and New England's economic importance would decline.

Can anything but obsession account for such an absurdity as this? It is not necessary to suppose that Mr. Mellen held the deliberate opinion that New England is being driven to the verge of secession for want of a transportation monopoly independent of the rest of the country; that such an idea should be entertained by him, and thought worthy of communicating to an interviewing journalist, is quite remarkable enough.

The chief earmark of an obsession is the loss of the sense of proportion; and the absence of this sense, so grotesque in what we have just been quoting, is hardly less conspicuous in Mr. Mellen's explanation of the practical policies which brought the New Haven to its present pass. Take this statement about the acquisition of the trolley systems, which were bought at extravagant prices:

I was trying to secure control of the trolleys contiguous to the lines of the New Haven, because I had the theory and belief that, first, all railroads were going, sooner or later, especially in congested communities, to be operated by electricity. Then there was a great economy in the erection of large units in the way of power houses, to furnish the electricity for both systems of transportation. When I say both systems of transportation, I mean those now conducted by electricity and those now conducted by steam.

Now, no doubt a "great economy" *can* be effected through "the erection of large units"; but the question is, how much? Will the economy be great enough to cover a vastly excessive price paid for the properties absorbed? And at what distance of time is that economy likely to be realized? How about the interest on the money expended for the purpose, during all the years intervening between the purchase and that time, "sooner or later," when the "large units" are actually going to be set up and put to use, "to furnish the electricity for both systems of transportation"? These are plain, hard matters of fact which a sound business man, not under the influence of an obsession as to the boundless efficacy of bigness or of monopoly, would carefully reckon with before deciding upon a course of action. But that was evidently not the case with Mr. Mellen; and it was not the case with men bigger than Mellen, in the halcyon days when it was the fashion to believe that any consolidation was bound to be a howling success if only it was sufficiently gigantic.

How far the country has recovered from that state of mind may, we think, in a measure be seen from the odd sound, the evident lack of effectiveness, of Mr. Roosevelt's talk on the Trust question in his recent speech at Pittsburgh. His arraignment of the Democratic policy in regard to Trusts as an attempt to revive the business methods of 1850, or even of 1650—such was his language—was the kind of thing which a dozen years ago would have awakened a hearty response in many quarters; now it falls utterly flat. We all know, to be sure, that Big Business has come to stay; nobody thinks of going back to 1650, or even to 1850. But we also know that the benefits of bigness have their limits; that though economies can be effected by consolidation, it remains a question how great these are and whether they are not offset by evils more important than the gains. A dozen years ago, the dogma that the universal empire of consolidation and monopoly is written in the stars, and that any attempt to impede its triumph is childish folly, was widely acclaimed as an established truth. In reality, it was a swaggering assumption; and, whatever the future may bring forth, it is for the present in a state of pretty complete eclipse.

THE "PLUCKING BOARD" IN NEW LIGHT

No one, we believe, can read the testimony of Rear-Admiral Knight before a part of the House Naval Committee last week without feeling certain that the end of the "plucking board" is in sight. Heretofore, it has been an unwritten law that, though the heavens might fall, no officer who served on the board could ever discuss the reasons for a given action. But Congressional authority is supreme, and last Thursday we got a glimpse behind the scenes. Questioned about the forcible retirement of Capt. Gibbons, Rear-Admiral Knight, if the dispatches are to be trusted, showed some animus towards that officer, asserting that he had contributed nothing to the advancement of naval science, had been at sea only three years out of the last thirteen, and that a good deal of this was on the official junketing boat, the Dolphin. He even went so far as to say that Capt. Gibbons could not be rated an efficient officer.

Two of these charges are really indictments of the Navy Department. If Capt. Gibbons was not an efficient officer, what was the Department thinking about in entrusting to him the Utah, one of the newest and best of our Dreadnoughts? If he was without adequate sea service, whose fault was it? We can hardly believe that Rear-Admiral Knight, over whose own promotion there was a hitch and considerable delay, would insinuate that Capt. Gibbons should have written orders sending himself to sea. Capt. Gibbons applied for sea duty before his term as superintendent of the Naval Academy had expired, and it was the Department that sent him to sea, as it was the Department that sent him to Annapolis and London and to the Dolphin. In another, even worse, case, that of Capt. Templin M. Potts, plucked a year ago when the senior captain because he had not had sufficient sea service, the responsibility of the Navy Department was even clearer. Yet two successive plucking boards have apparently assumed that going to sea was optional with an officer. If that is so, there is favoritism, or worse, in the Navy Department that cries out for immediate investigation. As for the indictment that Capt. Gibbons had added nothing to naval science, written no textbooks, and invented no new ordnance or navigation devices, that would be legitimate, if it were clearly understood that this is a necessary requirement.

It would seem to be demonstrated, what was urged when the law was passed in 1899, that the responsibility of wrecking the careers of navy officers is too great to be placed in the hands of any of their fellows, even though an oath be required that each member of the board will "without prejudice or partiality, and having in view solely the special fitness of officers and the efficiency of the naval service, perform the duties imposed upon him" by the act of 1899. At least, it is now universally accepted in and out of Congress that substantial injustice has been done to at least four officers—Capts. Gibbons, Potts, and Rust, and Commodore Veeder. Bills to restore three of these have already passed committees of Congress.

Plainly, the prestige of the "plucking board" is shattered, and the unrest in the navy and the universal criticism of the press, in which Secretary Daniels frankly concurs, make it evident that some new machinery must be devised. The whole plan of retiring competent officers because they are a little less valuable than some one else is receiving condemnation, as it was bound to. Congressman Britten, of Illinois, has pointed out that the fifteen officers retired this year by the "plucking board" will draw $53,753 a year in retired pay when "at the zenith of their mental and physical powers and capable of giving most efficient and intelligent duty"—this "for passing their time in idleness." But if it is easy to find fault with the "plucking board" and to point out that we have established a new class of pensioners—men physically and mentally competent and highly trained in the Government service—it is not so easy to recommend substitutes for the board or the system. The board might be strengthened by adding to it some civilians, high judges perhaps, who would in no wise be influenced by antipathies or prejudices of the service, and who, it might be hoped, would not be wholly swayed by the professional opinions of their naval associates on the board.

The only other constructive suggestion of value yet advanced is the establishment of an active reserve list to which men might be transferred instead of to the retired list. This would take officers out of the regular line of promotion on the active list, yet permit certain promotions on the reserve list, while their services could be had on shore duty, as naval attachés and on other detached service. There would be thus less of a stigma, if any, attached to their retirement. Moreover, they could serve in professional branches of the Government, if Congress so willed, perhaps at a considerable saving in salaries. For instance, they could be used to officer the revenue cutter service, doing away with the necessity of a separate corps of officers. The fundamental difficulty is that officers will not die or become physically disabled, or retire of their own wish, as rapidly as is deemed necessary, in order to promote the youngsters to command rank at a comparatively early age. It is forgotten that Farragut, our greatest naval commander, did his notable work at the age of sixty-one, after a lifetime spent as a lieutenant.

LOSING OUR SCORN FOR "ABROAD."

Chicago has just sent abroad what is said to be the largest group of municipal officials that ever went from any city in America to study conditions in Europe. Some thirty men and women are in the party, which is officially styled the Chicago Railway Terminal Commission and Associates. The same city dispatched as large a delegation abroad prior to the Columbian Exposition, but the purposes of the two bodies are as opposite as the poles. Twenty years ago Chicago was inviting the world to come and see what a youthful city could do when it tried; now what is sought is instruction how to extricate the city from a tangle over various matters of first-rate importance. Plainly, we are moving away from the attitude that no Old World idea need apply for employment here.

That New York should offer Great Britain or Germany the flattery of imitation is only what the rest of the country expects of a city that it affects to despise as more than half foreign, in its ideals as well as in its population. "The standards of street cleaning and refuse removal here are materially below those that have long prevailed in many European cities," wrote William A. Marble, president of the Merchants' Association, to Commissioner Fetherston the other day. But when Ottumwa, Ia., begins to display ambitions about a civic centre; when Great Falls, Mont., looks round for a method of keeping lanes and alleys clean better than the annual "clean-up day," then the triumph of the Old World seems at hand. The surrender of Chicago has not taken place all at once. But the end might have been foreseen a few years ago when she so far unbent as to send one of her best-known citizens to the Continent to study vocational education. He was commissioned by a private body, but from that the step to the present has not been long. "We are coming over to ask you to help us," is the new Macedonian cry.

It is not hard to understand why we have been slow to look with favor upon European ways. Our national existence began as a protest against one of the most conspicuous of those ways, and in later time we have had our flatterers from the Old World to confirm us in our provincialism. When a foreign journalist of the prominence of the late W. T. Stead aroused world-wide comment with his book on "The Americanization of the World," was it any wonder that we were inclined afresh to regard Europe as anything but a model? Indeed, it is possible even now to save our pride with the reflection that it is only as we have approximated European conditions that Europe has been able to give us any useful advice. If we have scorned her political arrangements, not always intelligently, she has returned the feeling with interest. But as our cities have developed into congested centres, we have, somewhat to our surprise, found ourselves facing a situation that we had thought of as belonging peculiarly to the Old World. The repellent pictures that the university-extension lecturer threw on the screen season after season to show the housing problem of London or Birmingham came to have a too familiar look, and so, in the end, we have brought ourselves to the point of inquiring how such problems have been met in places that were wrestling with them long before we were aware of our drift in the same direction.

This new attitude towards the Old World means definite gains of various kinds for our civilization. Nevertheless, it is not only patriotism that suggests the possibility of overdoing our new admiration. To adopt wholesale and blindly will be as bad as not to adopt at all. Even foreign experts are already warning us not to lose our heads in our enthusiasm over our discovery of an up-to-date Europe. In a recent number of *Landscape Architecture*, Dr. Werner Hegemann, one of the leading city-planning experts in Germany, pointed out certain defects in some of the European city-planning that is apt to be indiscriminately praised by visitors. The "city beautiful" is not the entire aim of the well-balanced city-planner, although it sufficed for Napoleon III, whose one idea was to arouse the admiration of visitors from the provinces and other countries. Practical ends cannot be ignored, only they must be reached on broader lines than we have hitherto followed. But the great gain in our present attitude is unmistakable: the Chicago Commission is certain of a sympathetic hearing for its report on what it has seen and learned.

DIVINATION IN POLITICS—AN OPPORTUNITY FOR A ZADKIEL—PREDICTIONS THAT HAVE COME TRUE, AND OTHERS.

LONDON, July 10.

There is a fine opportunity just now for a political Zadkiel. Any man who can "look into the seeds of time and say which grain will grow and which will not" has a rare chance of proving his skill. What will be the result of the next general election? How will the Irish crisis end?

British general elections have upset a good many confident predictions. A conspicuous instance was that of 1880, when Gladstone brought the Liberals into power by a majority of 120 seats. Abraham Hayward tells how a young nobleman, only six weeks before the polling, said to him: "You talk of Liberals—where are they? I meet with none." In striking contrast was W. T. Stead's forecast, so notably verified, that the 1906 election would give the Liberals a majority of more than 100 over Unionists and Home Rulers combined.

The dissensions in Ireland recall the general disbelief in the possibility of peace in Canada when Lord Durham presented his report in 1839. Hayward once more is our authority. In a contemporary letter he declares that Lord Durham's project of a legislative union is "about as feasible as a plan to govern all Europe by a parliament sitting at Paris." "The French Canadians," he continues, "would not be a bit more satisfied at being governed by an English majority than by an English Governor, and the whole would end (as in the case of Holland and Belgium—an exactly parallel case) in a split."

The course of the "world movement" is full of traps for cocksure prophets. Sir Robertson Nicoll has recorded a talk he had some years ago with Frederick Greenwood, one of the most acute of English journalists. Greenwood expounded at length his views on the inevitable dominance of Asia by Russia. His argument seemed as cogent and irresistible as Euclid. During the whole evening Japan was not so much as mentioned. A similar conclusion to Greenwood's may be found set forth in a book entitled "The Russian Advance," published in 1903 by a young Senator from Indiana. We can all remember the incredulity with which Prof. C. H. Pearson's warning of a "yellow peril" was first received. In 1875, many years before the publication of Pearson's book, another professor, Sir Lyon Playfair, better known as a chemist than as a politician, expressed the opinion that China was by no means "a nation in the last stage of decrepitude, but one which may yet become among the most powerful of Eastern people, and may even now astonish us by burying antiquity and walking among the nations of the present."

The history of the development of Australia, like that of America, is strewn with exploded predictions. Darwin foretold that, owing to the cost of land transport, Australia would soon cease to find any profit in the production of wool. The richest part of Australia to-day—including the orchard lands of Victoria and the wheat lands of South Australia, to say nothing of the goldfields and silver mines—lies within a territory which Oxley, one of the most capable explorers, pronounced to be forever "uninhabitable and useless for all the purposes of civilized man." On the other hand, Sir Roderick Murchison predicted in 1844 the discovery of gold in Australia. The descriptions that had reached him of the rocks of that continent reminded him of the character of the gold-bearing districts in the Ural Mountains.

Now that every one is discussing the probable effect of the Panama Canal, it is worth while to recall what De Lesseps forecasted in 1855 as likely to follow the cutting of a canal at Suez: "Egypt, acquiring a greater value as a country of production, of internal trade, and of general transit, will lose its perilous importance as an uncertain or contested route of communication. The possession of its territory, no longer being of any interest to England, will cease to be a possible cause of contention between her and France, the union of the two countries will become henceforward unalterable, and the world be saved from the calamities which would attend a rupture between them." "The possession of its territory, no longer being of any interest to England," is, indeed, a master-stroke.

Wars and rumors of wars afford abundant opportunity for lucky and unlucky shots, metaphorically as well as literally. When Gen. Simpson entered Sevastopol in 1855, he was accompanied by the Duke of Newcastle, who had just sent home an adverse memorandum on the whole conduct of the war, pronouncing the General incapable, and the capture of the fortress next to impossible. The outbreak of the Indian Mutiny came like a sudden thunderclap upon the British public, but Sir Thomas Munro had foretold that, when nothing else was left for England to conquer in India, she would have to conquer her native army. The biography of Lord Granville shows that, when the Mutiny had already broken out, Sir Charles Napier never saw the need of more English troops or thought it expedient to remove the magazine from Delhi.

Lord Granville himself, when he became Foreign Secretary in July, 1870, was told by the Permanent Under Secretary that never during his long experience had he known so great a lull in foreign affairs, and that he was not aware of any pressing question that the Foreign Office would have to deal with. The following week was spent by Lord Granville mainly in abortive attempts to prevent war between France and Germany. Nearly thirty years later the outbreak and course of the Boer War provided many glaring examples of equal miscalculation, from Mr. Balfour's statement that he no more dreamed of the possibility of having to fight the Orange Free State as well as the Transvaal than he did of the possibility of war with Switzerland to the general belief in London that Gen. Buller would eat his Christmas dinner of 1899 in Pretoria. The one man in official position who had eyes in his head was Sir William Butler, then in command of the British forces in South Africa. He foresaw something of what the war would involve, and was so sharply reprimanded for the frankness of his warning that he was practically compelled to resign his post. About the same time John Morley made the right answer to the sneer that his predictions of grave disaster were those of a Cassandra. "Cassandra's prophecies," he replied, "happened to come true."

That conflict not only justified the foresight of the little group of so-called "pro-Boers" against the prevailing optimism, but was the occasion of a remarkably acute prediction by a French observer. Early in the war he visited Birmingham and was convinced by what

he learned there that Joseph Chamberlain and his followers would presently be driven to a protectionist policy. The "tariff reform" movement of 1903, which came as an utter surprise to English politicians, was thus predicted by Victor Bérard's "L'Angleterre et l'Impérialisme," published in 1900.

It was the failure of forecasts of individual careers that especially impressed Tacitus with the "ludibria rerum mortalium." If he had lived in modern times he would have had no need to revise his philosophy. One remembers how in 1839, on the publication of his first book, Gladstone was described by Macaulay as "the rising hope of stern and unbending Tories," and how in 1845 he was declared —by Disraeli, of all men!—to have destroyed his career by his resignation over the Maynooth grant. So, too, Campbell-Bannerman's outspoken denunciation of the concentration camps in the Transvaal was believed by many to have put the highest office in the state forever out of his reach. There were those, also, who during this period thought it a great pity that a young man of ability, like David Lloyd George, should have irretrievably ruined his political prospects by siding with the opponents of a popular war.

Thirteen years ago one of the ablest journalists in London fixed upon Winston Churchill as likely to be "Lord Curzon's most formidable rival" for the Conservative leadership, "when the Duke of Devonshire and Mr. Balfour lay down the sceptre they will in turn have received from Lord Salisbury." On the other hand, there is a brilliant instance of correct anticipation to be put down to the credit of Goldwin Smith. "The Irish blood," he wrote in 1861, "has given a hero, and it may give a ruler, to France in the person of MacMahon." It has truly been said that, if this prediction had been made in the Middle Ages, Goldwin Smith would have taken rank either as a saint or as a sorcerer.

During his thirty-six years' editorship of the *Times*, Delane owed much of his success to the accuracy of his intuitions. He foresaw the early stages of the Crimean War, and had his correspondents placed at the right points. In 1852 he wrote of Louis Napoleon: "He is now realizing the Irish conceit—he is feeding the ugly dog which might be dangerous with joints of its own tail in the shape of costly but unproductive public works. When the work is finished or the money runs short, he must either make war or follow Louis Philippe." A biographer has said of Delane that "he could distinguish between the relevant and the irrelevant in the calculation of probabilities as well as in the conduct of an argument." One of his principal leader-writers, James Macdonnell, had a no less remarkable knack of knowing what turn events were likely to take. "Again and again," we are told, "he would say that he must go to the London Library and pick out a number of books in French and English bearing on such and such a subject. These volumes would be his reading for several weeks, voluminous notes being taken; and then most surely their theme would appear in the public mind, finding him ready with a vast store of digested knowledge."

As a rule, however, it is not until their memoirs are published that the foresight of such men as Delane and Macdonnell is recognized. For the men who are shrewd enough to know what is coming are generally shrewd enough also to avoid giving hostages to fortune by making their predictions public before the event. H. W. H.

THE NEGLECTED TOMBS OF THE PANTHEON—VICTOR MARGUERITTE'S ADDRESS ON THE CENTENARY OF VICTOR HUGO'S DEATH.

PARIS, July 12.

On the occasion of the centenary of Victor Hugo's death, the perennial question of the Panthéon in Paris was brought up by Victor Margueritte, the novelist. He spoke in the nave, where the pulpit had been when the domed building was a church. For it was finally and for ever "disaffected" from religion when the Republic gave Victor Hugo's body burial there in 1885.

Who would think as he contemplated this deserted temple, in its cold robe of frescoes, that the inscription of 1791 shines on its front—"To her great men, the grateful country"? In vain our eyes look for their heroic throng, for that people of statues which the Republic might have set up here within these thirty years—all the divinities of our glories for the nation's education! Where we should wish to see a sort of magnified Westminster, a kind of city of heroes, we find but emptiness, abandonment, and oblivion. No doubt, to the illustrious dead buried in the crypts a few additions have been made. But such symbolic remains have to be sought out in their obscure tombs, across remnants of funeral wreaths in a labyrinth of catacombs. In ordinary days only a few scattered pilgrim tourists wander lost in the feeble gaslight amid dark walls.

Victor Margueritte did not say that most of these pilgrims are Americans who are curious to see everything and are not satisfied with the immense extent of the mural paintings which make of the Panthéon a veritable art museum, with scarcely more than its architecture to remind them it was once a church. In the crypts, which they invariably ask to see, the guardian shows them by a smoking candle the coffins of Voltaire and Rousseau (the latter is now getting a monument above ground by that great sculptor of tombs Bartholomé); of Soufflot, the architect of the building; of Lazare Carnot, the "organizer of victory" of the Revolution, and of his grandson, President Carnot, who was assassinated a hundred years later by an Anarchist; of Marshal Lannes, General Marceau, and La Tour d'Auvergne, "first grenadier of France," whose regiment still calls his name on their roll, with the perennial response, "Dead on the field of honor"; of the mathematician Lagrange, and Bougainville, the navigator; of Baudin, the Republican member of Parliament of 1848, who mounted the Paris barricade and was shot down to show how a man could die for his pay, of twenty-five francs a day, with which those more revolutionary than himself reproached him; of Marcelin Berthelot, as a glory of late French science, and of Emile Zola, for the part he took in the Dreyfus affair.

There is no great order in the collection; but, properly distributed through the aisles and former chapels, their tombs would exhibit not unworthily the dead whom France has chosen to honor for a century and a half. And yet they—and the many who have been omitted—are all overshadowed and for all time by the solitary tomb of Napoleon, visited uninterruptedly through the years by crowds of pilgrims under that other great Paris dome of the Invalides. It sends one back to Sir Arthur Helps's essay on what really constitutes a great man, particularly when he is dead. At present, in the crypts of the Panthéon, the American appreciation heard oftenest is: "How very spooky it all is!" S. D.

PROSECUTION OF SOCIALISTS IN GERMANY—LIBELLING THE ARMY—"RED ROSA" AND HER CLOUD OF WITNESSES.

BERLIN, July 10.

The Imperial Chancellor has seemingly become restive under the charge thundered at him for years past of want of zeal against the Socialists. He has listened unmoved to the demand of the great industrialist, backed up by the Conservative and National Liberal parties, for more effective "protection" of the right to work, by which is meant giving the police summary power to sweep strikers off the streets. His two main legislative successes, the Alsatian Constitution and the great Army bill of last year, he owes to Socialist support against the Right. The Conservatives, of course, voted the Army bill itself, but the financing of it had to be carried against their opposition with Liberal and Socialist aid.

Lately, however, the Government apparently has been meditating over the adage about a man's being known by the company he keeps, and it has determined to dissociate itself with vigor from its compromising allies of last summer. To the great joy of the mad mullahs of the workers' "protection" party, who clamor incessantly for a holy war against the foes of altar and fatherland, the word has gone forth to hale Socialist orators before the courts on all sorts of charges, and a series of political prosecutions is heralded, the prospect of which for a time gave great joy to the "state upholding" parties and press. This joy has been turned into mourning by the collapse of the prosecution of Rosa Luxemburg, and it is doubtful whether the impending prosecutions of the advocates of a general strike will yield more satisfaction.

The Luxemburg case has ended in an ignominious retreat on the part of the state as represented by the public prosecutor, all the more unpleasant as it involves the credit of the most vital and important organ of the state, the army. Frau Rosa Luxemburg, the burning orator of the Socialist party, already has suffered imprisonment several times for libelling the state and its institutions. She is the burning Sappho (except that she hates and denounces instead of loving and singing), the implacable Judith of the Socialist party. She is no Fabian. She is for revolution here and now, and despises the Reichstag party, with its comfortable armchairs and compromises. She smells the battle from afar, and sayeth Aha! among the Staatsanwälte. Her lips drip fire and vitriol, and she never harmed a fly. At party congresses she causes acute embarrassment to the male chiefs of the organization who are not yet ready to revolt, and was wont to exchange thrusts with Bebel himself. The English Government would rather have a thousand such than one suffragette of the Pankhurst type. In a speech at Freiburg, Frau Luxemburg, "Red Rosa," as the papers call her, talked of a case of ill-treatment of a soldier at Metz, and said: "It is certainly one of those dramas which are enacted day in, day out, in German barracks, although the groans of the actors seldom reach our ears."

Gen. von Falkenhayn, the Prussian Minister of War, laid an information against "Red Rosa" for libelling the officers and non-com-

missioned officers of the army in these words, and the public prosecutor joyfully took up the case. The defence had to prove that "dramas," that is, acts of cruelty and ill-usage, were of daily occurrence in German barracks. Single instances of barbarity would not do. Here the prosecution thought it had Rosa delivered over to it, bound hand and foot.

The prosecution had reckoned without the Socialist organization. There are in the party something like three-quarters of a million of enrolled members, practically all of whom have served in the army, either as "one-year volunteers" or as ordinary privates. The defence announced their intention of proving the truth of Rosa Luxemburg's contention. On the day appointed for the handing in of depositions of evidence to be offered they declared that their side proposed to call 922 witnesses to acts of cruelty in the army which they had either endured themselves or seen.

In a few cases these acts were committed by officers; in the great majority by non-commissioned officers or by the "old soldiers," that is, men who have a year's service behind them, and seemingly often receive a hint from above to make things uncomfortable for recruits until they show more smartness and intelligence in learning their work. The cruelty complained of mostly took the form of slaps in the face, punches, and kicks, beating with sheathed sabres and bayonets, with riding whips and harness straps, forcible jamming of ill-set helmets on the wearer's head, compulsory baths in icy water, followed by a scrubbing down with scrub brushes until the blood ran, compulsory squatting in muscle-straining attitudes until the victim collapsed or wept for pain, unreasonable fatigue drill, and so on.

There were also abundant cases of absurd and humiliating punishments inflicted by non-commissioned officers, such as turning the men out of bed and making them climb to the top of the cupboards or sweep out the dormitory with tooth-brushes. In a few instances witnesses were prepared to depose to cases of suicide committed by men in consequence of long-protracted ill-usage. In other instances men had been driven to desertion. One man had become insane. A lieutenant at Memel beat a man so severely with a sword that he had to be dismissed from the army as unfit and compensated for injuries sustained during service. The public prosecutor did his best to persuade the court that this evidence was inadmissible, but the court held otherwise and appointed a date two days later for the resumption of the proceedings. By then Rosa's army of witnesses had swelled to 1,030. But the authorities were not prepared to allow them to tell their stories. The public prosecutor informed the court that the Minister of War could not at such short notice investigate and file answers to the charges. The Minister intended to bring them before courts-martial so far as they were not outlawed by lapse of time. He proposed the adjournment of the case. The defence protested against changing the venue to the courts-martial, in whose findings the defendant and her friends had no confidence. They demanded an immediate trial before the civil court.

The judge, however, held that the demand of the prosecution for more time was, in the circumstances, reasonable, and adjourned the proceedings *sine die*. They will, of course, never be reopened. L. L.

Civil War Literature

By CHARLES FRANCIS ADAMS.

II.

In preparing any adequate notice of Lord Newton's biography* of his old diplomatic chief, the temptation is great to dwell on passages in that portion of it which relates to France. Very revealing, these cover a most important period, that of the overthrow of the Second Empire, the humiliation of France, and its rapid rehabilitation after the German occupation ceased. As recounted by Lord Newton, a witness, with an eye keen to the situations and personages involved, it is far from an inspiring story; but in it there are lessons from which we in America might profit. First and foremost among these is the shifting, irresponsible character of the French conduct of foreign affairs throughout the régime of Louis Napoleon, as well as during more recent years. Of stability there was none; traditions had ceased to exist. It is a record of opportunism. Strange glimpses of this state of affairs are afforded in the confidential letters addressed by Lord Lyons, always in familiar language, to the various Foreign Secretaries. Indeed, in some cases it seems questionable whether subsequent publication is altogether fair. For instance, writing to his chief, Lord Granville, from Tours in October, 1870, during the Gambetta chaos, Lord Lyons says of a conversation he then had with the gentleman in charge of the French Foreign Office:

> M. de Chaudordy said that he would tell me what was in the bottom of his heart about the cession of territory, if I would promise to report it to your Lordship only in such a form as would ensure it never being published now or hereafter, or even being quoted or referred to (I, 326).

Lord Lyons then proceeded to repeat in detail what the French *pro tempore* Foreign Minister said. In spite of Lord Newton's implied "promise," we here are admitted into M. de Chaudordy's innermost confidence.

Again, writing from Tours a month later, Lord Lyons thus expressed himself in regard to Thiers:

> I thought my prudent course was to listen and say nothing, which, as you know, is easy with him; for he talks too well for one to be bored with him, and is quite content to talk without interruption.

This seems to have been a somewhat prevalent weakness among the members of the diplomatic service of that period. For instance, Lord Lyons again writes to Lord Granville, under date of December 31, 1880, concerning Mgr. Czacki, the Papal representative:

> Monsignor Czacki is a very great talker, which makes it easy to say very little in answer to him, and I took full advantage of the facility for being conveniently silent which this afforded me.

The incident is further elaborated in characteristic fashion by Lord Newton, as follows:

> Whether influenced by Monsignor Czacki or not, Her Majesty's Government sent Mr. Errington, a Liberal Member of Parliament, to Rome in an ambiguous capacity which was loudly denounced in the House of Commons both by Home Rulers and by fervent Protestants, and in the course of one of the discussions on the subject, Mr. Gladstone informed an astonished audience that there was all the difference in the world between an Agent and an "Agente."

It is necessary, however, to recur to matters which are of especial interest to Americans and American historical writers in connection with our Civil War. Of Seward, then in the Senate, but the prospective Secretary of State in Lincoln's coming Administration, Lord Lyons thus wrote from Washington, under date of January 7, 1861, more than three months before the fall of Sumter:

> With regard to Great Britain, I cannot help fearing that he will be a dangerous Foreign Minister. His view of the relations between the United States and Great Britain has always been that they are a good material to make political capital of. He thinks at all events that they may be safely played with without any risk of bringing on a war. He has even to me avowed his belief that England will never go to war with the United States. . . . The temptation will be great for Lincoln's party, if they be not actually engaged in a civil war, to endeavor to divert the public excitement to a foreign quarrel. . . . I think he is likely to play it.

This was written in anticipation, a few days less than two months before Lincoln's inauguration; recurring to Mr. Seward, now become Secretary of State, some three weeks after the inauguration, Lyons sent to his chief the following illuminating information:

> Mr. Seward came to me on the evening of the 20th ultimo, and asked me to let him speak to me very confidentially. . . .
>
> Mr. Seward observed that he considered it all important to ward off a crisis during the next three months; that he had good hopes that if this could be effected a counter revolution would take place in the South; that he hoped and believed it would begin in the most distant State, Texas, where indeed he saw symptoms of it already. It might be necessary towards producing this effect to make the Southern States feel uncomfortable in their present condition by interrupting their commerce. It was however most important that the new Confederacy should not in the mean time be recognized by any Foreign Power.

He then, in the same dispatch, added the following:

> If a considerable rise were to take place in the price of cotton, and British ships were to be at the same time excluded from the Southern Ports, an immense pressure would be put upon H.M.'s Government to use all

*Lord Lyons: A Record of British Diplomacy. By Lord Newton. London: Edward Arnold. 2 vols. 30s. net. The work is published in this country by Longmans, Green & Co., New York. $8.50 net.

the means in their power to open those Ports.

He then adds this significant suggestion:

As regards the latter point in particular, it certainly appeared that the most simple, if not the only way, would be to recognize the Southern Confederacy.

Finally, in this curious letter Lyons thus describes what occurred at a dinner at the British Legation the evening of the day on which his dispatch was dated. "After dinner," he wrote, "Mr. Seward entered into an animated conversation with my French and Russian colleagues, and signed to me to join them." Alluding to some Peruvian papers just then published, "Mr. Seward, speaking as he had done all along very loud, said to my French and Russian colleagues and me, 'I have formed my opinion on that matter, and I may as well tell it to you now as at any other time. . . .'"

My Russian Colleague, M. de Stoeckl, argued the question with Mr. Seward very good humoredly and very ably. Upon his saying that a Blockade to be respected must be effective, Mr. Seward replied that it was not a blockade that would be established; that the U. S. Cruisers would be stationed off the Southern Coast to collect duties, and enforce penalties for the infraction of the U. S. Customs Laws. Mr. Seward then appealed to me. I said that it was really a matter so very serious that I was unwilling to discuss it; that his plan seemed to me to amount in fact to a paper blockade of the enormous extent of coast comprised in the Seceding States; that the calling it an enforcement of the Revenue Laws appeared to me to increase the gravity of the measure, for it placed Foreign Powers in the Dilemma of recognizing the Southern Confederation, or of submitting to the interruption of their Commerce.

Mr. Seward then went off into a defiance of Foreign Nations, in a style of braggadocio which was formerly not uncommon with him, but which I had not heard before from him since he had been in office. Finding he was getting more and more violent and noisy, and saying things which it would be more convenient for me not to have heard, I took a natural opportunity of turning, as host, to speak to some of the ladies in the room.

How very narrow our margin of safety then was may be inferred from the following passage in the same dispatch:

M. de Stoeckl and M. Mercier inferred, as I do, that within the last two days the opinion of the more violent party in the Cabinet had prevailed, at all events for the moment, and that there is a danger that an interference with Foreign Trade may take place at any moment. I hope that it may still be prevented by the fear of its producing a recognition of the Southern Confederacy. But I am afraid we must be prepared for it. . . .

M. Mercier thinks it advisable that he and I should have a discretionary Power to recognize the South. This seems to me to be going too fast. I should feel a good deal embarrassed by having such a power in my pocket, unless the contingency in which it was to be used should be most clearly stated. What does appear to be of extreme importance is that England and France should act in concert.

All this, it is to be borne in mind, occurred prior to any outbreak of hostilities; sixteen days were yet to elapse before Fort Sumter was fired on (April 11, 1861). Immediately thereafter, the policy of the Government as respects Southern, or Confederate, ports and commerce had of necessity to be publicly announced. It was a serious question. It was first urged that an embargo should be placed upon the Southern ports, as the alternative to a blockade. While the matter was still undecided, Lord Lyons, it now appears, wrote Lord John Russell (April 15, 1861), as follows:

But if the U. S. are to be permitted to seize any ship of ours wherever they can find her within their jurisdiction on the plea that by going to a Southern port she has violated the U. S. custom laws, our commerce will be exposed to vexations beyond bearing, and all kinds of new and doubtful questions will be raised. In fact, this, it seems to me, would be a paper blockade of the worst kind. It would certainly justify Great Britain and France in recognizing the Southern Confederacy and sending their fleets to force the U. S. to treat British and French vessels as neutrals in conformity with the law of nations. . . .

Just as Mr. Seward was confident that he had prevailed in the Cabinet, the President and the violent party suddenly threw over his policy. Having determined not to resign, he pretends to be pleased, and one of his colleagues says of him that in order to make up for previous lukewarmness he is now the fiercest of the lot. It is a great inconvenience to have him as the organ of communication from the U. S. Government.

Commenting upon the foregoing, Lord Newton adds, speaking correctly enough on that much-discussed subject: "It was absolutely necessary, however, to deal with the Blockade Question, and the Cabinet consulted the Law Officers of the Crown, with the result that the Southern States were recognized as belligerents."

Again, writing five weeks later, May 21, Lord Lyons thus expressed himself as to the international diplomatic situation at Washington:

One of the great difficulties I have to contend with in my endeavour to keep this Government within such bounds as may render the maintenance of peace possible is the persuasion which prevails even with sensible men that *no* outrage will compel England to make war with the North. Such men, although seeing the inexpedience and impropriety of Mr. Seward's treatment of the European Powers, still do not think it worth while to risk their own mob popularity by declaring against it. If they thought there was really any danger they would no doubt do a great deal to avert it.

Of these men the most distinguished is Mr. Sumner. He has considerable influence in Foreign Questions and holds the important office of Chairman of the Senate Committee on Foreign Relations. He is in correspondence with many people in England, and I believe with the Duke and Duchess of Argyll. I think no greater service could be rendered to the cause of peace than to make Mr. Sumner aware of the real perils to which Mr. Seward and the Cabinet are exposing the country. If some means cannot be devised of checking them, they will carry not only arrogance but practical vexations to a pitch which will render the maintenance of peace impossible. If Mr. Sumner's correspondence from England convinced him that there was real danger in Mr. Seward's proceedings, he might do a good deal to put a stop to them. I think I have done something to shake his confidence, but I believe he still relies to a great degree upon assurances he received from England under circumstances wholly different from those which now so unhappily exist.

At this time Mr. Seward was, as we now know, still obsessed with the belief that there was a strong Union feeling latent in the South, and that the true solution of American difficulties would be found in a patriotic appeal and a foreign war. On this head Lord Lyons thus wrote to Earl Russell on the 4th of June:

The present game of the violent party appears to be to discover or invent some shade of difference in the conduct of England and France in order to use violent language, or even to take violent measures against England without necessarily involving themselves in a quarrel with France also. The plan most in vogue at this moment seems to be to send me my passport. . . . If H. M. Government concede nothing to violent language it will *probably* subside, but there is such a dementia in some of the people here that we must not be surprised at any act of violence they may commit.

Lord Newton then writes as follows concerning the famous dispatch of May 21, 1861, from Mr. Seward to Mr. Adams, first brought to light twenty-five years later by Hay and Nicolay. This dispatch, apparently designed by Secretary Seward to bring on a rupture between Great Britain and the United States, it will be remembered, underwent, before transmission, most important modification at the hands of President Lincoln:

Writing on June 24, Lord Lyons reported that he had discovered that Mr. Seward had prepared a dispatch which was all but a direct announcement of war, and that it was only the intervention of the President and of the more reasonable members of the Cabinet which prevented its being sent to the American Minister in London. The great qualities of President Lincoln, by the way, do not appear to have been recognized at this early period, for competent judges pronounced that although well-meaning and conscientious, he gave no proof of possessing any natural talents to compensate for his ignorance of everything but Illinois village politics.

Unfortunately, Lord Newton does not print in its entirety this most important diplomatic communication. A little later on, however, we come upon a most characteristic minute of Lord Palmerston, addressed apparently to Earl Russell. In it he refers to the battle of Bull's Run, or, as he terms it, "Yankee's Run." He does so in language curiously Palmerstonian:

The Americans are not cowards; individually they are as reckless of their own lives as of the lives of others: . . . and it is not easy to believe that if they had felt they were fighting for a great national interest they would have run away as they did from the battle, or that whole regiments would have quietly marched away home just before the

fight was to begin. The Truth is, the North are fighting for an Idea chiefly entertained by professional politicians, while the South are fighting for what they consider rightly or wrongly vital interests.

The above is most suggestive of the conviction as to the respective ideals and purposes of the parties to our conflict, which firmly possessed Palmerston's mind throughout the Civil War, and was productive of important consequences. Referring to the same matter, on August 2, Lord Lyons had written to Sir E. Head:

There is nothing very surprising in raw levies being seized with such a panic as that which led to the flight from Bull's Run. The want of spirit before and since shown by the Militia regiments is a worse sign. Two went away, on their term expiring, one may say from the battlefield itself. The defeat, and even the danger of Washington being taken, have been unable to induce any whose time is up to remain.

These are incidents in our war which our somewhat over-patriotic historians have found it convenient quietly to ignore.

The foregoing specimen of the confidential correspondence Lord Palmerston was in the custom of carrying on with his political associates is, however, suggestive. One of those associates, and one who stood high in his estimation, was Lord Clarendon, twice Foreign Secretary. With him Palmerston's correspondence was astonishingly frequent. Of it Sir Herbert Maxwell, in his recently published Life of Clarendon, says:

I have been at pains to count those written to Clarendon in Palmerston's own hand during a single year—1857. They number three hundred and ten, ranging over the whole field of politics, foreign and domestic, diverging not infrequently into personal matters. Some of these letters are exceedingly long, written *currente calamo*, without a preliminary draft and with hardly an erasure or alteration from first to last. (Vol. II, 299, 300.)

We here get a glimpse, and a most suggestive one, of that practically unlimited wealth of intimate material which it is the function of the biographer to master and digest for the subsequent use of the general historian. He, so to speak, purveys. At the same time, it must be admitted, the mass of raw material thus to be assimilated and made available is calculated to give pause to the boldest. For instance, while, in the case of Lord Palmerston, we read of hundreds of letters available, in the case of Lord North and that most important phase of American history to which Bancroft devoted a life, we now learn that "when Lord Brougham was composing his 'Historical Sketches,' he borrowed from North's family all the letters that had been written by the Prime Minister to the King. By some unhappy accident they were mislaid, and they have never been recovered. Thus we listen, as it were, to one speaking at a telephone, and have to guess, as best we may, what answers he is receiving. Could we but read the lost letters of Lord North, we should know a great deal more than we do now of the conduct by government of the war in America." (Lucas, "North," I, 116-117).

Caste Among Anglers

THE WAR OF THE "WETS" AND THE "DRYS."

Perhaps the germ of "angling," as distinguished from ordinary fishing, is to be found in a certain sense of superiority over his fellows felt by the inventor of the first real fish-hook. To tie a string around the middle of a long splinter of flint, cover the flint with bait, let a hungry fish swallow it, and then jerk, depending upon the chance that the flint would turn cross-wise in the stomach of the fish and thus pull it out of the water—all this was one thing. To bring the fish up hooked neatly in the mouth by the deftly shaped bit of metal was quite another, and the inventor of the new method doubtless felt entitled to a little more than the average signs of respect from the multitude as he carried his catch back to his cave or tent. Of course, the use of the hook became general in times still primitive, but a superior caste consciousness having once been formed, some new refinement at one point or another in tackle or mode of handling would at once be seized upon as the test of élite standing. And thus it has come about that of those who take fish a certain proportion are entitled to be called anglers, while the others are just fishermen, and possibly something worse.

The taking of fish for the market, or for the sole purpose of furnishing necessary food, is, of course, thoroughly honorable in itself, and the great body of the "just fishermen" have never concerned themselves seriously with the pretensions, valid or invalid, of the "anglers." But when within the angling fraternity itself some rigid censor proposes to declass those who have previously sat among the elect, heartburnings and recriminations are sure to be the result. Attempts at new drawings of the line have been so various, and have met with such various degrees of success, that it would hardly be safe to-day to hazard a detailed and exhaustive statement of the attributes which would be accepted without challenge as those of the perfect angler.

After the artificial fly became common there was developed a class who, at least in their own minds, held that no man could possess the genuine angling spirit who would consent (they would think *stoop*, if not say it) to take a game fish with any form of bait whatever. Many have avoided the use of bait because of the existence of this feeling, though not always convinced of the soundness of the exclusive fly man's contention. But in the course of time division arose among the fly men themselves. The "dry," or floating, fly made its appearance in the southern streams of England, with new methods of tying and handling in closer approximation to the form and appearance on the water of the insects on which trout are accustomed to feed. A struggle between the two methods arose and waxed warm, but the new way proved well adapted to English streams, and its general adoption now stands recorded in the Encyclopædia Britannica as a part of England's angling history. In America, however, the dry fly has been used by only a small percentage of fly-fishermen, and it has been assumed that the difference in the character of the streams constituted an effective barrier to its general adoption. This assumption has often been challenged, and two years ago an advocate of the dry fly wrote in one of the sporting magazines:

If the angler wishes to be a true fly-fisherman, let him give up such tactics and cast the dry fly. That the wet fly is in many ways successful is freely admitted, . . . but is it fly fishing, in the strictest sense of the term? Is it not rather bait fishing with a fly as bait? . . . Would not the same method be used if the fly were replaced by a worm?

That such slighting remarks should strike fire was inevitable, and an important part of Mr. Southard's sumptuous volume* is given to a vigorous defence of the wet fly, with counter attack, not on the dry-fly method in itself, but on the alleged exaggerations and unfairness of its militant advocates. "It is a fine art," he admits, "this dry-fly method of angling, and it requires great skill and patience to practice it successfully. It will not, however, I venture to say, black the stove, shine your shoes, comb your hair, clean your hat, or do a thousand other things that some American dry-fly writers would have every wet-fly angler and beginner believe; and it is not, perforce of many adverse conditions, the alpha and omega of all fly fishing."

He admits that the dry fly is well suited to the brown trout, the one species found in the English streams where the dry fly originated. One imagines the admission spiced with conscious malice, however, for he characterizes the brown trout as "without doubt the least attractive of all the species of trout found in America which rise to the fly." The brown back which gives it its name is dirty, shading off into yellow, its red spots are scarce, and its scales are large, giving it an appearance of coarseness. It strikes with some force, but makes only a short struggle, and is easily landed. In fact, although a game fish, it ranks as such below nearly all, if not all, the other trouts, and this "notwithstanding the fact that some few anglers (mostly dry-fly men) have cried early and late its game qualities." The wisdom of Mr. Southard's tactics may here be questioned. British anglers might hear the words "wet" and "dry" bandied *ad libitum* and not realize that the trouble was anything but another local-option election; but when the species of trout that has drawn the steps of England's authors, statesmen, and divines to the chalk streams since ages before Walton is stigmatized as a "quitter," and a dirty-looking fellow at best, the aid of a few Dreadnoughts from over the water is at once assured to the American dry-fly flotilla.

Mr. Southard falls in with the general American assumption that in any case the dry fly is not adaptable to the swift cur-

**Trout Fly-Fishing in America.* By Charles Zibeon Southard. New York: E. P. Dutton & Co. $7.50 net.

rents which characterize so large a portion of our best trout streams. But simultaneously with his argument comes "The Dry Fly and Fast Water," from the pen of George M. L. LaBranche,† who roundly asserts on the basis of years of personal experience that the dry fly "is applicable to any part of a swift stream short of a perpendicular waterfall." Mr. LaBranche is a delightful writer to follow, and is nowhere abusive or contemptuous towards those who have not, as he, gone over to the exclusive use of the dry-fly method. Here and there, however, he adopts a line of argument which, to the wet-fly angler of delicate sensibilities (admitting the existence of such), may cut deeper than hard words:

> Even as a knowledge of the better forms of music leads, eventually, to a distaste for the poorer sorts, and as familiarity with the work of great painters leads to disgust with the chromolithograph-like productions of the dauber, so, too, does a knowledge of the higher and more refined sorts of angling lead just as surely to the ultimate abandonment of the grosser methods.

If the debate were merely between the respective merits of wet and dry flies in tempting the trout to a rise, it would be of negligible import, though perhaps it might never be settled. But when the form and theory of handling of a mere artificial insect is made the basis of claims to superior standing in sportsmanship, or of charges of grossness, one feels that the sport of angling is in danger of developing along unnatural and unhealthful lines. There are those who still believe that Izaak Walton was one of the finest spirits of his time, and that if he should suddenly appear on the banks of any angling water and go to fishing for perch with "a worm, a minnow, or a little frog," he would be an honor to any company of anglers. Any definition of the angler that would throw out a Walton is fatally defective, and we mean by this Walton as he actually was, in the seventeenth century, not Walton as some advocate of this or that in angling might imagine that he would have been if he had lived in our own day. It is not impossible that under the torn shirt and tanned skin of the country boy, with his tamarack pole and can of worms, beats occasionally a true angler's heart. The same boy will probably adopt the fly and the split bamboo, later on, if he can afford them. But if he occasionally offers an angle-worm to some trout not interested in flies, the reason is not to be sought in any essential grossness in his nature. The true angler's spirit must be too catholic and too democratic to hedge the sport round with arbitrary distinctions, and exclude from fellowship one fundamentally inclined to that gentleness of spirit and serenity of mind which the rod, the line, and the brook have a peculiar ability to develop.

W. H. Johnson.

Books and Men

READING THE ADVERTISEMENTS.

Hard things are said about the magazines, but none, surely, worse than this: "I always read the advertisements first. They're the best part of the magazine." It was related with much delight, a few years ago, that Mr. Kipling reproved a friend for sending him some periodical from which all the advertisements had been cut. "I can write stories myself," said he, implying with frightful mock-modesty that it took Heaven-born genius, far beyond that of the author of "The Courting of Dinah Shadd," to compose advertisements. The thing has passed into current speech, and "Read the advertisements first" has become a catch phrase, repeated parrot-like as a supposedly clever and original remark.

The great charm and importance of advertisements has been forced upon the public by their ubiquity, size, and enormous cost. The vast sums paid by this or that company for the back page of this or the other magazine have solemnly been imparted to all of us.

"You would hardly believe, would you, Musseer," said a Chicagoan to a visiting Frenchman, "that less than forty years ago this great city was lying in ruins from a terrible fire?"

"Ah, M'sieu, I might not believe him eef onlee one gentleman tell me so—but when ten, forty, seexty gentlemen tell me—que voulez-vous?"

It is thus about the advertisements. There is ever some impressive person in the smoking-car who will inform you as to the exact number of thousands which it has cost the manufacturers to utter the simple but telling phrase, "Drink Zingo!" in letters of red, to all the readers of some popular weekly. Another man is fairly sure to add that the inspired being to whom first came the idea of naming Zingo so simply yet so musically was rewarded by a check for forty thousand dollars. And you are lucky if a third man does not say that when the Zingo company resolved to deface the State of Maine with signs bearing their trade-mark, a goat, it cost just six millions to do it.

All this has had its effect. What costs so much, what occasions such vast outpourings of treasure, must be good. Christian Science burst upon many as a religion which "has a good deal in it" when they found that Mrs. Eddy was growing rich. If the inventor of a single word, or phrase, to advertise a stove-polish, or a soap, makes more money thereby than rewarded the life-work of Robert Browning, it simply shows that Browning did not know how to "deliver the goods." If the wretched authors who produce the magazine fiction about which we all complain should suddenly begin to be rewarded by the golden flood which pours in upon the men who write jingles about buttonhooks, who knows but that we might see them in a sort of aureate haze? Who knows but that the literary part of the magazine might win back its popularity from the advertising section?

Advertising section? It is all advertising section—all but a meagre bit—in the magazine of to-day. You are scarcely introduced to the heroine before she flees away, and turns up among the ice-cream freezers. The haughty hero walks through his opening lines in respectable surroundings, but unless he proposes marriage at the very beginning of the story he has to do it wedged in between the safety razors and the patent mops. "A page on which advertisements and reading matter are mixed," writes Professor Münsterberg, "is a mess which irritates and hurts a mind of fine æsthetic sensitiveness, but which in the uncultivated mind must ruin any budding desire for subtler harmony."

It is not the comparative interest of the advertisements and the stories, however, nor the cost of advertising, nor the gentle custom of forcing the reader to pursue the story among the advertisements, that I would especially ask you to consider. It is the almost universal stupidity, bad taste, and lack of attraction in the majority of the advertisements themselves. It is a gross libel upon the worst of the magazine fiction to say that the advertising section is the more interesting. Excepting a very few notable instances, the advertisements are repellent rather than attractive, and if large returns in money follow their publication, if they "pull" well, it is probably in spite of them rather than because of them.

In considering this phase of the subject, the reference is made, of course, to those advertisements which have a positive character, to those which try to appeal through some striking phrase or particularly through a conspicuous picture. Advertisements which are little more than simple announcements, without any picture, are not under discussion.

For many years a remarkably obnoxious-looking child hailed us from every wall, and in every magazine, with the cry: "I say! You ought to drink Zimdad!" First and last, I think I have heard a dozen persons remark that if they were parched with thirst, if they were expiring in the desert, if 'twere the last drop in the well, and they were fainting on the brink, never under any circumstances would they touch Zimdad. Surely, the psychological appeal in such an advertisement is askew.

How many of us were deeply sympathetic with the tall young gentlemen in frock-coats and puff ties, whose hair, parted in the middle, hung over their deeply lined foreheads, as they leaned forward, drove the fist of their right hands vigorously into their left palms, and exclaimed: "It's your *money* I want!" or "I can sell you real estate!" How many of us decided to walk away rapidly as soon as one of those earnest young men appeared in the flesh, and never by any chance to buy anything they might have to sell?

Edmund Lester Pearson.

News for Bibliophiles

THE WIDENER COLLECTION OF STEVENSON.

The sumptuous, privately printed catalogue of the collection of first editions, presentation copies, and manuscripts of the writings of Robert Louis Stevenson formed by the late Harry Elkins Widener, the bringing together of which was one of the chief pleasures of his too few years of book collecting, is a volume to be treasured. Besides being an almost complete bibliography, with accurate collations, it is of great literary interest and is itself a first edition, for in its pages many poems and letters are printed for the first time.

The book is a quarto, beautifully printed on fine paper, in an edition limited to 150 copies. The illustrations, facsimile reproductions of title-pages, leaflets, autograph inscriptions, letters, and manuscripts, number ninety-two, and, with one or two exceptions, are of the full size of the originals.

From Mr. Widener's college days, Stevenson's books had been among his favorites, and he never travelled without having one or more of them close at hand. Before his death he had occupied himself in getting material in shape for a printed catalogue of his Stevenson collection, but the compilation, as it appears now, is mainly the work of Dr. A. S. W. Rosenbach, the one man who is familiar with the books and who has done so important a service in bringing the library together. Although Mr. Widener was a constant purchaser from Quaritch and other booksellers in England and America, a very large proportion of the rarities in his collection passed through the hands of Dr. Rosenbach. To this Stevenson Catalogue he has contributed an intimate memoir of his young friend, whom Edmund Gosse calls "that Marcellus of the race of book-collectors."

The first man to form an important or notable collection of Stevensoniana in America was Charles B. Foote, a man whose memory is still revered by all who knew him. He was the ideal of the true book-collector, quiet and unostentatious in manner, a keen lover of books, for both their matter and their form, enthusiastic and courageous as a buyer, sometimes, no doubt, going beyond his means, and possessed of the old spirit of friendliness towards the bookseller. His Saturday afternoon pilgrimage from one bookshop to another on his way uptown, accompanied generally by a close friend of kindred tastes, who, happily, is still w[illegible] recalled with pleasure.

Mr. Foote began buying first editions of Stevenson before that writer's death; indeed, one of his rarest items, Stevenson's only excursion into print on the subject of Scottish theology, his pamphlet "An Appeal to the Clergy of the Church of Scotland" (1875), was sent by Stevenson himself from the South Sea to Mr. Foote. In 1894 and 1895 Mr. Foote sold the major portion of his library at auction in three sales. These sales, especially the second, are made memorable to this day by the gathering of Mr. Foote's personal friends in the salesroom, and the noble manner in which they bid against one another for the possession of his books. The Stevenson collection was retained by him, and he continued to add to it until his death. It then passed, through a bookseller's hands, into the library of George M. Williamson, an enthusiastic admirer of Stevenson's writings, and the owner, already, of a great many rarities, including several of his books given by Stevenson to his old nurse, Alison Cunningham, with such inscriptions as "from her laddie," and "from her boy."

About the same time another great Stevenson collection passed into the market, with the library of Alfred J. Morgan, who had acquired the principal rarities belonging to Stevenson's mother when they were sold at Sotheby's after her death, and the best of these, also, were purchased by Mr. Williamson.

So, when in January, 1908, Mr. Williamson's library was offered at auction, his Stevenson collection was incomparably the best ever brought together up to that time, consisting as it did of the accumulations of several zealous collectors, and Mr. Widener did not fail to avail himself of the opportunity. Almost everything that he needed was purchased at that sale, and, it may be added, for the most part at very moderate prices, but no opportunity to improve the collection was allowed to pass, and several important additions were made to it before his death.

When, in 1910, Mrs. Strong offered for sale the manuscript of Stevenson's Autobiography, being some memoirs of his childhood which he had given to her "for future use" after his death, Mr. Widener at first declined it, as did also, a few days later, the late J. P. Morgan, and the manuscript was returned to its owner. Mr. Widener could not, however, forget how attractive a document it was, and a few weeks afterwards he bought it and ever afterwards regarded it as one of his choicest treasures. In 1912 he printed, for private distribution, forty-five copies. It still remains unpublished.

Among other important additions were the manuscripts of the series of "Brasheana" sonnets, and the printed proof-sheets of Numbers I and II, put in type in the style of the "subscription edition of Gay's Poems," but never published. These were sold by Charles Baxter, Stevenson's literary executor, at Sotheby's in 1911. Mr. Widener already owned the impression of Sonnet I, which had belonged to Stevenson's mother. No other seems to be traceable. Though these sonnets, in memory of Peter Brash, who kept a beershop in Edinburgh frequented by students in Stevenson's old university days, add nothing to his literary reputation, the idea of writing them and printing them in large type was happily characteristic, and to the collector of first editions their value is immense.

It is not easy to write of Harry Widener's Stevenson collection without giving voice to some personal recollections of the man and of his books. In September, 1911, I made my first trip to London. Harry Widener had been on the Continent for some time, and had planned to give up his last three or four days, before sailing for home, to making pleasant our first visit. Among other plans for our entertainment he had arranged for a hurried visit to the Isle of Thanet, where Col. W. F. Prideaux, after strenuous years of war, captivity, and government service in Abyssinia and upper India, has settled down to the quieter life of the book-collector and the bibliographer. His bibliography of Stevenson, a model of its class, is the trustworthy guide of every collector. While we both wanted to meet the man, there is no doubt that Mr. Widener made the trip principally for the purpose of seeing the two Stevenson leaflets, "To the Thompson Class Club" (1883) and "The Laureat Ste'enson to the Thamson Class" (1885). At the time, neither of us knew the whereabouts of other copies. Since Mr. Widener's death Sir Sidney Colvin's copies of these leaflets have been added to his collection.

On a previous occasion he had given me a list of his "wants," a few great rarities such as "The Penny Whistles" and the Thompson Class Club leaflets, and a somewhat larger number of third- and fourth-rate books, mainly of slight value but desirable as making the collection more complete. Among these was the second edition of "An Object of Pity," of which twenty-five copies were printed privately, with reproductions of drawings by Mrs. Strong, in 1898. One day, in Quaritch's, while Mr. Widener was arranging for the shipment of his purchases, I was looking over the shelves of modern authors. There, in its original pasteboard box, I found a copy of this "An Object of Pity," being No. 2 of six copies only (out of the twenty-five) printed on Japan paper. Laid in the same box was a copy of "Objects of Pity," Bazett Michael Haggard's reply to Stevenson's skit, which, though it is without any of the sparkle or wit of the original, is sought after by all Stevenson collectors. The box and its contents were marked at the very moderate price of *thirty shillings*. As it is a bookseller's first business to buy books and sell them (at a profit), I did not call Mr. Widener's attention to it, but put it aside, where he would not be likely to spy it, and after he had gone I bought it. When we were both back home he was well pleased to obtain the "Object of Pity" at thirty dollars. As this Edinburgh edition contains some verses by Stevenson not elsewhere printed, so far as I know, it was actually worth double this figure.

Nor was this the only bargain that I found at Quaritch's during that visit. Some day, when I print my "Memoirs of a Retired Bookseller," I shall tell of an item of Americana which I bought for practically nothing and which was purchased, as a great find, by the first collector to whom it was offered, at ten times thirty dollars. But this is a digression.

At the sale of M. C. D. Borden's library, in 1913, Dr. Rosenbach purchased for Mrs. Widener the rarest and most interesting of printed Stevenson items, the little "trial" pamphlet, "Penny Whistles," which is now, for the first time, adequately described in the catalogue. This copy originally belonged to Mrs. Strong and was purchased by Mr. Borden some twelve years ago. Although bibliographers say that two copies are known, the second seems not to be located, unless it be among the material owned by Stevenson's widow, who died a few months ago. Neither Charles Baxter nor Sidney Colvin seems to own the book, though both must have received copies at the time of printing.

At the Borden sale, also, Dr. Rosenbach bought the autograph manuscript of "David Balfour," published in England under the title "Catriona." But even more interesting than this important manuscript is the series of fifty-seven original autograph letters written from the South Seas to Sidney Colvin, from which a selection was published under the title "The Vailima Letters." Harry Widener was always fond of this series of letters, and his grandfather, in adding the manuscript to the Stevenson collection, has rounded it out and perfected it.

Much more might be said about the books

and manuscripts described in this catalogue, but within a few months they, with other literary treasures of even greater value, will be dedicated, with suitable restrictions, to the use of students and the public in Harvard's new library. Not only will Harry Widener's treasures be suitably housed, but for the first time in its history Harvard's own library will be properly protected and arranged in a fireproof building, with ample shelf-room to allow for the storage of those large accessions to the library which are certain to come from Harvard's alumni and friends, who, heretofore, knowing of the unsafe condition of the old buildings and that shelf-space for large additions was non-existent, have been holding baek their gifts.

In 1638 John Harvard gave half of his fortune and his library to the new college, which then took his name as its founder. Of this library, said to have consisted of about 370 volumes, one only is now known to be in existence. When another three hundred years have passed, how many of these Widener books will still be on their shelves? A much larger proportion, we hope. Stevenson will then perhaps have become a long-forgotten author and probably most of his books, especially the American editions, will have disintegrated into dust, but we may be fairly eertain that the Shakespearean folios and others of the older books will be in as good eondition and as much esteemed as to-day. And, built as it is to endure, there is little doubt that the new Widener Memorial Building will still be standing, a perpetual monument of a mother's love for her dead Lyeidas.

Correspondence

FALSE DISPATCHES FROM THE PHILIPPINES.

To the Editor of The Nation:

Sir: About the 10th of June a dispatch appeared in a Cincinnati newspaper, and I suppose was printed throughout the country, telling of the assassination by the natives of "Mr. Ollie Chambers, an American teacher," in the Philippines.

As I have known many such items to be without foundation, I sent the clipping from the Cineinnati paper to Mr. Quezon, the Resident Commissioner from the Philippines, asking him to ascertain if there was any truth in it. He enelosed the following letter in answer:

June 24, 1914.

Honorable Manuel L. Quezon, Resident Commissioner from the Philippine Islands, House Office Bldg., Washington, D. C.

My Dear Mr. Quezon:

Referring again to your letter of the 15th instant regarding the reported assassination of Mr. Ollie Chambers, said to be a teacher in the Philippine Islands, I beg to inform you that I am just in receipt of the following cablegram from Governor-General Harrison, in response to our inquiry of the 16th instant:

"Referring to telegram from your office of 16th inst., no Government employee named Ollie Chambers; there is a teacher named Ollie C. Kemp stationed at Tagudin, Muntain Province. He was in Manila June 19 in good health."

If the report that Chambers had been murdered were true, the authorities at Manila would certainly have a record of it, and the fact that they have no such record is conclusive to my mind that the report is false.

I return the clipping enclosed with your letter, in accordance with your request.

Very sincerely,

Frank McIntyre, Chief of Bureau.

By such false statements it is sought to discredit the policy of the Administration.

Chas. B. Wilby.

Biddeford Pool, Me., July 16.

AMERICAN HELLENES.

To the Editor of The Nation:

Sir: Strolling in May about a town in Greece, I happened on a company of soldiers drilling in the principal square. As I leaned against an ancient bronze gun watching them I was accosted in the American language by a young man who hailed from "the finest place in all America." This, it appeared, was Coney Island, where he had been a waiter in a restaurant—a delightful occupation, for it left him at leisure to play cards all winter! "I am a soldier," he said, "although not in uniform, for the officers have taken me to wait on them."

The drill over, there gathered about me a group of English-speaking Greeks. They had volunteered for the war with Turkey and had gone through the Bulgarian war as well. Part were American citizens, but had overstayed the six months' passport limit, and now the Greek Government holds them for further service. There is no escape, and they must serve out the required time, stated by one to be a year and a half longer. But all, without exception, mean to return to America as soon as they are free.

In spite of this rather arbitrary treatment they are animated by a truly ferocious Greek patriotism, and burned for another war with Turkey, but not at once; "in four or five years," they said, to give time to recuperate and to organize "the new fellows" from Macedonia, so as to bring the army up to half a million.

I asked one if he would return to Greece in case of another war. "Sure," he replied. "Oh," remarked a second, "he came too late for the war; those who went through it won't come back."

Half their company, they said, was composed of American Greeks, and the new fact, new to me at least, was the enforced retention of these fellows, many of whom have grown up in America and are American citizens—and this after giving up their occupations and coming at their own expense to fight for Greece. If the newspaper estimate of their number at 17,000 is right, these "Americans" must form a substantial part of the peace footing of the Greek army, and not the least valuable part, for they are intelligent and energetic, and are naturally better educated than their home-keeping comrades.

But when they escape from their present restraint, if ever they do, and when their fervid patriotism has cooled off under the stress of finding new jobs after several years' absence, it remains to be seen whether their present treatment will encourage a similar volunteer movement in case of another Balkan war.

Besides the holding of these volunteers, a new law forbids the emigration of boys over fourteen, except on deposit of a sum varying from $40 to $400, according to age, the deposit being recoverable if the subject returns and performs his military service. Such sums may not bulk large in American eyes, but in Greece $40 is a small fortune, for money is scarce in a primitive, hilly country, whose surface is about 80 per eent. bare rock.

The pity of the Balkan situation is that the wars have not settled the pending questions, for all these small nationalities are seething with greater discomfort than ever, and burn to fly again at one another's throats. Mutual hatreds have been only envenomed by armed conflict, and in Greece, at least, the whole thought of the people seems to run to fresh conquests. It all confirms the moral of recent editorials in the *Nation*—that war settles nothing, but only leaves things worse than before, after frightful destruction of life and property.

F. R. Welles.

Bourré, France, July 8.

THE CONSTITUTIONAL POWER OF THE COURTS.

To the Editor of The Nation:

Sir: If it is Mr. Hulme's contention that there is no grant in *specific words* to the Federal Judiciary to declare an act of Congress void, as I infer is the case from his letter published in your issue of July 2, he is correct. But if he concludes from this that there is no *direct grant* of such power, I think he is wrong. Mr. Hulme errs in considering, as he does in his letter published in the *Nation* of April 23, that tho court, in passing upon the constitutionality of an act of Congress, exercises a *political* power. The legislative powers of Congress are limited; they are enumerated and delegated; all powers not granted are reserved to the States or to the people. Whether in any particular case Congress has exceeded its power can only be determined by reference to its source of authority.

This calls for a construction of the act and a determination whether Congress has acted within, or exceeded, its authority; certainly the Federal Court is acting judicially in arriving at such a determination. As I have already pointed out in an earlier communication, this is a question arising under the Constitution, and hence is included in the language "the judicial power shall extend to *all* cases, in law and equity, arising under the Constitution," etc. It would not be possible to make this grant more comprehensive and inclusive. To have added specific cases in which the power should be exercised would have been to weaken the completeness of the word *all* in its application to other cases, according to a well-known rule of construction.

Mr. Hulme seems to think that the opinions expressed in the Convention and subsequently are not decisive as to the existence of the power in this particular case. I cannot see any force in such an argument. As pointed out by another correspondent, the power of the Court to declare void an act of Congress was repeatedly referred to in the Convention debates and in the discussions concerning ratification, and no doubt as to its existence was ever expressed. Evidently to them the word *all* was conclusive, and was given its full meaning.

By the Virginia plan it was actually proposed that the national judiciary should be associated with the Executive in the exercise of the veto power upon acts of Congress. It was objected that this would give the judiciary a double negative, because "they will have a sufficient check on encroachments on their own department by their

power of exposition of the laws, *which involves a power of deciding on their constitutionality.*" ("The Growth of the Constitution," Meigs, p. 116.) Thus we see that it was proposed to give the Federal Court a political power, but that it was considered that its judicial power would be entirely adequate.

This discussion was originally called forth by the statement of Chief Justice Clark, of the Supreme Court of North Carolina, who not only denied the grant of authority, but also said that when first exercised, in 1803, it came as a great surprise. This indicates an unfamiliarity on the Chief Justice's part with the history of this clause, and the discussion in and after the Convention. The importance of the controversy arises from the harmful influence that attacks on the Supreme Court may exert when coming from such high judicial authority. EDWARD C. PEARSON.

Lake Pleasant, N. Y., July 20.

AN INTERNATIONAL COURT FOR THE AMERICAN CONTINENTS.

TO THE EDITOR OF THE NATION:

SIR: After a test of the Monroe Doctrine that has extended over more than ninety years and has been applied to various disputes as they have arisen, it has become the habit of all of us to assume that this policy, which is not founded upon international law, but is individual to this nation, can and will be extended to cover every requirement. That it has achieved the result of strengthening this nation in the past, as it has also fortified the republics in the South, there can be no question. We glory in the application of the Doctrine because it produces the effect we most desire, and because we believe that it is exercised for the common good of mankind, and is a necessary safeguard for this country and for republican government in general.

It is an undeniable fact, however, that under the Doctrine as administered, when a difficulty arises between a foreign Power and one of our sister republics in the South, the Administration of the day makes itself judge and jury of the facts and interests at issue and, by reason of its might, forces itself into the controversy and administers affairs to suit itself, without the invitation of either party to the disagreement, except possibly that of the Southern republic, when she is in the wrong and in need of our protection. It is well known that no application of this policy is made that is not viewed with fear and distrust by the republics in the South—a feeling which naturally arises by reason of their apprehension lest we are saving them from foreign domination only in order that we may ourselves, at a later day, absorb them.

There is, of course, no basis for the assumption that the policy set forth by Monroe is founded upon reason or justice. That was not the primary motive on account of which it was put into operation. It was intended first of all as a bulwark of protection for this nation and for others in the western hemisphere, in order that our republican institutions might receive an unlimited opportunity to grow and develop. Its object is laudable in our eyes, but because it does not grow out of a desire to mete out equity and justice in each dispute or controversy as it arises, it is incomplete and imperfect in its conception and administration according to our present lights. Not being based upon the principle of equitable adjustment, it can be enforced only while our strength predominates. Every enforcement of the policy, even when it is exercised on account of foreign financial claims, creates an unpleasant, unsatisfactory, and dangerous position for this nation. It may be argued that every such enforcement tends to avert a greater danger to the nation. That may be true. It does not, however, dispose of the dangerous situation created by the enforcement of the policy.

The question presents itself, then, whether, in order to accomplish the purpose of the Doctrine, interference shall invariably be necessary, even when no question of policy, colonization, or territory arises as a primary cause of a dispute, and the only point at issue is, for instance, whether or not money is due to a foreign nation or its citizens. Is it not possible that some expedient might be evolved whereby the need for the application of the Doctrine should never arise in those instances in the case of which debts or finances are the issue, and which certainly may readily be distinguished from disputes in regard to colonization, territory, or policy?

In order that this should be accomplished regularly and in order, it would be necessary to establish an adequate system for the consideration of the facts of a controversy. It must be one in which the southern republics shall feel full confidence. Therefore, they must be instrumental in its creation and be a part of it. It must be one also in which foreign nations shall have confidence, and, therefore, it must be of a standard which no one can question.

It seems to me that no better suggestion can be advanced than that an international court be created, composed of representatives of republics on the American continent, with jurisdiction covering those cases and disputes involving alleged debts and financial demands by foreign nations or their citizens. The decree of the court on these points should be final. The treaty or charter creating this court would be another long step in advance in the permanent, peaceful relationship of nations, and would tend in large measure to relieve the United States from so frequent an assertion of its powers in settling disputes among its friends and collecting funds from one to deliver to another.

As the creation of the court and the powers which would be vested in it are in no way contemplated by the Monroe Doctrine and are no part of it, but, on the contrary, would be a means of preventing a violation of the doctrine and so dispose of the need of its assertion in the cases at issue, the court would be acceptable to all American republics, which view the Monroe Doctrine with suspicion and dislike. As it would be a court of standing, it would also be acceptable to every foreign Power having a just claim, as a happy means of establishing its debt and as a relief from the burden of deciding whether to abandon its claim or to risk unpleasant relations with this nation by asserting itself and demanding payment.

Such a treaty would naturally create much criticism. Some would think too many powers were surrendered, others would believe it did not go far enough. But the court, as originally formed, would mean the working together of the American republics as a body for justice in international dealings, and nothing more forceful could be said in its favor. W. A. HOWELL.

New York, July 16.

Literature

THE PROMISED LAND.

Zionism. By Richard J. H. Gottheil. Philadelphia: Jewish Publication Society.

The wisdom of the Jewish Publication Society of America in issuing a volume under its auspices on a movement that arouses as much opposition as it does adherence, written by one who is a stanch and uncompromising advocate of Zionism, may be questioned. Such a presentation is naturally controversial and becomes a special plea, for which the Society, though supposed to be impartial, in a measure stands sponsor. But this objection aside, the subject could not have been placed in worthier hands. Professor Gottheil, the well-known Semitic scholar, who holds the chair of Semitic languages of Columbia University, has been identified with Zionism almost from its inception, and he has followed the somewhat devious and entangled course of the movement closely. He writes exceedingly well; his presentation is attractive and at times forcible. He is well acquainted with all details, and he draws from his large fund of learning in Oriental literature and Oriental history to reinforce his point of view. The testimony must also be given that, though an ardent partisan, he endeavors to be fair to opponents, and that on the whole he succeeds in his endeavor, though there are passages about some eminent scholars and writers, like Salomon Reinach and Israel Zangwill, which might have been omitted. If, despite all that can be said in favor of Professor Gottheil's work, one puts it down with a confused and somewhat painful impression, it is due in part to the diverse and indeed contradictory currents united under the term Zionism and in part to a certain lack of sympathy on the part of the author towards modern movements in religion and in political and social life, which seems to be an outcome of the movement itself.

To define Zionism baffles even its author, for he nowhere clearly defines it. Its keynote is insistence upon Jewish nationalism, quite irrespective of the fact that the combination of nationalism with religious tenets of a universal scope would appear to be an almost impossible alliance. Probably most of its adherents would regard the preservation of religious traditions and customs among the Jews as an essential part of their programme, overlooking the fact that traditions and customs which rest upon beliefs no longer held cannot be maintained merely by regarding them as a "national" heritage. These two aspects of Zionism—the one political, the other religious—complicate the situation, and it is not surprising to find, as Professor Gottheil's narrative clearly shows, that after an existence of barely twenty years the Zionists represent a diversity of views and aims which is almost bewildering.

In its early stages, the movement centres upon the remarkable personality of Dr.

Theodor Herzl, an able journalist of Vienna, who had many of the qualities of a leader and a statesman. In 1895, stirred up by the anti-Semitic movement, that began in Germany in the eighties, and that had spread to Austria and France, he wrote a monograph on "The Jewish State," the title of which indicated his solution of the "Jewish question," as it was called. Herzl was not an observant Jew, and, so far as can be ascertained from the volume before us, never became a believer in the specific doctrines of Judaism. He had retained, however, a strong sympathy with the sufferings of the people to whom he belonged, and, attributing this sympathy to an invisible "national" bond existing among Jews, he reached the conclusion that the reassertion of the "national" spirit was called for by the events of the times. Though the founder of Zionism, he did not coin the term. This in itself is significant as an indication that Herzl's bent of mind was not towards the restoration of a Jewish state in the religious sense which the designation "Zionism" implies. He believed that if the Jews had a state and government of their own, they would be in a better position to take care of those whom persecution or wretched conditions of life drove from Russia, Galicia, and Rumania, and would also be able to exert political and diplomatic pressure to obtain better treatment for those Jews who would remain outside of the proposed state. Such was Herzl's programme, which aroused interest chiefly among two classes of Jews, among the orthodox believers, to whom the hope of a return to Jerusalem formed a doctrine of their faith, and among those who had moved away from observances of the rites of Judaism, but who had retained their interest in the fate and welfare of the Jews. Many of those who were attracted to the movement were, like Max Nordau—and probably also Herzl himself—agnostics in matters of religious belief, or they were swayed by the spirit of romanticism, so strikingly portrayed by George Eliot in the person of Daniel Deronda, of whom Israel Zangwill seems to be the living incarnation.

By the year 1897 the time seemed ripe for a congress of those united in the belief in the practicability or desirability of the organization of a Jewish state, and in August, 1897, the first congress convened at Basel. The "orthodox" and "Romanticists" won the day, and with the adoption of a definite programme to work for "a publicly and legally assured home in Palestine," Zionism was formally launched. The Congress of Basel, though it might be regarded as representative of Jewish sentiment, was far from being representative of the Jews themselves. Large bodies held aloof, and considerable opposition was manifested on the part both of genuine adherents of the tenets of Judaism, who realized that the movement was not a religious one, and of those who had departed from traditional lines and who felt that the reassertion of a "Jewish nationality" was a step in the wrong direction

Professor Gottheil tries bravely in the course of his narrative to answer, and at times to minimize, the objections to Zionism, but without signal success. His special pleading reveals the weakness of the entire movement, which became manifest at the second congress in 1898, when a proposal was received from the English Government to organize a "Jewish State" in East Africa. To Herzl and his immediate followers, Palestine had merely a sentimental interest. Their chief thought was to obtain some place of refuge for Jews unable or unwilling to live in European countries, and with this political centre a powerful means of protection for Jews in general. They were ready to abandon Palestine, though they endeavored to conceal this abandonment by suggesting that East Africa or some other place was merely a station on the way to Palestine. Not so the orthodox believers, who could not give up Palestine without an abandonment of a religious tenet. The inevitable break came. Professor Gottheil admits that, had a direct vote been taken on the English proposal, it would have been defeated. A truce was patched up by voting for a commission of inquiry, but many abstained from voting. From this time on more factions developed. With each succeeding congress, held annually until 1901 and biennially thereafter, the divisions within the ranks grew sharper, the only point of union being a disposition to encourage colonization in Palestine. Even in this aim there was no complete accord, for an influential group headed by Zangwill formed an independent organization to acquire territory for settlements of Jews outside Palestine. Mr. Zangwill himself transferred his romantic interest in the Holy Land to a still more romantic sentiment for leading his people to a new land of promise; and at present he directs the shafts of his sharp wit against those who long for a return to Jerusalem. Dr. Herzl's unexpected death in 1904 was a further blow from which the cause has never recovered.

Professor Gottheil devotes the latter portion of his work to a consideration of what might be called side-issues of Zionism, which only serve to show how hopelessly muddled the whole situation has become. One must admire his invincible optimism, but it is strange that he does not, as a student of history, recognize the symptoms of decay. Sentiment alone keeps the Zionists together, or rather from getting at one another's throats, and no movement of a large character has ever thrived on sentiment alone. We have already suggested the main reason for the failure of Zionism to make any substantial headway after the first burst of enthusiasm had passed—the impossibility of an alliance between "agnostics," who seek a political solution of the Jewish question, and orthodox believers, for whom "nationalism" is a corollary of the religious faith. The term "agnostics" is here used as a convenient one to embrace under it all who under pressure of modern thought have assimilated—consciously or unconsciously—western habits of mind and western ways of life; who have set aside such doctrines as the inspiration of the Bible and the election of Israel by a direct Divine choice, which alone justify the belief in "national" aspirations for the Jews; and who have also abandoned religious practices and rites that are to a large extent survivals of ancient Semitic customs having been grafted on to Prophetical Judaism.

Running throughout Professor Gottheil's volume is also a disposition to exaggerate the disabilities under which the Jews labor and to look upon minor social prejudices in the same light as actual injustices and direct persecution. The "wailing" tone seems to be part of the stock in trade of the agnostic Zionists like Nordau, and one suspects at times that the Zionist leader whines in order to keep up his courage and to keep his followers together. If we consider that barely a century has passed since the movement began for political and social emancipation of the Jews in Western Europe, it is certainly no cause for discouragement to find that they have become part and parcel of modern currents of civilization, in commerce, in the professions, and in public life.

CURRENT FICTION.

When Love Flies Out o' the Window. By Leonard Merrick. New York: Mitchell Kennerley.

This is, we believe, the first American issue of one of Mr. Merrick's earlier novels. It is written with the expertness of a story-teller who has "arrived." Like so much of the fiction of the past decade, it is romantic in substance and realistic in detail. Meenie Weston's squalid experience in the Cabaret de l'Homme merely prepares a scene for heroic rescue. Ralph Lingham's struggles with publishers, editors, and managers add, in themselves, another dreary chapter to the Grub Street annals of Gissing and his imitators. The slow disintegration of the married happiness of Meenie and Ralph is quite simply and ruthlessly set down. But the end of it all is as delightfully romantic and improbable as a fair reader or a gentle reader could desire. The atmosphere is of Bohemia and "art," but little play is made with the famous temperament. Meenie Weston, aspiring to become a great singer, has become a chorus girl. Lingham is a novelist whose work brings excellent reviews and small profits. At the moment when he rescues and marries Meenie he is at least not unprosperous. After their marriage, by mere chance, everything goes wrong with him; they have nothing to live on or borrow on, and Meenie is forced to return to the stage. Here she finds success, which she thinks to share with her mate, as a matter of course. But Lingham is neither big enough nor small enough to endure the position. Their relation is hopelessly embittered, and finally they separate. Here the realist would have left them, but Mr. Merrick is not that. He helps Meenie steadily upward to the final eminence of a musical-comedy star on

Broadway. She induces her manager to read the play Lingham has written in the first days of their marriage. The manager accepts it, and at the moment when Meenie is crowding one of his houses with her singing, Lingham is crowding another with the comedy of the year. Nothing remains but a meeting and reconciliation, which the author does not deny us. In less skilful hands the story might have been absurd or commonplace. It is not profoundly moving, as Mr. Merrick tells it. But it is gratefully lacking in the surface brilliancy which annoys the quiet reader in many current novels.

Louis Norbert. By Vernon Lee. New York: John Lane.

Vernon Lee calls her "Louis Norbert" a "two-fold romance," and, indeed, the reader's interest is equally divided between the twentieth-century personages—Lady Venetia Hammond and the young archæologist—and the little group of the seventeenth century, principally Sir Anthony Thesiger, ancestor of Lady Venetia, Louis Norbert, Maria Mancini, niece of Mazarin, and the Abbé Manfredini. Lady Venetia interests a casual acquaintance in the great mystery of her line—the mystery of Louis Norbert, whose portrait hangs in her home, and who lies buried in Italy. Together, given the required impulse by some chance discoveries, they set to work to unearth the facts of his life. From correspondence which is brought to light in strangely chronological order, they make out that Norbert is the son of Louis XIV and Maria Mancini, that Mazarin conceals the fact of his birth from the Queen Mother for political reasons, and that Louis Norbert is finally killed through the Abbé Manfredini, spy and assassin in the pay of the French Court. The atmosphere of time and place in all that Vernon Lee writes of these far-off personages is fresh and convincing, though superficial rather than deeply studied; and the style is refreshingly polished and easy. The romance, as the writer calls it, of the two modern protagonists is disappointing. Their subject of study exhausted, Lady Venetia, conscious of her seniority, marries not the archæologist, but a common friend and more mature man.

Gray Youth. By Oliver Onions. New York: George H. Doran Co.

In writing "Gray Youth," Mr. Onions has taken a careful look round the social horizon, and, having accurately located the position of the various windmills, has conscientiously broken a lance against each one in turn. There are a great many things and more ideas in the world of to-day that Mr. Onions dislikes very intensely—most of them beginning with F, like Feminism and Futurism and Free Love—and so with a diabolic cunning he has written a book (or, rather, two books, for "Gray Youth" was published in England in two volumes under the titles "The Two Kisses" and "A Crooked Mile") that brings in every ism of his particular detestation, to the end, presumably, that the slaying may be done within a conveniently compact area.

Unfortunately, though one may sympathize fully with many of Mr. Onions's prejudices against windmills, it is impossible to commend his unscientific method of attacking them. He is obviously very angry, and his indignation at times gets the better both of his sense of humor and of his sense of reality. In his anxiety not to overlook any piece of foolishness of this foolish age, he has written a story that verges on the incoherent. One may meet people in fiction and in real life quite as silly and quite as offensive as Amory and Cosimo, and it is unfortunately indisputable that a morbid interest in sex is characteristic of a number of superior-minded young persons of to-day, but Mr. Onions fails entirely to convince us that his principal characters have any relation to reality. Even the two supposedly healthy, normal creatures who are intended to point the contrast with the abnormal coterie of sex enthusiasts are not real; they are merely stupid and uninteresting.

The second book is better constructed than the first, and in each there are bright patches which remind one of the excellent work of which Mr. Onions in happier moments is capable, but the story throughout halts painfully, and the limpness of the "Tailpiece," as the concluding chapter is styled, suggests an obviously appropriate comparison. Those who most sympathize with the author's convictions will most regret his present indiscretion.

The Rising City—I. The Duchess of Wrexe. By Hugh Walpole. New York: George H. Doran Company.

In a note on the title-page the author of this long novel thinks it well to reassure the reader that this is not the first number in a trilogy, though three novels are to be grouped under the common title, as connected "in place, in idea, and in sequence of time," and certain of the characters are to appear in all three stories. Rachel and Roddy we shall look for with some confidence, and their child.

The Duchess of Wrexe is one of those grand old women who have been the backbone of nineteenth-century English fiction. She is (or is intended to be) the supreme dowager, avatar of England's pride. As head of the clan of Beaminster, she represents the culmination of the old autocracy, and her passing marks the end of a régime. Though when we meet her she is an old woman and an invalid long retired from social activity, we are asked to believe that her power, both social and political, has known no lapse, that her name is feared and half-worshipped in all orders of society. Unluckily, her author does not succeed in making her terrible or even credible. She is both too wicked and too stagy in her wickedness. It is impossible to believe that the world hangs on the lightest word of a person whose recorded words are merely dull or malicious. Her granddaughter Rachel is more like flesh and blood, and her story and Roddy's, detached from the machinery of the Duchess yarn, would have had a good deal of reality. But Mr. Walpole has been intent on picturing a phase of England, and has sacrificed much of the natural human interest of his people towards that end.

TWENTY CENTURIES OF JURISPRUDENCE.

Great Jurists of the World. Edited by Sir John Macdonald and Edward Manson. Boston: Little, Brown & Co. $5 net.

The second volume in the Continental Legal History series, published under the auspices of the Association of American Law Schools, contains brief biographies of twenty-six great jurists. Beginning with Gaius and ending with Ihering, it covers a period of nearly 2,000 years and deals with "four great periods of jurisprudence: (1) The period in which Roman Law was developed; (2) that in which it was regarded as the common law of continental countries; (3) the period of the supremacy of natural law in many of its forms; (4) the age of codes and legislation."

Most of these biographies were published originally in the *Journal of Comparative Legislation.* All are entertaining and instructive, but some are sketchy and popular rather than scholarly, as might be expected of contributions to a magazine, though that magazine be devoted to the solution of sober and serious problems in comparative legislation. It is to be borne in mind, however, that the purpose of each chapter is to reveal the personality of a particular jurist and to account for the peculiar influence he exercised upon the development of law. The personal note is dominant. It is the object of this volume to celebrate the jurist rather than jurisprudence; to "correct the habit of describing doctrines apart from their historical setting and the times in which their expounders lived."

Judge Veeder has explained, in an introductory chapter, the method pursued in selecting jurists for these biographical sketches. In the first place, only "jurists of international reputation" have been chosen—that is, jurists whose influence has extended beyond a particular nation. Lord Mansfield is excluded. His reputation is world-wide, but his influence "was exclusively national." Lord Eldon is excluded for similar reasons, while his brother, Lord Stowell, is included. It was the good fortune of the latter to become Judge of the High Court of Admiralty during the Napoleonic wars and to have the unique opportunity of expounding the law regulating the rights of belligerents and neutrals in war upon the high seas. Many of the rules of Prize Law, which he formulated, are now accepted by all nations and are embodied in the recent "Declaration of London, Drawn Up by the Representatives of the

Great Powers to Serve as a Code of Maritime Law in War."

Judge Veeder explains the prominence given to doctrinal and institutional writers, as compared with jurists whose distinction was gained in the practical administration of justice, as due to the fact that on the Continent the formulation of legal principles has been the work of those who taught law in the universities rather than the work of judges.

Again, the selection of jurists for this particular roster was determined in part by a desire to include the best representatives of the various schools of juristic thought. For example, Grotius and Pufendorf laid especial stress upon the "law of nature as a law grounded in reason and valid for all mankind." Bacon, Hobbes, and Bentham belong to the school of positive law. Savigny heads the historical school, and Ihering is a type of "the later jurists who have attempted a synthesis of the foregoing theories, at the same time pointing to the merits of a comparative method."

Many jurists of great influence have been omitted, but such omissions were inevitable, and the editor expresses the hope that they may some day be supplied in an additional volume.

ANOTHER PART OF PROFESSOR FRAZER'S "GOLDEN BOUGH."

The Scapegoat (Being Part VI of the "Golden Bough"), a Study in Magic and Religion. By J. G. Frazer. New York: The Macmillan Co. $6 net.

Twenty-four years ago Dr. Frazer published in two volumes his "Golden Bough," a book the appearance of which marked an epoch in the literature of the vast subject with which it dealt. Others had touched parts of that subject, had collected facts bearing on particular tribes or particular classes of usages and superstitions. But no one, not even in Germany, had brought together so large a mass of data bearing on so many departments of the life of primitive man, or had handled them in a way which was at once so comprehensive and so illuminating. Those two volumes were much expanded in a second edition in 1900; and now they have swollen to a series of treatises, each of which is a large book, and the last of which appeared just after the publication of the present volume. To it we hope very soon to return. Meantime, it is well to convey to the reader some notion of the contents of the volume that now lies before us.

This volume is a continuation of an earlier treatise (itself a part of the "Golden Bough" series), entitled "The Dying God," and takes up the idea of using the death of some divine being, so as to make that particular being, as it dies, a means of removing evils of which the worshipper seeks to rid himself. The discussion opens with a statement of the various objects to which primitive man endeavors to transfer the evils from which he suffers, or imagines himself to be suffering. These are sometimes lifeless objects, mostly natural objects, vegetable or mineral; such as stones or heaps of stones, or pieces of wood. Sometimes the evils suffered from are fastened or nailed up into walls or trees in order to put them where they can do no more harm. Sometimes, again, the evil is passed over to an animal, as in the case of the Hebrew scapegoat, or of the bird let loose at the cleansing of a leper (Leviticus xiv, 7). A calf is used among the Badagas and Todas of the Nilghiri hills in Southern India to carry off sin. Sometimes, again, it is to men that sins and evils are transferred. A familiar example of this custom may be found in the Sin Eater of Wales, who at a funeral quaffed off a bowl of ale or milk in which the guilt of the deceased was supposed to have been placed and so, taking that guilt to himself, delivered from it the soul of the departed. There is evidence for this custom, as practiced in Shropshire and Herefordshire, as late as the latter part of the seventeenth century. The evils thus transferred are of various kinds: a disease may be such an evil, or it may be some bodily defect, such as a wart, or perhaps some pollution incurred, or some offence committed against the Unseen Powers. Most commonly the evil is conceived of as existing in the form of a spirit or devil, the spirit being often something dwelling inside an object, and bearing the same relation to it as man's soul or life bears to his body. Or perhaps the evil, a physical malady, for instance, is due to a spirit which has effected a lodgment within the man and must be expelled from him.

From this general treatment of harmful things and their transfer or expulsion, our author passes on to the special case of the general clearing out of evils, physical and moral, and particularly of noxious and malignant spirits, by public authority, describing the ceremonies by which there is in many parts of the world an annual national housecleaning, so to speak, for getting rid of ghosts, demons, and witches. A relic of this may be found in the Shetland Isles, where, on the 29th of January, a custom is still observed which in quite recent times consisted in chasing away the Trows or Trolls, earth spirits that were permitted once a year only, at Yuletide, to come up among the dwellings of men. Then follows a fuller consideration of particular forms in which the Scapegoat superstition has appeared. The human scapegoats of ancient Rome and of ancient Greece are described and parallel instances cited from many other peoples, in the more savage of which they are still observed. After a long examination of the Aztec usage of sacrificing men in the character of gods, which Dr. Frazer regards as belonging to a different circle of ideas, and intended to represent symbolically the renewal of the powers of Nature, the book closes with an elaborate account of the Roman Saturnalia and the various customs observed in European Catholic countries during the Middle Ages which have been supposed to be connected with that festival. Observances similar to the Saturnalia in Western Asia, and particularly the Babylonian feast called Sacæa, throw light on the singular story contained in the Book of Esther, and on the origin of the festival of Purim, still observed by the Jews in commemoration of the triumph of Mordecai over Haman.

The method followed is the same as that with which Dr. Frazer has made us familiar in his earlier volumes, viz., in an accumulation of instances drawn from an immense number of tribes and countries indicating the presence of the same notion under an endless variety of forms. Many a reader may find it hard to follow the alert author as he skips about from ancient Babylon to modern Bolivia, from the Twelfth Night festival-keepers of Ireland to the Mayas of Yucatan. But the value of the treatment lies in this very collocation of similar phenomena found among peoples remote in space and time. The historical scholar who investigates the religions of classical antiquity profits by what he learns of the ceremonies of West African negroes, and the student of the folklore of modern savages finds their strange rites ennobled by the relation in which they are placed to the beliefs which in the days of Æschylus and Herodotus co-existed with the finest developments of Hellenic creative genius.

The interest which these investigations and those set forth in previous volumes possess for us may be described as three-fold.

In the first place, we see a flood of light poured on the mental condition of primitive man. To him the world was full of spirits. They were everywhere and in everything, just as microbes are around us and inside us. Like microbes, they were sometimes pernicious, sometimes beneficent, but always powerful. Like microbes, they were seldom to be seen or touched, but not the less real for all that. They were neither spiritual in our sense, nor yet material in our sense, but something between the two, for primitive man had not established the modern "antinomy" of Matter and Spirit. They were rather what we might call effluent influences, immanent in or emanating from physical objects, but nevertheless capable of acting apart from such objects. Man's whole life was spent among them, or in an effort to get rid of them, and everything he could not otherwise account for seemed to be due to their action. The words "demon" and "devil," which Dr. Frazer is obliged to use, have associations for us which did not exist for primitive man, and convey a conception of personality more definite than our remote ancestors possessed.

Secondly, this curious belief in spirits and spiritual influences, having embodied itself in a great variety of usages and rites, has in them outlasted its original meaning. In Cicero's time the Romans continued to practice ceremonies the ground of which had been long forgotten, and at which educated men smiled. So the peasants of many European countries observe customs of whose former meaning they know nothing

at all. But there are still peoples among whom the uneducated still cling to rites and customs which have for them a real meaning and value, while the educated disregard them and have moved away into a different intellectual atmosphere. The less educated classes in China still value the protection against the entrance into a house of malevolent spirits which is afforded by erecting a detached wall opposite the door, a little way off it, the spirits being unable to enter because they have to move along straight lines, and thus cannot turn round the end of the wall to reach the door. And this notion subsists in a country which has just given itself (on paper) a new-fangled constitution of the European-American type.

Thirdly, there is a remarkable development in the customs as well as in the ideas that gave birth to them of metaphysical and theological doctrines out of primitive superstition. Evil takes a moral color and passes into the Hebraic and (ultimately) Christian conception of Sin. Dr. Frazer observes in his Preface: "When we survey the history of this pathetic fallacy (*i. e.*, the possibility of transferring our bodily and mental ailments to another who will bear them for us) from its crude inception in savagery to its full development in the speculative theology of civilized nations, we cannot but wonder at the singular power which the human mind possesses of transmuting the leaden dross of superstition into a glittering semblance of gold."

There is, of course, a danger incident to Dr. Frazer's explanations in the facility with which they can be applied to cases where an external similarity may conceal a real difference. He is aware of this danger, and sometimes points it out. Yet he may sometimes appear to have not wholly escaped it. We are occasionally reminded of the incessant use by Max Müller, in his books written thirty years ago, of the Sun and Dawn myths, which, in his hands, and still more in those of his most eager disciples, were made to explain most things in ancient religion and not a few in ancient history.

One conclusion stands out clearly from all these investigations. We must beware of the habit so common among ethnologists of the older generation, the habit of assuming that a similarity of customs or institutions indicates some racial connection or some actual connection in history among the various peoples who use those customs. The evidence gathered by Dr. Frazer shows that the human mind has in many races and countries worked upon similar lines without any such racial affinities or any historical contact. It is, indeed, surprising to see how much greater among divers races is that similarity of customs than any one would have, *à priori*, supposed it likely to be.

Not less surprising is the amazing persistence of customs after their origin and meaning have passed into oblivion. This may be explained by the hold upon popular emotion which they had established, and which passed on by inheritance as if it were in the blood. Perhaps we may take account also of men's habit of continuing to observe a usage, even when they smile at it, from the feeling that if it does no good, it can do no harm. And there are instances in which a custom, having begun as a grimly cruel superstition, has in the progress of the ages been softened down into an occasion for harmless merrymaking, and is now maintained because its antiquity appeals to sentiment, and because it varies the monotony of everyday life in rural districts.

"IMPROMPTU CONFABS."

Walt Whitman: A Critical Study. By Basil de Selincourt. New York: Mitchell Kennerley. $2.50.

This is a book on Whitman which will please nobody—not his disciples, not his enemies, not the inert public. It will offend his disciples through its occasional clever dispraise; his enemies through the mood of high, nay, supreme, seriousness which pervades it; and the inert public through the dulness of a good deal of the discussion. The public will be offended by technicalities. The disciples will not care to hear that "Leaves of Grass" should have included "lovingest enumeration" of "parish councils and town councils, of voluntarily formed leagues, unions and societies, songs of presidents and chairmen, of treasurers and secretaries and committees," etc.—which is not a bad comment. The enemies will not care to read that "to discover him is to discover a new world, a new future, a new self," or that "omnes, omnes," and "allons," and "mélange mine own" "are capable of bringing us to the verge of tears"—which are absurd comments. And both disciples and enemies will object to such assertions as this: "Devotion to his mother was to be the dominant feature of Walt's emotional life"—which is not true.

The object of the author, however, is not to please any special group of readers, but to discuss with some fulness "aspects of the subject which court misunderstanding or have received relatively little attention hitherto." Beginning with a biographical sketch that lays emphasis mainly on Whitman's sexual life, Mr. de Selincourt turns to the Problem of the Form, which is the chief theme of criticism in the book, receiving as it does half the space; the rest is devoted to Children of Adam, Calamus, Democracy and the Individual, and Whitman and America—the total impression is of 50 per cent. form and 50 per cent. sex. What the author says of the latter is not important enough to deserve reproduction here, but what he says of Whitman's poetic form is likely to attract some attention through its novelty.

Whitman is conceived as a "great stylist" who transcended, not form, but metre, having achieved a new form "for which other poets [including Goethe] seem to have searched in vain." This form enjoys the elegant name of "impromptu confab." Putting aside "a rhythmical plan or predetermined scheme of any kind," Whitman sought a form "determined by nothing else than the creative impulse which takes as it arises the form proper to it." The principle which he unconsciously, though not invariably, followed, was that the lines should have, not identity of pattern, but identity of substance—each line comes to us "floated separately on an independent breath"—and, secondly, that the lines should be joined, should lead one to another, mainly by means of the device of *epanaphora*. In other words, there is a junction of "two seemingly incompatible qualities, continuity and independence"; "the equivalence of the lines is their equivalent appeal to our attention as contributors to the developing expression of the poetic idea of the whole"—"the piece continues to expand in significance as it expands in volume."

Mr. de Selincourt's exposition of this somewhat difficult matter suffers from tenuity and a twisting of the meanings of words in the interest of expressiveness, so that the reviewer is not quite certain that he does justice to the conception of the author; but if he understands that conception correctly, the following comments must be reckoned with. In the first place, Mr. de Selincourt writes critically about the means that Whitman must employ to attain his end, without uttering a word of criticism about the end itself (that end being "the deliberate and progressive unfolding of the conscious life of a man who is at once individual and typical"). Only Whitman's fondest admirers can afford to take his purpose for granted.

In the second place—and this is perhaps still more serious—the explanation of the means does not, after all, amount to much. Everybody knows that Whitman's "verse" is habitually "end-stopped," and that, within the paragraph or the short poem, he frequently amplifies rather than progresses. In the light of this knowledge, one is not greatly impressed by learning that Whitman's lines may be likened to unified and coherent sentences that have a cumulative effect. That may be true—it probably is—but it does not take us very far. It is an explanation that does not explain, but merely orders roughly. Setting aside conventional modes of approach, Mr. de Selincourt comes to his subject with an open, even a gaping, mind; but in so far as his view is novel it seems to the reviewer unprofitable. Disciples of Whitman will no doubt go on to write ingeniously of his "form," and to extoll him as a unique and commanding artist, but the critic to whom Whitman is not the Great Camerado, but, if one must label him, Caliban on Paumanok, will continue to regard him as a poet *in posse*, not *in esse*, as one who said rightly,

> The first step I say awed me and pleas'd me so much,
> I have hardly gone and hardly wish'd to go any farther,

and who, in his "confabs," obeyed no principles of form save a few that are so flexible as to be well-nigh negligible. As he placed object after object in his catalogues, so

did he place line after line, casting each in the mould that pleased him at the moment. Naturally, there are suggestions of hexameter and of blank verse, naturally there are many delicate and resounding rhythms, but much more we cannot say, for the simple reason that there is very little more to say.

RECREATIONS OF A LAWYER.

Essays and Miscellanies. By Joseph H. Auerbach. Two volumes. New York: Harper & Bros. $3 net.

These are the literary recreations of a "legal luminary," as our fathers used to say. Mr. Auerbach is a distinguished member of the New York bar. In England he might have been a King's Counsel, and King's Counsel have frequently been men of letters also. With us success in the law, as elsewhere, too often involves a narrowing of interests, locally accepted as a national virtue. Mr. Auerbach has felt this pressure, and gently complains in his Preface that "the lawyer that is guilty of any departure from the customary methodical walk of professional life, invites excommunication from many of his brethren. . . . A lawyer of prominence almost invariably betrays his solicitude about my health by the inquiry, 'Well, how is the poet to-day?' And inasmuch as this happened merely because I have offended with the magazine article, it is difficult to conjecture what the pretentious book may call forth." Upon a second obstacle to his enterprise we believe the writer lays mistaken emphasis; namely, upon "the prejudices of the closed shop, ungrudgingly entertained for all non-union men, by some members of the writing guild." Such members of the writing guild are, we are sure, inconsiderable in numbers and in quality. There is no kind of book which the writing man takes up more eagerly and hopefully than the book of the "amateur"—the by-product of a life of action or of intellectual activity outside of purely literary channels. There is always the hope of finding a fresh point of view, or at least a pen untrammelled by professional exercise.

Both finds are to be made between these covers. In one of his papers Mr. Auerbach expresses his distrust of originality in the sense of brilliancy and inventiveness. He has little of that quality himself, nor has he the orderliness and continence of the person whose main business it is to put himself down in black and white. Lawyers have a way of speaking reverently of "the legal mind." Laymen who have had experience of legal procedure—especially of court procedure—seldom feel that either concision or clearness is a mark of the style which presumably reflects that mind. A striking illustration of the faults to which it is liable is furnished by the "Foreword" of this work, by one of the most distinguished American lawyers and speakers. We do not doubt that Mr. Choate has meant (on request) to say something about Mr. Auerbach, as well as to commend him. Very likely, he could make these words impressive in speaking them; in cold print they are trite and perfunctory: "Even the greatest authors have many dull and uninteresting passages, but each has jewels of thought which are of precious value to any reader who can acquire and retain them as his own possession."

Mr. Auerbach himself is not perfunctory, but he is often extremely diffuse. A great many of his pages would be the better for ruthless cutting, and some of his essays are so inferior that they might have been more safely omitted outright. A single volume of carefully chosen and edited work might have given the writer a better chance of winning an audience for his first book. And yet we are not sure. There is a kind of pleasant insolence in this lavishness which a professional writer could not afford. Here are virtually all the exhibits available—Mr. Auerbach seems to say—take them or leave them as you please: it is not a matter of life and death to me! A few papers we may well enough leave, papers purely occasional in source, and not inevitably surviving occasion. Two of them, "The Bible in Modern Life," and "A Club" (a familiar essay) are discouraging for their sheer length. But the volumes, as a whole, under whatever process of culling or humoring the reader may choose, surrender the impression of a personality kindly, enlightened, and companionable.

Notes

A volume of poems by William Rose Bénet, entitled "The Falconer of God," will be published shortly by the Yale University Press.

Simeon Strunsky's "Village Life in New York City" will be published in the autumn by Henry Holt & Company.

Little, Brown & Company announce that they will publish in the autumn "Big Tremaine," by Marie Van Vorst.

Among the autumn publications of Doubleday, Page & Company will be a critical and biographical study of "Joseph Conrad," by Richard Curle.

We have received the Catalogue of the Icelandic Collection bequeathed to Cornell University by the late Willard Fiske, professor of North-European languages and librarian of the University from 1868 to 1883. The catalogue, a bulky volume of some 750 pages and typographically excellent, is compiled by Halldor Hermannsson. Its price is $6 net.

We have received the programme of the Fourth International Congress for Popular Education and Instruction, which will be held at Leipzig, Germany, between September 25 and 29. The programme draws attention to the fact that the principal feature of the lectures, conferences, and exhibitions will be the education and instruction of juveniles. The discussion under this general head will embrace such subjects as: The Anthropology of Puberty, a paper on which will be read by Prof. Stanley Hall; Physical Culture; Moral Education; Intellectual Instruction, and (the programme here has an early Victorian ring) the Education of Young Females. Topics arranged for particular discussion are: Juveniles and Books; The Lecture System, Popular Universities, Settlements; Juveniles and Art, Museums, and Theatres; Juveniles and the Kinematograph; Juvenile Physical Culture, Bodily Exercise, Sport; The Care of the Neglected and Abandoned. The proceedings will be conducted in general in German, but French and English may also be used. Inquiries and applications for membership may be addressed to the General Secretary of the Congress, Herr Paul Schlager, Eutritzscher Str. 1911, Leipzig, Germany.

The author of "Figures Famed in Fiction" (Rand, McNally; $1.25 net) writes himself upon the title-page as H. G. Pillsbury, D.D. The reader of the book might almost guess the reverend gentleman's calling, for there is a strong moral flavor, both in his selections and in the treatment. The choice, for discussion, of such characters as Donovan, Marcus Vinicius from "Quo Vadis," and Dr. Hopkins from "The Minister's Wooing," by Mrs. Stowe, shows that Dr. Pillsbury would have us take, with our novel reading, a good bit of ethical and religious instruction. There are fifteen essays in all, some told in the words of the fictitious characters, and some in the third person. The characters are either naturally noble and virtuous, or else they are reformed in the course of the story. They are all well described—so well, in fact, that the reader gets nearly as good an idea of them as he would had he gone to the novel itself.

Of the ten volumes of the Cambridge Manuals of Science and Literature (Putnam; 40 cents each net) that have appeared since our last notice, none is written with more distinction of style than Joseph H. Longford's "The Evolution of New Japan." It is almost impossible to lay down the little volume once you have begun it, so fascinating does Mr. Longford make his story of the revolution that has occurred in the Island Kingdom since the restoration of the Government to the Emperor by the Shogun in 1867. Most of the other volumes deal with narrower subjects, although, as in the case of W. H. St. John Hope's "A Grammar of English Heraldry," these may have wide ramifications in history or literature, or both. The volumes so far unnamed are: Prof. A. H. Gibson's "Natural Sources of Energy," which considers the possible exhaustion of such resources and possible new supplies; Dr. Edward J. Russell's "The Fertility of the Soil"; Prof. George H. Carpenter's "The Life-Story of Insects"; Harold Russell's "The Flea"; Prof. W. J. Dakin's "Pearls"; James R. Thursfield's "Naval Warfare"; Vernon Lee's "The Beautiful," an introduction to psychological æsthetics, and J. D. Anderson's "The Peoples of India."

When a man brands most that has been written about a subject as "superficial and unreliable," and announces his purpose "to present *facts* . . . without the slightest regard to their effect upon the public mind," one looks for a noteworthy result. Yet, of John R. Lynch's "The Facts of Reconstruction" (Neale; $1.50 net), nearly one-half deals with events since Hayes, and the other half gives only such developments as came under the

author's eye. As one of the first negroes elected to Congress, he saw something of reconstruction in Mississippi, but his chapter-headings, such as The Part Played by Mississippi in the Early Days of Reconstruction, are ludicrously over-promising. The volume is negligible even as reminiscence.

The irresistible fascination of the tragic existence of Mary Queen of Scots has led Frank Arthur Mumby to take up once more the oft-told tale in "Elizabeth and Mary Stuart: The Beginning of the Feud" (Houghton Mifflin; $3 net); but he tells it in a novel fashion. Instead of venturing to rival Walter Scott and Froude in historical narrative, he has carefully put together in chronological order, with short but sufficient explanatory connecting paragraphs of his own, all the important original documents dealing with his theme. These he has culled from the English Calendars of State Papers and other sources of the highest historical value. The actual letters of Cecil, Throckmorton, Robert Dudley (later Earl of Leicester), the Spanish Ambassadors, Quadra and Guzman de Silva, Thomas Randolph, and other contemporaries give the reader something of the flavor of the intrigue and gossip of the early Elizabethan period. They cover the half-dozen years from Elizabeth's accession to Mary Stuart's unfortunate marriage to Lord Darnley. To the careful and critical reader they also afford interesting and abundant first-hand material for correcting innumerable errors and prejudices in Froude's "History" and Scott's "Kenilworth."

The student of American history who has felt a little bewildered at times by the materialistic views of the so-called economic historians, or who has wondered whether the men who are said to have made the nation were not, after all, to a lamentable extent self-deceived, will find reinforcement for his faith and strong buttressing for his judgment in Prof. E. D. Adams's Yale lectures on the Dodge foundation, delivered in 1913 and now published under the title of "The Power of Ideals in American History" (New Haven: Yale University Press; $1.15 net). Professor Adams does not mince matters. He takes issue frankly with the bread-and-butter conception of American history, which, in some quarters, has of late been insistently urged, and undertakes to show that it is not gain, but ideals, which in the great movements of our national experience have been both the inspiration and the controlling force. The happily chosen titles of his chapters—Nationality—a Faith, Anti-Slavery—a Crusade, Manifest Destiny—an Emotion, Religion—a Service, Democracy—a Vision—indicate sufficiently the author's line of thought. Substantively considered, the treatment is slight; unfamiliar facts are few, and neither criticisms nor generalizations are at any point elaborately supported. As a broad and vigorous exposition, however, of the forces and ambitions which, after all is said and done, have actually predominated in the minds of the American people and determined their attitude towards public questions, the book is distinctly stimulating, and ought to be widely read.

The third volume of Worthington C. Ford's edition of the "Writings of John Quincy Adams" (Macmillan; $3.50 a volume), covering the years 1801-1810, while dealing with an important period in Adams's earlier public life, is less rich than its predecessors in new material of importance. Adams returned to the United States in September, 1801, and the following April entered the Massachusetts Senate, where he served until February, 1803, being then elected United States Senator. His letters show a political independence which, while alienating him more and more from the Federalists, left him, at the same time, only a qualified supporter of Jefferson and the Republicans. He condemned Burr for killing Hamilton, but the old quarrel between Hamilton and John Adams was not forgotten, and he absented himself from the Boston meeting at which Harrison Gray Otis delivered a eulogy of Hamilton. On the other hand, he feared the effects of the acquisition of Louisiana upon the political importance of New England, and strongly opposed the impeachment of Pickering and Chase. To the fateful embargo he gave a reluctant but stanch support, believing from the first that the only alternative was "embargo or war"; then, when the Massachusetts general court voted instructions to its Senators which he disapproved, and elected a successor to take his seat when it should become vacant, he resigned (June, 1808), and became for a time a man without a party. Before the end of the year, however, he had become convinced that the embargo must be modified, and gave his countenance to the policy of non-intercourse which succeeded it. In June, 1809, he was appointed Minister to Russia, where he labored to protect American commerce during the last months of Napoleon's "Continental system." Mr. Ford's notes to the various letters and papers continue to be adequate.

When Professor Skeat died in 1912 he left among his papers some 7,000 large slips, of the sort that formed the basis of his numerous editions of early English authors, on which he had noted difficult words encountered in his recreative excursions into Elizabethan drama and other works of the sixteenth and seventeenth centuries. These slips have now been laboriously revised by Mr. A. L. Mayhew, and, under their joint names, issued as a "Glossary of Tudor and Stuart Words, Especially from the Dramatists" (Oxford University Press). The work covers about the range of Nares's "Glossary," but by reducing the number of illustrative quotations, without sacrificing etymologies and specific references, it has been brought into much more wieldy compass. There is no pretence of exhaustiveness; "try" and "course," in their nautical senses, are, for example, omitted. The practice with regard to Middle English forms is not perfectly consistent; frequently they are registered, but under "accloye" there is no hint that the word was English before Spenser's "Faerie Queene." On the other hand, to Ascham's picturesque Chaucerism "stept in age" might have been added Lodge's "stept in yeares," from the 1620 edition of his translation of Seneca. But the margins of this welcome little volume are fairly broad, and whoever will may engage in the not disagreeable task of filling them with his own gleanings.

"Hail and Farewell: Vale," the third volume of George Moore's Irish memoirs, is hardly distinguishable in subject matter from "Ave" and "Salve" and his earlier confessional works (Appleton). An effeminate, elderly sentimentalist, languidly attudinizing in his arm-chair, dreams over again his mad, bad days as an art student, the great evenings in the café of the Nouvelle Athènes with Manet and Degas, and the literary campaign that he made with the poets in Dublin. Most of his Irish collaborators he has portrayed before, but some of them never so maliciously. His treatment of Lady Gregory, for example, is positively feline. First comes a malignant little sketch of a conversation on Buddhism, held long ago in Lady Gregory's drawing-room, and participated in by the hostess, Sir Edwin Arnold, and the author: "When Sir Edwin rose to go she produced a fan and asked him to write his name upon one of the sticks. But she did not ask me to write my name, though at that time I had written not only 'A Modern Lover,' but also 'A Mummer's Wife,' and I left the house feeling for the first time that the world I lived in was not so profound as I had imagined it to be." Then comes the destruction of Lady Gregory's "Cuchulain": "She was just content to pepper her page with a few idiomatic turns of speech which she very often does not use correctly." The note of this volume is purr and scratch in alternation. This is not exactly the note of a great English classic—though George Moore is a pretty writer in this latest silken manner of his. It is rather the note of an experienced gossip. Considered merely as gossip, some of the pages are quite delightfully piquant; others are divertingly silly; and there is a tolerably generous offering of "sallets" of a rancidity to command attention. On the whole, a fairly scandalous book, written up to the author's favorite motto, "to be ashamed of nothing but to be ashamed."

We may notice here in advance of the completion of the whole work the publication of Part I of the Principles of Tantra, edited with an introduction and commentary by Arthur Avalon (London: Luzac & Co.). It will be more convenient to review the Principles as a whole, when the second part appears. Briefly stated, the work is a modern Hindu's exposition and defence of the Tantra system, and thus far the most important part of the book is the Introduction, by Mr. Avalon, who seems to be not only a student of this peculiar religious philosophy, but to be a believer in its antiquity and philosophic value. Mr. Avalon is right in demanding that the Tantra shall not be held to be a system of magic and obscenity till the Tantra works themselves shall have been interpreted. He himself is inclined to credit apparently obnoxious features with an esoteric meaning which robs them of their seeming vulgarity and exalts them into symbols of wisdom. Yet we doubt whether even the broadest tolerance can really sanction the belief that "putrefying corpses are still brought to life" by Tantra magic, or that the "five M's," *madya, mānsa, matsya, mudrā, maithuna,* that is to say, worship with wine, meat, fish, grain, and—let us say—woman, are intended as aids to greater spirituality.

It is a distinct pleasure to call attention to a brief but lucid sketch of "The Influence of the Bible on Civilisation" (Scribner; $1.25 net), by Dr. Ernst von Dobschütz, professor of New Testament at Halle and recently exchange professor at Harvard. In eight chapters he shows how the Bible makes itself indispensable for the Church; begins to rule the Christian empire; teaches the German nations; becomes one basis of mediæval civilization; stirs non-conformist movements;

trains printers and translators; rules daily life, and becomes once more the book of devotion. The upshot of the historical survey is this: The Bible is not a textbook on science; even theology looks to it not for authoritative proof of doctrine, but as a source of historical information; and the history of Israel which it relates must enter into the larger field of universal history, even the personality of Jesus being subject to comparison and analogy. This apparent secularization, however, serves only to restrict the Bible to its own proper province, religion. "It is the book for Christian devotion. This was its original intention, and I venture to think that it is not a loss, but a gain, if the Bible is once more applied to its proper purpose."

The April number of the *American Journal of International Law* is two months late in appearing, but its contents make it worth waiting for. Alpheus Henry Snow, of Washington, D. C., contributes a careful study of the American philosophy of government and its effect on international relations. Mr. Snow discusses the rights of individuals against Governments—those fundamental rights which, in the United States, are affirmed in the Declaration of Independence. Ultimately, in his opinion, the question must arise, What right have citizens of one nation against another nation? The old theory of international law, that it is concerned solely with the rights of nations against one another, has become essentially modified, and the rights of the individual as against a foreign nation in which he may be sojourning, or against one of its citizens, becomes a vital question. Mr. Snow works out the problem presented in an instructive way, incidentally considering its application to the Monroe Doctrine. Other articles include: A European view of Central American questions; a study of the law of hostile expeditions as applied to the United States, by Emerson Curtis; an essay on aerial land and maritime warfare, by Wilmot E. Ellis. The editor-in-chief, Mr. Scott, writes an admirable paper on the Declaration of London of February 20, 1909, that resulted from the conference called to consider the creation of an international prize court. The editorial comment is illuminating. The question of Governmental action to further the holding of a third Hague Conferenee, as recommended at the second, is briefly considered, and various other matters relating to the Hague conferences are dealt with more elaborately, among them Mr. Carnegie's endowments. The supplement, of treaties and other documents, is valuable.

Pensioners, Sizars, and Fellow-Commoners (if the last category still exists) of Christ's College, Cambridge, should be grateful to the late Master of the College, Dr. John Peile, for his monumental labors in compiling a "Biographical Register of Christ's College, 1505-1905, and of the Earlier Foundation, God's House, 1448-1505" (Cambridge University Press). An almost incredible amount of industry and patience, inspired, we may be sure, by a filial love for his House, of which he was both alumnus and Master, must have been expended on the making of these two weighty volumes. They consist of records chronologically arranged, as accurate as careful research has been able to make them, of those who have been entered on the registers of Christ's College. Towards the close, when the work, all but complete, was interrupted on account of serious illness, Dr. Peile was ably assisted by Mr. J. A. Venn, *docti patris filius doctus*, a son of Dr. Venn, who is president of Gonville and Caius College and himself the author of historical works dealing with that foundation. Mr. Venn also saw the work through the press and contributes a prefatory note. For the layman, unless he be connected with the foundation of Christ's College, these volumes will naturally hold but little interest, but to the historian and bibliophile their value as books of reference will be considerable.

Montgomery Schuyler, journalist and art critic, died on July 16, ten days after the death of his wife. Mr. Schuyler was born in Ithaca, N. Y., on August 19, 1843. He entered Hobart College at Geneva in 1858, but did not graduate. Coming to New York after the Civil War, he was successively an editorial writer on the *World*, the *Times*, and, latterly, the *Sun*. He was managing editor for *Harper's Weekly* from 1885 to 1887, and was a reader for Harper & Brothers from 1887 to 1894. He had contributed verse and literary articles to various leading magazines, and wrote frequently on his favorite subject, architecture, on which he was acknowledged as one of the leading authorities in the United States. Among his publications were: "The Brooklyn Bridge," which he wrote in collaboration with W. C. Conant in 1883; "Studies in American Architecture," 1892, and "Westward the Course of Empire," 1906.

Samuel G. W. Benjamin, the author, artist, and diplomatist, who died on July 19, was born in Argos, Greece, on February 13, 1837, the son of Nathan B. Benjamin, an American missionary. After attending the English school at Smyrna, he entered Williams College, graduating from there in 1859. He was assistant librarian of the New York State Library from 1861 to 1864, and afterwards spent several years reading law, studying art, and at sea. In 1883 he was appointed the first United States Minister to Persia, and served in that capacity till 1885. He was formerly art editor of the American department of the *Magazine of Art* and of the New York *Mail*. A marine painter and illustrator, during the Crimean War his marine drawings of episodes in the war were published in the *Illustrated London News*. In 1870 he opened a studio in Boston. Among Mr. Benjamin's publications may be mentioned: "Constantinople, Isle of Pearls, and Other Poems," 1861; "Ode on the Death of Abraham Lincoln," 1865; "The Turk and the Greek," 1867; "Contemporary Art in Europe," 1877; "What Is Art?" 1877; "The Atlantic Islands," 1878; "Art in America," 1879; "The Multitudinous Seas," 1879; "The World's Paradises," 1879; "Troy, Its Legends, Literature, and Topography," 1881; "Persia and the Persians," 1886, and "The Story of Persia," 1887.

The Rev. Dr. Milton S. Ferry, the Hebrew scholar, who died recently in California at the age of seventy-four, was born in Albany County, N. Y., and graduated from Yale University. Dr. Ferry was received into the New York Conference of the Methodist Episcopal Church in 1863, and continued in the ministry for twenty-one years. In 1884, he was appointed professor of Hebrew in the Garret Biblical Institute, Evanston, Ill., but at his own request was transferred to the chair of Christian Doctrine. In 1887 and 1889 he visited and made observations in the leading universities of Germany, and continued for some time as a student of the University of Berlin. Dr. Ferry was the author, among other publications, of "Biblical Hermeneutics," and was a member of the American eommittee chosen to edit the tercentenary edition of the King James version of the Bible.

NOTES FROM ABROAD.

The death of Joseph Chamberlain releases for publication a collection of documents that will be of great value to the historian of Radicalism in England before the Home Rule split. They consist of a number of letters and papers belonging to Sir Charles Dilke, who left instructions that they were not to be given to the world during Mr. Chamberlain's lifetime. They have already been arranged and edited by Stephen Gwynn, and had been read and approved by Mr. Chamberlain himself. The Chamberlain papers relating to the Transvaal War and the tariff-reform controversy affect so many persons still living that they are not likely to be issued for many years to come.

> Miss Jinks in the town begs the loan of
> The book from the innkeeper's wife,
> And reads till she dreams she is one of
> The leaders of fashionable life!

Well, Miss Jinks in the American village may derive comfort from the society news of a single day in the late Paris season. It is the ancient and authentie *grand monde*, and not the cosmopolitan world where Russian Grand Dukes rub noses with Republican millionaires. It is that very close circle in which families of old title shelter what remains to them of the irrecoverable past. At one dinner, three such families were represented by American women, or daughters of American women, married to their titles. At an afternoon music hour, a duehess and a countess were Americans who had lost their nationality by marriage. At a *soirée dansante* for the coming out of a daughter of the old régime, her companions were chosen among the children and grandchildren of similar Ameriean women long since merged in the lingering aristocracy of France.

One of those vast international assemblies of Roman Catholic communicants which have attracted so much attention of late years, under their name of "Eucharistie Congress," takes place at Lourdes at the end of July; and it is straining the capacities of the French railways. It is expected that 200,000 persons will take part in it. The French state railways are organizing special trains from each diocese, over and above the through trains for foreigners. The lodging capacity of Lourdes, with all its experience of giant pilgrimages, is even more sorely taxed. Not only the villages of the neighborhood, but cities as far away as Tarbes and Pau, are called on for hotel room. Seven bishops of the United States announce their coming, and as many more from Canada; eight from Brazil and fourteen from Spanish America, including one from troubled Mexico and one from Panama sixty-three French bishops, as is natural; sixteen from Italy and seven from Spain; four from Austria and three from Hungary; four from Portugal, that is, from their exile; two from Ireland and two from Scotland; one each from England, Belgium, Luxemburg, Germany, Russia, Bulgaria, and Greece; three from Africa; nine from Turkey in Asia; two from the East Indies; three from Indo-China

and three from China; and, closing the world's circle, three from Australia.

Georges Perrot, who has recently died, was known to the world at large as the archæologist and historian of art in antiquity; but to the world of learning, particularly in its relation with the state, he was something more. He was the last director of the famous Ecole Normale, as it had existed for the hundred years since its foundation by Napoleon. He has had, indeed, a successor who is an old and typical *Normalien*, Ernest Lavisse; but this has only softened in detail the political revolution in which the institution has lost its character with its autonomy. It is no longer anything but an annex of the Paris University faculty of letters at the Sorbonne. In its distinct life, it had been a sovereign school, forming professors for the highest university faculties of all France.

At this late day, it is idle to lament the passing of a great, humanizing institution which, more than any other, secured the association of lofty literary traditions with French scholarship and science. Jaurès was one of its latest productions; and in his Socialist career he still continues the grand rhetoric of the *Normalien*. It may be inevitable that the republic should level down all distinction and aristocracy, even of thought and language; and perhaps the Ecole Normale, in its independence, was becoming quite as inevitably a nest of reaction against the all-regulating republic. Perrot himself represented a Protestant connection; and his predecessor, Fustel de Coulanges, had certainly not won his great name in the historical philosophy of the state by any Clericalism. Without being a *laudator temporis acti*, it may be doubted whether the new formation of the French university, cultivating intelligences under the levelling harrows of dictionaries and encyclopædias and official formulas, will produce again that essentially literary type of scholarship which was so long the glory of France.

The new Archbishop of Upsala, in Sweden, is an interesting product of the university revival in that country. Like others of the new generation of Scandinavian scholars, he has made himself a name in the intellectual life of France and Germany. After professing at his alma mater of Upsala, he was honored by an appointment to teach the history of religions in the University of Leipzig. From there he has been promoted to his present post, which has the only archbishop's title existing in Lutheran countries. This makes him also pro-chancellor of the University. In his younger days he was for some years pastor of the Swedish church in Paris, during which time he studied Zend with that most deeply learned of modern Israelites, James Darmesteter; and he published in French a notable study of "the future life according to Mazdeism." He also edited the History of Religions by the deceased professor of Leyden University, Tiele. His most considerable work is two volumes on "The Religious Problem in Catholicism and Protestantism," in which he studies with intelligence and sympathy the leaders in the modern intellectual movement from Newman to Bergson. As the first (Roman Catholic) Archbishop of Upsala was consecrated at Sens by Pope Alexander III, Archbishop Soederblom prepared himself for his new dignity by a pilgrimage to that one-time primatial see of France.

In the movement, patriotic, artistic, literary, and dramatic, which has been going on for ten years in the summer theatre of Mézières, near Lausanne, in Switzerland, this year is noteworthy for the play of "William Tell." It has been written by an author already known, René Morax, staged by Jean Morax, and has a musical partition by Gustave Doret—all being native talent. The lake and mountains enter into the scenery of the piece, with rhythmical prose and grave thoughs which Rousseau would have recognized, and with a chorus full of musical emotion and sustained by brass instruments in the vast free hollow of the Alps. The President of the Swiss Confederation, surrounded by the Federal Council and the diplomatic corps, took their places at the first representation. The King and Queen of the Belgians presided in their turn. There is every reason why the artistic reputation of the little Swiss village and its population should become known to summer wanderers in the Alps from their patriotism, just as Oberammergau has long been known from its religion.

Science

SAMUEL W. JOHNSON.

From the Letter-Files of S. W. Johnson. Edited by his Daughter, Elizabeth A. Osborne. New Haven: Yale University Press. $2.50 net.

Samuel William Johnson was one of that small group of American chemists who, two generations ago, undertook to extend and develop laboratory instruction in chemistry and to apply this science to the industries of the country. His whole life was devoted to training workers in this field, to making others realize what chemistry could do for them, and to developing institutions and methods to extend the knowledge of chemistry and to make it available to those engaged in productive occupations. For forty years he was professor of agricultural chemistry in Yale University, and for twenty-three years director of the Connecticut Agricultural Experiment Station. This station was the first permanent organization of the kind in America, and its establishment, in 1877, as an independent State institution "for the purpose of promoting agriculture by scientific investigation and experiment" was largely due to the persistent work of Professor Johnson, who naturally became its Director. Ten years later Congress passed the Hatch act, granting Federal funds to State experiment stations and providing for a central advisory bureau under the Department of Agriculture. This volume, which contains the story of the birth of this system of institutions of public research, is an uncommonly interesting biography of the man who had the genius to foresee the advantage of such work, the faith to devote himself to it, and the tact and persistence to succeed.

Born in Kingsboro', New York, in 1830, Professor Johnson spent most of his childhood and youth in Lewis County, to which his family removed when he was four years old. His only systematic schooling appears to have been at Lowville, the county seat, and this was over at sixteen. The principal of the Lowville school was, by some rare chance (in those days), a chemist, and before young Johnson left the school, chemistry had become the absorbing interest of his mind, never to be displaced. The first great event in his intellectual life was the gift of a copy of "Fresenius" which the principal brought him from New York.

Two years later, after a period of teaching in district schools, his father fitted up a laboratory for him at the farm, and there, with Fresenius as a guide, he prepared most of the reagents and worked through the qualitative methods of analysis so far as possible. His father, however, saw no professional future for him in chemistry, and wished him to study law or medicine. But unwilling to give up his dream of a scientific life, Johnson obtained a place as instructor in Flushing, L. I., hoping to demonstrate that he could support himself by teaching and at the same time continue his scientific studies. After five years, about equally divided between teaching at Flushing and Albany and work at the Yale Analytical Laboratory, with the problem of ways and means for European study constantly in his thoughts, he was supplied by his father, who had been quietly watching and testing his son, with the means for carrying out his cherished plan; and the following two years were spent abroad, chiefly with Erdmann in Leipzig, and Liebig and von Pettenkofer in Munich. In 1855, he returned to an assistant's position in the Yale Scientific School. The following year he was appointed professor of analytical chemistry.

Professor Johnson was a voluminous writer on his chosen subjects, as is shown by the ten pages of titles of contributions to scientific and agricultural journals given in the appendix of this volume. He edited Fresenius's Manuals, and wrote two books, "How Crops Grow" (1868) and "How Crops Feed" (1870). These treatises were the beginning of a new and better agricultural literature, and found immediate recognition. They have probably been read and studied more widely than any other works on agricultural chemistry, and have been translated into German, Russian, Swedish, and Japanese.

Professor Johnson's letters are good reading; they have the charm of frank, spontaneous utterance, graphic and apt expression, and humor. One does not have to be an agricultural chemist to enjoy them. Mrs. Osborne has done her part as editor with great skill, furnishing just enough pertinent information and interesting comment to make this one of the most readable of recent biographies, and an adequate memorial of a man who played a most important part in the development and application of agricultural chemistry in this country.

A good sort of compendium of celestial science is "The Essence of Astronomy, Things

Every One Should Know About the Sun, Moon, and Stars" (Putnam; $1 net), by Edward W. Price. It is a compilation, excellent in the main, not of original research publications, but of authoritative astronomical works, and illustrated by superior halftones of photographs of the heavenly bodies taken with the principal instruments of the Lick and Yerkes Observatories. To these might well have been added the significant work at Mt. Wilson. But the text is hardly up to the character of the illustrations, although in considerable part brought well down to its date. Much less is made of the unsurpassed work of Barnard than of that emanating from the Lowell Observatory. The latter's photographs of Mars have especially been regarded as open to criticism by many unbiassed astronomers. Misstatements of fact are not abundant: page 31, inclination of the earth's axis to its orbit is 66½ degrees, not 23½; p. 107, the saros is 18 years, not 19; p. 197, last line, the symbols need revision; p. 201 and elsewhere, the name of a well-known American astronomer is misspelled. The chapter on instruments, the telescope in particular, is especially clear and concise, but the chronology is not so good as it would have been had the author followed Miss Clerke's model in her "History of Astronomy." The list of atlases might well have included Norton, also Upton; and the comets need the addition of Chambers's recent treatise, at least. The omission of an index detracts greatly from the book's value as a manual for handy reference. The language is mainly untechnical, and the little volume will find a suitable niche along with greater works, its brevity and compactness helping towards its acceptance by beginners in sky lore.

Dr. Lemuel Conant Grosvenor, who died on July 17, was born in Paxton, Mass., on March 22, 1833. He studied medicine at the Cleveland, O., Homœopathic Medical College, from which he graduated in 1864. Dr. Grosvenor's professional career was spent in Illinois, the last thirty-seven years of it, until his retirement in 1907, at Chicago. He was a lecturer on anatomy and morbid anatomy, 1871-2, at the Hahnemann Medical School in Chicago, and from 1873-1899 he was professor of obstetrics and sanitary science at the Chicago Homœopathic College. He was the author of "Our Babies," 1883, and of several other medical books. Dr. Grosvenor was a member of the American Institute of Homœopathy, the Chicago Academy of Homœopathic Physicians and Surgeons, of which he was president for three terms, and the American Paidological Society.

Sir Christopher John Nixon, ex-president of the Royal College of Physicians of Ireland, died on July 19, in Dublin, where he was born on June 29, 1849. Sir Christopher was professor of medicine at the Catholic University, a member of the General Medical Council, honorary fellow of the British Institute of Public Health, and vice-chancellor of the University of Ireland. He was educated at Trinity College, Dublin, and at the Cecilia Street School of Medicine, Paris. He was at one time professor of anatomy and physiology, and was the first president of the Royal Veterinary College of Ireland, which he took great interest in establishing. He was the author of various papers on diseases of the heart and nervous system, and of a "Handbook of Hospital Practice and Physical Diagnosis." He was knighted in 1895 and created a baronet in 1906.

Drama and Music

BUSINESS-LIKE HISTORY.

English Drama of the Restoration and Eighteenth Century. By George Henry Nettleton. New York: The Macmillan Co. $1.50 net.

This volume and a projected sequel reaching to our own days are intended to fill up the gap in English dramatic history occasioned by the stoppage of Sir A. W. Ward's well-known work at the close of the reign of Queen Anne.

The work is both historical and critical, but its contributions in the latter field may be dismissed as unimportant. Mr. Nettleton's criticism, even at its best, exhibits only the sort of merit belonging to the apt replies of the conscientious and well-drilled pupil. Evidence of vigorous personal rebound to the impact of literary appeals of any nature is quite absent from the specifications—we had almost said entries—of this business-like and neutral-colored work. The unwisdom of adding perfunctory criticism to genuine, if somewhat contracted, scholarship hardly calls for comment; the remedy in such cases is the partition of functions or the collaboration of authors.

Even as investigator, Mr. Nettleton prefers to narrow his field, and secures this concentration by the exclusion or attenuation of some of the topics best fitted to interest both the specialist and the cultivated reader. Of the influence of stage conditions on authorship he says little; on the relation of drama to the life and spirit of the times, his reserve amounts to taciturnity. He is happiest and most at home in fixing dates and settling priorities, in tracing the rise, growth, and amalgamation of literary genres, in finding descendants for Sir Fopling Flutter or progenitors for Charles Surface, in balancing the claims of England and France to ascendency in this or that period of English drama. Mr. Nettleton's corrections are mostly abatements; a rake-off or rebate of from 25 to 50 per cent. on the energy and decisiveness of the conventional view is observable in his estimates of French influence under Charles II, of the fatuity of heroic tragedy, of the significance of Jeremy Collier's protest, of the influence of Voltaire in the eighteenth century. These diminutions awaken in the reader the same mixture of confidence and impatience which marks the attitude of the victim of high living to the cautious physician who insists on the dilution of his wine.

There are a few queries on points of detail that might be put by an observant reader. What is the meaning of Mr. Nettleton's assertion on page 30 that a patent dated 1660 created a monopoly which lasted "almost three centuries"? In what sense is the word "confidantes," on page 135, applicable to two such active and principal figures as Lady Brute and Belinda in "The Provok'd Wife"? Who is this other Belinda in Congreve's "The Way of the World" (see page 150) on whom the printed cast is strangely silent and of whom no vestige lingers in the memory of a reviewer who has re-read the play within the last few weeks? In what version of "Venice Preserved" did Mr. Nettleton find authority for the statement, on page 102, that "On the scaffold, Jaffier is to pay the penalty of his vacillations"? Why is "Whitehead" written four times for "Whitefield" on page 252, and what new nephew is Sir Oliver Surface trying to unmask when he appears, on pages 281-2, under the alias of Sir Oliver Teazle?

In the presentation of his matter Mr. Nettleton is not infelicitous. Whatever he lacks, he possesses beyond question that admirable perspicuity in the view of a fact as a fact which belongs to minds unaided, and therefore undistracted, by power of generalization or quickness of sensibility. The limpidity of his style is absolute, and, within the bounds fixed by a restricted vocabulary and uniformity of sentence-structure, it maintains a high standard of neatness and good taste. Twenty-five pages of careful bibliographical notes form a useful appendix to the volume.

THE BLACK COUNTRY.

The Widowing of Mrs. Holroyd. By D. H. Lawrence. New York: Mitchell Kennerley. $1 net.

This three-act drama is a remarkable achievement for a first effort by a young author who has been writing only for two or three years. It deserves its place in the Modern Drama series, edited by Edwin Björkman, as an example of the new realistic school, but the "superb craftsmanship" which the editor discerns in it is scarcely its most distinguishing quality. It is, on the contrary, in constructive skill that the play is chiefly defective. Inexperience is manifested in the hesitancy of the action, in much unnecessary repetition, and in the arbitrary use of coincidence. The virtue of the piece resides in the veracity of the atmosphere and the characterization. Only those familiar with the life, personality, and speech of the pitman of the English black districts will be able to realize the truthfulness of the scenes herein depicted. And it may be added that the conduct of the various personages is, from the psychological point of view, entirely logical and consistent. On the other hand, the psychology is of a simple and conventional order that does not necessarily imply any extraordinary powers of reflection or insight, and the realism is photographic rather than inventive. It is conceivable that the author, himself the son of a miner, may have had personal experience of episodes similar to those which he describes. But even if this should be the case, the descriptive ability which he displays, the aptness and raciness of his dialogue, and his rigorous adherence to type are uncommon gifts.

The tale is not in itself valuable. All its elements are sordid and uninspiring. The heroine, a decent, hard-working woman, to

escape from an unhappy home has married a miner, who soon reveals himself as a drunken, immoral brute. Presently she begins to look with favorable eye upon a young electrician who befriends her and wishes to take her and her children away. A crisis is reached when her drunken husband insists upon her entertaining two of his loose female companions. There is a fierce quarrel, culminating in a fight between the husband and the engineer. Mrs. Holroyd, wrought to fury, bids her husband begone, wishes him dead, and finally confesses her love for the engineer and agrees to flee with him on the morrow. The next day Holroyd is killed in the pit, and when his dead body is brought home the old affection of the wife is revived in the preparation of it for burial. Filled with remorse, the woman accuses herself and the engineer of virtual murder, and upon her lamentations the curtain falls. The engineer says that he will return, but the eventual outcome is left uncertain.

Plainly, the fortuitous elimination of the miner is an amateurish way of solving what might have been an interesting dramatic problem. There is no direct relation between cause and consequence. A craftier playwright would have connected the lover with the husband's convenient removal. But the veracity of the individual scenes is vital. Language, behavior, and incident are appropriate and intensely characteristic. They might be kinematographic representations of actual happenings in a miner's household. But in the theatre something more is needed than a literal transcript of the actual, and this Mr. Lawrence does not supply until his last act. Here, in the scene where the widow and the old mother exchange confidences, while they do the last offices for the corpse, there is the needed touch of imagination to exalt and justify the realism. The revulsion of feeling excited by the memories of happier days in the remorseful heroine is both true and subtle.

The score of Humperdinck's new opera, "Die Marketenderin," has been printed by Fürstner in Berlin.

Siegfried Wagner has had many reasons for thinking that it does not pay, except from a pecuniary point of view, to be the son of a very great man. Nor does he seem to be able to live down the unfavorable impression he made in the past. At a recent music festival in Hanover one of the concerts was conducted by Max Reger, who produced his "Romantic Suite" and won "a stormy ovation." The next day Siegfried Wagner conducted a concert of his own compositions and was chilled with "polite applause." Public and press united in making it obvious that he was "not the man to make a festival out of a concert of his own works."

Spanish music is seldom sung by our choral societies, possibly because their conductors are not acquainted with any that appeals to them. It will interest many of them to know what pieces were sung in London recently at a concert given by the Orfeo Catala of Barcelona. The critic of the *Telegraph* wrote that "it would appear that, as the Spaniards are the proudest nation in Europe, so they are of the saddest. For even in the delightful 'L'hereu Riera,' a popular dance, by Ribo, in Morera's 'El Rossinyol,' and in the exquisite 'Cant dels Aucells,' by Millet, there was an air of decided sadness. Millet's work and Noguera's 'La Sesta,' Granados's 'Elegia Eterna,' and Nicolau's 'La Mort de l'Escola' are all remarkable compositions. In all, the 'bouche fermée' plays a conspicuous part, and the tone is beautiful, while the voice parts, à 6, 5, or 4, move with a delightful ease. In two cases there was a soprano solo part superimposed, which, sung with quite extraordinarily beautiful method by Madame Maria Barrientos, made a very remarkable and appealing effect."

Six thousand five hundred school children played the fiddle the other day in the Crystal Palace, London, 3,500 being heard in the afternoon, the others in the evening. The children ranged in age from eight to sixteen. Owing to the great number of players, the conductor-in-chief had to be helped simultaneously by two sub-conductors. One would suppose the results must have been excruciating, but one of the leading critics avers that "the performances were most stimulating."

Art

COUNT CAMONDO'S COLLECTION AT THE LOUVRE.

PARIS, July 10.

A certain general interest attaches to the art collection which Count Camondo left to the Louvre Museum and which was opened to the public in June. He made it a condition that the collection should be exhibited undivided for fifty years; and a consequence is that living artists, against the usual rule, find a place in the famous galleries. Count Camondo exercised intelligently his two predilections in art—French painting of his own day from Ingres to Claude Monet, and decorative art of the eighteenth century.

Among the paintings, numerous examples of Degas profit most. From the unknown to the discovered painter, here are his *danseuses* and race horses, both drawn in astounding perspective. "It is the only exact painting of shoulder blades since Michelangelo" has been said of it; and there is the wise distribution of color, which is also perspective. Those who were in at the first discovery of Degas will find here the Dance Lesson, which was left so long at the Luxembourg Gallery, and the Grande Leçon de Danse, which became celebrated only to be lost to sight for years in this private collection; the Pedicure, and Absinthe, with its three planes to complicate the perspective; and the often reproduced Washerwomen.

Of Manet, there is the Fifre, which was in the Salon des Refusés of 1863, with Whistler and Fantin-Latour. "Manet doesn't know how to paint," was the day's criticism. There are fifteen paintings of Claude Monet; one of the best of Alfred Sisley, who died of want, while a painting which he had sold for 40 francs brought 29,000 a few days after his death for the dealer who had bought and kept it; and there are instances of Renoir, Cézanne, and Pissarro, who thus get into the Louvre. There are drawings of the early Forain, forgotten as if he were dead; and there is Toulouse-Lautrec, with his Japanese vision of French men and women, scarcely known abroad except for his prodigious posters for the nascent Moulin Rouge. There is an evolutionary series of thirty-five water-colors by Jongkind from 1858 to 1883, and two novel figure paintings by Corot. In all, there are 136 paintings, pastels, water-colors, and drawings of French artists of the nineteenth century, mainly later than 1860.

Of the eighteenth century, there are but one painting and twelve drawings; but it is interesting to note that they have been rescued for the public from sales of private collections. A Perronneau portrait came from the Princess Mathilde, two Latour pastel-crayons from the Goncourt brothers, and a Springtime of Watteau—a study for a large decorative panel—from the Crozat sale. There are fantastic designs of Saint-Aubin and Fragonard, and a study of Prud'hon for his Empress Josephine, which is in the Louvre.

The two halls for the eighteenth-century collections have been lined with woodwork of the time, transferred for the occasion by the state from the quarters of the Military Governor of Paris in the Place Vendôme. This is made visible for the first time to the general public. Falconnet's Three Graces—the clock which drew so much admiration at the Paris Exposition of 1900—is here. It was bought in 1881 at the sale of Baron Double for $20,200. From the same collection comes the furniture of King Louis XV's chamber at Versailles—two sofas, four armchairs, and four gilt wood chairs, all covered with richest Gobelins tapestry—and for this, too, Count Camondo paid $20,000. There are twenty Italian Renaissance bronzes, one of which is a Crucifixion by Donatello; old French faïence, and a collection of Japanese bronzes, masques, paintings, and drawings. The value of this new addition to the vast Louvre collections may be appreciated. The collection of French Impressionist painters of the first period is the completest yet made; and it was gathered, not after their long-disputed success, but year by year by Count Camondo, who was their contemporary admirer.

Cézanne never took his place among the Impressionists of the first hour, although he was a friend from boyhood of Zola, whose book, "Mes Haines," did more than anything else to make them and himself known to the critical public. Perhaps Cézanne's isolation was partly because of Zola, according to conversations just reported by Ambroise Vollard. "If Cézanne had the genius for a great painter, he had not the talent to become one," was Zola's definitive judgment. "I have some of his paintings, but I shall never hang them on my walls. Don't ask to see them. It pains me too much when I think what my friend might have been if he had been willing to direct his imagination—and

also to work at his form. I have done my best to electrify Cézanne; but nothing will get him out of his dreams. He will shut himself up more and more from the real world."

Cézanne, on his side, explained how he had drifted away from Zola. "I was no longer at my ease with him. He worked now at a carved wood desk. It ended by giving me the impression I was having audience of a Minister. Then a good many people came around him, and what they said was very tiresome. Once I tried to talk of Baudelaire —the name interested no one." After Zola published "L'Œuvre," relations virtually ceased between the two friends. Cézanne said: "You can't ask that a man who doesn't know should talk reasonably of the painter's art; but how, *nom de Dieu*, can he dare say that a painter kills himself because he has made a bad picture? When a picture isn't realized you throw it into the fire and begin another!" Edouard de Goncourt also quarrelled with Zola about this art-novel. Vollard spoke to Cézanne about Rosa Bonheur. Cézanne asked if he had seen any of her work. Vollard said he found what he had seen "very strong." "Yes," said Cézanne, "it is horribly like!" S. D.

Finance

THE NEW HAVEN'S AFFAIRS AND THE MARKET.

The disagreement between the Federal Administration and the New Haven Railroad directors, and the announcement last Tuesday of a suit for dissolution of the property, have been foreshadowed for several weeks. It may be the simplest solution of the company's entanglement with outside undertakings; for the series of deadlocks in this matter ought to be ended once for all, and that can be accomplished by a court decision. When New Haven stock broke 7 points, last week, the report of the Interstate Commission was at first declared to be the gravely unsettling influence; it was then assumed that some greatly disturbing incident would accompany the directors' meeting of Thursday. Yet the curious part of the matter is that there was nothing in the Commerce Commission's statement of facts which had not been known before; nothing in its comment on those facts which did not have widespread concurrence, even in Wall Street; nothing in its proposal of prosecutions to recover wasted funds which would not, if successfully pursued, have inured to the New Haven's profit, and nothing in Thursday's proceedings by the directors which had not been foreshadowed a week before.

The Stock Exchange began by arguing that a Commission which denounced so unsparingly the improper financing of the decade past, in the New Haven, would not be disposed to liberality in acting on the petition of other roads for higher rates. But this was hardly reason for fresh misgiving at the publication of the New Haven report; because it was perfectly apparent, even a year ago, just what the Commission thought of this New Haven episode. The Commission's language, to the effect that the Mellen management was "one of the most glaring instances of maladministration revealed in all the history of American railroading," was undeniably severe; one might perhaps have wished that a more judicial tone had been preserved. It was certainly stronger than the language in which, a year ago, the Commission declared the "outside financial operations of the New Haven for the last nine years to have been wasteful in the extreme." But the two assertions come to pretty nearly the same thing. Furthermore, whereas the report of a year ago declared guardedly that "the financial condition of the company calls for careful consideration and prudent action, but gives no occasion for hysteria," last week's report goes so much further as to say that "honesty and efficiency of management of this property, as a railroad only, will undoubtedly in time restore its former standing."

The reason why the report of the Interstate Commerce Commission went into the question whether directors of the Mellen régime might be civilly or criminally prosecuted for the waste of the New Haven's money was that the United States Senate had ordered it to do so. Careful reading of the report shows that the Commission, while very positive about the responsibility of those directors, is not so very sure that the money can be recovered from them. It estimates that $60,000,000 to $90,000,000 was thus squandered in purchase of useless or over-valued properties. It maintains that Billard's profit of $2,748,000 on the Boston & Maine jugglery was so far illegal that a suit for restitution could be maintained.

But it speaks guardedly about suits against the directors. The most it really says is that directors "should be made individually liable." But that might be merely a proposal of new legislation. The truth is, as Wall Street recognized at once, first that suits for restitution usually lie against beneficiaries of irregularly diverted funds, whereas, with very few possible exceptions, the acquiescent New Haven directors were certainly not that; but, more than this, that the statute of limitations runs against actions like the Westchester and Rhode Island operations, which were carried out more than half a dozen years ago. For much the same reason, the suit filed at the close of last week against the directors by minority shareholders, to recover $306,000,000, was not taken seriously in the least.

The disturbance of New Haven shares, over the week's earlier incidents, would seem, therefore, to have been somewhat overdrawn. The agitation over the approach of the meeting of the New Haven directors, last Thursday, certainly was. Everything, from a defiance of the Government to application for a receivership, was predicted in advance of that meeting. What occurred, however, was that the directors repudiated the whole idea of a receivership, appointed a committee to consider a suit against Billard, and again asserted their unwillingness to consent to a forced sale of their company's 225,000 shares of Boston & Maine, if the Massachusetts Legislature continued to insist on the promise that the purchasers would surrender it, whenever the State of Massachusetts should take it into its own head to buy the stock, and to require the New Haven, when offering it to outside investors, to mark the stock conspicuously with notice of that stipulation.

All of this action of the board was what should have been expected. The real question is, not whether any one ought or ought not to have been frightened at this week's events, but whether the State and Federal authorities will be business-like and merciful, or will pursue such measures as to ruin the market for the New Haven's assets, and thereby inflict still greater injury on the thousands of New Haven shareholders. There is quite as much chance of a happy as of an unhappy outcome in that direction; for the Federal courts, which have not been harsh or unreasonable in fixing the terms of similar dissolutions, will now have the deciding voice.

That the New Haven can afford to give up its other outside properties, even if it has to sell them at a loss, is at least suggested by the earnings in the last annual report. They were actually operated for the most part at a loss. During 1913, the New Haven Railroad system proper earned $68,613,000 gross and $22,031,000 net. In the same year, the Rhode Island trolley system earned for its owner, the New Haven, a surplus of $88,000, and the Connecticut trolleys one of $109,000, while the Millbrook Company reported a deficit of $179,000, the New England Steamship Company one of $355,000, and the New York, Westchester & Boston one of $1,405,999.

New Edition of

Curtis's Nature and Development of Plants

By CARLTON C. CURTIS, Professor in Columbia University. ix+488 pp. 8vo. $2.50.

The third revised edition of this successful textbook for beginning college courses in general botany is brought up to date and embodies many suggestions from users of the previous editions. Its plan is unchanged.

The first part is an excellent introduction to vegetable morphology and physiology; the second part treats of the great groups of flowerless and flowering plants.

A History

—by—

Dr. R. A. Douglas-Lithgow,
Author of "Heredity: A Study," etc.

8vo. Illustrated. Map. $2.50 net

This is a book of far more than local interest. In a most entertaining manner the author has told the story of this quaint island world, so sufficient unto itself from the time of the earliest settlements to the decline of the whaling industry; and even now retaining its delightful individuality, although as a popular summer resort, overrun each year by a horde of "off-islanders."

Aside from the reading-charm, this history—one is tempted to write "biography," such a distinct feeling of *personality* is awakened—has a very real value as a record of events and customs.

RIESS AND JANES'S CAESAR. GALLIC WAR. Books I-II....$0.85

The Same. Bound with **JANES'S SECOND YEAR SIGHT READING...$1.20**

Edited by ERNST RIESS and ARTHUR L. JANES, of the Department of Classic Languages, Boys' High School, Brooklyn.

Provides all the material for the intensive study of Books I and II of the Gallic War, presenting, besides the notes and vocabulary, over 50 pages devoted to a grammatical summary, and over 30 pages containing exercises in prose composition. The notes on the two books are equally full in order to enable teachers to begin reading the Commentaries with either book. In the Grammatical Appendix is all the material required for an understanding of the syntax of Caesar. The Prose Composition Exercises follow a systematic syntactical outline, while at the same time their content covers a connected narrative of the events of the two campaigns. The sentences are short throughout.

JUST PUBLISHED

ESSAYS IN EXPOSITION

Edited by BENJAMIN P. KURTZ, Ph.D., HERBERT E. CORY, Ph.D., FREDERIC T. BLANCHARD, and GEORGE R. MacMINN, of the University of California. Price $1.30.

This book comprises in one volume all the materials necessary for a precise, practical college course in exposition. The Introduction, of about fifty pages, takes the place of the usual rhetoric and is followed by over five hundred pages of selections from representative authors.

The Introduction, by reducing all the possible varieties of expository statement to a few types, supplies a method for the definite and thorough analysis of expository thought, to be applied in the student's own oral or written expression and in the analysis of essays. It contains also a brief, practical treatment of the simpler effects of style.

The authors represented in the selections which follow are John Stuart Mill (3 selections), Cardinal Newman (3 selections), Matthew Arnold (3 selections), Ruskin (3 selections), Spencer, Huxley, Fiske, Froude, Macaulay, Bagehot, Dowden, and John Addington Symonds.

The Nation.

NEW YORK, THURSDAY, JULY 30, 1914.

Summary of the News

A crisis of extreme gravity has developed in the European situation. On July 23 Austria sent a peremptory ultimatum to Servia in regard to the assassination of the Archduke Francis Ferdinand and the general question of the anti-Austrian movement in Servia. That movement, Austria contends, has received semi-official support, the assassination of the Archduke was planned at Belgrade, and the perpetrators were supplied with explosives and their passage into Bosnia was facilitated by Servian officials. Austria, therefore, demanded from the Servian Government "a formal assurance that it condemns this dangerous propaganda," and also an inquiry into all the circumstances at which Austria should be officially represented. A time limit up to 6 P. M. on Saturday was set for the receipt of the Servian reply.

Servia's note in reply to the demand was received by the Austrian legation at Belgrade within ten minutes of the expiration of the time limit, and as it was considered unsatisfactory, the Austro-Hungarian Minister immediately left Belgrade. Servia expressed willingness to comply with all of the conditions demanded by Austria except that relating to the participation of Austrian officials in the inquiry, on which point explanations were desired. The note concluded with an offer, if the reply were found inadequate, to submit the questions at issue to the Hague Tribunal and to the Powers which signed the declaration of 1909 relative to Bosnia and Herzegovina.

It has been apparent from the first that Austria is determined to accept nothing less than a complete and humiliating submission on the part of Servia, and that in this policy she has the support of Germany. Indeed, on Tuesday, together with the news that war had been declared and active hostilities commenced, came the statement from Vienna that even full acceptance by Servia of the terms imposed would not now satisfy Austria. The danger, then, is that Russia, as the protector of the Slav states, may become involved, and if Russia, then the other Powers of the Triple Alliance and the Triple Entente. As we write, hopes for the localization of the war are entertained, but the situation is extremely serious.

In the House of Commons on Monday, Sir Edward Grey, the British Foreign Secretary, announced that he had invited Germany, France, and Italy to confer with Great Britain through their Ambassadors in London with a view to arranging the difficulties between Austria and Russia. While the other Powers accepted the proposal unconditionally, Germany accepted in principle only, and on Tuesday the news came that, although sympathetic to the principle of mediation, in view of her alliance with Austria, she must decline to take part in the conference, but suggested that the various Cabinets work together to localize the conflict. Mobilization of troops is proceeding in almost every country of Europe, and the British and German fleets are in readiness for service.

The Government suit to dissolve the New Haven Railroad as a combination in restraint of trade was filed on July 23 in the United States District Court for Southern New York.

Secretary Garrison announced last week that the Panama Canal will be opened to commerce for all ships needing not more than thirty feet of water on and after August 15.

It was announced on July 23 that the nomination of Thomas D. Jones, of Chicago, for a place on the Federal Reserve Board would be withdrawn at his own request. We discuss editorially the circumstances which led up to Mr. Jones's withdrawal.

As a result of the Congressional investigation of the case of Capt. John Henry Gibbons, who was compulsorily retired from the navy by the "plucking board," it appears that his record during his service has been practically unimpeachable, and that other officers have been retained in the service whose records are not as clear as that of Capt. Gibbons. Secretary Daniels has appointed a commission to investigate and recommend a new plan to Congress as a substitute for the "plucking board."

The fight for the Governorship of New York State and Col. Roosevelt's intervention therein are calculated to add to the gayety of nations and to alleviate something of the general gloom produced by the international situation. On Wednesday of last week the Colonel finally decided that Mr. Hinman, a Republican, was deserving of Progressive support. On the following day William Barnes, the Republican boss, started a libel action for $50,000 against the Colonel, and on Sunday ex-Gov. Sulzer informed a newspaper reporter that he expected to be called as "an expert witness" in the suit and also to be elected the next Governor of New York.

There has been but little change in the situation in Mexico since we wrote last week, despite various alarmist rumors of counter-revolutions by Orozco and of Zapatistas menacing Mexico City. Negotiations for transferring the Government to the Constitutionalists have gone forward, and on Monday the delegates appointed by Provisional President Carbajal to confer with the Constitutionalists left Mexico City on their way to Saltillo, where the conference is to be held. It is stated that Gen. Carranza is disposed to be lenient in the conditions of surrender that he will demand, except that he will insist upon the trial of all who may have been concerned in the murder of Madero. The attitude of Villa, who is said to have been commandeering horses and smuggling arms across the border, has occasioned some anxiety in Washington.

It was decided on Saturday of last week to postpone the transatlantic flight of the America until October. Many changes have already been made in the machine, and Mr. Curtiss is understood to be not yet entirely satisfied with it. The Weather Bureau has given warning that it would be unsafe to undertake the flight between August 15 and the middle of September.

After a trial, hardly second in sensational episodes to that of Captain Dreyfus, Madame Caillaux was on Tuesday acquitted of the murder of Gaston Calmette, editor of *Figaro*, whom she shot in his office on March 16.

The trouble in Hayti and in Santo Domingo has continued and there has been fighting between the rebels and the Government troops. Precautions are being taken at the Navy and State Departments in view of the possibility that intervention may become necessary.

On July 23 a note was handed to the representatives of the Powers in Albania by the Mussulman insurgents demanding the abdication of the present Mpret, Prince William of Wied, and threatening, unless their demand should be complied with, to destroy the capital. The threat has not, up to the time of writing, been carried out.

A deplorable incident in connection with the Home Rule controversy occurred in Dublin on Sunday as a sequel to some gun-running by the Nationalist Volunteers. A force of police and soldiery attempted to disarm a body of Volunteers as they were returning to Dublin with a cargo of rifles that had been landed at Howth, some ten miles distant. In the first skirmish apparently the Volunteers had the worst of it, for they fled and reached the city in advance of the troops. When the latter arrived, they were met by a large mob and were attacked. The troops finally retaliated by firing into the mob, with the result that four persons were killed and some thirty wounded. The incident has occasioned the greatest excitement in Dublin and throughout the country, and in the House of Commons on Monday Mr. Asquith promised that the fullest inquiry should be made into all the circumstances attending the shooting.

Earlier in the week, on July 24, came the news, not unexpected, that the conference summoned by King George to discuss the Irish question had ended in a failure to reach an agreement on the area of Ulster which should be excluded from the operation of the Home Rule bill. It is understood that some concessions were offered on both sides, but not sufficient to enable the two parties to agree. The impression nevertheless prevails that some good has resulted from the conference, since the Government is now informed of exactly how far each side is prepared to go in the way of concession and may be assisted by this knowledge in reshaping its amending bill. The question of the constitutionality of the King's action in summoning the conference and of the terms of his speech was effectually disposed of when Mr. Asquith announced in the House of Commons on July 23 that he accepted full responsibility for both.

The deaths of the week include: Samuel Swift, July 21; Prince Vladimir Mestchersky, July 23; ex-Congressman James D. Richardson, Count Alexander Roma, July 24; Major Eustace Loder, Rev. Horace C. Hovey, July 27.

The Week

The postponement of all the treaties now before the Senate until the regular session of Congress is by no means an unmixed evil. It was practically certain that the Colombia treaty could not now have been ratified, in view of the opposition aroused. As to the Nicaragua treaty, the postponement of its consideration will help not a little towards its final burial. It is different with the twenty-three peace treaties, for their purpose is so plain and straightforward, and their aim so humanitarian, that they should be ratified without loss of time. They constitute the great constructive achievement of Mr. Bryan's administration. However the charge of inconsistency may lie against him and Mr. Wilson in their handling of the Mexican situation, as contrasted with the international procedure outlined in these agreements, the fact remains that the cause of peace will be tremendously advanced the minute these treaties become the supreme law of the countries involved. Can any one doubt that if there were similar treaties among the European nations now on the verge of war, the danger of hostilities would be less? The chief pretext for war is Austria's hot indignation over an assassin's crime. A year hence, with passions cooled, the question whether it would be wise and worth while to go to war because of a murderer's shot, would be regarded and probably decided in a totally different spirit.

Newspaper readers must have rubbed their eyes last week as they read the announcement that a party caucus had voted to lay aside a Rivers and Harbors bill in order to expedite the passage of more important legislation. One might be excused for supposing that the head-line writer had reversed the facts. But the Democratic Senators are actually going to proceed with the consideration of the Trust bills at the expense of the "pork-barrel" measure. Of course, for so unprecedented a course there must be a special reason, and there is. Not a sudden and huge accession of political virtue, but the determined figure of Senator Burton, firmly planted upon the Senate rules, is the impelling cause. Senator Burton has taken the trouble to familiarize himself with the details of the bill, and has damaged its reputation considerably by showing it up as one of the most vicious examples of its kind in recent years. Its viciousness, however, is its great charm for both Democrats and Republicans, who have had a loving eye upon its mass of local appropriations. But Senator Burton is evidently in earnest, and his fellow-Senators, remembering that one such bill was talked to death by Senator Carter a few years ago, have yielded before the prospect of a filibuster.

The Agricultural Department's Commission investigating the high price of beef has a rare chance to make a ten-strike in the way of a "best seller." If, in addition to the scientific marshalling of all the facts attainable, it should succeed in giving an intelligible and trustworthy analysis of the cardinal factors in the situation, its report would have a greater number of readers than any public document since the Government was founded. Nobody knows what to believe, and nobody knows what to think of the things he does believe. Here is Joseph M. Cudahy, vice-president of the Cudahy Packing Company, telling of the futile efforts that his company has made to sell frozen beef and mutton from Argentina in the general American market—the well-to-do American will have none of it; and the meats, says Mr. Cudahy, have had to be sold at a sacrifice. Chilled beef did better; but that, too, he says, was far from a brilliant success. But the most interesting statement made by Mr. Cudahy is this:

> As a matter of fact, packers are now losing money on beef, and this in spite of the fact that they are getting record prices for hides and all other by-products. It is when meat products are low that packers can make the most money.
>
> The average cost of beef on the hoof is higher now than ever before at this time of the year, and I do not look for any cheap meats until the production of meat animals has caught up with the increase in population. This, I believe, will not be for many years.

A fair discussion of the situation depicted by these broad assertions is what the people really need, both for the purpose of forming a just judgment and for the purpose of applying such remedies as may be possible.

We cannot but feel that any explanation of Secretary McAdoo's use of the revenue cutters would be unsatisfactory, save one. It does not matter to us that the Secretary paid his way, and that he learned something about life-saving, when going out on these boats. The only possible defence for it is that it has been the custom of previous Administrations, including Mr. Cleveland's, for decades past thus to use Government boats, the abuse reaching its greatest height under Mr. Roosevelt, when as many as three naval vessels were kept going for the use of the President and his family. As we pointed out then, so must we now, that this custom is without warrant in law, and invariably leads to abuses. If it is true that the Apache has been making week-end cruises with Congressmen and others, this is one of the worst cases on record. What Congress should do is to set aside a boat for the President if it thinks that the President should have a yacht, and it should be known as such, and not be masked as a dispatch boat or gunboat. Congress should then as clearly specify the privileges it wishes the Cabinet officers to have. Mr. Daniels is said to have misused ships of the navy in this way more than any other Secretary of late years, yet he, too, is but following precedent. To our minds a Secretary ought never to be allowed to take his family on a Government ship, and his own presence should be absolutely in the line of duty. It is, incidentally, not our idea of the duty of a Secretary of the Treasury for him to take part in rescues at sea.

It is a wicked thing for Boss Barnes to imitate Col. Roosevelt and to incur notoriety by bringing a suit for libel. Such imitation is the very reverse of flattery. It is, moreover, "peculiarly despicable" in any one to fail to take Col. Roosevelt's assaults with meek resignation. Here is Barnes, too, in so mean a spirit as to recall that he was a Federal officeholder under the mighty T. R. himself during all the time the Colonel was President and Barnes was getting control of the New York State machine. But the Colonel will easily brush that aside. It is part of his happiness in life to have some one to pound; if it cannot be a boss when his votes are no longer needed, why, it is the nameless craven and the base mollycoddle. Any one who interferes with this pastime is bound to incur the awful wrath of Oyster Bay. But the sporting public, if this suit ever comes to trial, is going to be mightily entertained. The Caillaux trial can furnish no more sensations. Shall we not have cries of treason to the Fatherland? Will there not be rumors of hidden documents and of public secrets to be preserved? Offended honor, too, will stalk about the courtroom throughout the trial, and the auditors will surely cry, "Louder, louder!" if one of the principals but drops his voice a second. The trial in Michigan will be as nothing; with the Dreyfus case alone shall we be able to compare it. We are not sure, however, that both time and money could not be saved by letting Theodore and William fight it out in mortal combat, say, in Bowling Green, to settle whether they are

bosses or not, and if so, which is the greater.

The resignation of Representative McDermott, of Illinois, is the final episode in a story which contained much that was sordid, and far more that was at once ludicrous and contemptible, but little that was of serious import to the nation. Mulhall's endless "revelations" showed the National Association of Manufacturers to have been engaged in an attempt to influcnce political events, of which the imbecility was so much more striking than the immorality that it was impossible to get up any really serious indignation over it. So far as individual members of Congress were concerned, his statements, except in the case of McDermott, were, so far as we can remember, too flimsy to be of any effect whatever. In McDermott's case, even, what did the damage was chiefly, or entirely, the exposure of relations of the Congressman with pawnbrokers and brewers, and not with the tariff or other schemes of the National Association of Manufacturers. He cuts a sorry figure, and is well out of the House; and we can but hope that he may prove to be mistaken in his expectation of a "vindication" at the hands of his constituents.

Although the result of the Democratic primary in Texas is hailed in some quarters as a slap at the Administration, it seems to have been fought out upon local issues. Chief of these was prohibition, the Constitutional amendment being rejected. The defeated candidate for Governor was on the losing side of this question, but the majority against him was twice that against prohibition, which would argue his rejection upon other grounds than his position upon this one issue. His opponent was introduced during the campaign as "the eliminator of the eliminators," and this euphonious title, coupled with the fact that the professional politicians of his party were nearly all against him, suggests that he managed to impress himself upon the voters as in some sort an anti-machine candidate. He is a vigorous speaker, and evidently skilled in turning dissatisfaction to his advantage, as is shown by the applause that greeted this period in one of his last campaign speeches:

> The time used to be when one schoolbook was enough for six or seven boys; now it takes six or seven books to do for one boy. I want the time to come when the people of the State will be removed from the necessity of buying new schoolbooks every time the moon changes.

On the same day his opponent was explaining that an amendment of the election law for which he was sponsor would not restore the vote to negroes.

It is hard to believe that an opera impresario would voluntarily do anything to add to the natural difficulties of his profession, but if the report is correct that Manager Aborn is going to insert a "weight for voice" clause in his contracts for the Century Opera House, the troubles of a Hammerstein will seem as the small dust of the balance. The fact that there is much reason in the idea will not make any easier the task of getting it accepted by all corpulent singers. Yet who has not had his pre-curtain picture of a Juliet or a Madame Butterfly dashed to pieces by the sight of the too, too solid flesh? When a heroine almost visibly pants for breath as she slowly mounts an incline up which she is supposed to glide like a sylph, somehow the music does not destroy the ludicrous incongruity. We should like to hope for success for Manager Aborn in his bold undertaking, but we fear that it is one of those alluring visions which in this finite sphere are too good to be true.

The withdrawal last week of Defiance from the remaining trials for the honor of defending the America's Cup was unexpected. It was, however, unavoidable, since the boat, which has been under repair constantly, was in need of more extensive alteration if she was to compete further. It is regrettable that the yacht could not be tuned up in time, for her designer, Mr. Owen, is indubitably a young man of much ability, despite the mistakes made in rig and construction of Defiance. Fortunately for the owners, the day of the racing-machine in these contests is over, and something of the great investment of the tri-city syndicate may be saved by turning this boat into a schooner or yawl. When Thomas Lawson's Independence failed so lamentably, there was nothing to do but to break her up. Since Colonia had a long and useful career as a cruising schooner after her ill-luck as a would-be cup defender, Defiance may yet do honor to her designer for years to come. For the America's Cup the choice is now narrowed down to two boats that are very evenly matched. Resolute has been wonderfully handled, sailed for everything that is in her, and at the same time studied in her every performance with scientific care. On board Vanitie things have not gone so well, but she has steadily improved, and, if there should be good, steady winds in the final trials, it will not be safe to assume that Resolute will be chosen to represent us against what is without doubt the most dangerous craft yet sent after the America's Cup.

Gov. Tener's classification of baseball players as neither miners, hod-carriers, nor ditch-diggers, but professional men, is flattering to lawyers, doctors, and clergymen, but will hardly be accepted by the players themselves as giving them a sufficiently high rating. Professional men include politicians, editors, and college professors. A Chautauqua lecturer is a professional man; so, we suppose, is an inventor or a consulting engineer. A mere Shakespearean actor would rank himself in the same large class. So would a novelist, an advertising agent, or a violin-player. To put along with these miscellaneous specimens of humanity a man who can pitch a ball in such a way that nobody can hit it, or who can catch a ball no matter what its speed or direction, and get paid handsomely for doing it, is to ignore fundamental differences. Probably all that the Governor of Pennsylvania meant was to differentiate ball players from devotees of tennis, golf, or bridge, but he should have come out with the whole truth, regardless of whom it hurt. Baseball playing is neither an occupation nor a profession; it is a career.

The enterprising American who has pleaded guilty to the theft of a brass handle from an antique bureau in the Robert Burns cottage at Ayr had the less excuse for his indiscretion, in that by merely waiting a few years he could probably have seen handle, bureau, and all as often as he liked by visiting some museum in his own country. When in a single day an American captures Master Humphrey's clock, a lock of Wolfe's hair, a first edition of "Endymion," a first edition of the "Faerie Queene," and autograph letters and original manuscripts of Stevenson, Browning, Andrew Lang, and others, is it any wonder that a fellow-countryman who has been entertaining guests at the Tam o' Shanter Inn should yield to the delusion that any object of historic or artistic interest in the Old World was his for the taking? As the Judge noted, in mild reproof, "apparently Americans have different ideas of such matters than prevail in this country." We would not criticise his decision, but still, there are certain forms that should be observed in all our acquisition of relics. To violate them

needlessly is to offend the very persons to whom we should be exceedingly grateful for caring for these things until the time comes when we desire them.

The collision in Dublin on Sunday between the troops and the Nationalist Volunteers—and, afterwards, with a mob, of which several were killed—is doubly unfortunate. It will inflame feeling on the spot, and it will also, most unhappily, give point to the bitter charge that the army is ready enough to fire upon men in the South of Ireland, though it will not move, and its officers refuse to obey orders, against armed men in the North openly boasting of treasonable plots. Whole companies of Ulster Volunteers can parade the streets of Belfast with rifles in their hands, and the garrison lifts never a finger; but in Dublin the Nationalist Volunteers are halted with the demand that they surrender their arms. This contrast cannot have been in the intention of the Government. Some one must have blundered. Yet the deplorable affair will need to be handled with great tact and fairness by the English authorities. They cannot be all caution and conciliation in Ulster, and at the same time all rashness and severity in Dublin.

The definition of a gentleman is once more a source of trouble. It was supposed to be settled with legal exactness by the British Workingmen's Insurance act, which provided that any one who earned more than £160 a year and did no manual labor was entitled to the distinction. But the Liverpool Steamship Owners' Association does not find this classification altogether satisfactory. Technically, the captain, the mate, the second officer, and so on down to and including the sixth assistant in the engine-room, are gentlemen. The seventh assistant engineer, however, has to do some oiling or wiping, or at all events some kind of manual work. He is, accordingly, outside of the charmed circle. At the same time he is continually thrown into the society of gentlemen. Will not this mathematical drawing of the line create an undesirable class consciousness, which will affect the social status in the mess-room and otherwise disturb etiquette on the high seas? This is the question that is vexing the souls of the Liverpool shipowners. Lloyd George has been appealed to for an official ruling on the point. He may hark back to Carlyle's pet definition of the gentleman as one who owns a gig. There is still a good deal of "Gigmanity" in the world.

The South African Government is still suffering from the effects of its high-handed expatriation of the labor leaders who were resorting to violence in their endeavor to win their strike. Subsequently thereto, the Botha Government introduced a bill so far-reaching as, among other things, to make it a cause for expatriation for any strike picket to use violence. For this bill was soon after substituted a much milder "Riotous Assembly" bill, which has also called forth vigorous popular manifestations, a copy of it being publicly burned in Capetown as a protest against "Russianizing a British colony." The proposed liability of all foreign-born citizens to expatriation, originally contained in this bill, aroused fears among the British residents that this clause, while ostensibly aimed at foreign-born agitators of the type sent back to England, might some time or other be used in favor of the Boers as against the British. Hence this part of the measure has been abandoned. Botha's Administration has not only antagonized the British elements, but the extreme wing of the Boers as well.

The revelation in the Caillaux trial that the *Figaro* was in the pay of the Hungarian Government will hardly surprise any one familiar with Parisian journalistic conditions. The venality of the French press has long been beyond dispute, though it is rarely brought out so clearly as in this case. The difficulty is partly in the fact that, in France, newspapers are without the volume of advertising patronage which supports the press of Germany, England, and the United States, and must, therefore, seek to live chiefly on income from circulation, too often inadequate; and hence that journals readily fall into the hands of unscrupulous men who seek a short cut to riches or to power. Then, the long-standing tradition of venality must in itself have its effect. No country in the world is wholly free from some sort of blackmailing, "revolver" journalism; but there is probably far less cash purchasing of newspapers in England and in the United States than anywhere else.

Reports of renewed friction between the German military authorities and the inhabitants of Alsace seem credible in view of the severe sentence recently pronounced by the Supreme Court of the Empire, at Leipzig, upon an Alsatian caricaturist. This clever satirist, Jakob Waltz, who signs "Hansi" and is known to the public by that name, has long been a contributor to the comic paper, *Durchs Elsass*, and has written and illustrated children's books. His favorite amusement has been to make fun of German policemen, soldiers, schoolmasters, travellers, etc. His worst offence, however, appears to have been the dedication of a Christmas book "to those who never forget." This, of course, referred to the annexation of the provinces and the hope that they may yet be restored to France; and it was probably the main ground of the original charge against "Hansi" that he was "preparing an act of high treason." As it was found impossible to maintain this charge, it was dropped, and the caricaturist was tried and convicted and sentenced to a year's imprisonment for the crime of "inciting to violence" and "insulting German policemen and teachers." News of this was said to have been received in Paris artistic circles with absolute "stupefaction." One would think, unless the Germans have lost their sense of humor, that it would have been received with stupefaction in the artistic circles of Berlin and Munich. Their caricaturists, too, are all the while ridiculing the police and the military and other authorties. Is it a crime to do in Alsace what is merely laughed at in Prussia and Bavaria? *Fliegende Blätter* and *Ulk* will have to mend their ways.

The chief interest of the sessions of the Duma, recently adjourned, was in the relations between that body and the Cabinet. One of the first acts of the new Premier, M. Goremykin, was to declare that, being a Minister without a portfolio, he was not obliged to answer interpellations. Something like a struggle was reached when the Government ordered the criminal prosecution of a Deputy for a speech delivered in the Duma in which official susceptibilities were wounded by references to the advantages of a republican régime. This denial of free speech in the Duma was based technically on an alleged ambiguity in the statutes, and was met promptly by the passage of a measure affirming the complete legal immunity of Deputies for their speeches. Certain grants of money demanded by the Government were either refused or reduced, and the Finance bill was amended by the insertion of a proviso abolishing the Ministerial practice of applying to the Treasury from time to time for small grants unauthorized by the Duma. These successes were made possible by the coöperation of parties, but the encouragement they afford to the carrying out of a determined policy of opposition to the Government is slight.

WAR MADNESS.

Bishop Butler once speculated on the possibility of a whole nation going suddenly insane. If he were alive to-day, he could extend his query and ask if a half-dozen nations at once might not become crazy. In Vienna, in Paris, in Berlin, in St. Petersburg, he would see signs of acute mania afflicting large bodies of people. Mob psychology often shows itself in discouraging and alarming forms, but is never so repulsive and appalling as when it is seen in great crowds shouting for war. Lest we forget, indeed! About nothing does the mob forget so quickly as about war. The Parisian crowd is crying out to-day "à Berlin!" just as if the same madness had not filled the streets of Paris in 1870, with what ravage and humiliation to follow, others have not forgotten even if the French mob has. And the way in which the war-fever has seized upon Berlin seems equally to call for the services not of a physician, but of an alienist. If one looked only at these surface manifestations, one would be tempted to conclude that Europe was about to become a gigantic madhouse.

Indications have long been that the militarist party, which has the upper hand in Austria, intended to have a war with Servia, no matter what that country did. The original demands made by Austria upon the Servian Government were imperious in the extreme. That they were intended to provoke a refusal and to bring on hostilities is now clear. For the Servian reply, which was an almost complete submission, was promptly declared by the Vienna Government to be, not merely unsatisfactory, but "dishonest"! It would be hard to find rougher language in a diplomatic note. Moreover, we next had the cool announcement that, even if Servia were to comply literally with every detail of the Austrian ultimatum, it would be too late. The Austrian troops must have their long-awaited war. If a decent pretext could not be found, the Austrian forwards would proceed without one.

All this has come as a great surprise to Americans. The shock caused by the assassination of Archduke Ferdinand was fully realized in this country, but the later news dispatches gave us in this country very few premonitions of the sequel. Yet the foreign newspapers, covering the period from the first to the middle of July, have now come to hand, and they make the state of affairs much plainer. From them it is evident that a press and militarist campaign against Servia was at once set on foot in Vienna. This did not confine itself to the natural outbursts of grief and anger at the murder of the heir to the throne, but went violently into the whole matter of the Serb movement and the threat to Austria which it was alleged to mean. There were signs in plenty that the old Emperor, Francis Joseph, was pushed aside, more or less, by the aggressive party. He once went so far as to send a statement to the press denying some of the assertions which the army men had fathered; but his aged hand was too feeble to withstand the onrush. Those who had so confidently counted upon the Archduke Ferdinand, as one who would take a high tone in foreign relations, were determined not to be balked by his death. So manifest was their purpose that the Hamburg *Fremdenblatt*, so early as July 4, spoke of an attack by Austria upon Servia as a settled thing. The only question was whether Russia would be drawn into the struggle: in that case, asserted the *Fremdenblatt*, "there can be not a particle of doubt that the German Ambassador in St. Petersburg would notify the Czar that Germany would consider it a *Bündnisfall*"—that is, that Germany, under her treaty with Austria, would be compelled to go to war with Russia.

Quotations could be multiplied from the Vienna papers of the first and second week of July, going to show the zeal displayed in manufacturing, not alone an anti-Servian spirit, but a demand for war. Thus the official *Deutsches Volksblatt* published the decision of the Council of Ministers to apply the severest measures to the Serbs in Bosnia. These were to include even a rigorous control of their schools, into which military discipline would be introduced. It also asserted that Austrian officials must be admitted to the inquiry which the Servian Government was to make into the assassination at Sarajevo. The *Neues Wiener Tageblatt* spoke of the satisfaction caused by the belief that Austria would soon, if necessary, "intervene with energy" in Servia. A stronger tone was held by the *Reichspost*, which declared that diplomatic methods would be of no avail with Servia, which ought to be dealt with by Austria summarily. The *Neue Freie Presse* looked ahead to actual intervention, or to war, and argued that Russia ought to give Austria a free hand at Belgrade, since it was clear that the ambitions and the plottings of the Serbs constituted a danger to all Europe, as well as to Austria, and must be sternly repressed. The general attitude of the Vienna press was not badly represented by the *Reichspost* when it asserted that Austria was not threatening Servia, but that Servia was menacing the Dual Monarchy.

To all this, the official declaration of war by Austria was the inevitable sequel. It is a step which was taken without a decent regard for the opinion of mankind, and is fraught with consequences which may easily amount to that terrible "catastrophe" of which Sir Edward Grey solemnly warned Europe on Monday. The dullest must see that what Austria is driving at is not simply a blow at Pan-Serbism, but the acquisition of Servian territory. This, however, would surely not be permitted by the Powers, no matter how rapid may be the triumph of Austrian arms, without reference to a European Conference. The German Emperor has refused to assent to the calling of such a Conference in advance, in order to prevent war, if possible, but it will have to come later—unless, indeed, all the Continental nations should be drawn into the conflict which Austria has so arrogantly and wickedly begun.

WILSON'S USE OF DEFEAT.

In requesting the President to withdraw from the Senate his nomination as a member of the Federal Reserve Board, Mr. Thomas D. Jones has behaved as handsomely as he has done throughout the entire affair. The country knew nothing about him before, but it now knows him to be a man of exceptional vigor, independence, and high-mindedness. It is evident that the striking testimonial to him, signed by the leading merchants and bankers of Chicago, did not over-state his qualifications.

This is said to be the President's first notable defeat in Congress. It is such in the sense that Mr. Jones was his personal choice for the Federal Reserve Board, and that he urged a confirmation with all the power of his Administration. Mr. Wilson's letter to Senator Owen, in behalf of Mr. Jones, was not intended, it is reported, for publication. It was given out inadvertently. But in its statement about Mr. Jones's connection with the Harvester Company, it showed that the President was not fully informed, and gave an opening for the prejudice and animus which have been so unhappily displayed. Against them Mr. Wilson has not been able to make head.

It is one thing, however, to be defeated, and a different thing to utilize defeat in such a way as to strengthen one's position for the future. This is what President Wilson has done in his remarkable letter accepting the declination of Mr. Jones. Besides express-

ing a very clear and biting opinion of the petty attitude of Senators Hitchcock and Reed, he has seized the occasion to set forth certain convictions and principles of his own which cannot fail to commend him to the sober judgment of Americans who think. In the first place, he has put vividly his conception of the new banking system as a great instrument for the general good upon which it is an outrage for partisanship to lay its hand. Anything like party scheming or captious meddling, in connection with it, is a wrong to the whole country. In the endeavor to establish sounder financial methods and to bring about a genuine prosperity, there should be, affirms the President, "united effort," with nothing of "partisan prejudice or class antagonism." With marked emphasis he writes: "I believe that the judgment and desire of the whole country cry out for a new temper in affairs."

What the President means by this, he has made very definite. There has been a spirit of proscription in the air. Against some classes of men there has been the grossest discrimination. They have been lumped together, after the fashion of the French Revolution, as Enemies of the People. If one wanted an example of this, one could find it in the ranting in which Senator Reed was indulging last Thursday at the very moment when the news of Mr. Jones's withdrawal was made known in the Senate. Could we believe him, there are whole groups of rapacious Americans going about to oppress and devour their fellow-citizens. It is the Terror come again. Of course, a man like Senator Reed is more than half-conscious that he is talking clap-trap. He is simply holding up bogey-men before his frightened constituents. But the effect of such tirades as his is most mischievous. It tends not only to exclude a man like Mr. Jones from a public service which he was ready to undertake at a personal sacrifice, but to prevent others of his kind from subjecting themselves to similar vilification and rebuffs. This was a point made by the impressive array of Chicago men who urged the confirmation of Mr. Jones. How, they asked, if he is rejected, can we expect men of high character and marked ability to undertake public work for the nation? They saw clearly that the course of the Senate was putting a premium on little and subservient men. President Wilson, too, sees it, and makes plain his abhorrence of the small-minded and intolerant attitude which would shut out great capacity from great services. In the most explicit language, he declared in his letter that the "manifest injustice" done to Mr. Jones was not in keeping with the desires and the demands of a "generous, fair, and honorable people"; and he stamped upon the whole idea of proscribing any class when it is a question of enlisting the best skill and the truest patriotic devotion in the great constructive work of government.

Some people in Washington have intimated that this first defeat of the President will be as a letting out of the waters. Hereafter, they pretend to think, Senate or House will feel at liberty to deny or thwart him. This will be as it will be. No cool observer ever supposed that President Wilson's extraordinary ascendency over Congress could be indefinitely maintained. But it is far from being at an end as yet. And in the way in which he has so seized upon his first striking check as to cover his enemies with humiliation and to get his own strong purpose more clearly before the country than ever before, is plain warning that some men do not cease to be formidable simply because they are defeated. Of Mr. Wilson it may evidently be said, as it was of an English statesman, that he has a "terrible rebound."

THE COMPENSATION LAW IN ACTION.

As the first month of the operation in New York State of the Workmen's Compensation act draws to a close, its reality as a factor in the people's life becomes apparent in the news of the day. Such headlines as "A Thousand Claims a Day for Compensation," "Forty-eight Deaths in Twenty-three Days," bring home vividly to the mind how large a part the simple and comprehensive mechanism of the new system is going to play in reducing distress and relieving anxiety among the great mass of toilers in this State, and in preserving to thousands of children opportunities for education and advancement of which a wholly unexpected blow of fate might otherwise have deprived them. That the law has marked faults, and that, aside from any specific defects, the system will carry with it difficulties and evils that must be reckoned with as an offset to its benefits, may be admitted; but the feeling must be well-nigh universal, among persons of right instincts, that here has been accomplished a great stroke in the fight against human misery, a great addition to the sum of human happiness.

That the cost of this great gain has to be paid for, and that it will be borne by the people at large in their capacity as consumers, is also being brought home in various ways. One of the most definite, and in some respects most interesting, instances of this is furnished by the action of a number of the laundry companies, which have adopted the simple plan of adding one cent to their charge for each bundle of laundry delivered. On the slip it is distinctly stated that this is done "on account of the cost of the Workmen's Compensation law," the company adding that they are "firm believers in workmen's compensation, but it undoubtedly increases the cost of production." From the beginning, the advocates of the legislation have planted themselves on the ground that the burden of accidents occurring in the ordinary operation of an industry ought not to be borne by the individuals who happen to be the victims, but ought to be regarded as a normal charge upon the business, the cost entailed by proper compensation for injury or death to enter into the accounts on the same basis as the outlay for fuel, or light, or fire-insurance, or taxes. And although it took some time for this idea to become familiar to the public, it must be said that as soon as it was clearly grasped it met everywhere with ready acceptance. There has been no false pretence in the advocacy of the policy, nor has there, among intelligent people, been any misunderstanding as to the nature of its working. We were all supposed to be very willing to pay our share, as consumers, for that which it was clearly desirable should be done and for which, if done, it was clearly equitable that the consumers should pay. Nevertheless, it is fortunate that in this little matter of the laundry people are made to realize expressly and palpably, even though on a small scale, that these things *do* have to be paid for, not by an abstract entity called the State, but by John Smith or Mary Jones, in the very concrete capacity of a wearer of shirts and stockings.

As for the amount of burdens of this kind in general, when they are realized at all, it must be confessed that people are prone to magnify rather than to belittle them. If the "cost of living" should continue to rise, or even should continue at its present high level, there will doubtless be a great deal said about the way in which the compensation act has aggravated the situation. Generically, such talk is perfectly justified; specifically, it is apt to be very loose and irresponsible. The same kind of thing is true, too, about the burdens laid upon the community by the ever-increasing demands upon State and city governments for humanitarian institutions, for education and public health, and for the maintenance of conditions conducive to better living for the mass-

es. But the cold figures, when looked at, large as they are in themselves, are seen to be very small in comparison with the aggregate expenditures of the well-to-do and the rich. To imagine, as some have done, that the maintenance of their standard of comfort by even the fairly well-to-do, or their ability to rear a family, is seriously affected by the cost of the State's philanthropic activities is to form arithmetical conclusions without arithmetical data. The state of mind at the bottom of such notions is not altogether unlike that which was wittily exposed by a public-spirited man of wealth, a short time ago. "If any man tells you," he said to the solicitor for a charity for which a vigorous campaign was made, "that he is being called upon for so many things that he is afraid he will end in the poorhouse, just tell him that whenever he gets to the poorhouse I will refund to him all the money he has ever spent on charity."

We must avoid both the extreme of ignoring the seriousness of the expense that may be involved in the multiform schemes which fall under the comprehensive designation of "social betterment," and the other extreme of crying out in exaggerated alarm whenever any such scheme is broached. Large as is the scope of this compensation for injuries and the expense thereof, it has limits which would seem to be pretty well fixed from the beginning by obvious conditions. This is not the case with old-age pensions, nor with pension schemes generally; and in these there are apt also to enter factors which may be far more demoralizing, both as to politics and as to individual life, than is the case with the system of compensation for accident.

FOLKWAYS IN CRIMINAL TRIALS.

The picturesque proceedings in the Caillaux trial bring to the front, more vividly than anything that has happened since the Dreyfus case, the contrast between Continental criminal procedure and that prevailing throughout the English-speaking world. Great as are the differences inherent in the two juristic systems, the contrast is perhaps greatest between the Continental system as practiced in France and the English system as exemplified in the United States. Reading the reports of what has gone on day after day in the Paris courtroom, one finds one's self in a world so different from that depicted in any great trial in New York, that one hardly feels as if the same name should be applied to the two things. A person whose habits and training had caused him to believe that either was marked out by sacred and indisputable principles as the only just method of establishing the truth of a criminal case might easily fall into the error of looking upon the other as absurd or monstrous. "What, admit hearsay and sentiment, let witnesses deliver stump speeches, and drag in any fact, however remote, that they or their counsel fancy may have some influence on the jury's judgment? How can a jury deal responsibly with this farrago of miscellaneous assertions? Will not the value of them be judged simply according to the fancy, or the prejudices, of the jury? And is this not reducing a trial to a farce?"

Such might be the feeling of the American or the Englishman; but the Frenchman could match it in his judgment of our methods. "Is it possible," he might say, "that this everlasting fencing on the admissibility of evidence is really calculated to bring out the truth? Again and again, one finds one's self at the very crux of the matter, but some metaphysical objection closes the lips of the witness. Moreover, the effort expended on these technical matters is so exhausting that the point of view of all concerned becomes a false one. You not only refuse to let in all the light that can be had on the subject, but you fix attention so intensely on the rules of the game that the real object—the ascertainment of the truth—ceases to be, as it should be, the one absorbing purpose of judge and jury. With us, the truth is the thing constantly sought for; we may dash about wildly in our search for it, but our eyes are open, our hands are untied, and we get it at last if there is any way of hunting it down."

That the one way is as good as the other would be a bold assertion; but that each has its advantages and each its drawbacks there can be no question. Probably the opinion of Fitzjames Stephen that, on the whole, miscarriages of justice have, in practice, been found to be just about as likely under one system as under the other, is not very far from being the opinion of the ablest students of the subject. But to hold this opinion is very different from asserting that questions of procedure are of no importance. It is quite possible that the English method has worked out, among the peoples of whose traditions and temperament it is an outcome, far better than the Continental method could have done; and *vice versa*. But the fundamental fact is that the right working of either depends essentially on the desire to do justice. Given this, and either method will be made to serve the ends of truth and equity; the right of the accused on the one hand not to be condemned without convincing evidence, and of the State on the other not to be paralyzed in the upholding of the law by trivial or unreasonable difficulties, will be paramount, however the external form may seem to stand in the way. Pope's dictum, "Whate'er is best administered is best," applies more truly to the forms of the administration of justice than it does to forms of government in general.

An interesting aspect of the question raised by these comparisons relates to the degree of strictness with which the rules of procedure should be applied. Under the English system, there has been at various times a vast amount of abuse arising from a senseless magnifying of technicalities. In England, procedure was long ago so reformed as almost completely to rid criminal trials of this reproach. In our own country, the agitation of the subject during the past twenty years has accomplished notable improvement in practice, but there is still room for much more. The fact that all the great nations of the Continent get on without a large part of those rules of procedure which we regard as so essential does not justify a general and undiscriminating laxity in the application of those rules; this would be sure to mean partiality and inequity at best, and something like chaos at worst. But that consideration may properly be adduced to fortify the argument from common-sense against the erection of technical rules into a sacredness that is foreign to their nature. The rules should he obeyed strictly, and above all uniformly; but they should not be stretched beyond their natural meaning, or made so exacting as to demand for their fulfilment performance that borders on impossibility.

It is in reference to the subject of immunity that this question of the limits to the sacredness of a principle of procedure is most strikingly exemplified. The Constitutional principle—wholly absent from the procedure in French trials—that no person "shall be compelled, in any criminal case, to be a witness against himself," has been construed to cover so much more than what the words themselves say, that it has acquired the name of "the criminal's privilege." This, it seems to us, could never have come about if the distinction between principles of high import in themselves and principles which are mere practical rules for the attainment of an ulterior end had been borne in mind. There is nothing inherently wrong, nothing inherently oppressive, about asking an accused person to tell his story in court; but the process is liable to abuse, and the Constitutional provision is based solely on

tho belief that the only safe way to prevent the abuse is to exempt the accused from any necessity of answering questions. Such being the case, let the rule be obeyed by all means; but let it be obeyed and no more. It is senseless to girdle it about with one line of defence after another, for fear that somehow or other it might be violated. A violation of the rule is not an evil in itself, for the rule is not a good in itself; to treat it with the fearful reverence belonging to the fundamental rights of person or property is not only mischievous, but senseless.

THE PUBLIC DEFENDER.

The plan to have a public defender has doubtless suffered from the title proposed for that officer. It seems to assume that his duty is simply to seek to obtain acquittal. But State laws have long guaranteed to accused persons defence by a qualified attorney. By many a fee is regularly allowed to this temporary public defender. The creation of the public defender aims to put this defence on a better basis. The Massachusetts Commission on Immigration has found that hundreds of misunderstanding and misunderstood poor persons yearly suffer through the entrusting of their cases to men lacking in ability, honesty, or energy; and it recommends the establishment of a public defender as essential "to prevent crime and teach respect for the law."

The sole places in America which have made trial of the public defender are Los Angeles, where one has served since January, 1914, as a State officer, and Portland, Oregon, where private provision has been made for the maintenance of the office. The law authorizing the innovation in Oklahoma was vetoed by the Governor. In five months Attorney Ward of Los Angeles has investigated 3,000 cases, and has appeared in 135 of these in the criminal courts. The District Attorney, admitting his hostility to the plan at the outset, remarks that "you are performing a duty which this office has attempted in safeguarding the rights of the defendant; and I believe under the circumstances your position gives you a better opportunity to perform that duty than the prosecutor has." It appears that the most crying need was for some one willing to verify the stories of the accused and find witnesses in their behalf. Men, again, who did not realize that many trials involve questions of law as well as of fact, or men mentally defective, would plead guilty though they had committed no crime, or one palliated by circumstances. Accused, finally, who did not know that the law gave them time to make a defence, would plead guilty so as to receive a minimum fine.

The civil side of the Los Angeles work has revealed need for relief which would otherwise cost too much. Many have won wage settlements when they had not the price of a meal. Like the Legal Aid Societies, the public defender gives the lie to the charge that the courts are only for the rich. Portland's public defender has labored only in police courts. The Municipal Judge testifies that he has given a new meaning to the guarantee of a fair and impartial trial, and he himself writes in *Case and Comment* of the correction of the gravest defect of the Western police court—the disregard of the rules of evidence observed in a court of record, so that "dozens of persons are convicted on hearsay testimony and testimony otherwise incompetent."

The reiterated objection to the public defender is that the State concedes the accused every safeguard; he must be indicted by a grand jury, on a sworn accusation; he is confronted by his witnesses; he is allowed challenges and pleas; and twelve men must agree on his guilt. "One really wonders," remarks *Bench and Bar*, "how a conviction can ever be secured." But the fact is that many charges are backed by colored evidence, and that action by the grand jury is often hurried. The machinery of the law is directed by a public officer eager for results. Pitted against hired lawyers, he acquires aggressiveness not easily shaken off. Where tested, the public defender has not hampered the law, but has facilitated it by coöperation with the district attorney, and has reduced expenses by pointing out cases where prosecution is useless. He will obviously be no more inclined to acquit a guilty man than the prosecutor to convict an innocent.

To maintain that there should everywhere be a public defender would be absurd. The innovation is one to be introduced slowly. One locality may learn from the experience of another. The investigations undertaken separately by the Phi Delta Phi Society and the New York County Lawyers' Association should show whether a public defender is desirable here. There is no doubt that in many courts the ignorant and helpless suffer at the hands of petty exploiters; there is little doubt that, even apart from such shysters, the machinery of justice frequently works with roughness. There may be a variety of remedies. May not the public defender prove to be one of them?

A CENTURY OF "WAVERLEY."

Nothing in "Waverley" is more romantic than the story of its varying fortunes, from the day when, upon the unfavorable opinion of "a critical friend," Scott "threw aside" its first half-dozen chapters, "without either reluctance or remonstrance," to the day, nine years later, when, happening to want some fishing-tackle for the use of a guest, he looked into an old writing-desk and "the long-lost manuscript presented itself." Like the Disinherited Knight of a later tale, the neglected chapters went forth with no recommendation save their own merit. The author of "Marmion" could not afford to risk his poetical reputation in "a new style of composition"! Nor was it certain at first that his hesitation was not well founded. The public did not appear to welcome the anonymous production. Yet this indifference was short-lived. Scott confessed that "after the first two or three months its popularity had increased in a degree which must have satisfied the expectations of the author, had these been far more sanguine than he ever entertained." A little longer, and it became evident that a new era had been inaugurated in English literature. This was in 1814. A hundred years later finds the series of romances thus begun flourishing in undiminished popularity, and every aspiring author hoping for a tithe of the success of the novels that poured forth from the Wizard's pen.

People sometimes amuse themselves by asking one another in what period of the world's history they would choose to have lived. It would be easy to make a worse answer than to say: "In the early part of the nineteenth century, when one could be sure of a new novel by Scott every year." One might imagine the Ulster Conference adjourning for a few days in order that the leading members of His Majesty's Government and of His Majesty's Opposition might finish the latest romance spun by the Wizard of the North. No murder trial would be complete without copious quotations from the newest volume from Edinburgh, not necessarily because of the relevancy of anything uttered by hero or heroine, but because of the compelling interest of the scenes. The opposing lawyers would vie with each other for the privilege of reading as much as possible to the jury. High-school students, neglecting their prescribed reading, would cover several times as much ground in the fascinating new story, nor credit a bold prophet who should speak of the day when so irresistible a book would find its way to the college entrance list.

But do you mean to imply that as an historical romancer Scott was perfect? One thing we like about the author of "Waverley" is that he did not think so himself. He seems almost pained that so careless a piece of writing should have won so great a success. "The whole adventures of Waverley, in his movements up and down the country with the Highland cateran Bean Lean," he points out, just as if he were a professor of English literature, "are managed without much skill." Robertson Nicoll has just been demonstrating Scott's "glorious confusion" in "Midlothian." Then there is the awful slip in the seventh chapter of "The Antiquary," where he makes "the huge disk" of a setting sun sink into the ocean off the east coast of Scotland. Moreover, especially in "Waverley," he is long in getting under way, and more than a bit uncertain of his course. His third reading of "Pride and Prejudice" brings from him a sigh: "The big bow-wow strain I can do myself, like any now going; but the exquisite touch which renders ordinary commonplace things and characters interesting from the truth of the description and the sentiment is denied me." With limitations like these, how is it that he and his tales have survived a hundred years?

Let the shameful truth come from the novelist himself. After confessing the lack of plan in "Waverley," he immediately added: "It suited best, however, the road I wanted to travel, and permitted me to introduce some descriptions of scenery and manners, to which the reality gave an interest which the powers of the author might have otherwise failed to attain for them." And in another place he is even bolder in setting interest above technical perfection or even historical accuracy. "He that would please the modern world," he writes, "yet present the exact impression of a tale of the Middle Ages, will repeatedly find that he will be obliged, in despite of his utmost exertions, to sacrifice the last to the first object." It is unnecessary to read farther. Here was evidently a man who was determined to delight his readers even at the cost of offending the antiquaries. Let his knowledge of the past, and his conscious tampering with it, be the measure of his guilt. Carlyle hit him a harder blow. He has no message, according to the Prince of Message-Bearers. We should not be surprised if the romancer had instinctively avoided anything resembling one. How brazen, then, for Waverley and his fellows to be marching along after a hundred years, their eyes not dim, nor their natural force abated!

SCHOOL EXAMINATIONS IN ENGLAND—THE VALUE OF THE OXFORD "LOCALS"—THEIR SCOPE AND SIGNIFICANCE.

London, July 17.

There is a familiar story of how a French Minister of Public Instruction one day pulled out his watch, and remarked that at that moment every schoolboy in France was taking a lesson in such-and-such a subject. The tale is not true, but *ben trovato*, and the title of *Il Trovatore* belongs in this sense to the late Edward Bowen, of Harrow, who invented the story as a satire on the Continental tendency to the over-regulation of education. But there exists an office in Oxford where the secretary—a distinguished mathematical don—might pull out his watch at nine o'clock next Thursday morning, and declare: "At this hour 15,000 English schoolboys and schoolgirls in all parts of the country—from Berwick to Weymouth, and from Penzance to Great Yarmouth—will sit down to tackle my examination papers in arithmetic." For next week is one of the most important in the English school year—the week of the "Oxford Locals."

Foreign students of English secondary education have scarcely given due attention to the part played in its development by the "local" examinations of the older universities. Until the last few years the national Government had little to do with the secondary schools. There had grown up a large number of such schools of varying types and under diverse control—old endowed schools, schools founded by religious denominations and other corporations, and schools owned by private individuals. It all seemed utterly chaotic—an example of independence run mad. Yet, in fact, this apparently heterogeneous mass of institutions was largely coördinated by an examination system, originated by Oxford, and afterwards adopted by Cambridge also, which, while allowing elasticity of method, brought the work of these schools to the test of a common standard. The impartial outside criterion thus applied to wealthy and poor schools alike gave a recognition to good teaching wherever it was to be found, and helped to kill off the pretentious "academies," so called, whose inefficiency had hitherto escaped exposure. In the smaller rural towns, especially, the local examinations of the two universities did much to raise the tone of the secondary schools, long before the national Government attempted anything in the way of inspection and assistance.

Next week's Oxford local examinations will be held simultaneously at 41 centres in or near London, 351 in the provinces, and 13 abroad. Of the last group, three centres are in New Zealand, one in Natal, one at St. Kitt's, one in the Bahamas, one at Malta, one at Hongkong, one at a mission settlement at Chefoo, and four in Belgium, where the convent schools for girls attract many English pupils. The establishment of a local centre is not a very intricate affair. Most of the work is done by some resident interested in education, who undertakes the duties of local secretary. He gathers around him a local committee to share the financial responsibility and take turns in assisting in the supervision in the examination room. Some centres admit boys only, others girls only, and others both boys and girls. The local committee has to guarantee to the Oxford Delegacy of Local Examinations that it will present not less than twenty-five candidates, each paying to headquarters a fee of £1, or that, in default of the full number, it will make up the balance of fees. The committee is authorized to charge the candidates an additional fee of a few shillings to meet the local expenses of hire of examination room, stationery, postage, and the superintending examiner's railway fare, board, and lodging. At some centres the number of candidates considerably exceeds a hundred. In such cases the local committee can afford to reduce its local fee to a very small sum, and, at the same time, have a surplus to spend on prizes.

Candidates may come from any school or may have been privately taught. They enter themselves for either the senior, the junior, or the preliminary examination. They are not eligible for honors in the senior if over nineteen years of age, or in the junior over seventeen, or in the preliminary over fourteen, but candidates for a pass certificate are admitted though exceeding these ages.

The senior examination comprises twenty-three sections: (1) arithmetic; (2) religious knowledge; (3) history; (4) English language and literature; (5) geography; (6) political economy, etc.; (7) Latin; (8) Greek; (9) French; (10) German; (11) Italian; (12) Spanish; (13) mathematics; (14) higher mathematics; (15) botany; (16) chemistry; (17) physics; (18) domestic science and hygiene; (19) music; (20) bookkeeping; (21) needlework; (22) natural science, and (23) drawing. To obtain a certificate a candidate must satisfy the examiners in at least five subjects, of which four must be from sections (1) to (19). No one may offer more than eight subjects from sections (2) to (23). The scheme is thus distinctly an elective one, while discouraging "soft snaps." It is announced that the quality of the handwriting and of the spelling and the style of the composition will be taken into account throughout the examination.

Still further alternatives are offered in the details of the various sections, so that the schools which send up candidates are not obliged to follow an identical curriculum. There are choices, for example, in the books of Scripture that may be studied for (2), in the periods of history for (3), in the English classics for (4), and in the Latin and Greek books for (7) and (8). The music is entirely theoretical, but no one can pass in chemistry or botany without satisfying practical tests. A similar syllabus, but less advanced and less varied, is prescribed for the junior examination, with twenty sections, and for the preliminary, with seventeen.

The experience of many years has brought the management of these examinations to a high pitch of efficiency. The instructions issued from headquarters at Oxford to superintending examiners and local committees, as well as to candidates, make what appears like a complicated scheme work with perfect smoothness. At each centre the superintending examiner is an Oxford M.A., appointed by the Delegacy. He has nothing to do with judging the answers, but is responsible for the supervision during the whole of the examination week. He has to see, for instance, that the local committee has housed the examination in adequate rooms with a desk space of four feet for each candidate; that the sealed packets of question papers are opened and the contents distributed at the prescribed times; that the answers are collected accord-

ing to schedule, are duly classified, and are packed up and sent off to Oxford each night. Meanwhile the staff of examiners proper is assembled at Oxford, in readiness to begin their work without delay as soon as the packages of answers begin to arrive from the local centres.

The examiners are Oxford graduates who are experts in their subjects, and who, as a rule, have had actual experience of schoolteaching. Within a few weeks the results are published, the successful candidates being divided into three honors classes, followed by a pass list. An Oxford local certificate, under certain conditions, exempts the holder from the entrance examination at the various English universities and from the preliminary examination of various professional societies—such as the Pharmaceutical Society, the Institution of Civil Engineers, the Royal Institute of Architects, the Institute of Chartered Accountants, etc.

A few weeks later still, "supplementary tables" are issued, from which a candidate may learn the specific subjects in which he passed or failed. The examiners' reports accompanying these tables are full of useful suggestions for teachers. They may call attention, for instance, to the fact that in trigonometry many candidates employed logarithms in such a way as to increase rather than diminish their labor, or may point out that oral instruction in foreign languages is being overdone, the pupils not being as familiar with reading a language as with listening to it. In another subject teachers may be warned that they are relying upon antiquated textbooks.

In 1858, the first year of the Oxford local examinations, 1,151 candidates presented themselves. The senior honors list was headed by a boy named Edward George Clarke, who has since become one of the leaders of the English bar. Last year the candidates numbered nearly 20,000, of whom over 13,000 obtained certificates.

The Cambridge local examinations, organized on very much the same system, attract a slightly larger number of candidates than the Oxford. In addition, the two universities have united in establishing the Oxford and Cambridge Schools Examination Board, which examines such schools as have a regularly constituted governing body, and prepare a fair proportion of their boys for the universities—a class which includes both the older "public schools" (in the English sense), like Eton and Harrow, and newer foundations of the type of Clifton and Marlborough. The certificates that are granted in connection with these examinations similarly carry exemption from the preliminary tests of universities and professional bodies.

No doubt the method of gauging the work of schools by a written examination is far short of the ideal. Nowadays in many schools it is supplemented by a state inspection of the every-day teaching in the school itself. But fifty years ago the introduction of a system of inspection would have been so costly that the smaller private schools—those most in need of the stimulus of a test from outside—would have been excluded from its advantages. At that time the local examinations, setting up as they did an equal and independent standard, did much to raise the whole level of secondary education in England, and experience has so proved their value that to-day the advantages they offer are more keenly sought than ever before.

H. W. H.

THE LATE ARCHDUKE FRANCIS FERDINAND—HIS PRO-SLAVIC SYMPATHIES —SERB AMBITIONS.

GRATZ, Austria, July 11.

The shady parks of this pleasant city were filled with the usual holiday loungers on the Sunday afternoon of June 28, when the first reports of the assassination of the Archduke Francis Ferdinand reached the city. These were at first received with unbelief, but the newspaper offices soon began posting bulletins confirming them, and giving the principal details of the crime, and the excitement then became intense. The city of Gratz had a peculiar interest in the late Archduke, for in the first place it was here that he was born and passed his earliest years, and, secondly, his politics and conduct of public affairs had made him so unpopular that, except in military and clerical circles, his accession to power was regarded here with considerable misgivings.

Francis Ferdinand was undoubtedly unpopular, excepting always with the soldiers and the clericals, in his native city as well as in other parts of the country in which the population is predominantly German, and for two reasons—because he favored Slavic rather than Germanic interests in Austrian political life and because in religious matters he was a strong and illiberal clerical. In Gratz the antagonism between the Slavic and the Germanic elements of the population is intensified because of the proximity of the city to the ethnic borderland of Austria. The city regards itself as the southeastern outpost of Germanic culture and the German language, since but a few miles to the south of it the population of the country becomes Slavonian and a few miles to the east is the western border of the Hungarian plain. The acute and irrepressible conflict which has been going on for a generation between the Germanic and the Slavic elements of the population is one of the most interesting developments in the history of social institutions. The German-speaking citizens of Austria consider themselves the eldest sons of the Empire, and as such claim precedence in its social and political life, and, as a matter of fact, although they are in the minority numerically, the greater part of the political power, as well as of the wealth, culture, and industry of the Empire, has from time immemorial been in their hands.

Since the fatal year 1866, however, the Slavic elements of the population have been asserting themselves with great vigor and success and striving to gain the position to which their greater numbers would seem to entitle them. The Germans of the Austrian borderlands thus find themselves engaged in a life-and-death struggle with an active and relentless foe which is determined to destroy so far as possible the Germanic influence and to supplant it with the Slavic.

Francis Ferdinand, although of German blood, did not support the German Austrians in this struggle, but gave his great influence to the cause of the Slavs. Just how much this attitude was due to his wife, who was a Bohemian, is not known, but it is generally believed that her influence with him was great. Francis Ferdinand was known to be a strong, self-reliant, and self-contained man, but he was devotedly attached to his morganatic wife, and it is probable that he was inclined to assist her people to gain the position they felt belonged to them in the Austrian Empire.

His relation to the Slavic and the other non-Magyar elements of the population of Hungary was similar. As in Austria, so in Hungary the race which has from the earliest times been the dominant race is in the numerical minority and finds itself opposed politically by other races of different languages and traditions. These subordinate races, however—the Germans, Croatians, Slavonians, Slovaks, Ruthenians, and Rumanians—occupy a different position with reference to the ruling race than do the subordinate races of Austria. The Magyars of Hungary are an energetic and masterful race, the various parts and parties of which, whatever their differences of opinion on other matters, are absolutely united in their attitude towards the non-Magyar peoples of the country. They have never swerved from their determination to be the ruling caste and to keep the other races in subservience. Politically, also, they are a highly developed people and are able to unite for the accomplishment of a common end. In Austria, on the other hand, the Germans are split into a variety of parties and groups which are often so fiercely opposed to one another that united action is impossible. Their Slavic opponents make full use of this fact and thus occupy a much stronger position in the maintenance of their institutions and languages than do their brethren in Hungary.

It has been of great importance, consequently, to the non-Magyar populations of Hungary to have the moral and political support of the Archduke Francis Ferdinand. The Croatians were under especial obligations to him in their heated and long-drawn-out contests with the Magyar rulers in Budapest and entertained great hopes of his reign when he should finally come to the throne. The Rumanians of eastern Hungary were also especially favored by him. He was, indeed, popularly supposed to have been bitterly hostile to the Magyars, but this is an imputation which undoubtedly did him an injustice. Francis Ferdinand showed friendship for the Magyars in various ways. He spoke their language fluently and enjoyed speaking it, and frequently visited the Magyar magnates. But he was a large-minded man of statesmanlike views, who could comprehend the needs and rights of all the races whom he would one day be called upon to govern.

It seems like the irony of fate that, although he sought to advance the interests of his Slav subjects, it was by one of these that the Archduke was finally assassinated. The assassination of Francis Ferdinand, however, was an expression of the rage felt by all Serbs, both in and out of Servia, at the attitude of Austria-Hungary towards Servia during the Balkan War and at the annexation of Bosnia-Herzegovina. The Serbs are an ambitious race and have formulated extensive pan-Servian plans. The Balkan war enabled them to realize a portion of these plans by the annexation of the ancient Servian territories in Macedonia. A further development of them contemplated the annexation of Bosnia, Herzegovina, and Montenegro, and finally of Dalmatia. The population of all these countries is predominantly Serb, and their inclusion in the kingdom would give to Servia a large and compact territory with a considerable seacoast. The rulers of Vienna and Budapest, however, have naturally spared no efforts to prevent the realization of these ambitions. Hence the acrimonious diplomatic squabbles which have taken place between the Austro-Hungarian and Servian Cabinets and which have many times brought the two countries to the brink of war. Hence, too, the assassination of Francis Ferdinand. The

Archduke's plans with reference to the Serbs contemplated indeed a greater Servia, but within the limits of the dual monarchy. To the Servian enthusiasts this idea is hateful. Their greater Servia must be an independent country.

Still more irritating to the Austrian-Germans than the Archduke's position in the race troubles of the country was his intense clericalism. We in America do not realize what we have escaped in that we have no political party which represents a religious sect. Here the advocates and orators of the Clerical party often do not hesitate to appeal to the public with perfect confidence to support its candidates for political office on purely religious grounds because God is on their side and the devil on the other. Such an orator near Gratz recently promised the favor of St. Anthony of Padua, who is a very popular saint in these parts, to all who would vote his party ticket, and the wrath of God to those who refused to do so. Such campaign methods naturally bring confusion into the consideration of every proper political issue and have had the result in Austria of alienating from the Church most of the intelligence and industry of the land, so that the two classes of the population which are still faithful to the Church are the highest and the lowest—the upper nobility and the peasants. The latter are ignorant and superstitious and are easily held by the clergy. The higher nobility are still faithful, probably largely because the Imperial family, including all of its ramifications, are strong adherents of the state Church. No one, therefore, would have complained of Francis Ferdinand for being a devout churchman; it was expected of him. Since his marriage with Countess Sophie Chotek, however, he was much more than this. His wife was of a deeply religious character, and apparently to please her he became an active supporter of the political propaganda of the Church. Also in purely ecclesiastical matters, such as the appointment of bishops, he favored men who were extreme and ultramontane in their views instead of those who were liberal and national. His interest in the social, inner life of the Austrian people took this direction, and this alone. He was apparently but little interested in art, music, education, or literature, all of which occupy so much of the attention of the middle and upper classes in Austria, except in their relation to the Church.

Notwithstanding these facts, there is even among those who disliked the Archduke a feeling of genuine sorrow and of loss at his death. It is recognized that he was a strong man with a capacity for leadership, a man of good intentions, a good husband and father, and it is felt that the Government of the country, with its tremendous and almost insuperable difficulties, needs such a man. The head of the Austrian state governs it in a very real sense, and should be before all things a man of character. The personal idiosyncrasies of the ruler and his likes and dislikes are matters of relatively subordinate importance, since his policies, whatever they be, are sure to be displeasing to great numbers of his subjects, so very conflicting are the interests of the various groups into which they are divided. It is indeed unfortunate that the Archduke should have been removed from the scene in the very prime of life and when his people were beginning to understand and to respect him. And what the political consequences of his assassination will be it is impossible to foretell.

HENRY S. PRATT.

Joseph Chamberlain

By SIR HENRY LUCY.

A CONTEMPORARY'S ESTIMATE OF A GREAT ENGLISHMAN, WHO WAS FOR YEARS THE DOMINANT FORCE IN THE POLITICS OF HIS COUNTRY, BUT NEVER ACHIEVED THE HIGHEST MARK.

Eulogies spoken across the table of the House of Commons honoring prominent Members who have finally answered to the old Lobby cry, "Who goes Home?" are not uncommon. It is exceedingly rare that there should be added the last tribute of an adjournment of the House. That it should have been paid to Mr. Chamberlain upon the motion of the Prime Minister, a political opponent of life-long standing, adds to its value. The scene presented the House of Commons in its best aspect. With one accord, Members uncovered when the Premier rose, and remained bareheaded throughout the three speeches. Mr. Chamberlain was a relentless foe, a mercilessly hard hitter. Having in the course of his career shattered in turn two great political parties, it was inevitable that he should have created a host of personal enemies. By his graveside rancor was hushed. There was general, unqualified consent to Mr. Asquith's suggestion, clothed in one of the perfect sentences of an exquisite speech. "It is," he said, "fitting that within these walls, where the echoes of his voice seem to many of us still to linger, we should suspend for a few hours the clash of controversy and conflict while we all join in acknowledging our common debt to the life and example of a great Englishman."

At one point in this speech, Mr. Asquith incidentally referred to the fact that Mr. Chamberlain in the course of a brilliant career had never attained the Premiership, a position to which he seemed predestined. On this point I am able to supply interesting testimony of Mr. Chamberlain's personal views and aspirations on the subject. In the spring of 1900 I happened to sit next to him at a little dinner given by a mutual friend. He talked with the frankness, doubtless well considered, which sometimes startled people. He mentioned that he had that morning been reading a magazine article of mine published simultaneously in London and New York discussing his chances of succession to the Premiership.

"If," he said, "you want to know the truth about the matter, I will tell you. Never at any time in any circumstances do I intend to be Prime Minister of the Unionist party. I am ready to serve under Arthur Balfour or any one else who may be preferred to the post. I confess it was different when I was on the other side. Fifteen years ago I was certainly resolved to be Prime Minister in the Liberal succession. If I had been, you would have seen established that condition of Liberal Imperialism of which Rosebery and others futilely talk to-day."

There were three crises in the career of Mr. Chamberlain which, had they turned in a different direction, would have changed the history of England during the two decades following on the year 1886. When, in 1882, W. E. Forster was driven out of the Irish office, a feat the accomplishment of which was largely due to Chamberlain's action, that gentleman had marked succession to the office as his own. At this epoch he, in conjunction with Sir Charles Dilke, was the rising hope of turbulent Irish Nationalism clamoring for Home Rule. Forster had, at the risk of his life, attempted to stamp out the aspiration with the iron heel of Coercion Acts. These Chamberlain opposed in Cabinet Council. Now Forster was got out of the way, he was prepared to be installed in Dublin Castle with authority to attempt to cure Land Leagueism by kindness. In anticipation of the Chief Secretaryship being entrusted to him, he, in the early days of May, 1882, took counsel with friends in the confidence of Parnell, friends not absolutely new to the Cabinet Minister. With characteristic self-confidence, he counted without Gladstone, who passed him over in favor of Lord Frederick Cavendish. Incredible on the face of it, indisputable in fact, the first intimation of the appointment reached him when, seated on the Treasury Bench, he heard the Whip move for a writ for a new election in the West Riding of Yorkshire, "to fill the place of Lord Frederick Cavendish, who since his election has accepted the office of Secretary to the Lord Lieutenant of Ireland."

That was adding insult to injury. It was probably the foundation for the personal animosity to his sometime Leader that marked their subsequent relations. Had he gone to Dublin in May, 1882, he might have met the fate reserved for Lord Frederick Cavendish. Or he might have realized the strong desire possessing him at the time to give Home Rule to Ireland. In either case, the course of history at home and abroad would, as averred, have been altered.

The second crisis happened between the introduction of Gladstone's first Home Rule Bill and its second reading. Chamberlain, unaccustomed to the strange armor newly put on as an ally of Lord Salisbury, hankered after reconciliation with his old party. A principal objection taken by him against the bill was the proposal to exclude Irish representation from Westminster. If that were withdrawn, he was prepared to abstain from opposition to the second reading, with the result that the Conservative onslaught would have been repulsed, the bill would have gone into committee, and the earthquake that rent in twain the Temple of Liberalism would have been averted.

As I have related elsewhere, upon documentary evidence supplied by the principal agents in the plot ("Sixty Years in the Wilderness"), everything was arranged to meet Chamberlain's views. In moving the second reading of the bill, Gladstone was to announce the withdrawal of this part of the scheme. Chamberlain was to follow, declar-

ing his objection to the bill removed. The quarrel would be patched up, and the Liberal party would live together happy ever afterwards. For inscrutable, never-explained reasons, Gladstone concluded his speech without making the stipulated announcement. In the ensuing division Chamberlain led his fifty-five followers into the Opposition Lobby in line with the thirty-eight Whigs under the captaincy of Lord Hartington. The Home Rule bill was rejected, and the Liberal party was driven out into the wilderness, where, with brief interval, they forlornly wandered for nineteen years.

The third crisis arose in connection with what is known in history as the Round Table Conference. This final attempt at reconciliation had its origin in a speech addressed by Chamberlain to his Birmingham constituents, in which he let fall the significant remark that the differences between the severed sections of the Liberal party were such as might be settled by half-a-dozen men seated at a round table. As he thus summoned the conference on his own initiative, so he broke it up by an amazing letter, with strange irony addressed to a weekly religious paper. There is no doubt that when he entered upon the conference he hoped and believed it would lead to the closing up of sundered ranks. His frame of mind at this critical epoch is indicated in a passage from a letter written to me from Stornoway, dated April 21, 1887: "I deplore with you the state of feeling now prevailing in the Liberal party. There has been nothing like it in our generation, and the outlook is very black. Like you, I wish I were out of it all, for politics have lost all charm for me."

As events turned out, he then, in his fifty-first year, halted on the threshold of a new departure in political life that led him to a pedestal from which he will through all time stand out as a dauntless epoch-maker.

At his best, and he remained at his best up to the last day he was seen in the House of Commons, Chamberlain was the most powerful of Parliamentary debaters, not excepting Gladstone. Knowing the limits of his own capacity, he did not aim at oratory. He was preëminently a man of business, but was endowed with the gifts of lightning-like acuteness of perception, consummately lucid expression. In charge of an intricate bill, he steered it through the shoals of committee with masterful hand. He was perhaps seen at his best when he stood with his back to the wall, faced by a host of assailants. The more noisy the interruption the cooler he grew, warding off blows with deft parryig of his rapier, swiftly followed up b ytelling thrust at his aggressor.

When, in 1886, Gladstone having nailed the Home Rule flag to the Liberal masthead, Chamberlain drifted into the haven of Conservatism, he paid the penalty of his supreme capacity as a phrasemaker. "He that maketh others beware of his tongue," says Bacon, "let him beware of other men's memory." During the last twenty years of his active life Chamberlain, rising to address the House of Commons, was ever faced by the ghost of his dead self. Whatever questions might be to the front, Education, Ireland, Free Trade, the place in the political firmament held by the House of Lords, it turned out that Chamberlain the Radical had said the thing most damaging to the position at the moment taken up by Chamberlain the colleague of Lord Salisbury. When he had anything to say on any subject, whether the averment were that a particular thing was black or white, he said it in a clean-cut phrase that went straight home to the understanding and lingered long in the memory.

There is abundant precedent for the circumstance that, having commenced his political career in one camp, he concluded it in another. In this respect he is in the good company of Disraeli and Gladstone. Where his powerful individuality manifested itself is in the fact that while in turn he dominated the councils of the two great political parties of the state, he also, in turn, rent them to their centre. The breaking up of the Liberal party on the question of Home Rule was followed seventeen years later by the disruption of the Unionists on the question of Free Trade. The hand that wrought the ruin was in both cases Chamberlain's.

It is small wonder that a man with such a history should have created many enemies. After 1886 they were divided in the House of Commons into two groups, the Irish Nationalists, whose early trust he had betrayed, and the Radicals, whom he deserted. The bitter feeling found outburst in the historical free fights on the floor of the House in the final stage of the Home Rule bill of 1892. But if he had a cohort of enemies, he had a circle of warm friends, whose fidelity he was careful to reward.

The summit of his marvellous career was reached in the autumn of 1902, when, a passenger in the finest cruiser of the British Navy, the ex-Mayor of Birmingham, Secretary of State for the Colonies, sailed for the Cape, intent on binding up the wounds created by the ravages of war, the shout of Europe bidding him God-speed on his mission drowned by the acclaim of South Africa welcoming him to its shore. He was at that time not only the most powerful, but the most popular man in England. A companion picture presented five years later leaps to the eye. It shows a partly paralyzed figure painfully making its way across a London railway station, with gallant but futile attempt to raise its hat in response to the greeting cheer. It was Joseph Chamberlain returning from the Riviera, where he had passed some weeks in vain struggling with the effects of a blow that had stricken him down, while, dauntless, hopeful to the last, he was counting on the achievement of his final campaign. The incident suggested to one looker-on the idea of a wounded lion, long time lord of the forest, returning to its lair to die.

Civil War Literature

By CHARLES FRANCIS ADAMS.

III.

Recurring to Newton's Life of Lyons* and the revelations therein, presently, but four months after Palmerston's "Yankee Run" letter, came the Trent affair. The conduct of the British representative throughout that memorable and trying episode, as here intimately disclosed, might serve as an all-time model for diplomatists. It is not too much to say that Lyons then saved the situation. What we now have in his confidential dispatches to Earl Russell adds, it is true, nothing of moment to what we already knew. It is, however, the voice at the other end of the telephone we are listening to.

The stopping of the British mail steamer Trent on the high seas by Capt. Wilkes, in command of the San Jacinto, occurred on November 8, 1861. As Lord Newton very truly observes, "an incident of the gravest nature, it seemed likely to render futile all the laborious efforts made to keep the peace between England and the United States." The news arrived in England on November 27. The first private letter from Lord Lyons was of the 19th of the month. In it he wrote to Lord Russell:

> I am told confidently that orders were given at Washington which led to the capture on Board the *Trent*, and that they were signed by Mr. Seward without the knowledge of the President. I do not vouch for the truth of this.

The situation was most trying. Lord Newton writes:

> In the absence of authentic information [Lord Lyons] felt that on the one hand it would be unsafe to ask for a reparation which might be inadequate; on the other hand he was reluctant to make a demand which might be unnecessarily great. Consequently, he resolved to take no steps until he received instructions from home, refused to say a word on the subject either officially or unofficially, and instructed the Consuls to maintain silence.

Writing in his diary on the 16th, three days previous, W. H. Russell, "Our Special Correspondent" of the London *Times*, had said:

> I went to the Legation, and found the young diplomatists in the "Chancellerie" as demure and innocent as if nothing had happened, though perhaps they were a trifle more lively than usual. An hour later, and the whole affair was published in the evening papers.

Three days afterwards Lord Lyons thus expressed himself to Earl Russell:

> I have all along been expecting some such blow as the capture on board the *Trent*. Turn out how it may, it must I fear produce an effect on public opinion in both countries which will go far to disconcert all my peaceful plans and hopes. I am so worn out with the never-ending labour of keeping things smooth, under the discouragement of the

doubt whether by so doing I am not after all only leading these people to believe that they may go all lengths with us with impunity that I am sometimes half tempted to wish that the worst may have come already. However I do not allow this feeling to influence my conduct, and I have done nothing which can in the least interfere with any course which you may take concerning the affair of the *Trent*.

As is the case in all books written by Englishmen relating to America, as probably in all books written by Americans relating to things English, the author has a way of falling into quite portentous errors of detail. For instance, in referring to this episode, he speaks of the "Governor of Boston," meaning, of course, his Excellency John A. Andrew, then Governor of the Commonwealth of Massachusetts. He says, truly enough, that Governor Andrew "distinguished himself by the following statement: 'That there may be nothing left to crown this exaltation, Commodore Wilkes fired his shot across the bows of the ship that bore the British lion at its head.'"

Referring shortly afterwards to other dispatches which he does not print, Lord Newton says that at this time—in the closing days of November—while the Trent affair was in process of settlement, Mr. Galt, the Canadian Finance Minister, happened to be in Washington and had an interesting conversation with President Lincoln, who disclaimed for himself and the Cabinet all thought of aggression against Canada:

> The President also stated that he himself had been opposed to Mr. Seward's circular putting the coasts into a state of defence, but had been overruled. On being asked what the recommendation to make fortifications and depôts of arms on the Great Lakes meant, he only said, "We must say something to satisfy the people." About the Mason and Slidell case, he remarked, "Oh, that'll be got along with!" He further volunteered the observation that if he could not within a reasonable period get hold of Virginia, Kentucky, and Missouri, and keep Maryland, he should tell the American people to give up the contest, for it would be "too big" for them.

This is a distinctly interesting disclosure of the nature of the official advices as to the American situation then reaching the British Ministry.

Lord Newton seems to have some undisclosed grievance against Mr. Hammond, then permanent Under-Secretary at the Foreign Office. At one point he refers to him as a "man who seemed marked out to add to the gaiety of nations"; at another as a "very unfortunate prophet"; and, again, as one whose "singularly faulty judgment and unhappy prophecies have been already commented upon"; and, still later on, as "the guileless Hammond." Mr. Hammond now "expressed the opinion that Messrs. Mason and Slidell would be immediately executed, so that there might be an answer ready whenever their release was demanded."

Lord Russell's dispatch relating to the Trent affair is still freshly borne in mind. Most peremptory as originally drawn, it was softened down by the Prince Consort, then on his death-bed—his last public act. It reached Washington on the night of December 18th. The next morning Lord Lyons called on Mr. Seward and acquainted him with its general tenor; Lord Lyons next thus reports on this momentous interview to his chief:

> Before I left Mr. Seward he said that there was one question which he would put to me "informally," but which it was most important that I should answer. Was any time fixed by my instructions within which the U. S. Government must reply? I told him that I did not like to answer the question; that what of all things I wished to avoid was the slightest appearance of a menace. He said I need not fear that; he only wished me to tell him privately and confidentially. I said that on that understanding, I would tell him that the term was seven days. He then said that much time would be lost if I did not let him have a copy of your dispatch "unofficially and informally"; that so much depended upon the wording of it, that it was impossible to come to a decision without reading it. I told him that the only difficulty I had about giving it to him at once unofficially was that the seven days would at once begin to run. He said that was very true, but I might let him have it on the understanding that no one but himself and the President should know that I had done so. I was very glad to let him have it on these terms. It will give time for the Packet (which is indeed already due) to arrive with M. Thouvenel's Dispatch to M. Mercier, and in the meantime give Mr. Seward who is now on the peace side of the Cabinet time to work with the President before the affair comes before the Cabinet itself. I sent the Dispatch to him in an envelope marked "Private and Confidential." Almost immediately afterwards he came here. He told me he was pleased to find that the Dispatch was courteous and friendly, and not dictatorial or menacing. There was however one question more which he must ask me, without an answer to which he could not act, but at the same time he must have the answer only in strict confidence between himself and me. I had told him in confidence that I was to wait seven days for an answer on the subject of the redress we required. Supposing he was within the seven days to send me a refusal, or a proposal to discuss the question? I told him that my instructions were positive and left me no discretion. If the answer was not satisfactory, and particularly if it did not include the immediate surrender of the Prisoners, I could not accept.
>
> I was not sorry to tell him this in the way I did. I avoided all menace which could be an obstacle to the U. S. yielding, while I did the only thing which will make them yield if they ever do, let them know that we were really in earnest.
>
> I don't think it likely they will give in, but I do not think it impossible they may do so, particularly if the next news from England brings note of warlike preparations and determination on the part of the Government and people.

Lord Newton then prints an official dispatch from Lyons to Russell, under date of December 23, 1861, descriptive of the final steps in the Trent affair. Incidentally Lord Lyons says:

> M. Mercier went of his own accord to Mr. Seward the day before yesterday and expressed strongly his own conviction that the choice lay only between a compliance with the demands of England and war. He begged Mr. Seward to dismiss all idea of assistance from France, and not to be led away by the vulgar notion that the Emperor would gladly see England embroiled with the United States in order to pursue his own plans in Europe without opposition.

The dispatch closed as follows:

> You will perhaps be surprised to find Mr. Seward on the side of peace. He does not like the look of the spirit he has called up. Ten months of office have dispelled many of his illusions. I presume that he no longer believes in the existence of a Union Party in the South, in the return of the South to the arms of the North in case of a foreign war: in his power to frighten the nations of Europe by great words; in the ease with which the U. S. could crush rebellion with one hand and chastise Europe with the other; in the notion that the relations with England in particular are safe playthings to be used for the amusement of the American people. He sees himself in a very painful dilemma.

Of Mr. Seward's famous reply Lord Newton writes: "The American reply arrived on December 27, in the shape of a note from Mr. Seward of the most portentous length, abounding in exuberant dialectics, but the gist of which was contained in the two following paragraphs:

> "The four persons in question are now held in military custody at Fort Warren in the State of Massachusetts. They will be cheerfully liberated.
>
> "Your lordship will please indicate a time and place for receiving them."

Lord Newton then adds: "The question of peace or war had hung in the balance for weeks, but the victory was complete, and British diplomacy achieved a success which was not equalled until Fashoda supplied a somewhat similar case in 1897."

The next private dispatch of Lord Lyons to Earl Russell, dated December 27, is printed in full by Lord Newton. It has an historical interest. The British representative wrote as follows:

> It is of course impossible for me to give an opinion upon the argumentation in Mr. Seward's voluminous note. Time barely admits of its being read and copied before the messenger goes. But as the four prisoners are given up, immediately and unconditionally, it is quite clear to my mind that you will not wish me to decide the question of peace or war without reference to you. A rupture of diplomatic relations, not followed by war, would be worse than war itself, for after that, nothing but actual hostilities would ever convince the Americans that there was any limit to our forbearance.
>
> I hope, however, that the Note will, on further examination, be deemed sufficient. In that case it might not be unadvisable to give credit to Mr. Seward, in speaking to Mr. Adams, and the more so perhaps because Mr. Adams is, or at all events was, devoted to Mr. Seward and his policy. I cannot say that my general opinion of Mr. Seward has undergone any change; but without inquiring into his motives, I must allow him the merit of

having worked very hard and exposed his popularity to very great danger.

I shall not be able to give you any information to-day as to the effect produced upon the public. Mr. Seward has begged me to keep the answer a secret until to-morrow. He intends to publish it in the newspapers here to-morrow, and has sent a copy to New York to be published simultaneously there. In the latter case it will be conveyed to the public in Europe, as well as to you, by the same packet which takes this letter. Mr. Seward told me he "had been through the fires of Tophet" in order to get the prisoners surrendered.

In this dispatch Lord Lyons further adds:

I think it very important, with a view to the preservation of peace, that advantage should be taken of the opportunity to put Canada into a state of defence; and indeed (as I said in a dispatch which I wrote in May last) to provide for the security of all our possessions on both sides of this Continent. While Canada, in particular, is apparently defenceless, the Americans will never believe that we contemplate the possibility of war. And it must never be forgotten that when they make peace with the South, they may have a large army to provide with employment, and an immense amount of popular dissatisfaction and humiliation to find a safety valve for.

Referring to the surrender of the two Confederate Commissioners, he says:

In any case I shall give a caution to the Commander of the ship which takes them, that they are not to be received with honours or treated otherwise than as distinguished *private* gentlemen.

Those who have not seen the Americans near, will probably be much more surprised than I am at the surrender of the prisoners. I was sure from the first that they would give in, if it were possible to convince them that war was really the only alternative. My difficulty has been to make them aware that it was surrender or war, without making such threats as would render the humiliation too great to be borne. This was the object of my confidential communications with Mr. Seward before I gave him your dispatch.

Writing of the details of this transfer, on December 31, Lord Lyons refers to the belief that it would occasion a popular outburst and disturbance at Boston. This belief prevailed so strongly that Russell, "Our Special Correspondent," wrote in his Diary under date of December 27:

I have resolved to go to Boston, being satisfied that a great popular excitement and uprising will, in all probability, take place on the discharge of the Commissioners from Fort Warren.

He then adds, as indicative of the intensity of the feeling prevailing:

Mr. Seward, apprehensive that some outrage would be offered by the populace to the prisoners and the British Flag, has asked Lord Lyons that the Southern Commissioners may be placed, as it were, surreptitiously in a United States boat, and carried to a small seaport in the State of Maine, where they are to be placed on board a British vessel as quietly as possible; and this exigent, imperious, tyrannical, insulting British Minister [Lord Lyons] has cheerfully acceded to the request.

Reaching New York on the 31st of December, Russell next made the following entry in his Diary:

To my great regret and surprise, however, I learned it would be impracticable to get to Fort Warren and see the prisoners before their surrender. My unpopularity, which had lost somewhat of its intensity, was revived by the exasperation against everything English occasioned by the firmness of Great Britain in demanding the Commissioners; and on New Year's Night, as I heard subsequently, Mr. Grinnell and other members of the New York Club were exposed to annoyance and insult, by some of their brother members, in consequence of inviting me to be their guest at the club.

Of this apprehension of some mob outbreak on occasion of the transfer of the Confederate Commissioners to the British flag, Lord Lyons wrote as follows:

I have a better opinion of the Boston mob than Mr. Seward has, and should have had very little fear of the prisoners being insulted, if I had taken them from Fort Warren directly on board a British man-of-war. I am not sorry however to spare the Bostonians (who are among the most friendly to us of the Americans) what they might consider a mortifying and humiliating spectacle. I have at Mr. Seward's request not made the name of the place at which the prisoners are to be transferred generally known. Indeed, I found that many people were going to Boston to be present on the occasion, and there is no advantage in having a crowd or a sensation about it.

Of Lord Lyons's handling of this most critical and important negotiation, his biographer says:

Congratulations now began to pour in upon him, and Lord Russell wrote that nothing could have been better than his conduct, and that his patience, forbearance, and friendly discretion had gone far to secure the favorable result obtained.

Referring to the whole course of proceedings at this time, Lord Newton further says:

Writing to Mr. Hammond [Lord Lyons] explained that he had resisted the temptation "to do something" "which always besets one when one is anxious about a matter"; and that from the first he had been convinced that the more quiet he kept the better would be the chance of the instructions from home producing their effect. To other correspondents he expressed the view that it was the British military preparations which had turned the scale in favour of peace. . . . But no one reading the *Trent* correspondence can fail to realize that the issue of peace or war depended to a great extent upon the method in which the British representative at Washington carried out his task, and that the slightest error in judgment on his part would have rendered the conflict inevitable.

In after years Lord Lyons frequently expressed the opinion that if there had then been telegraphic communication across the Atlantic it would have been impossible to avert war, and it is more than likely that he was correct, although it is improbable that many people realized it at the time . . . but the restraint which enabled Lord Lyons to refrain from saying a single word upon a question over which the whole population of the United States was buzzing for six or seven weeks was little else than an inspiration.

Books and Men

THE PESTILENT CATALOGUE.

Sylvestre Bonnard thought a catalogue the most interesting of books. "I do not know," he wrote, "any reading more easy, more fascinating, more delightful than that of a catalogue." His enthusiasm can be explained—one of the first entries he found in the catalogue he was reading ran like this:

La Légende Dorée de Jacques de Gênes (Jacques de Voragine);—traduction française, petit in-4.

This MS. of the fourteenth century contains, besides the tolerably complete translation of the celebrated work of Jacques de Voragine, 1. The Legends of Saints Ferréol, Ferrution, Germain, Vincent, and Droetoveus; 2. A poem *On the Miraculous Burial of Monsieur Saint-Germain of Auxerre*. . . .

This MS. is written upon vellum. It contains a great number of illuminated letters, and two finely executed miniatures, in a rather imperfect state of conservation: one represents the Purification of the Virgin, and the other the Coronation of Proserpine.

Coming to our own country, and looking at the fictitious creatures of Eugene Field, instead of those of Anatole France, it appears that Judge Methuen, who figures in "The Love Affairs of a Bibliomaniac," suffered from a disease called "catalogitis":

Judge Methuen has been a victim (a pleasant victim) to the catalogue habit for the last forty years, and he has declared that if all the catalogues sent to and read by him in that space of time were gathered together in a heap they would make a pile bigger than Pike's Peak, and a thousandfold more interesting. I myself have been a famous reader of catalogues, and I can testify that the habit has possessed me of remarkable delusions, the most conspicuous of which is that which produces within me the conviction that a book is as good as mine as soon as I have met with its title in a catalogue and set an X over against it in pencil.

But this is, so to speak, a land of faery, in which librarians permit neither themselves nor anybody else to wander. These catalogues fire the imagination, they speak of golden manuscripts, of rare and curious books, they themselves partake of the nature of literature. To many poor drudges, however, a catalogue means nothing but that hideous invention, that ghastly row upon row of cases, filled with score after score of little drawers, known as a card catalogue.

When card catalogues began to spread over the land, twenty or twenty-five years ago, it was thought that the world's great age began anew—bibliographically speaking. It was the last word in the art of cataloguing books. And so librarians pitched in and built these monuments. The catalogues began to grow. The prediction made early in the game, that the day would come when the catalogues of the Boston Public Library and of the Harvard Library would meet on the Harvard Bridge, seemed likely to be fulfilled. Like the animals in Mr. H. G. Wells's story, the wasps became the size of crows,

and rats grew as big as wolves, and people wondered what might occur if a few elephants took some of the magic food. Things that were merely grotesque and amusing became fairly serious.

Now, the gigantic period has been reached, and one feels that even the makers of catalogues have their occasional secret qualms. To walk from the letter A to the letter S in the catalogue of a large library is something which one does, on a warm day, only when duty drives. Probably those who associate daily with these preposterous and titanic creations fail to realize what has happened. Outsiders, even librarians, are certainly impressed. "I can assure you," an English librarian wrote recently, "that the catalogue-room of the New York Public Library is an awe-inspiring sight."

The latest authority on this subject, Mr. William Warner Bishop, does not seem to hold out much hope. His book, "Practical Handbook of Modern Library Cataloguing" (Williams & Wilkins Co.), is a succinct statement of things as they are, by a man who knows what he is talking about. Mr. Bishop is superintendent of the Library of Congress reading-room. It appears, from this book, that library catalogues had better be on cards, and that they are apt to keep on growing. Even the dictionary form, almost everywhere considered the simplest, cannot be easy to consult after it passes a certain size.

"It is too much," the author writes, "to expect that because the dictionary form of arrangement is comparatively simple, it will of itself be intelligible to untrained persons." Now, "untrained persons" does not mean uneducated persons—it means those who have not studied cataloguing as a science, or an art, whichever it is. So there must be, Mr. Bishop suggests, attendants to aid and instruct the uninitiated in the use of the catalogue. Such assistants, by the way, have been suggested in other places, and in some libraries may be already at work.

Really, with catalogues growing to an absurdly colossal size, and requiring, even in their simplest forms, interpreters to make them clear to anybody but a specialist, it is not unfair to think that cataloguing has entered a blind alley. That catalogues are evils, hardly any one will deny; that they are necessary evils, most librarians will maintain. The most illuminating comment upon them is that chief librarians usually avoid them as if they were full of bacilli. They know far too much to endanger their dispositions by trying to consult them.

Comments of this sort are usually disposed of on the ground that they are "destructive" criticism. Catalogues are getting too large, and partly for that reason too hard to consult. But I have no method to suggest whereby they may be kept smaller—no method, that is, not involving the use of explosives.

Something could be done, however, to liberate many unfortunate cataloguers, and spare the feelings of other unlucky persons who have to consult their work. This would consist in shortening and simplifying the legend which is printed upon the cards issued by the Library of Congress and the libraries which follow its methods. An absolutely unnecessary amount of detail is usually given there, for no discoverable reason except the possible gratification of a few expert bibliographers. This and certain irritating practices in regard to authors' names are customs which might be abolished with advantage.

A typical example of the treatment of authors' names in many catalogues is afforded by the cards in the Library of Congress for the books by the Indian poet who recently won the Nobel Prize. Any one would, of course, look for him under Tagore, Rabindranath. He authorizes that spelling of his name in his books; members of his family are entered under Tagore in "Who's Who." But the cataloguers know better. They have a little system of their own, and with rare tact and modesty they tell you blandly to look for the poet's works in quite another part of the catalogue, under the letter R—Ravindranatha Thakura.

It is these little Jack Hornerisms which have made card catalogues justly so popular and beloved, and given librarians a reputation for scholarship unmarred by suspicion of pedantry.

EDMUND LESTER PEARSON.

News for Bibliophiles

"POET LAUREATE AND HISTORIOGRAPHER ROYAL."

In the letters patent of August 18, 1670, John Dryden receives the joint appointment of "Poet Laureate and Historiographer Royal." To the former office he had been appointed two years before, immediately after the death of Davenant.* The latter office, which had been vacant since the death of James Howell in 1666, is now combined with the Laureateship, and Dryden becomes entitled to the revenue from both—£100 from the one, £200 from the other. The conjunction of these two offices, "how hardlie soever those two faculties meet in the same person" (as Speed said in 1611 of similar conjunction in the case of Bernard Andreas), seems to have occasioned no remark among the biographers of Dryden; but it is, none the less, a rather curious and interesting bit of literary history.

The precedent for combining them is, in a sense, coeval with the Laureateship itself; for the diploma presented by Orso to Petrarch, when the poet was crowned Laureate in Rome, testifies "to his excellence in the arts of poetry and history" ("Petrarch, His Life and Times," Hollway-Calthorp, London, 1907, p. 99). There was, however, a more precise precedent in England itself in the person of Bernard Andreas, the Poet Laureate and Historiographer Royal to Henry VII and Henry VIII. Andreas, who was a blind Augustinian friar, a native of Toulouse, accompanied his royal master to England, and celebrated not only Henry VII's but also Henry VIII's achievements in a series of poems, a *Vita* of Henry VII and a number of Annals contributed in fulfilment of the duties of his office. In a patent issued only a year after Henry VII's accession, granting Andreas a pension of ten marks a year, the poet is described by his full title of Poet Laureate and Historiographer Royal (Rymer's "Fœdera," XII, p. 317); and the title of his Life of Henry VII reads: "Bernardi Andreae Tholosatis | Poetae Laureati, Regii Historiographi | De Vita atque Gestis | Henrici Septimi | Angliae ac Franciae Regum Potentissimi Sapientissimique | Historia."

The patent quoted in the "Fœdera" has, of course, not passed unnoticed. John Speed in his "History of Britain" (London, 1611, p. 728) comments at some length on Andreas. Warton mentions his joint offices in the "History of English Poetry" (ed. Hazlitt, III, p. 128); and later historians have referred to him; but the works of Andreas, which are altogether in Latin and French, have apparently remained a sealed book to students of literature, although the Augustinian's works were edited by James Gairdner in 1858 in a volume entitled "Memorials of the Reign of Henry the Seventh."

With these works, and their connection with the subsequent establishment of the office of Poet Laureate I shall deal in a later article. It is sufficient in this note to point out that Andreas not only held both offices, but was also frequent in the expression of his sense of obligation to fulfil the duties pertaining to them.

With the death of Andreas (c. 1525) the Laureateship lapsed. Henry VIII was not such a patron of the arts as his predecessor, and had more strenuous matters on his mind than laureates. With the circumstances leading up to the official rehabilitation of the Laureateship, I shall deal elsewhere. As to the office of Historiographer Royal, there are some curious problems which can be noted in briefer compass.

In Dryden's patent, already referred to, the poet is appointed "our Poet Laureate and Historiographer Royal" with "all the rights . . . thereunto belonging as fully and amply as Sir Geoffrey Chaucer, Knight, Sir John Gower, Knight, John Leland, Esq., Benjamin Johnson, Esq., James Howell, Esq., Sir William Davenant, Knight, or any other person or persons having or exercising the place or employment of Poet Laureate or Historiographer, or either of them, in the time of any of our royal progenitors." In this obviously mixed and inaccurate catalogue, Leland and Howell are of course the Historiographers. The former was made "Library Keeper"* by Henry VIII some time before 1530 and, in 1533, "King's Antiquary." The precise title of "Historiographer Royal" he does not seem to have had; but he not only fulfilled the duties of "King's Antiquary" with conspicuous zeal, but kept up the traditional connection of historiographer and poet, for he wrote (with Udall) "verses and ditties" at the Coronation of Anne Boleyn, and also composed a Latin poem on the birth of Edward VI.

Whether Leland had an immediate successor, I am unable to ascertain: but there is a record in Nicholl's "Progresses of King James" (Vol. III, p. 136), among the "Free Gifts in the Thir-

*See note by the same author in the *Nation* of June 17.

*One of Andreas's appointments was as "Keeper of the King's Library" (Gairdner, Memorials, p. xii, quoting Crusenius in Monastico Augustiniano, p. 192).

teenth year of the King's Reign," of a gift of two hundred pounds (precisely the amount, be it noticed, that was subsequently paid to the Historiographers Royal) to a certain "Thos. Dempster, Historiographer"; and that Dempster was definitely offered the post is confirmed by his Autobiography and other contemporary authorities (D. N. B. XIV, 337).

James Howell, however, in spite of Andreas, Leland, and Dempster, flattered himself that he was the first Historiographer Royal. He had been a sort of "royal intelligencer" to Charles I, and after the Restoration returned to the allegiance and became an assiduous applicant for office. Failing in his effort to be made Clerk of the Council, and being equally unsuccessful in his petition for appointment as Secretary to the Royal Commission on Trade, he urged that "among the prudentst and best policed nations there is a minister of state qualified and appointed with the title of Historiographer Generall" ("The Familiar Letters of James Howell," ed. Jacobs, London, 1892, Vol. II, p. 687). In this petition he was successful and was duly appointed, Feb., 1661, with a grant of two hundred pounds as "His Majesty's free gift." His epitaph, about the wording of which Howell seems to have been much concerned, reads: "Jacobus Howell | Cambro Britannus | Regius Historiographus | In Anglia Primus* | Qui post varias Perigranaciones | Tandem naturae cursumperegit | Satur Annorum & Famae | Domi Forisq. | Huc usq. erraticus | Heic Fixus 1666" (Letters, Vol. II, p. xlix).

Four years after Howell's death, the office of Historiographer was, as has already been noted, conferred upon Dryden. At the revolution of 1688, when Dryden lost both offices, it is, I believe, universally stated that the Laureateship and the post of Historiographer were at once passed on to Shadwell; but it would seem that the offices were again divided, the Laureateship going forthwith to Shadwell, and the office of Historiographer being conferred upon a certain Robert Plot. Besides Wood's Athenae (ed. Bliss, IV, 772+) the principal source of information about Plot is a brief biography, prefixed to the second edition of Plot's "Natural History of Oxfordshire," London, 1795. The article on Plot in the "Dictionary of National Biography" by Thomas Seccombe incorrectly ascribes this biography to Plot's stepson, John Burman. It is, however, by Plot's assistant and successor at the Ashmolean, Edward Lhuyd (see the Publisher to the Reader, in the 1705 edition of the Natural History).

Robert Plot was first professor of chemistry at Oxford and the first keeper of the Ashmolean, having been chosen in 1683 by the donor, Elias Ashmole. In 1687 the title of secretary to the Court of Honour was conferred upon him by Henry, Duke of Norfolk, and in 1688 he was appointed Historiographer Royal to James II. So, at least, says his biographer, who adds that upon his death, in 1696, the following inscription was placed upon his tomb (at Borden in Kent): "In Academia Oxoniensi | Primus Chymiae Professor | . . . Regi Jacobo Secundo Historiographus."

The only difficulty in all this is that in the Calendar of State Papers, Domestic, 1691-2, there is a warrant dated December 8 and addressed "to the Attorney or Solicitor-General to prepare a bill constituting Thomas Rymer, Esq., Historiographer Royal in the place of Thomas Shadwell, deceased, with the salary of £200 per annum, payable quarterly, out of the Exchequer, to commence from Michaelmas last past."

Resolve it who can! Either the King had two Historiographers Royal, or Plot was deprived of the office before his death, and it was given to Shadwell, or Plot was never appointed.

At any rate, the two offices were again divided at Shadwell's death, the post of Historiographer going to Rymer, and the Laureateship (the warrant for which was issued on the same day—December 8) going to Nahum Tate.

Rymer at least was the only Historiographer Royal of any distinction, since Andreas had held the post two hundred years before (I except Leland, whose position was anomalous). The "Fœdera," inaccurate as it has been accused of being, is a magnificent monument of industry and erudition. And Rymer, curiously enough, again continued the traditional union of history and poetry by being both poet and dramatist (though, *pace* Dennis and Addison, very bad as such).

After Rymer's death, there seems to have been a fairly continuous succession of Historiographers Royal, though the office was to wait another hundred years before it was again to be associated with imaginative literature. The salary remained at two hundred pounds, and at the close of the reign of Queen Anne fell, along with the Laureateship, and, at a somewhat later period, the Inspectorship of Plays, into the gift of the Lord Chamberlain. The official family of the Lord Chamberlain in the eighteenth century (take, for example, the official list as it is recorded in the British Almanac for 1759) is a strange menagerie. Along with the Master of the Revels, Solomon Dayrolle, salary, £200; Poet Laureate, C. Cibber (£100); Historiographer Royal, Jenkin Phillips (£200); Inspector of Plays, W. Chetwynd (£400), are "Pages of the Back Stairs," "Operator Teeth," "Ratkiller" (£48 3s. 4d); "Barber" (£170); "Moletaker," "Pinmaker," "Distiller of Milk-water," and other reverend functionaries too numerous to mention.

By 1779 the moletaker, the distiller of milk-water (had professional dairies been started by then?), and most of the other oddities have vanished. But the barber has become a "Principal Barber," with an "Assistant Hair-Dresser," and has moved up; and the literary group, with their titles and salaries unchanged, and their number increased by an "Embellisher of Letters to Foreign Princes," have slipped gently down to the end of the list. Was this George II's fault, one wonders, or was it Colley Cibber's? Or was it, perhaps, no more than the whimsicality of chance?

It has already been hinted that the post of Historiographer Royal, held at one time by Glorious John Dryden, was to come again into association with literature. The last Historiographer Royal of whom I can find any record is no less than—G. P. R. James, indefatigable novelist, zealous historian, author of the lives of various British sovereigns, editor of the "Letters of William the Third" (it was William the Fourth who appointed him)—and even poet, too. For did he not write a five-act drama, a fairy play, and a poem called "The Ruined City"?

EDMUND KEMPER BROADUS.

*Wood also declared (Athenae, II, 265) that Howell was "the first in England that bore that title."

Correspondence

STIRRING UP RACE HATRED.

TO THE EDITOR OF THE NATION:

SIR: To Senator B. R. Tillman few students of American politics would look for calm or reassuring words concerning the relation of whites and negroes. Yet, in a statement published in all the large South Carolina papers the other day, discussing the political condition of this State during the "reconstruction period," Senator Tillman is thus quoted:

Gov. Blease and Mr. Fortner are howling about the negroes having white teachers and the danger to our civilization from that source. I am inclined to believe the Southern people made a great mistake when they did not take charge of the negroes' education and put them all under white teachers instead of colored teachers.

Coming from such a source, this statement deserves careful consideration by the white constituents of Senator Tillman, to whom it is addressed.

To stir up race hatred in the effort to [illegible] office is a familiar practice with Gov. Blease and his friends. One of them, a State Senator running for Congressman, is accredited with these remarks by the correspondent of the Charleston *News and Courier:*

He promised if elected that he would throw every "nigger" mail carrier in the State out of his job and give it to some white man.

"If he stands the civil service examination, how are you going to cut him off?" a member of the audience wanted to know.

"I'll do it somehow," replied the speaker.

I have heard Gov. Blease make practically the same promise in his campaign for United States Senator, with the additional promise to turn out all the Republican postmasters and put "Bleaseites" in their places.

Much of this buncombe is promptly forgotten after election day, but the danger is that race antagonism, once stirred up, may result in concrete action disastrous in its consequences to both white and colored people. More than one lynching party, it is to be feared, has been roused to fury by the talk of candidates for office, and a lynching leaves its stain on the community years after the victim of the lynchers has been cut down and buried. Yet a whole citizenship is not to be judged by the rash language of political campaigners. The same county which has sent Blease's friend, Fortner, to the Legislature, has again and again in the past fifteen years given exhibition of the supremacy of the law over attempted violations of it. In the last attempt of this kind, when a respectable white married woman told a horrible story of assault upon her, and identified as the perpetrator a negro who was known to be in that neighborhood at the time, a lawless mob not only demanded of the Sheriff his prisoner, but used dynamite to blow down the gate to the county jail yard. Yet a few determined officials, properly armed, defied the mob and spirited the prisoner away. Later, trial of the case convinced a white jury that the woman was acting under hallucination and that no crime had been committed. Hence the negro was acquitted, and several white men are now under indictment for dynamiting. Color-blind justice is not unknown in South Carolina.

While men of the Blease party are pouring out their wrath upon inoffensive negro mail-carriers, a curious instance of business relationship between the two races exists in a cer-

tain town near Charleston. Here the leading dry goods and millinery store, situated on the main business thoroughfare, next door to the post office, and patronized by white ladies of the highest social standing, is owned and managed by a negro, who, of course, employs only negro clerks. To account for this condition would require the telling of a long story, but it is mainly attributable to business tact combined with lack of social ambition on the proprietor's part. Yet that town is one of the largest in the Congressional district of the State Senator quoted above. Will he try to put the dry goods merchant out of business?

ROBERT ADGER LAW.

Spartanburg, S. C., July 14.

THE COLOMBIAN TREATY.

TO THE EDITOR OF THE NATION:

SIR: Referring to the editorial, "Roosevelt and Wilson," in your issue of July 9, it seems to me that you, in common with most other writers on the subject of the proposed Colombian treaty, overlook what appears to me to be the most important factor in the entire question. Between December, 1860, and May, 1861, eleven of our Southern States seceded from the Union. The United States Government, under the Presidency of Abraham Lincoln, took up arms against the seceders, calling them "rebels," and a war lasting four years was the result. At the same time our Government used every effort in its power to prevent the Governments of European nations from acknowledging the independence of the so-called "Confederacy." Some forty years later, when the shoe was on the other foot and it suited the club-swinging disposition of another President to do so, we acted towards the secessionists, in another friendly republic, in exactly the manner which we had formerly objected to England, France, and Russia assuming towards *our* secessionists.

By so doing have we not reversed our policy, and prepared the way for Japan, for instance, to acknowledge the independence of the Philippines or Hawaii? To me, it seems perfectly plain that Mr. Wilson is endeavoring to steer our ship of state back to the course set for it in Lincoln's time and that Col. Roosevelt was the ignorant pilot who steered it off its course and into uncharted waters.

THE HONOR SYSTEM.

TO THE EDITOR OF THE NATION:

SIR: In his answer to Professor Sparrow, Professor Firkins has made a show of victory and would seem to have withdrawn from the debate under his own steam. And yet no one with a first-hand knowledge of the honor system will be misled by this subtle doctor. Following the line of his dialectic, one might discredit many things; for example, the sacrament of marriage and the scheme of salvation. Does not a woman pay too high for her happiness when to obtain it she barters her obedience for worldly goods, instead of seeking—to adapt a phrase of Professor Firkins—all the benefits of unharnessed spirituality? And should not priests out of harness exhort to righteousness though the heavens fall, instead of holding out a promise of future rewards? Yes, indeed, if to the happy couple and the devout Christian the Church is no better than a marketplace and its articles of faith and ritual but terms of a contract. But to them, we suspect, as to the advocates of the honor system, there has come some gleam of the spirit of the laws.

And it is the spirit of the honor system that Professor Firkins's ingenuity has been unable to evoke from the body of its practice. As the initiated know, that spirit is one of mutual trust and esteem—a corporate, community spirit which has nothing to do with bargaining between man and man; and the pledge is not a mere detail of college polity, but a formula of faith, a badge of distinction, a point on which centres the sentiment and loyalty of the students who sign it, and from which radiates an idealism that has given tone and distinction to the undergraduate life of Virginia and Princeton. Those who dislike surveillance during examinations Professor Firkins refers to "the police officer at the corner of the block," who has indeed become a very familiar figure in discussions of the honor system. But surely this is a melancholy analogue, if one hopes for a more comely ideal within college walls than can well obtain in the world at large.

At least where undergraduate responsibility reduces itself to the simple formula, "Support the team," do we not need a properly conceived and celebrated ideal of conduct? The honor system is defensible if it has done no more than to call order out of chaos.

PERSIAN INFLUENCE IN THE BIBLE.

TO THE EDITOR OF THE NATION:

SIR: The subject of Persian theology is mentioned in every theological seminary in the United States from Maine to Texas. That it is so often merely glanced at, with twisted vision, is probably due more to the alarm of conservatives than to any culpable carelessness. Yet it is a pity that such thoroughgoing institutions should fail utterly to see the most portentous facts in our Christian religious history—for some of the most radically "converted" of our young men have been *assisted* rather than hindered by looking at such crucial truths, having been actually tortured by the assertion that the Divine Power exercised a saving influence only upon a handful of people in a strip of land between the Jordan and the sea.

Surely, it can be said that the Persian intervention saved the Jewish nationality, with all that hung upon the restoration of the Jewish temple service. The Jews were Persian for well-nigh two centuries, while the larger mass of them remained in Persian Babylon. The epochs of Bible history are marked by the Persian reigns. Over a hundred words in the Hebrew Bible have been traced to a Persian origin, with that memorable word "Paradise" in the Greek New Testament recorded of our Lord at His latest moment. "Inspiration" is positively attributed to Cyrus in Chronicles and Ezra, while Avestic lore exerted enormous influence upon the exilic pre-Christian theology.

The very dualism seems reproduced in the New Testament expression where Satan, a pale shade of the Persian Angra Mainyu, is called the "God of this world." The theological seminaries pass lightly over the phenomenon of the Amshaspands (sic), leaving the impression that they were feathered cherubs rather than the sublimest creations of pious reason—as the attributes of God, only later personified. Avesta is historically the first document of personal religion "as to thought, word, and deed"; its Heaven is that. Surely it is a prime offence in gifted Americans to attempt to explain the Bible without the religion of the man who alone, under God, made the Bible possible.

L. H. MILLS,
Professor of Zend (Avesta) Philology.

Oxford, England, July 1.

THE EARLY WORKS OF LEONARDO.

TO THE EDITOR OF THE NATION:

SIR: A brief notice of Brown and Rankin's "A Short History of Italian Painting," in the *Nation* of July 2, suggests that the authors' views of Andrea and Nardo Cione (Orcagna and his less famous brother) and of Leonardo da Vinci's early works might have been modified by a fuller use of recent discoveries. As one of the authors of the book, I accept this criticism as just in regard to Andrea and Nardo Cione, but on the more important issue of the early works of Leonardo, the recognition of which often depends upon connoisseurship unsupported by external evidence, you will perhaps allow me to say that I have discussed the matter of Leonardo's conjectural early works with positive arguments from internal evidence in the columns of the *Nation* on several occasions, taking a position at the time which was rather heterodox—as in the denial to Verrocchio of any share in the actual execution of certain paintings disputed between him and his famous pupil.

It is now a little more orthodox to believe in an early and long unrecognized Leonardo and to disbelieve in Verrocchio as a painter: and, so far as I am concerned in the little handbook on Italian painting, I have tried to explain clearly and briefly for the public that the rehabilitation of Leonardo's youth as an artist has been due to the connoisseurship of men like Baron von Liphardt, Gcymüller, Bode, and others—as even Ruskin—of more faith perhaps than exact science; and to show how it was so by a positive analysis of the works in typical instances. I do not think that recent discoveries especially affect our opinions—or my opinions—one way or the other, although I admit a lack of acquaintance with one important new discovery, that of the "Benois Madonna" at St. Petersburg, conjecturally attributed to Leonardo and to the period of his well-known "Madonna" sketches, probably of about 1478-80.

So far as I can follow the recent development of Leonardo studies there are considerable contributions to the working out of his formal development in certain special fields, but as yet no systematic and complete analysis of his form as an organic whole, no adequate critical discussion of the artist in relation to his tradition and the modifications introduced by his genius. It is upon such a general analysis—begun by such studies as Müller-Walde's, under the handicap indeed of deficient critical judgment as to questions of authenticity—that the final determination of special problems in the internal evidence must be based. Needless to say such an analysis cannot be made by the ordinary art historian or by any academic specialist's method of morphological rule of thumb. It awaits the advent of the critic who can read the formal language of art in its universal and

permanent characters, and who can thus complete the work begun by the pioneer analysis, in a somewhat, yet not entirely, external way, by the greatest of modern connoisseurs, W. Bode, and indirectly aided by the rival and complementary effort of B. Berenson, both men of art faith as well as art science.

WILLIAM RANKIN.

Roselle Park, N. J., July 6.

ORIGIN OF THE CLOSED COUPLET IN ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: Professor Tatlock's article in the *Nation* of April 9, entitled "Origin of the Closed Couplet in English," properly emphasizes the influence of the Ovidian couplet, or elegiac distich. The question, however, as to what English poet first extensively handled the new tool or form is more uncertain. Joseph Hall (born 1574), later bishop, published in 1597 six books of satires, *Virgidemiarum*, so-called. In the prologue he wrote,

> I first adventure, follow me who list,
> And be the second English satirist.

This couplet he followed with many others, all in the "chicken-coop" style of the later classical couplet and in the satirical tone. The occasional triplet later found in Dryden appears in Hall, as well as the usual verse-pauses and the antitheses and balance. Of his work in general, except for the lack of the usual sharp bite, a few couplets from the first satire of the first book give fair sample:

> Nor ladies wanton love, nor wand'ring knight,
> Legend I out in rhymes all richly dight;
> Nor fright the reader with the Pagan vaunt
> Of mighty Mahound, and great Termagaunt,
> Nor lift I sonnet of my mistress' face,
> To paint some Blowesse with a borrowed grace.

Those verses give little idea of the acidity of Hall's satire or of the range of object* satirized. They include, nevertheless, a reference to Marlowe (killed in 1593). In 1596 Marlowe's translation into closed couplets of Ovid's elegiac "Amores" was published. The strong evidence of comparative metrical facility places the translation largely before the "Tamburlaine" (the date for which is now considered 1587-8)—that is, during the time that Marlowe was at Cambridge. He received there his B.A. in 1583-4 and his M.A. in 1587. Briefly, from this collocation of dates, it would seem that the couplet closed from the influence of Ovid came earlier than Professor Tatlock suggested.

Furthermore, the full-fledged classical satire in closed couplets, original in material, appeared from Hall in 1597, and was apparently written somewhat earlier, while the author was at Cambridge. He went to Cambridge in 1589 and became a fellow in 1595. His claim as the first English satirist can hardly be allowed, for authors who followed even classical models had preceded him. But the combination of purpose, substance, and versification was apparently original, and the success warranted the praise of Pope.

To Marlowe and to Hall, therefore, as well as to Heywood and Drayton, we should look for the first good examples in English of sustained classical heroic couplet as distinguished from the romantic heroic couplet.

Literature

THE ART OF WARFARE.

The Principles of War, Historically Illustrated. By Major-Gen. E. A. Altham, C.B., C.M.G. Volume I, with map in a separate volume. New York: The Macmillan Co. $3.50 net.

Whenever a German officer writes a book of commanding importance on war, we at once recognize that he writes, as it were, from a business point of view. That is, the Germans expect to fight the French, have to keep an eye on Russia, are particularly interested in the future of Austria, and are a bit nervous over the Balkans. But when we cross the Channel, we mark a difference. Broadly speaking, English military books are, or have been, either historical, recording the past glories of British arms, or academic, of general application, or else feeble reflections of Continental theories and doctrines. Gen. Altham's book falls under none of these heads; it is frankly one of preparation for war. No enemy is mentioned, no indication given of an approaching or even of a possible conflict, but none the less it is a fair deduction from its atmosphere that its author is skeptical of a future of unclouded peace.

He has used as headings of his most important chapters certain extracts from the British Field Service Regulations, and then drives home the principles therein stated or implied, by a discussion based chiefly on the important wars of the last half century or so; wherever possible, he closes his discussion by an analysis of the latest of these, the Russo-Japanese. Indeed, his admiration of the daring skill of the Japanese seems to know no bounds. This appeal to history, however professional, is conditioned by the author's purpose of preparing his brother officers for future wars, a purpose recognized by Gen. Smith-Dorrien in the somewhat inadequate introduction he has furnished the book. The author's point of view has an interest for us, in that, other things being equal, England's military problems are our problems here in the United States, and because just as England has in the past somehow or other muddled her way through, so have we. But here similarity stops: England's days of muddling are probably over, ours certainly are not. For England learned a sharp, if not a humiliating, lesson in the Boer War, and has since so well set her military house in order as to call forth from the French Staff the declaration that the British army is to-day one of the best in the world.

This improvement is reflected in the tone of Gen. Altham's book; it is as though an atmosphere of quiet confidence prevailed, an assurance that whatsoever might be the record of the past, the British army hereafter could be counted on to do its duty in conformity with the principles of the art. And as related to this aspect of the case, we may note the freshness and earnestness of the author's style, qualities somewhat unusual in a military textbook.

Gen. Altham devotes his first chapter to the Factors of Success in War. This is declared, and correctly enough, to depend more on moral than on physical qualities. Here is food for reflection in our own situation. Of moral qualities we assuredly have our share; whether we shall continue to have them, does not immediately concern us. But moral qualities alone may not suffice; modern wars are short, and we may not be allowed to show of what really good stuff we are made. To put the matter in another way, our possible adversary—we have absolutely none in mind—may be equally good under this head, but better prepared and better led, and it should not be forgotten by us that it takes two to keep the peace as well as two to fight. Does this mean for us an enormous army and navy, a swollen military budget? No; but it does mean that certain possibilities should never be lost from view by our responsible statesmen, that our national existence may not depend wholly on mere materialism or pure altruism, on huge crops of corn or of cotton, or on universal education. It does mean some idea, nation-wide, of discipline, some notion of self-sacrifice. To show how valuable, purely as by-products, the development of these qualities would prove to our undisciplined, turbulent nation is foreign to our present purpose.

The next chapter, The Characteristics of Fighting Troops, strangely enough, is given over almost entirely to cavalry and to "other mounted troops," by which are meant in this text mounted infantry and cyclists. This odd limitation is, of course, later compensated by a full discussion of the other arms, including a new one, the Royal Flying Corps. There is a chapter on machine guns and one on engineers, chiefly Royal; the remainder of the book treats of communications, intercommunication and orders, movements by land and sea, billets and bivouacs. The author touches briefly upon certain mechanical aids that will surely have an influence on future conflicts, such as wireless telegraphy, motor transports, and aviation, all of which are awaiting the coördinating experience of actual conflict, and has but little to say of heavy field artillery, the necessity of which in modern armies is one of the striking deductions of the Balkan War. What he says, however, is to the point.

Naturally, the professional reader will turn with the greatest interest to the chapters dealing with the three great arms. We may get on without aircraft, motor transports, and the like, but if we are to fight battles we must have infantry, artillery, and cavalry. In his treatment of these subjects, the author is sound. So far as cavalry is concerned, he contents himself, to be sure, with quotations rather than with the expressions of any original views on the mooted question of type. He leans, however, to the view prevailing in this country, and his statement of facts in respect of the achievement of this arm in the Civil War justifies the opinion that we must seek in that war

tbe first examples of its proper use in modern times. However this may be, and bearing in mind the remark attributed to Von Moltke, that our Civil War was nothing but a contest between two armed mobs, it is not disagreeable to us to read that the Prussians in 1866 might have avoided certain errors in the employment of their cavalry and artillery "had the experiences of the Civil War in America been more carefully studied" (p. 121), and later, more strongly yet (p. 124), "if the teaching of the American war was ignored and perhaps unknown to tbe Prussian General Staff, the lesson of 1866, etc."

The correct employment of artillery in relation to its sister arm of the infantry is so well put that we cannot forbear to quote the passage:

> What the infantry soldier needs is accurate artillery fire to keep down the heads of the hostile infantry until the trenches can be reached with the bayonet. The proximity or otherwise of his own guns is immaterial to the attacking foot soldier, provided their fire is accurate and maintained up to the last moment before the assault. It is no encouragement to the infantry soldier to see his own guns silenced alongside him and their personnel destroyed. What, therefore, is required of the artillery commander is not to accompany the infantry with his guns, but with the fire of his guns.

To Infantry, the author devotes over one hundred pages, in the course of which he traces the evolution of methods of combat from Napoleon's campaigns through the Russo-Japanese War. Of our own war, he asserts "that a close study of the prolonged struggle . . . will prove somewhat of a disappointment to the seeker after novelties in infantry tactics." The answer to this remark is, of course, obvious. He admits Henderson's statement that "the germ of the great extension of the modern infantry fights" may be found in our great war, but adds that it was "not more than a germ," upon which a good deal might be said. But his main argument is drawn from the experiences of 1870-71 and of 1904-5, and he concludes that "the long duration of modern battles, the increasing frequency of night operations, involving continuous spells of night and day marching and fighting and the increasing importance of mobility in strategical and tactical combinations, have all enhanced the necessity for the thorough training of the infantry soldier 'to fit him mentally and physically to do his duty in war.'"

We must contest the statement (p. 129) that "the South African campaign was the first test of warfare under the new conditions of smokeless powder and magazine rifles." At Santiago both our infantry and that of the Spaniards were armed with a magazine rifle using smokeless powder. The expression "staffing" (p. 238) for staff work is wholly new to us. Stonewall Jackson appears on page 7 as J. Jackson (which earns him two separate entries in the index); Lee as Robert Lee, and Stuart as J. B. Stuart, and so in the index. We cannot account for the statement that it was the Persian light horse which "inflicted disaster on the Roman legions at Cannæ." On map 4 (Sha-Ho) the second division, Oku's army, should be the third. Trantenau is given in the index as Frantenau, and does not reappear in its proper place. The index is fair, and the maps are collected in a separate volume. The text is well printed and presents a handsome appearance in its khaki covers and blood-red edges. *Absit omen!*

CURRENT FICTION.

The Victim. By Thomas Dixon. New York: D. Appleton & Co.

"A romance of the real Jefferson Davis" this book calls itself, and in a prefatory note the author states, without qualification, that in its pages he has drawn the real character of the President of the Confederacy, "unobscured by passion or prejudice." This is a fine show of impartiality, but the result is a picture of a human being who is too nearly perfect for acceptance by any one not a blind worshipper of him. If Davis made any mistakes, Mr. Dixon never heard of them—with one exception: "On February 22, 1862, Jefferson Davis committed the one irretrievable mistake of his Administration. He consented to his inauguration as permanent President of the Confederacy under the strict forms of constitutional law. . . . A military dictator clothed with autocratic power could have subdued the discordant elements and marshalled the resources of the country to meet the crisis." But usually his hero is everything a hero should be, except omnipotent. Lee is altogether secondary. One finds at the last, somewhat to one's astonishment, that with President Davis in the chair the Confederacy could fall. But not everybody in high place was perfect. Gen. Joseph E. Johnston is termed a "sulking old man" and "the great retreater." Beauregard is "the little fiery, impulsive, boastful South Carolinian." For the rest, the book is much like its predecessors, having less venom, however, owing to the absence of the carpetbagger and the free and enfranchised negro. Barring its partisanship, it presents a vivid and truthful picture of war days in the South, particularly at Richmond.

Gay Morning. By J. E. Buckrose. New York: George H. Doran Co.

Readers who recall "Down Our Street" and "A Bachelor's Comedy," and who enjoy that sort of mildly humorous idyl, will find here something of the same kind, but not so good. Mrs. Buckrose, who in the earlier stories seemed to have caught and conveyed certain fresh types of village character, here too obviously appears in the rôle of determined entertainer. "Come," she appears to be saying, "I am now about to be amusing again." Bassett *père* is head of a small egg-importing business, from which he returns every night, tired but complacent, to his suburban villa, his Ma Bassett, and his Emma. Emma is engaged to a worthy young man who is "in with" Mr. Bassett. Then comes the legacy of a fortune from a distant relative. The villa is left for an estate; Bassett retires to be a country gentleman; there is actually something of a rise in the social scale. A Sir Matthew falls in love with Emma. Her betrothed is entangled by a designing sibyl, a sort of Blanche Amory. Neither of the engaged pair has ever really cared for the other in the way of marriage, but both consider themselves held to the arrangement by "honor." Of course, Emma loves Sir Matthew. The question is simply how much manœuvring and misunderstanding shall take place before they come to terms. Meanwhile, old Bassett, missing the activities of the egg business, has turned his idle hands to speculation, while Ma Bassett, in the physical inertia exacted of wealth, has grown fat and unhappy. Bassett throws away the fortune, and we leave him buckling contentedly to eggs once more, with Ma Bassett waiting and working for him in the recovered villa, and Emma comfortably bound to Sir Matthew. If the whole thing were at once more spontaneous and more restrained, it would be delightful.

Hunt the Slipper. By Oliver Madox Hueffer. New York: John Lane Co.

Some of the success of Mr. Hueffer's novel is due to the unusual method he has adopted in the telling of his story. The book is divided into a series of "narratives," each contributed by one of the principal characters, and thus we get the events of the story from different angles. The captious critic might declare that this was rather a lazy device for eluding the problems of characterization, but Mr. Hueffer has provided us with a good deal of amusement, and we are in no mood to be captious. The story concerns a dear old English gentleman and a suddenly discovered granddaughter, and the hunting of the slipper is the search for the granddaughter in the United States of America. The plot is flimsy, but is ingeniously worked out. Mr. Hueffer obviously draws largely on his own experiences in describing scenes and adventures in New York, and not the least amusing portions of the narrative are his sly digs at various foibles in the American character which often strike our English visitors. One of his characters has been so unfortunate as to get into jail on a charge of murder, and it is, of course, necessary to get him out. Two influential friends, we read, "had decided between them that it would be better not to go into the question whether he was guilty or innocent, because, if he was innocent, he would probably get rather a heavier sentence than if he wasn't. So they had merely inquired what were the prevalent rates for aqultals (*sic*), with or without a stain on your character; they were rather high, because of the police scandal and the coming Presidential election."

Curing Christopher. By Mrs. Horace Tremlett. New York: John Lane Co.

Here is a moral story about a young man called Christopher, who, disregarding the accumulated wisdom of the ages, played with fire and burnt his fingers. The lady in the case was Lebah, a young person of easy manners, but, we are led to suppose, impeccable morals. Now, Christopher had everything that ought to make a good young man happy: a position in the city, a home in a London suburb, a doting wife—one of those sweet little women who in later life, one feels sure, will develop a tendency towards *embonpoint*—and at least two olive branches. Yet in spite of all these things, while his wife and family were recuperating from whooping-cough by the sea, Christopher must go and mix himself up in a flirtation with the engaging Lebah. How long the affair would have dragged on nobody can tell, but one day the person whom Lebah desired to marry, a gentleman with a "sardonic, world-worn look," took Christopher and threw him out of Lebah's flat, subsequently adding insult to an injury inflicted on his head by making him drunk and then directing his taxi to an address at the other end of London. Of course, Christopher had to think up some explanation when he finally reached home, and the simplest thing seemed to be to have lost his memory. Naturally, he was regarded by his family and his family doctor as a dangerous lunatic, and it was all very unpleasant until the time came for a happy ending. If only some one had had the inspiration to slap Christopher on the wrist early in the first chapter, this story would probably never have been written.

THE NEAR EAST.

The Balkans: A Laboratory of History. By William M. Sloane. New York: Eaton & Mains. $1.50 net.

Professor Sloane has constructed this book mainly upon the foundation of a series of articles written for periodicals. Revision has not introduced sufficient unity and proportion to make of the whole an enlightening interpretation of the latest acute phase of the question of the Near East. Much information is given, however, regarding the history and character of the various peoples now in the Balkan peninsula. The second half of the book follows the external events of the last six years, gives special attention to the formation of the Balkan alliance, and in the last two chapters, which are distinctly the best in the book, reviews the action of the six great European Powers and surveys the present situation. Professor Sloane's three recent visits to the Balkan peninsula enabled him to make personal observations and to acquire special knowledge of conditions from westerners of long residence.

Unfortunately, the descriptions are disfigured by a number of positive errors which might have been avoided by more careful reference to easily accessible authorities. A few of these may be noticed. Vestiges of the Roman Senate, instead of being "early swept away" (p. 6), persisted at Constantinople down to the catastrophe of 1453. The original Bulgarians are supposed to have entered the Balkans, not in 517 (p. 65), but in 687. Tamerlane did not drive Bayezid I into exile (p. 9), but took him prisoner. Venice could not have lost Rhodes (p. 16), never having owned that valuable island. Stephen Tzernovitch did not found Cettinje, since he died about twenty years earlier than 1485, while the great Scanderbeg was not his grandson, but his distant cousin and a contemporary (p. 91). The statement that Great Britain alone of the Great Powers made a direct gain of territory by the Treaty of Berlin (p. 211) is triply incorrect. Great Britain's acquisition of Cyprus was by a special previous convention with Turkey; it was indirect, since the island is still nominally Turkish; and the Treaty gave directly to Russia lands both in Europe and in Asia.

Nor is Professor Sloane's observation of contemporary events more accurate. The Turks have desired to raise their customs dues from 11 to 14 or 15 per cent. (p. 31), but have not as yet been permitted to do so. It would be strange if their "bitterest foes" should admit that the Greeks constitute six millions of the inhabitants of the Balkan peninsula (p. 199), when impartial authorities assign them not more than four and a half millions. It is no longer true that "the principal industry of Servia is the raising of swine" (p. 201). In the brief account given of the Turkish revolution (p. 153), the events of 1908 and 1909 are confused together. The Albanian revolt of 1911 was caused, not by any action of the Young Turks in regard to Christians (p. 159), but by their attempt to "Turkify" the Moslem Albanians. The party of Union and Progress did not return to power in the summer of 1912 (p. 162). The citations in the appendix show that the Bulgarian-Servian treaty preceded the Greek-Servian treaty by eleven weeks, but this has not been corrected in the text (p. 201). Bulgaria and Servia agreed only upon their common boundary, and not upon the future boundaries of Greece and Rumania, as shown in the map facing page 198. Professor Sloane could hardly have been expected to explain the still unknown circumstances which led up to the Balkan-Bulgarian war, but he need not have failed to notice that it was Bulgaria's insistence upon the terms of the Bulgarian-Servian treaty, and not a desire on her part to break it, which aligned Servia against her (p. 175). The Powers had set apart Albania out of the territory which Servia had hoped to have; whereas Bulgaria had gained more in the direction of Constantinople than had been expected. Not Bulgaria, but Servia, therefore, desired to break the treaty.

Exception must be taken to yet one more statement, not this time so much of fact as of opinion. Professor Sloane says: "It is my firm conviction that national assertiveness, that international differences, even that traditions, are almost entirely artificial in the Balkans and the work of paid agents faithfully serving dynasties or governments whose interest it is to divide and rule." It is generally believed that this was true of a part of the population of Macedonia under the Hamidian régime, but that such conditions extended over the whole Balkan peninsula is wholly out of harmony with the evidence. When have men died by thousands for artificial traditions, or for a mere "so-called patriotism"? Are not Albanians as distinct a nationality as the Scotch when in a similar stage of clan-life? Are not Bulgarians and Greeks as different as Bohemians and Italians, or Bulgarians and Servians as separate as Swedes and Norwegians? If genuine nationality be denied the Balkan peoples, it would be hard to say where it may be found.

THE PHILOSOPHY OF COMMON-SENSE.

Earth Hunger and Other Essays. By William Graham Sumner. New Haven: Yale University Press. $2.25 net.

The most illuminating chapter in this work is Professor Sumner's autobiographical sketch. His father, he tells us, belonged to the class of men of whom Caleb Garth in "Middlemarch" is the type. In 1841 he went prospecting through Pennsylvania, Ohio, and New York, and came back convinced that, if a man would live as poorly and educate his children as badly in the East as he would have to in the West, he could do as well in the East. This hard-headedness, this cold, calculated determination not to run after phantasms, he entailed on the author of these essays, whose every utterance is that of an austere man, who knows, or is convinced that he knows, what is attainable, and who is not going to waste time and energy chasing the unattainable.

What he desires above all things is reality. We do not demand the truth, he declares, because we do not know where to get it. We do not want rationalism, because that is only a philosophy, and it has limitations like any other philosophy. We do not demand what is natural or realistic in the philosophical sense, because that would imply a selection of things, in operation all the time, before the things were offered to us. But we have no patience with invented and imaginary forms. There you have William Graham Sumner. He tolerates nothing that has been prepared merely to serve a purpose, no matter how edifying the thing or patriotic the purpose.

A collection of essays from such an intellect is like a strong wind—though it bites, it exhilarates. Not the slightest regard is paid to the sensibilities of the reader. If his mental processes happen to resemble Professor Sumner's, well and good for him; if they do not, he had better read this book with his intellectual top-coat on. The reviewer ventures to hope that it will be widely read, for whether he wins our

assent or our dissent, Sumner is an awakener.

There is a logical order in the arrangement of this volume. The first essay is on "The Teacher's Unconscious Success." Knowledge is power, and it is nothing more. The vital question is, What will the possessor of knowledge do with it? With it he may become more useful or more harmful. Half-culture is one of the great curses of our time. It makes men volatile and opinionated. It makes them easy victims of fads and fallacies, and it makes them stubborn in adhering to whims. It takes character to make character, and here is where the personality of the teacher has a transcendent function. The teacher's part is to foster habits that will lead to the right use of knowledge.

Hence, there is fitness in finding the second essay in this collection devoted to "The Scientific Attitude of Mind." To some it may seem a far cry from the witch-hanger of the seventeenth century to the political grafter and legislative log-roller of the twentieth. But Professor Sumner places them in the same category. He urges us not to make the mistake of supposing that all follies and manias, like those which made Salem distinctive, are permanently overcome. The roots of popular error are ineradicable; they lie at the bottom of human nature; they can produce new growth and new fruits at any time. In this twentieth century the probable line on which the deductions will be drawn is in politics and civil institutions. The modern world has rejected religious dogmatism, but has taken up a great mass of political dogmatism, and this dogmatism is intertwined with the interests of groups of men. If you accept the political dogmas of the eighteenth century and begin to build deductions on them, you will reach a construction as absurd and false as that of witchcraft. The only security is the constant practice of critical thinking.

But critical thinking is as necessary in religion as in politics. No religion ever offers itself, we are told, except as a complete and final answer to the problems of life. A religion cannot say: "I am the best solution yet found, but I may be superseded to-morrow by new discoveries." Yet that is exactly what every science must say. We have Galton's word that "every religious instructor, in every creed, is one who makes it his profession to saturate his pupils with prejudice." Professor Sumner subscribes to this dictum, and the fact that he was himself in orders, and for a period an actual incumbent, makes his agreement all the more interesting. Indeed, it imparts astringency to his assertion that "there is another form of phantasm which is still in fashion and does great harm—that is, faith in ideals." Every ideal, he contends, is a phantasm; it is giving up one's hold on reality and taking flight into the realm of fiction.

This leaves religion in something of a plight. Are its credentials to be based upon a knowledge of reality? If so, who shall tell us what is reality? In a matter admittedly transcending the senses, on whose critical thinking shall we rely? Professor Sumner, in the essay before us, mentions religion by way of illustration, but while he has perhaps cleared our thought on the subject which he has immediately in hand, he has created confusion on another subject, and one which the world has hitherto agreed to consider the most vital that can employ the human faculties. Professor Sumner may have been not without a consciousness of the paradox in which he has involved us, for he confesses later that criticism is pessimistic. Yet he hastens to qualify this assertion: pessimism includes caution, doubt, prudence, and care; optimism means gush, shouting, boasting, and rashness.

In "Earth Hunger, or the Philosophy of Land-Grabbing," and in the papers which follow, we find a rigid and invigorating application of the critical method disclosed in the first two essays of this volume. The dominant note is economic. The industrial revolution of recent centuries has brought in its train revolutions in philosophy, ethics, religion, politics, and all other relations of human society; for whenever you touch economic and industrial causes, you touch those which underlie all the others. The philosophers and all the resolution-makers of every grade come running together and shouting pæans of victory to the rising power and the coming glory; and, therefore, they assert that they have made it all. It is totally false. They are themselves but the product of the forces, and all their philosophies and resolutions are as idle as the waving of banners in the breezes. Democracy itself, the pet superstition of the age, is only a phase of the all-compelling movement. If you have abundance of land and few men to share it, the men will all be equal. Each landholder will be his own tenant and his own laborer. Social classes disappear. Wages are high. The mass of men, apart from laziness, folly, and vice, are well off. No philosophy of politics or ethics makes them prosperous. Their prosperity makes their political philosophy and all their other creeds. It also makes all their vices and imposes on them a set of fallacies produced out of itself.

In the essay on Earth Hunger we have a brilliant critique of the foreign and colonial policies of the United States. A sharp distinction is drawn between economic earth hunger and political earth hunger, between the extension of industry and commerce on the one side and political aggrandizement on the other. The economic earth hunger of our own nation is satisfied for the present, and is provided for far into the future. But we may turn around in our folly, if we choose, and ask, "What is it all worth?" We may run in chase of the old baubles of glory and vanity and passion. If we do, we shall only add another to the long list of cases in which mankind has sacrificed the greatest blessings in pursuit of the greatest follies.

The relentless piling up of facts and the inexorable logic that characterize "Earth Hunger" are as plainly evident in "What Is Civil Liberty?" The voice which we hear is of one crying in the wilderness. It is declared that men have failed of freedom, not because kings, nobles, or priests enslaved them, but because liberty was too high and great for them. They would not rise to it; they would submit to any servitude rather; therefore they get servitude. The strain of liberty is in the demand which it makes on the whole mass of the people for perpetual activity of reason and conscience to reëxamine rights and duties, and to readjust their equilibrium. Civil liberty is not a scientific fact. It is not in the order of nature. It is not positive and objective; therefore, it is not capable of constant and easy verification. It is historical and institutional. That means that it is in the flux and change of civilization.

And so throughout the whole of this volume of essays. Let the subject be what it may—liberty, freedom, education, family life, democracy, natural rights, monopoly, capital, politics, economics—we are forever confronted with the philosophy of commonsense, conveyed to us through the medium of a rugged, impatient, and domineering personality.

THE REAL DISPUTE IN IRELAND.

The Happy Irish. By Harold Begbie. New York: George H. Doran Co. $1.25 net.

This book (published in England under a better title, "The Lady Next Door") is a record of observations relating to the Home Rule question, made on a trip through Ireland. Mr. Begbie is in the main impartial, his observation is discriminating and sympathetic, and his conclusions are really enlightening.

"An honest man," he tells us in the preface, "going to Ireland with no prejudgments in his mind, might easily return from his study with inspiration, arguments, citations, and economical data for two distinct books. One book would persuade the world to call for Home Rule. The other book would convince the world to maintain the Union. . . . And neither . . . would make use of arguments employed by the rival protagonists of Irish politics." The religious question, he thinks, has no real bearing on the matter of Home Rule. He was unable to discover a case of Catholic intolerance; and the one alleged instance which was brought to his attention after he went back to England turned out to be strong evidence, not only of tolerance, but of forbearance. The only intolerance or bigotry which he could find in Ireland was in the Protestant part of Ulster. The uproar in Ulster on this subject, he believes, is largely buncombe. On this point Mr. Begbie's testimony is weighty, for he notoriously represents an extreme type of evangelical Protestantism.

The really valid arguments both for and against Home Rule are social and economic.

The greater part of Ireland is agricultural and conservative. She does not want to be "dragged at the heels of a rich, powerful, and sorely troubled nation committed to industrialism." She does not need and cannot afford the costly social legislation which is now being forced upon her. She wants to keep house for herself, instead of having her house kept for her "by the wealthiest and most extravagant housekeeper in the whole community of nations." In the first part of his book, which is by far the longer, Mr. Begbie presents this argument in a variety of forms and with many illustrations, quoting all sorts of people—a Catholic bishop, a Quaker, a lawyer, a woman shopkeeper, etc. The bishop believes that some of the finest traits of Irish character are threatened by the Union. "You paralyze our self-reliance," he says. "We tend under the Union to become the parasites of your wealth, the hangers-on of your imperial greatness."

On the other hand, Belfast, in its social and industrial conditions, belongs with industrial England. The second part of the book contrasts Belfast with rural Ireland, much to the disadvantage of Belfast. Readers of "Twice-Born Men" will recall that Mr. Begbie knows something about slums; and he declares that the horror of the slums of Belfast can scarcely be matched in the worst parts of London. Statistics of infant mortality are appalling. He describes intolerable labor conditions in the factories: "I would rather see my own children dead," he says, "than working in the very best of the Belfast linen mills." In the sweated part of the industry matters are, if possible, worse. Wages for fine sewing vary from one-third of a penny to a penny per hour. In the light of these circumstances, Mr. Begbie concludes, "If I were an Irishman and lived in Belfast, I should be a Unionist, . . . in order to force for Belfast, by the strong hand of democratic England, taxation of the rich and social reformation of the poor." Reform for Belfast would not come, he thinks, from a parliament at Dublin, because this would be overwhelmingly conservative. It is an odd anomaly, he remarks by the way, to see the Irish Conservative working in double harness with Mr. Lloyd George, and the Irish Socialist in similar alliance with English Conservatism.

From the Irish point of view, there are thus sound reasons for both answers to the Home Rule question. But since the industrial population of Ireland is a small minority, Mr. Begbie inclines to the belief that "it is wise for Ireland to pursue her own road." She may ultimately be drawn into the vortex of industrialism; but she ought to have a chance to keep out by her own devices.

In style the book is popular and a trifle slipshod; but it contains many attractive sketches of rural Irish life and some grim ones of the Belfast factories and slums. It is illustrated with a number of reproductions from photographs.

Notes

Henry Holt & Company announce for publication on August 22 "Greylake of Mallerby," by W. L. Cribb, and "Love's Legend," by H. Fielding-Hall. The same company will publish in October a translation of Oscar Schmitz's "The Land Without Music."

Among the autumn publications of the Century Company are announced: "Canadian Nights," by Albert Hickman; "Living Up to Letchwood," by Julian Street; "The Rise of the Working Class," by Algernon Sidney Crapsey. The following juvenile books are also announced: "Phyllis," by Maria Thompson Daviess; "Baby Bears," by Grace Dayton; "The Book of Friendly Giants," by Eunice Fuller; "More than Conquerors," by Ariadne Gilbert; "The Bubble Ballads," by Melville Charter; "The Runaway," by Allen French; "The Lucky Stone," by Abbie Farwell Brown.

To the Oxford Editions of Standard Authors has been added Mrs. Dinah Maria Craik's "John Halifax, Gentleman" (Oxford University Press; 1s. 6d. net). It would be difficult to hazard a guess how many editions of this novel have been published since its original appearance in 1857, or how many thousands of readers have felt the charm of the lovable personality of John Halifax. We suspect that the rising generation of readers is not as familiar with this hero of a day when "the grand old name of gentleman" might be borne without abuse as it might and ought to be, and we trust that this inexpensive edition, attractively illustrated by Warwick Goble, may induce it to make good the deficiency.

A new and handy edition, one that will slip easily into the pocket, of Palgrave's "Golden Treasury," is published by the Oxford University Press. The present edition is supplemented by notes by C. B. Wheeler which may be useful by reason of the biographical details that they supply, but which appear to us to be too extensive and to assume too abysmal an ignorance of the English language on the part of the user of the anthology. In this edition, also, a well chosen selection of additional poems representing the latter half of the nineteenth century is given. Concerning the additions the editor explains with pleasing filial piety: "None but Mr. Palgrave could have grouped the newer poems in 'the most poetically effective order,' as he conceived it, so they have been added in the chronological order of their authors." Commendation is superfluous in the case of a critical work which, on its publication, in 1861, immediately won for the author a distinctive place in literary history, and which has been surpassed in merit by none of the many excellent anthologies since published, of which it was itself the prototype.

In "Telepathy of the Celestial World" (Fleming H. Revell; $2 net) the author, Horace C. Stanton, accepts the telepathic hypothesis as an established datum, and upon it bases an imaginative description of the scope of telepathic communication in the world we enter after death; even going so far as to hold that the method of communication between the three persons of the Godhead must be telepathic, and devoting a whole chapter to the elucidation of this view.

"A reverend amateur in politics," the late Canon Maccoll was once somewhat irreverently called. How much of truth there was in the characterization may be judged by a reading of the "Memoirs and Correspondence" of Malcolm Maccoll, edited by George W. E. Russell (Dutton; $3.50 net). Here is set down with exemplary fidelity, and without bias, the chief events in the Canon's life and his main titles to remembrance. He was not a man of first-class powers, but had a great gift for winning the confidence of first-class men and rendering himself serviceable to them. That a poor Scotch clergyman should have been a correspondent at the same time of Gladstone and Lord Salisbury was a remarkable proof of Maccoll's versatility and, it may be added, usefulness. His political judgment was ordinarily sagacious, and he was an embattled pamphleteer. Probably nobody in England wrote more copiously than he did on all phases of the Eastern Question. He was of such vitality and drive that, though, after marrying at seventy-three, he died at seventy-five, it seemed natural for Mr. Bryce and others, in writing letters of condolence to his widow, to speak of him as one for whom they had looked forward to "a long and useful life."

One of a new series of Manuals for Christian Thinkers (London: Charles H. Kelly; 1 shilling net) is contributed by Saint Nihal Singh under the title "Progressive British India." In somewhat more than a hundred pages it recapitulates the intellectual advancement, economic progress, religious and social development, and political growth of India during the last century in chapters made up out of articles published in the London *Nation* and various reviews. The author is a thoughtful and conservative thinker, and his little book gives an unbiassed view of the good and evil wrought by British dominion in his native land. Statistics as to schooling and economic progress are furnished in sufficient quantity and a list of "books suggested for reference" will be found useful by those wishing to go into details.

By the diligence of the editors of the *Homiletic Review*, Messrs. Robert Scott and G. W. Gilmore, there has been made accessible to readers who are interested in practical symbolics a volume of about six hundred pages, entitled "The Church, the People, and the Age" (Funk & Wagnalls; $3.50), in which over a hundred professional men, American and European, seek to answer, in their several ways, the following questions: "Why is it that there are so many persons who are indifferent to the claims of the Church? Do you think it wise to ask the great majority of people to subscribe to statements that deal with debated and controversial questions? What should be the basis and direction for a fundamental theology of the Church?" The answers of these men, many of them men of distinction, afford not only interesting, but at times entertaining, reading. It should be added that Professor Beckwith contributes an analysis and summary of the various answers, and that the photographs of the participants in the symposium give a touch of humanity to the theological discussions.

The metrical romance on Richard Cœur-de-Lion, which was composed somewhere near

the end of the thirteenth century, has not been reprinted since the publication of Weber's "Metrical Romances" (1810). We have it now in a new edition, by Karl Brunner, under the title of "Der mittelenglische Versroman über Richard Löwenherz" (Wiener Beiträge zur Englischen Philologie, XLII; Leipzig: Wilhelm Braumüller). Unlike Weber, the present editor has collated all the seven extant manuscripts of the poem (to say nothing of the early prints of Wynkyn de Worde), and he gives a full record of the variant readings at the bottom of the page. From an examination of the words that occur in rhyme, Dr. Brunner concludes that the poem is written in a southeastern dialect, with an admixture, however, of northern forms. How such a contamination of dialects came about he does not try to explain. His introduction contains, besides a description of the manuscripts and early prints, a discussion of the metre and a study which attempts to determine what is historical and what is legendary in the work. He gives also at the end a rather slender sheaf of notes on the text, a glossary of words in the same which are supposed not to be recorded in Stratmann-Bradley's "Middle English Dictionary," a list of proper names, and a German translation of the romance. It would have been more to the purpose if the editor had applied to the preparation of a fuller glossary the energy which he has expended on this translation. The fact that a number of the words listed in his glossary of only four columns are actually found in Stratmann-Bradley does not inspire confidence in his accuracy. There are other things that also excite suspicion. For instance, "lewede men" in Middle English does not necessarily mean "laymen"; it may mean, of course, merely "ignorant men." The form "ryt" (l. 3151) is not a weak preterite (!) of "ride," but the regular present indicative (3 pers. sing.). These are merely specimens.

The romance of Richard Cœur-de-Lion was translated from a French original, which, however, is lost. The English poem itself is of the rudest character. Nevertheless, its direct narrative and touches of rough humor make it rather easy reading. Well known is the passage which describes how Richard's mother, being of demonic origin, could not stand the presence of the holy sacrament and so flew off incontinently through the roof of the church. Amusing, too, is the description of the relish with which the sick monarch ate a boiled Saracen, in lieu of the pork (unobtainable in Palestine) that he had first called for. The whole tone of the poem reminds the present writer of the ballads concerning the Shah of Persia which he heard several years ago from ballad-singers in the streets of London on the occasion of the visit of that potentate to England. The main interest of the work lies in the popular traditions which it preserves in regard to a great national hero—traditions which had sprung up within less than a hundred years of his death. It is hard to believe, however, that so incondite a production represents the culture of any but the rudest classes in thirteenth-century England.

The opinion of not a few general readers that certain parts of the Old Testament are unimportant or uninteresting has doubtless diminished acquaintance with it. To remove or lessen this difficulty, the Rev. Dr. M. G. Glazebrook, Canon of Ely, has arranged "The Layman's Old Testament" (Oxford University Press), comprising the major part of the Old Testament, with selections from the Apocrypha, and a general revision. He omits Leviticus (a mass of ancient ritual), Chronicles (a largely lengendary and unhistorical version of a part of the book of Kings), Esther (a wholly fictitious account of the origin of the Feast of Purim), Lamentations (laments over the fallen fortunes of the nation), and the Song of Solomon (charming non-religious love-songs, parts of which are not proper to be read in public). The narrative matter and the prophetic sections are given in chronological order, and poetical pieces are printed stichometrically. There are brief footnotes and eleven maps. A good deal in the prophetical books (referring to obscure peoples and events) might profitably be omitted, and the confused text of Ezra i-vi should be revised and united to Nehemiah. But the volume as it stands will facilitate the reading of the Old Testament. The insertion of First Maccabees after Nehemiah, for example, will be helpful, and it will be a relief to have the prose material printed in the fashion of other books, without the usual disturbing sharp divisions into chapters and verses.

In two elaborate volumes on "Unknown Mongolia" (Philadelphia: Lippincott; $7 net), Mr. Douglas Carruthers has given us a valuable and interesting account of two years of exploration. The particular area traversed and mapped was the basin of the upper Yenisei south of the Siberian railway, and the vast plain of Dzungaria still farther to the south. Hemmed in by great ranges, the Syansk and the Tian Shan or Celestial mountains, and by the barren Gobi Desert, this wild country has remained isolated, desolate in winter and with but slight communication with the outer world in the summer months. Here was the birthplace of the Mongols and the Turks; here the Huns wandered, gathering force and numbers before they swept over Europe, and here was born Jenghis Khan, the most picturesque and sanguinary of all the early Mongols, whose name is still revered by the Tartar tribesmen. The physical geography is the main subject, but there are full and scholarly accounts of the natives. One of unusual interest deals with the tribal life of the Uriankhai. Although on the very outskirts of the empire, the power of official Peking was felt by this tribe up to the time of the author's visit in the annual tax which was paid in the form of mares, sheep, goats, furs, eagles' tails, swans, geese, and grebes.

A second ethnological account of great interest in the same book is a condensed history of the Mongols, who once placed their sovereign on the throne of Peking, overran and well-nigh conquered Europe, establishing a vast but phantom empire from France to the Pacific, and who have left the imprint of their architecture throughout India. It is astonishing to learn that so close to the desolate, almost barren tundra wastes of Siberia is this region of swamps, jungles, meadows, and diversified uplands, sheltered fertile valleys, a maze of lofty glacier-covered mountains, and a network of lakes and rivers. Hardly any English explorers have entered even the borders of this region, while the splendid works of Prjevalsky, Severtzoff, Potanin, and other Russians are inaccessible to most people on account of their difficult language. Few books of exploration as elaborate as this are so readably written, and the photographs are excellent. The work ends with several appendices relating to physical geography, the Dzungans of Dzungaria, and the life-zones of the region. A series of excellent maps in color, a bibliography, and a good index are evidence of the pains which the author has taken to round out his work in every direction. Three well-written chapters on sport and animal life in general are contributed by Mr. Miller, one of Mr. Carruthers's two companions.

Prof. C. H. Weller, the author of "Athens and Its Monuments" (Macmillan; $4 net), has accomplished the difficult task of writing a clear and careful account of the remains of ancient Athens in about 400 by no means closely printed pages. The book contains 262 illustrations, which have been carefully selected and are well reproduced. The subject matter is divided, after a short but useful introduction, into ten chapters. In the first chapter the situation of Athens and the general aspect of the ancient city are briefly and well described; the second is a much condensed, but clear, historical sketch; the other chapters are devoted to a discussion of the various monuments arranged by the regions in which they are found, the last one being concerned with the Piræus and the ports. For the most part, the route of Pausanias is followed. The author has made use of the latest studies of the monuments, and it is agreeable to Americans to note how frequently the recent work of our scholars at the Athenian School appears. The original and admirable studies of Messrs. Stevens, Hill, Caskey, and Dinsmoor furnish both authority and illustration, and, indeed, the book itself is presumably in a measure the outgrowth of Mr. Weller's connection with the School.

In a book in which so many details must be considered, and in which the author must constantly decide what material should be rejected and what accepted, the reader will occasionally wish to find some things that are not there, and will probably think that other things which are might well have been omitted. In general, however, both omissions and inclusions have been most wisely managed, and one is impressed throughout with the writer's thorough command of his material. In cases where there is a lack of agreement between scholars, he states his own view moderately and clearly. A few minor details suggest comment. On page 314, in regard to the Hecatompedon, it is said: "The west pediment probably bore two immense coiled and rearing serpents, with a group of gods between them." Since, however, Heberdey has now shown that the figures of the gods almost certainly belong to a smaller pediment, it would seem that the above theory should be modified (see Dickins's catalogue of the Acropolis Museum, pages 62 and 85). In the account of the temple of Athena Niké, since current restorations of the cornice make the entablature appear too heavy, note might well have been taken of Stevens's demonstration of the true proportions. Figure 218 is given as Stevens's restored plan of the Erechtheum, as indeed it is; but Mr. Stevens subsequently modified this and redrew the plan as it appears in his chapter on Architecture in Fowler and Wheeler's "Handbook of Greek Archæology." On page 247, to illustrate the later history of the Propylæa, the interesting view in Turkish times given by Stuart and Revett, or that by Kinnaird, would have been welcome. These

are of more real importance to the student than the Dörpfeld-Elderkin plan of the Erechtheum (Figure 220), which seems to belong to "Nephelococcygia" rather than in a work which deals with facts. But the faults of Professor Weller's book are trivial, and its excellences great. It should be of much value to the student who is beginning work in Athens, and to all travellers who seek for more than a passing view of the ancient ruins.

Essays in part reprinted from recent numbers of current English reviews make up a volume of "Anglo-Indian Studies" (Longmans, Green; $3.50 net), by S. M. Mitra. The author notes that the word Anglo-Indian has been appropriated by the Eurasians and deprecates the fact. His Anglo-Indians are English residents of India. The book is a curious medley of valuable observations on present relations between the races in India and valueless observations in regard to the history of the Hindus. Verbosity and inaccuracy combine with the naïve self-complacency of the Hindu to produce some extraordinary "Studies." Thus Mr. Mitra believes that the circulation of the blood was taught in India in the second millennium before Christ, and that about 1500 B. C. the Hindus were carrying on war with cannon and muskets. The great Hindu epic, which he ascribes to the same period (!), contains a number of moral truths, some of which coincide with those of other civilized peoples. On this basis we have a study called "Christianity in Hinduism." On the other hand, when the author is discussing present-day matters, his words are often pregnant with meaning. Thus he reduces all discontent in India to the effect of Anglo-Indian arrogance. Administrative reforms do not touch the masses; they do not care who rules them; but they object to being treated like dogs. Hindus and Mohammedans may be excluded from office; Bengal may be divided; but the shop-keeping Englishman must not kick the native. If this is rather exaggerated, it nevertheless contains a germ of truth not the less important as coming from a native source.

The booklet, "Japan's Modernization" (London: Charles H. Kelly; 1s.), is one of a series of manuals for Christian thinkers. The author, Saint Nihal Singh, is a writer of repute on Indian matters, who at the time when the victories of the Russo-Japanese War were having an appreciable influence upon Indian political aspirations, visited the island empire and published his reflections in some of the leading London reviews. They are embodied in this manual. Unfortunately, the author had not sufficiently grasped the Japanese situation to write anything of abiding value. What is the logic of his political philosophy when on one page he can term feudalism a "malignant growth eating into the vitals of society," and on the next ascribe the wonderful achievement of building up an organization on new foundations to the spirit which the indigenous code of ethics and chivalry *(bushido)* instilled in the hearts of the Samurai? The statistics which overweight several of his chapters are neither up to date nor trustworthy. The latest authorities are right in giving four, not three, Imperial Universities. Misspelling Tohoku ("Tohoko") University, he mistranslates it as Hokkaido, whereas the term signifies Northern, and includes Sendai on the mainland, where the science and other colleges are situated. In fact, at page 78, he refers to a Tohoku Gakuin at Sendai. The same inaccuracy marks his treatment of Christian schools. And why at this late date should the author abandon the standard term *Japanese* for the stilted "Nipponese," which he uses throughout? He has been ill-advised in reproducing ephemeral magazine material in this belated manual.

NOTES FROM ABROAD.

Has the influence of Shakespeare been exercised mainly through the library or through the stage? The question has been raised in connection with the English scheme for the celebration of his tercentenary. Prominent actors and theatrical managers are protesting against the proposal to place the arrangements in the hands of representatives of literature rather than of the dramatic profession. Shakespeare's vocation, they argue, was primarily that of an actor and a theatrical manager, and only secondarily that of a man of letters.

On July 13 the disablement benefit of the British Insurance act came into operation for the first time, one of the conditions of receiving it being that the insured person must have paid his contributions for 104 weeks. The ordinary sickness benefit covers twenty-six weeks, at the rate of 10s. a week for men and 7s. 6d. for women. In future at the end of this period a worker who is permanently disabled will be entitled to draw a further benefit of 5s. a week until he is old enough to claim his old-age pension. It is estimated that the amount to be paid in disablement benefit will be about £2,000,000 a year. The second annual report of the Insurance Commissioners, just issued, shows that in England alone over 10,500,000 persons are now insured.

An incidental result of the Insurance act is a falling-off in the sale of proprietary medicines. People who formerly doctored themselves with quack nostrums are now able to avail themselves of competent professional advice. Indirectly, middle-class patients, not themselves on the roll of insured persons, are gaining an advantage from the act, for the great increase in the number of doctors' prescriptions to be made up enables the druggists to reduce the price of dispensing to their customers generally.

A novel feature of the industrial situation in England is the growth of trade unionism among agricultural laborers. Farm workers have usually been slow to combine, but the success of united movements in the cities is now inspiring them to make a stand for better conditions. In Herefordshire there is every prospect of a strike when the wheat harvest begins towards the end of July. The men are demanding a wage rate of eight cents an hour, with a week of sixty hours in the summer and of fifty-four in the winter. A weekly half-holiday—a privilege almost unknown on Herefordshire farms—is also asked for. The farmers are warning their men that a higher wage will mean the loss of such perquisites as cider, milk, hauling of fuel, etc.

In an editorial in the *British Weekly* on Joseph Chamberlain's career, Sir W. Robertson Nicoll recalls a political dinner party at which he was present at the time when the late statesman was starting his "tariff reform" campaign. The chief guests were Sir Henry Campbell-Bannerman and Sir Henry Fowler. The latter took an extremely gloomy view of the future of the Liberal party, and predicted that the new protectionist propaganda would soon sweep the country. "C.-B." emphatically dissented from this view. "Chamberlain," he said, "will be trapped in his facts and figures. He knows nothing." Another English journalist, Lucien Wolf, tells of his astonishment at finding, from an interview at the time, that Chamberlain, before attacking Free Trade, had not taken the trouble to study either the history or the theory of the question. He knew nothing, for example, of the old Colonial preferences and their mischievous effect on British commerce.

A critic of Bergson's philosophy comes from an unexpected quarter. He is not so much a philosopher as a mathematician. M. de Gaussure, formerly of Geneva, now of Berne, has become a formidable critic of the popular French philosopher. At a recent meeting of Swiss philosophical professors at Rolle, De Gaussure attacked Bergson's doctrine of "Time." There was afterwards an animated discussion in which Flournoy, Lutaslawski, Werner, and others not so well known took part.

The Janssen Observatory, on the top of Mont Blanc, which, since 1909, has been buried in ice and snow, has now been replaced by a new observatory. M. Maurice Flamy, astronomer of the Paris Observatory, after going over the ground, chose as the new site the Petit Flambeau at the entrance to the Col du Géant. The new station is at an altitude of over 10,000 feet, and the rock constituting the Petit Flambeau is always encased in ice. It was found that the old observatory had not only been buried, but also wrecked and carried out of its place by the movement of the glacier.

The festival at Geneva, celebrating the entrance of the canton into the Swiss Confederation 100 years ago, momentarily diverted attention from the national exposition at Berne. It was a festival not for Geneva alone, but for the Catholic cantons of Soleure and Fribourg, which, in 1814, sent representatives to the shores of Lake Leman to welcome their new *confédérés*. The fête on July 4 and 5 brought crowds to the old Protestant capital. An immense theatre had been constructed near the entrance to the port, at which a "patriotic spectacle" in four acts was presented. This was entitled "La Fête de Juin." The words were by Swiss poets, and the music by Jaques-Dalcroze. With its Alpine and rustic scenes, its shepherds, soldiers, and peasants, its marches, dances, and choruses, it was a pageant of the sort especially agreeable to the Swiss taste, but to the foreigner seemed long and rather monotonous. The most original part of the festival was a realistic reproduction at the Port-Noir of the arrival of the contingents from Soleure and Fribourg. They came on three archaic looking boats, and were attired in military uniforms of the Napoleonic period. After being received by the civic and military authorities, and welcomed by salvos of artillery and much ringing of church bells, a long cortège passed through the streets of Geneva which was made up of the officers of state, all the civic societies, groups from Berne and Lucerne in costume, the University authorities and students, gymnasts, boy scouts, and school children. On July 6, it was the

turn of the young people, who had a procession and concert of their own, followed by the execution of another spectacular piece entitled "Fête de la Jeunesse."

Admirers of Vincent van Gogh will be glad to know that the first volume of his complete correspondence has appeared in print. His letters afford an insight into the strange mentality of this most un-Dutch of all Dutch artists. Un-Dutch he was also in this gift of expressing himself in writing. With the brush alone Rembrandt told the story of his life, and few were the artists in Holland that sought expression in words as well as in colors. The Dutch painter does not believe in theory; he despises it, and is apt to say that it is good enough for the people who cannot paint, such as the Germans. "Let them talk about it, we do it," is his attitude. Vincent van Gogh was not one of these. He loved to philosophize on the emotions he experienced in his deeper self, on the forces that go to the creating of a work of art, on the relationship that exists between art and reality, between art and religion. Religion was the keynote of his thinking. In the thirty-eighth letter of the collection he denies that the artist's love of nature should be identical with religious emotion. Interesting criticisms on the work of other artists, of writers, and thinkers are scattered through these pages. They show what influences touched him, and what his own cravings were. In the twenty-ninth letter, he describes the impression some drawings of Millet had made on him in these words: "Take thy shoes from off thy feet, for the place whereon thou standest is holy ground." He was no great admirer of contemporary English artists, who told a story like novelists rather than giving shape to mental visions. He warned his brother Theo against Heine, Renan, and Michelet. George Eliot he admired, her "Scenes of Clerical Life" especially. Whatever may be the final judgment pronounced on his art, which by some is exalted as the work of a genius, by others decried as the chromatic ravings of a maniac, no such dissension is likely to arise over this volume of letters. They will teach the enthusiasts to understand him better and more wisely, they will convince the scorners of their mistake.

The first volume has appeared of a "Handboek der Nederlandsche Taal" (Manual of the Dutch Language), which promises to be a standard work of its kind. The writer is Dr. Jac. van Ginneken, S. J., a well-known philologist in his native country. He deals in this first volume (which is to be followed by four others) with the sociological structure of the Dutch language. First the dialects are discussed, next the several developments which arose from the mixtures of seventeenth-century Dutch and native tongues in the colonial settlements. The second part of the volume is devoted to the narrower differentiations of speech, depending on family, age, sex, and profession. In other words, this first volume offers a bird's-eye view of the language as it is spoken at the present day in all its infinite variety. The book is not a treatise in the traditional style, describing the phonetic and grammatical growth of the language from the earliest periods down to the present day. It considers the language it deals with not as an aim but as a means, by which the author hopes to arrive at a psychology of the nation as a whole. For in its language alone the soul of a people can be studied.

Science

CHARACTER.

The Foundations of Character. By Alexander F. Shand. New York: The Macmillan Co. $3.

Nearly twenty years have passed since Mr. Shand published in *Mind* an article entitled "Character and the Emotions," which was looked upon by the narrow circle of those to whom it appealed as important in itself, but especially as giving promise of future valuable work from its author. To-day we have a partial fulfilment of this promise in a book of marked distinction which cannot fail to command wide attention. For during these years of silence Mr. Shand has devoted himself to the development of the theses presented in the article referred to, and to the collection of a vast body of notes from well-chosen sources which serve to corroborate the positions he maintains, and which he promises to elucidate further in a volume treating of the Sentiments.

No one who studies this book with care can fail to appreciate the courage involved in undertaking so difficult a task as the author has set for himself; nor can one help admiring his skill, the conscientious care with which his statements are made, and withal the marked modesty he displays in the presentation of very original observations; a modesty which at once disarms criticism, and at the same time encourages the expression of any difficulties that may be found in connection with the exposition of an author so evidently earnest in the quest for truth. The method of approach is indeed acknowledged to be tentative; but on this very account it appears sound in principle, for in dealing with so complex a subject Mr. Shand has seen that it is useless to strive at once to gain "indisputable foundations." He has, therefore, adopted provisional hypotheses, in the main based upon current opinion, and has endeavored to correct these and to leave them in such form "that they can be made use of and improved by others without being wholly abandoned." In this he has succeeded well. Critical study of his work must, of course, lead to certain restatements, and doubtless to some improvements of classification; but one closes the book with the conviction that the work done will not have to be done over again by future students of the subject. Throughout we find the keenest of introspective analysis, as instances of which we may note his studies of the relation of play to pleasure and joy and of the relation of impulse to desire (p. 460 f.).

Although this book deals with only part of the author's investigations, the field covered is so broad that it necessarily yields a bulky volume, which will probably become a book of reference rather than a work to be studied as a whole by more than a limited number. As a book of reference, however, it will prove to be invaluable to the writer who deals with human motive. The subjects treated are so complex that, notwithstanding the great care used by the author in the preparation of his table of contents, the reader does not always find it easy to catch the drift of thought. It would have been most helpful had the work included some brief summary of the author's classifications: a lack that may well be supplied in a second edition, which it is also to be hoped may contain a fuller treatment of "the relative ethics of the sentiments" (Bk. I, ch. xi), especially in regard to the analysis of conscience; unless this is to be included in the future volume promised to us.

It is interesting to note that, in so thorough a study, hardly any reference is made to the influence of rational initiative in the formation of character, and somewhat surprising that our author does not call attention to this fact. For in this particular his work furnishes very strong corroboration of the positions lately maintained by McDougall in his "Social Psychology," who justly claims that we tend to overlook the enormous importance of the instincts as "the prime movers of all human activity." This being granted, it is nevertheless clear that the influence of this rational initiative cannot be overlooked. Probably we shall hear more of this in Mr. Shand's later volume.

The author's most significant contribution is given in the enunciation of the "Laws of Organization"; which are gradually developed, and which may perhaps best be explained in his own words (p. 460):

> There are, then, three principal orders of systems. The simplest and least comprehensive are felt in consciousness as "impulses": the second, which comprise a number of the former, include our emotions and appetites; the third, which are the most comprehensive of all, organize a number of emotions with their attendant impulses and instincts.

This last order is held to constitute the sentiments to be treated in the forthcoming volume; the body of this book being given to the study of the emotions, and of the lower systems, the instincts, which the emotions organize. The value of this conception is shown in the flood of light it throws upon the problems with which our author deals. And it is quite in line with the modern psychological conception of consciousness as a system of minor psychic systems, corresponding with physical activities, which in like manner are recognized to be the functioning of systems of minor physical systems. This fact seems to have escaped the observation of our author, who might well have emphasized it as a strong corroboration of the positions he maintains.

That psychic systems of this general nature and of varied complexity exist, and that the more complex systems hold the less complex in subordination, is to be granted; and the importance of the formulations made by Mr. Shand is not to be questioned. The general order of subordination as described by him may also be accepted

in the main, and may well be found serviceable in making an orderly arrangement of the mental states considered. Nevertheless, it would be too much to expect that a classification of our varied impulses, emotions, and sentiments on such a basis would be found available to cover all the various complex systems, physical and mental, which occur in the life of man, and which vary greatly among different individuals and at different times in the same individual. It is natural, therefore, that we find difficulty in maintaining the author's distinctions as clear and sharp as he would lead us to expect them to be. Mr. Shand seems at times to forget that there is a fundamental likeness in all forms of activity, and a similar likeness in all the corresponding forms of consciousness. He also overlooks, or minimizes, the existence of states of consciousness which cannot be brought into the field of awareness, but which, nevertheless, must be held to be fundamentally of the same nature as this field of awareness. Thus (p. 458) he holds that a sharp line can be drawn between the reflexes and the instinctive reactions in the fact that the former do not, while the latter do, involve impulses. If we take a purely objective view there is surely no basis for drawing such a distinction; a fact which gains importance when we note that he holds (p. 101) that the reflexes are not, while the instincts are, expressions of character, which surely can only be interpreted in an objective view. Nor can he base this particular position upon introspective evidence; for the impulses are much less distinct in content than such a view would imply, and many of them must be assumed to exist even where they cannot be grasped in awareness with sufficient clearness to enable us to analyze them.

It appears clear that we must accept fully our author's view that the emotions organize diverse instincts. And we may agree with him that a given instinct may belong now to one and now to another emotion (*e. g.*, p. 255). But it seems impossible to grant that an emotion remains the same thing when the instincts it organizes change (*cf.*, *e. g.*, pp. 190, 203, 215, 254, 381). Each pulse of consciousness is enormously complex, and each change of instinct-feeling, corresponding to a change of instinctive reaction, must differentiate one pulse from another. We may still call two diverse mental states by the same emotional name, because we recognize that the diverse instincts that are organized tend towards the same end; but this does not justify us in holding that a given emotional content is maintained unless the instinctive activities also remain unchanged. An experience comes to be called an emotion when it is a special type of instinct-feeling which accompanies a special form of instinct-action—which latter happens to be of sufficient intensity, and sufficiently constant in form, to be recognized as a whole when it recurs. But it cannot be granted that there can be any change of instinct-feeling content without a change of emotional nature. Our author acknowledges that such a criticism of his view in this particular is possible (close of p. 202), but in the main sticks by his guns; doing so surely in the face of overwhelming evidence. The emotion of the coward (p. 254) who is fleeing is certainly a very different thing from his emotion as he fights for his life when at bay; although both emotional forms belong to one system that looks to his escape from danger, and may for convenience be called by the same name.

To attempt to summarize adequately the contents of the book would force us to pass the limits proper to a review. The systems of Fear and Anger, Joy and Sorrow, and their most marked derivatives are considered in the order named. All these are looked upon as emotional systems. Fear, anger, and sorrow are classified as emotions; but joy is held to be a system "more comprehensive than the emotion" (p. 285). Surprise is treated with fulness, and is held not to be an emotional system (p. 430), because "it has neither impulse nor end"; yet our author acknowledges in "law 97" that "the *effect* of surprise is to make us attend to the event that surprises us"; this surely indicates an end, and seems to cast doubt upon his conclusion, which is distinctly opposed to the opinion of the mass of thoughtful men.

The volume closes with an important Book on "The System of Desire" which is held to be not an emotion (p. 518), but "potentially a system of prospective emotions" (p. 469); a statement which raises the question why Desire is not to be considered a sentiment under the definition thus far given. We may hope to find the answer to this question when the author's volume on the Sentiments appears.

It is in connection with the consideration of joy that there seems most reason to dissent from the author's views. While he agrees (p. 272) that pleasure and joy cannot be identified, he has so far failed to appreciate the fact that pleasure is a general quality that may belong to any mental element, that he constantly does, in fact, identify the two in many of the points he makes. That pleasure tends to its own conservation is so old an observation that Herbert Spencer assumed no one could hesitate to "substitute for the word pleasure the equivalent phrase—'a feeling which we seek to bring into consciousness and *retain* there'" (Principles of Psychology I, § 125). And it is equally clear that joy is one of the most pleasant of experiences, as a general and spontaneous active state must necessarily be. That joy tends to maintain itself is therefore due to its quality of pleasure, and not to the nature of the emotion itself, as Mr. Shand suggests (pp. 280 f., 297, 299 f., 329).

One may also be inclined to dissent from the statement (p. 395) that the primary emotion which is developed into what we know as sorrow is not the opposite of joy. Moreover, we not infrequently find the author overlooking the patent fact that many of the so-called expressions of sorrow are really the expressions of relief from sorrow (*e. g.*, weeping), or of blind efforts of the physical system to break away from the sorrow's depression. As soon as these expressions appear the emotion gains new qualities, with which in some cases sorrow may be mixed, but in connection with which in other cases it is altogether lost. To construe (p. 331) the yelping of a dog, outside the door in the cold, as an expression of sorrow is certainly quite unconvincing.

Important as these points are they relate, nevertheless, to details that do not go to vitiate the author's main contentions, which must be conceded to be in general correct and profoundly important. The reader of this work will look forward with eagerness to the appearance of the promised volume dealing with the analysis of the Sentiments.

The Bulletin of the American Geographical Society for June opens with estimates of the growth of the population of the different countries in 1920, by Prof. M. Jefferson. A geographic study of Nova Scotia is contributed by Prof. R. H. Whitbeck, in which there are many interesting facts in regard to "the province that has been passed by." There is also a topographical map of Mexico, together with one showing the cities and their relation to the Mexican plateau.

Drama

IMAGINATIVE VERSE.

Tristram and Isoult. By Martha Kinross. New York: The Macmillan Co. $1.25 net.

There is poetic imagination of no common order in this latest variation of the ancient Arthurian legend. But the ability manifested is fanciful rather than dramatic—although there are several effective scenes—while the spirit and manner, notwithstanding the occasional use of antique words and phrases, are completely modern. This does not in any way affect the interest of the romance or the merit of the verse, which, if it seldom soars to the heights of positive inspiration, contains many passages of decided vigor and beauty, and is consistently clear. Moreover, the author shows marked power of characterization in her dialogue and a rare sense of local atmosphere, especially in her vivid pictures of the sea.

She divides her story—for although cast in theatrical form, it is more narrative than play—into three parts, of which the second is subdivided into three episodes. The first is at Camelot, where Guinevere and Isoult exchange confidences while discussing a tournament in which Arthur and his knights have been engaged. Guinevere bewails her guilty love for Launcelot, and confesses her envy of Isoult, who, wedded to a notorious coward and ruffian like King Mark, can afford to accept openly the devotion of such a noble lover as Tristram. Isoult, admitting her happiness in this respect, tells of the pangs of jealousy which she suffered until assured that Tristram's relations with his

own wife, her namesake, Isoult of the White Hands, were purely platonic. Then Tristram, fresh from his victory in the recent tournament, enters and finds his welcome in a long love scene full of passionate eloquence, which is ended abruptly by Arthur, who, after highly commending the lovers for their mutual loyalty, announces that Tristram must instantly away to defend the Cornish kingdom of the recreant Mark against the invader. In all this there is no drama. All is narrative; but the narrative is excellent of its kind, and the personalities are differentiated with bold and skilful strokes.

In the second part the scene is in Mark's Castle of Tintagil. Here there is more action, although the interest still centres in the picturesqueness and vigor of the dialogue. There is theatrical value, doubtless, in the episode where Mark, in the absence of the heroic Tristram, who is killing his enemies for him, tries to murder Isoult by flinging her from the battlements upon the storm-beaten rocks below; but it is greatly diminished by the prolonged mutual recriminations in which the principals indulge. The device by which the lady is saved is more ingenious than her failure to expose the assassin is probable. But the literary quality of the scene is admirable, as is that of the banquet scene, in which Tristram, whom the treacherous Mark has dared to banish, under pretence of permitting him to rejoin his deserted wife, utters a defiance ringing with fierce contempt and chivalrous courage. This is a notable bit of declamatory verse, which ought to have led to a decisive climax, but the effect remains purely oratorical. The intended climax is reserved for the ensuing scene, at midnight in the now deserted banquet hall, where another love scene, of remarkable eloquence, occurs between Tristram and Isoult. On the printed page it furnishes delightful reading, but leaves the dramatic action at a standstill until the last moment, when Mark, entering stealthily from behind, runs the unsuspecting Tristram through the body. This, of course, is sheer melodrama. In the last act (Part 3) Tristram is dying in the house of his wife—Isoult of the White Hands—whither he has been transported. She is nursing him patiently and hopelessly, as she had done once before. It is a pathetic situation, handled with tact and womanly insight, but not much dramatic originality. Queen Isoult, of course—no matter how—arrives in time to bid her lover a last farewell, and to kill herself upon his dead body. The meeting of the two women, with its mutual revelation of wrecked love, is, perhaps, the most genuinely dramatic moment of the whole play.

"Tristram and Isoult," as this skeleton of it will indicate, is a succession of more or less dramatic episodes, not a true drama. But the dramatic weakness of it is constructive, not fundamental. An author capable of taking the dry bones of an old myth and revivifying them in this imaginative fashion may be expected to write a first-rate play when she has learned more of the art of dramatic construction.

"APARTMENT 12-K."

It cannot be said that the dramatic season in New York has opened auspiciously. "Apartment 12-K," a farce by Lawrence Rising, which was produced last week by the Shuberts at Maxine Elliott's Theatre, is as futile a conglomeration of physical comedy and vapid dialogue as even Broadway has been invited to laugh at. Nothing of course is more entirely natural than that a new elevator boy should guide an inebriated fat man into the apartment immediately beneath his own, or that the charming lady of the house should mistake the bibulous tones of the stout gentleman's conversation as he disrobes for those of her medical husband who has been visiting a patient. In farce, of course, we do not require a probable or even a possible concatenation of circumstances to bring about the desired situation, but we do require that they be made to appear believable. That is only the Aristotelian preference for a "probable impossibility." And when we have accepted the situation we require rather more humor than is afforded by the spectacle of a grotesquely fat man mountainously undulating beneath bed clothes while an embarrassed lady endeavors to explain the situation to an irate mother-in-law. The cast, in which we understand certain changes are to be made, is, with the exception of the mother-in-law, decidedly mediocre, but at that is better than the play deserves.

This is Mr. Rising's first play, and we have seen it stated somewhere that he is only twenty-four years of age. We should have imagined that he was very much younger. The aim of the piece is obvious. It is an attempt to tickle American palates with French diet, and the attempt is a failure. It is not that American palates are incapable of appreciating Gallic delicacies; it is that American cooks, when they try to compound them, put in only the obvious ingredients—the risqué situation, the *scène de déshabillé*—and omit to add the delicate flavoring of wit and irony. It seems not improbable that in "Apartment 12-K" we have a shadow and foretaste of the kind of dramatic entertainment that is to be offered to the public during the forthcoming season in too abundant doses. If that prediction should unhappily be verified, we shall have only one thing to be thankful for: we shall at least have escaped from last season's sociological drama which invited us to believe that the surest way to elevate mankind was to immerse him in a sewer. But the sooner managers realize that French farce is a native product which cannot be cultivated on an alien soil, the better it will be for them and for the public, for American dramatists cannot write it and American players cannot act it.

In the English provincial towns the cinema now seems likely to prove a good friend to the regular theatre, which at first it threatened with extinction. It has created a new play-going public. People of Puritan tradition have had their objections to the stage overcome by what they have seen in the picture palaces. In towns where the theatrical managers have been put on their mettle by the competition of the "movies," and have improved the quality of their productions, a new class of audience has been attracted to the drama. Some of the better sort of music-halls are reported to have profited in the same way.

Music

A concert in aid of the survivors of the Empress of Ireland was given in London on June 29. One of its features was the performance of Chopin's funeral march by the leading London orchestras, under Sir Henry J. Wood.

Nearly two hundred young singers and players were heard during the first three months of the existence of the Music League of America, the philanthropic organization started with a view to benefiting talented artists. Of this number, 144 were singers, 18 were violinists, and 34 played the piano. For all of the successful candidates the Music League will find opportunities to appear at recitals and concerts in connection with women's clubs, at educational institutions, and at private musicals. A series of Music League concerts is to be given in various cities and towns.

A year ago the Berlin Royal Library sent out a request for expert information regarding local peculiarities and survivals of mediæval musical practices in the cities of the Empire. Already eighty-six cities have been heard from, and the Royal Library announces that much valuable information that was on the point of being lost, has thus been saved.

The Century Opera Company has obtained the rights for the performance of all the Wolf-Ferrari operas. Two of these were already included in last year's repertory. The coming season "Le Donne Curiose" and "L'Amore Medico" will also be sung. Among the singers newly engaged are Miss Bettina Freeman, of the Boston Opera Company, and Hardy Williamson, a young Welsh tenor.

The mild sensation created in some foreign cities by the performances of the infant Willy Ferrero, who, though not yet eight years of age, conducts an orchestra successfully, seems to have subsided. To many it occurred that a well-trained orchestra can play even without a conductor. Landon Ronald, however, found the boy "a most unaccountable genius," and it is said that members of the orchestra who tested his ability by playing false notes were promptly singled out and reprimanded. Child pianists are less likely to attract attention hereafter if they have to compete with child conductors, and that will be something to be thankful for.

The apparent determination to give many of the performances at the Century Opera House next season in the original Italian, French, and German seems to indicate a belief that there is no general desire in New York to hear operas sung in English. One of the main arguments used by the champions of opera in English is that in foreign Continental countries the performances are always given in the language of each land. But when the combination opera company from Boston and London produced "Parsifal" in Paris in German, it proved a great attraction. The retort might be made, however, not without good reason, that those who patronized the German "Parsifal" were mostly members of the large German colony in Paris. Snapshots of the crowd waiting to get in had a markedly Teutonic aspect.

It is announced that the management of the Metropolitan has ordered a new scenic attire for "Parsifal." It is to be hoped that whoever provides this scenery has been asked to travel and get suggestions by noting how

some of the leading opera houses in Germany, Austria, France, Italy, and Spain have overcome the technical and artistic difficulties presented by this opera. It would be well, also, to provide a better cast for "Parsifal" than the Metropolitan performances during recent years have boasted. One recalls the great cast Conried provided for the original performances of "Parsifal" in New York—a cast including Ternina, Burgstaller, Homer, Van Rooy, Goritz, and Journet.

The insulting attitude of many German musicians towards America is illustrated by a story of Brahms and Dvorák related in a German periodical by Oskar Nedbal, who was a pupil of Dvorák at Prague. One day Dvorák returned from Vienna in a state of great excitement. His class was assembled, but instead of teaching, he presently began to weep like a child. When he recovered his composure he related what had happened. He had called on Brahms, who had been the first to discover his genius, and who, on this occasion, was indignant because he had accepted an offer from New York. "Remain here, dear Dvorák," Brahms said; "do not follow the fashion of the virtuosi, who positively sell their art to the Yankees. It is unworthy of an artist to cross the ocean merely for pecuniary profit, and to make music for these dollar folk." "But, esteemed master," replied Dvorák, "I am not going of my own inclination; I go because I have a wife and children to support. And over here I shall not earn as much in a lifetime as the Americans offer me for a short time." But Brahms was not silenced. "Do not go!" he repeated. "I have a feeling as if we were selling our music to the Americans. All I possess is at your disposal. Take whatever you want." Dvorák repeatedly spoke of this generous offer, but it did not prevent him from going to New York, because, as he said to Nedbal, he would have been ashamed, after all that Brahms had done for him, to accept money from him in addition.

There is something amusingly arrogant in Brahms's assumption that to bring German music to America was like casting pearls before swine. The Viennese allowed Mozart and Schubert to starve; but the Americans, who pay more liberally than any other nation for music, are barbarians. So far as Dvorák is concerned, he was engaged by Mrs. Jeannette M. Thurber to be director of the National Conservatory of Music in New York at the munificent salary of $15,000 a year. He remained three years, and during that time some of the most promising of the younger American composers benefited by his instruction, among them Rubin Goldmark, Harry Rowe Shelley, William Arms Fisher, Henry Waller, Harvey Worthington Loomis, and Harry Burleigh. It was, moreover, during his sojourn in America that Dvorák wrote the "New World" Symphony, the most inspired composition ever created on American soil, and one that shows the marks of American influences. Had Dvorák followed Brahms's advice, this great work would never have been created.

Arnold Dolmetsch, who tried in vain some years ago to convert American music-lovers to his belief that the modern pianoforte is inferior to the harpsichords and clavichords of the days of Handel and Bach, still holds forth in London, where, some weeks ago, he gave another of his unique concerts in which these old-fashioned instruments were exhibited and played, together with obsolete viols of the seventeenth century.

Art

BRITISH ARTS AND CRAFTS IN PARIS.

Paris, July 15.

There is an exhibition in Paris, just now open and to remain open until October, that no one who has the chance of seeing it should miss. This is the exhibition of the Decorative Arts of Great Britain and Ireland, organized by the Board of Trade for the British Government, representing chiefly the Arts and Crafts Exhibition Society, and held in the Pavillon de Marsan at the Louvre. The interest is partly in finding so essentially British a show in its new French surroundings, partly in the fact that, as it is in a measure retrospective, it gives a better idea of what is being done in relation to what has been done in Great Britain and Ireland by the Arts and Crafts Society than is given by their show held every three years in London.

There is no question that the British work gains by its French surroundings. Never has it been so well housed before. A lofty and spacious hall has been reserved for it, and this has been arranged with cartoons hung its entire length, an alcove containing furniture and metal-work here and there, and at the farther end an apse with an altar set up in it, so that something of the effect of a basilica is produced. Along one side of the hall are small, well-lighted rooms filled mainly with prints and books, glass and pottery, stuffs and embroideries, one, larger than the others, devoted to the work of William Morris. Behind the apse is a passage where, under electric light, the silverware and jewelry are more luxuriously displayed than ever before in an English gallery. The result is to lend to the whole exhibition a decorative beauty and dignity that must surprise all those who have followed the career of the Arts and Crafts Society at home.

The show itself may be largely retrospective, but it impresses one very much as any single show in the series held in the last thirty years or so impressed one at the time. There are artists in England who boast of the originality of English decorative art. Certainly the collection is undeniably British: it could not for a moment, wherever or whenever seen, be mistaken for the work of any other nation. But to be different is not necessarily to be original, and the chief claim to originality of the more prominent school of decorative artists represented is their unswerving fidelity to earlier masters and methods according to their modern interpreters. There is but little visible attempt to break away from the standard set by William Morris. Newer groups have arisen in Great Britain—in fact, it is probably in London that the men who call themselves Post-Impressionists, Vorticists, Futurists, or other enigmatic names, have been most preoccupied with decorative art, no doubt hoping to find in it a still shorter cut to genius than in painting. The modern tendency is to that simplicity in decoration which Morris never understood. But the principal group at the Pavillon de Marsan gives few signs of straying into fresh decorative fields; for all the change in its general character, their show here is as it was at the New Gallery in the eighties and the nineties.

William Morris, could he return, would have small reason to reproach his disciples for inconstancy. It is because the responsibility, or the inspiration, of the Arts and Crafts Society rests with Morris that the interest centres in the Morris Room. The criticism has been made that it savors too much of a shop, and this is partly true. But, after all, Morris was a shopkeeper, and his chintzes and carpets, his cabinets and tables, are still sold in Oxford Street. It is also true that an occasional exhibit has little more than a sentimental value, like the wardrobe painted by Burne-Jones and given by him as a wedding present to Morris. But, still, the sentimental value—all that this rather clumsy piece of furniture stood for with the Morris group, that has now passed into history—is a real source of pleasure to everybody who can profit by this opportunity to see it again. And, at any rate, the interest of the Morris collection is, above all, personal, proof as it is of the enormous energy and versatility of Morris the man, undertaking the work of a dozen men as designer, manufacturer, reviver of old methods and industries, shopkeeper, as author, printer, illustrator, illuminator—there was no end to the arts and occupations which appealed to him, no end to the vitality and enthusiasm which he brought to their practice.

Of Morris the artist there is nothing new to learn. There was variety in the kinds of work he undertook; there was only one idea underlying them all—the mediæval. He could see nothing else. Like many other leaders of rebellion, he fought for a cause that eventually became a worse tyrant than ever was the one he revolted against. In his disgust with Victorian vulgarity, as he thought it, he made no allowance for modern conditions, but filled the room of the small nineteenth-century house with heavy furniture out of all proportion to its size, and covered its floor and its walls with a restless intricacy of endless pattern. He overloaded the pages of his books with ornament, and used type that was a stumbling-block to the reader. He loved beauty, and his sole endeavor was to create it, but he saw only one kind of beauty and he forgot that he could not make the modern world mediæval to harmonize with the art he revived.

His followers seem oppressed by his teachings, though the gain to their work from the simplicity and spaciousness of its present surroundings should prove to them a profitable lesson. Of course, there are exceptions; there always are. The standard has been broadened for the prints and drawings, which include a series of Beardsleys, lithographs by the Senefelder Club, examples of Conder; Harry Wilson almost always lends a touch of originality to his jewelry. The Whitefriars Glass Company may keep to some old designs—both useful and simple,

however—but they have evolved new ones as well. And so, here and there in a very large collection an exhibitor may be found who has freed himself from the Morris tradition, though the show as a whole seems a tribute to his memory.

That the British Board of Trade has arranged this Arts and Crafts Exhibition in Paris the same year that it is taking an important part in the Exhibition of the Book Industry at Leipzig, is a fact that might give a suggestive hint to Washington. If some board or bureau there had been charged with the same duties, American art might fare as well at Leipzig and Paris now, and might be better known in Europe. N. N.

To John Van Dyke's "New Guides to Old Masters" (Scribner) is added "Vienna-Budapest" ($1) and "Madrid" (75 cents). One finds the familiar combination of stimulating æsthetic comment with capricious attributions and habitual neglect of the relevant literature. Mr. Van Dyke finds it necessary to invent a new Bruegel, whom he dubs "Seasons Bruegel," to account for the fine landscapes at Vienna. A little study of the drawings would, we feel, convince him of the unity of the truly various work of Old Bruegel. It would do the reader no harm to learn that the Titian bacchanals at Madrid were painted for Alfonso d'Este, nor that Mantegna's lovely Entombment has a companion piece at Fenway Court. To compensate, perhaps, for his usual skepticism anent Rembrandt, our author is inclined to see no less than three Giorgiones at Vienna. In general, the complete casualness of these little manuals is at once their charm and their weakness.

A treatise written with rather more than German thoroughness in the French language by an American scholar is at least a novelty. We regret that we have neither competence nor space adequately to review Frederick Mortimer Clapp's "Les Dessins de Pontormo, Catalogue Raisonné" (Paris: Edouard Champion). Pontormo—he was the only really genial imitator of Michelangelo—as draughtsman was first rehabilitated by Berenson. Dr. Clapp has gone over the ground still more minutely, and his work may be regarded as definitive. Going out from the 165 drawings, which bear the master's handwriting, are clearly studies for paintings, or have other objective marks of authenticity, the author builds up a critical list of about 420 numbers; but all attributed drawings, whether regarded as veritable or not, are elaborately described and discussed. More than 300 of the genuine drawings are in the Uffizi. The Louvre and the National Gallery at Rome have considerable groups. We have noticed no omission except the entirely venial oversight of a study by "Andrea del Sarto" at Bowdoin College, which may fall in Pontormo's *milieu*. Dr. Clapp has prefaced his minute catalogue, which naturally takes account of dimensions, watermarks, and the like, with a chronology of Pontormo and a register of drawings which are studies for paintings. His criticism, which always evinces a sensitive taste, is given *passim*, but in a subsequent work on the art of Pontormo all such matters will be duly considered. The present catalogue should arouse lively anticipations for its sequel. The book is beautifully printed in large octavo and contains eight plates representing Pontormo's development as a daughtsman.

Finance

THE "WAR PANIC" IN EUROPE.

Monday, when the European stock exchanges, after an anxious and excited Sunday, were confronted with the news that Austria had rejected Servia's partial submission to last Thursday's ultimatum, was a day which financial Europe will long remember. In the preceding week, not only had there been a violent break in public securities of the two states immediately concerned (Servian 4 per cents in particular having fallen 5½ points), but British consols had gone down 2¼ and French 3 per cents 4⅛; German and Russian securities falling with them. These foreign markets had moved with great apprehension after the issue of Austria's ultimatum, at 6 P. M. on Thursday, giving Servia forty-eight hours in which to accept its terms; and before they opened again for business, at the beginning of this present week, the morning papers had the news that Austria had refused the Servian offer.

Monday's European markets opened in a condition bordering on panic; their movement naturally being governed, not alone by their view of conditions likely to be caused by an Austro-Servian war, but by apprehension as to whether the other larger Powers could be kept out of the conflict. The assertion of that day's London cables, that Monday's demoralization on the Stock Exchanges was the worst since the Franco-Prussian War broke out in 1870, may have been exaggerated. But on the present occasion the London market, which usually would have been the mainstay for the rest of Europe, was hit between wind and water by the bloodshed at Dublin on Sunday. Consols fell 2⅜ points; yet the unsettlement in London was surpassed on the Continent, where not only did open market money rates in general advance 1 per cent., following the 1 per cent. advance in the Austrian bank rate, but all Government bonds fell heavily: Servians 4 full points. In the resulting panicky condition, the closing of the Vienna, Budapest, and Brussels Stock Exchanges was inevitable.

Nowhere did this commotion in the markets produce so extraordinary results as in foreign exchange. When any nation is apprehensive of being engaged in war, its bankers will instinctively call home a great part of their credit balances from foreign markets. If it is possible to insure the return of such balances in the form of gold, the inducement to bid for instant transfer is all the greater. The peculiar fact about this week's similar recall of funds from this market by Europe was the violence and impatience which the foreign houses, under the panicky influence of the day, and with a view to getting the gold delivered before anything further happened, put in their bids for sterling drafts.

The result was a rise in foreign exchange rates here to higher figures than have been witnessed in this generation. For sterling drafts on sight, the "par of exchange" is 4.86⅝, and the usual point at which gold can be profitably shipped from New York is around 4.88. On Monday, however, sight drafts were bought at 4.91½, and probably at an even higher price. Obtained on such unusual terms, some $10,000,000 gold went out on Tuesday's European steamer, and more has followed.

A striking incident was the blocking of further shipments by that vessel, through the refusal of the underwriters, Monday afternoon, to insure any more gold on that consignment. This attitude was naturally caused in large degree by unwillingness to accept any larger risk in a single vessel. It may be wondered, however, whether another motive did not play some part.

Considering that this gold is being drawn in by the European markets, with a view to conceivable breaking of relations among the larger Powers, it excites peculiar interest to observe that the ten millions cleared that day for Europe, of which half was consigned to London and half to Paris, were carried by a German steamer. An imaginative mind might picture the situation, supposing Germany and France or Germany and England to have gone to war while the Kronprinzessin Cecilie was still upon the ocean, and while wireless orders from Berlin to her commander were a simple recourse.

On October 8, 1912, when the Montenegrin troops crossed the Turkish border, the Imperial Bank of Germany's gold reserve was $208,000,000; a prolonged process of strengthening its reserve, since that war was ended, brought its gold holdings to $336,000,000 last week. The Bank of France, which held $647,000,000 gold in October, 1912, holds $820,000,000 now. During the same interval, the Imperial Bank of Russia has added $146,000,000 to its home reserve of gold. These bank holdings are not Government property, but they are traditionally regarded as indicating the scope of the home financial resources on which a Government might rely in an emergency.

This comparison, in the case of Germany, France, and Russia, might be taken as meaning that one powerful restraint against belligerent action is removed. But when one examines the status of the two immediate parties to the Austro-Servian dispute, the case is altogether different. The Bank of Austria-Hungary reported $259,700,000 gold in its reserve when war broke out in 1912—much less than in the two preceding years; it now holds $259,800,000, or almost exactly the same. The public and private finances of the Dual Monarchy have long been in a highly precarious state; its industries have been prostrated; money is dear; bankruptcies and unemployment have reached a formidable total; and on top of this, the Hungarian harvest is in large degree a failure.

That the Austrian and Hungarian stock exchanges should on Monday have closed their doors, under the circumstances, is merely one more indication of the position in those countries.

There are no doubt conceivable instances in which a desperate situation of the sort may help to drive a government to war. But in this case, Austria will have to rely on Berlin to help her out; it is fair to presume that the French and English markets will be shut to her. Of Servia's financial and physical position, it is hardly necessary to speak. Bankrupt even before the Balkan War, her public credit and resources are naturally now at a minimum. Very possibly, this well-known fact was one reason for Austria's selection of this moment for her ultimatum. But Austria's own situation ought also to have been a reason for hesitation by her Government in taking the final step.

Important New Macmillan Books

FEEBLEMINDEDNESS: ITS CAUSES AND CONSEQUENCES

By **HENRY HERBERT GODDARD,** Ph.D., Director of the Research Laboratory of the Training School at Vineland, New Jersey, for Feeble-Minded Girls and Boys, author of "The Kallikak Family," etc.

A consideration of 327 cases of feeblemindedness which have come under Dr. Goddard's personal observation in his official capacity. The work differs from most of those in the field in that it is what may be termed a source study. Instead of generalizing on the subject of feeblemindedness, presenting arguments for this theory and that, and concluding with vague speculations, Dr. Goddard gives facts and allows the reader to draw his own conclusions.

Illustrated, Cloth, 8vo, 600 pages, $4.00 net.

PSYCHOPATHOLOGY OF EVERYDAY LIFE

By Professor Dr. **SIGMUND FREUD,** LL.D. Authorized English edition, with Introduction by **A. A. BRILL,** Ph.B., M. D., Chief of Clinic of Psychiatry, Columbia University; Chief of the Neurological Department, Bronx Hospital and Dispensary; former Assistant Physician in the Central Islip State Hospital, and in the Clinic of Psychiatry, Zurich.

With great ingenuity and penetration the author throws light on the complex problems of human behavior, and clearly demonstrates that the hitherto considered impassable gap between normal and abnormal mental states is more apparent than real.

Cloth, 8vo, 342 pages, $3.50 net.

GALILEO GALILEI: Dialogue Concerning Two New Sciences

Translated from the Italian and Latin into English by **HENRY CREW** and **ALFONSIO DE SALVIO,** of Northwestern University. With an Introduction by **ANTONIO FAVARO,** of the University of Padua.

"To say that students of mathematics will be interested in the volume is true, but it falls far short of the extent of the interest that will be aroused by it." For more than a century English-speaking students have heard Galileo referred to as the founder of modern physical science, but have had no opportunity to read in their own language what Galileo had to say. The present translation—a rendering into current English of the text of Favaro's National Edition—supplies this want.

Boards, 8vo, 300 pages, $2.00 net.

PROBLEMS OF CHILD WELFARE

By **GEORGE B. MANGOLD,** Ph.D., Director of the School of Social Economy, Washington University.

A work of special appeal to all men and women interested in the various aspects of practical sociology, and in the constructive philanthropy which deals directly with the child, and the improvement and social betterment of conditions relating to child welfare.

Cloth, 8vo, 522 pages, $2.00 net.

STATE AND COUNTY EDUCATIONAL REORGANIZATION

By **ELLWOOD P. CUBBERLEY,** Professor of Education, Leland Stanford University.

"The revised constitution and school code of the hypothetical State of Osceola," a forcible plea for educational reform and reorganization.

Cloth, 8vo, 257 pages, $1.25 net.

MANUAL OF FRUIT INSECTS

By the late **MARK VERNON SLINGERLAND** and **CYRUS RICHARD CROSBY,** New York State College of Agriculture, Cornell University.

A practical work on the principal insects which attack fruits and fruit trees. The life history of each insect is given, the injuries they inflict are described, and there are full instructions as to the means of control, primarily from the standpoint of the commercial grower.

Cloth, 12mo, 519 pages. Illustrated. $2.00 net.

THE FARM WOODLOT

By **E. G. CHEYNEY,** Director of the College of Forestry of the University of Minnesota, and **J. P. WENTLING,** Associate Professor of Forestry, University of Minnesota.

A handbook of forestry for the farmer and the student in agriculture which covers the whole subject of forest raising and producing timber as a lucrative part of the farming business.

Cloth, 12mo, 355 pages. $1.50 net.

THE NEW STANDARD CYCLOPEDIA OF HORTICULTURE

Edited by **L. H. BAILEY** and others. Volume Two just published.

"The fullest and most authoritative work of its class, the ready assistant to every class of plant grower."

Six Volumes. Richly illustrated. Now Ready Vols. I and II. Each $6.00 net.

Published at 64-66 Fifth Ave., N. Y.

The Nation.

NEW YORK, THURSDAY, AUGUST 6, 1914.

Summary of the News

When we wrote last week there was still a faint hope that even at the eleventh hour general war in Europe might be averted. As we write now, all the hope that it is possible to entertain is for a speedy termination of the conflict and for a final settlement that may make it impossible for those few men who have brought about this calamity ever again to decide for nations the issues of life and death. We trace more fully in our editorial columns the responsibility for the disaster that has overtaken Europe and the world.

Following the declaration of war against Servia by Austria on Tuesday of last week, mobilization was begun by Russia. On July 29 a semi-official warning to Russia to cease her activities was published in the inspired *Frankfurter Zeitung*, and this was followed by a demand from Germany, practically amounting to an ultimatum, that Russia state her position in the conflict. Russia's reply was an official announcement of mobilization, and on Friday the Kaiser declared a "state of war" to be existing in Germany. A more definite ultimatum by Germany demanded that Russia cease mobilizing within twelve hours, and this being ignored, at 7:30 on Saturday night Germany declared war on Russia. An order for the mobilization of the French troops, including practically every man under fifty years of age, was also promulgated by President Poincaré on Saturday, and Germany, scattering ultimata over Europe, issued one to France, which expired on Sunday. On the same day martial law was proclaimed in France and Algeria. By Monday a state of war existed on both the French and the Russian frontiers of Germany.

It is next to impossible from severely censored cable dispatches and from conflicting rumors to determine exactly what has taken place, but it seems perfectly clear that Germany took the initiative in crossing the frontier into France without awaiting a formal declaration of war. Infinitely more serious, however, is Germany's action in violating the neutral territory of the Grand Duchy of Luxembourg and of Belgium. German troops seized the railway in Luxembourg on Saturday night, and the Duchy was occupied by a large force, which has been estimated as consisting of 100,000 men. The neutrality of Belgium, which is guaranteed by treaty among the Powers, has also been violated, Germany having issued yet another ultimatum to that country, which expired at seven o'clock on Monday morning, offering an entente if the movement of German troops through the country should be facilitated. The request was refused, and on the same day German forces invaded Belgian territory.

The course that Great Britain would take remained for some time in doubt. The British Foreign Secretary, Sir Edward Grey, and the Cabinet have bent every endeavor towards the preservation of peace, and there has been a notable absence of jingoistic feeling in England, as, indeed, in France also. In spite, however, of a considerable peace sentiment in England and, presumably, in the Cabinet, it is obvious, since from the first every precaution has been taken as though war were impending, that the hopes entertained by the Ministry of being able to maintain a neutral attitude were slight. The invasion of Belgium was the decisive act, and Sir Edward Grey, in speaking of Belgian neutrality, declared in the House of Commons on Monday: "Our interest is as strong to-day as it was in 1870." As we write, no definite declaration of war has been made by Great Britain, but an ultimatum on the Belgian situation was issued to Germany on Tuesday, and the tone of the debates in the House of Commons leaves no doubt as to the determination of Great Britain to support France. John Burns, President of the Board of Trade, on Monday resigned from the Cabinet, as he could not endorse the policy of the Government. Mobilization of the British army was ordered on Tuesday.

The possible attitude of Italy in the event of a European war, which has long been a commonplace of discussion, has now been decided, temporarily at least, by a declaration of neutrality. The Italian Government bases its position on the ground that its obligations to the Powers of the Triple Alliance are confined to a defensive war, whereas it regards the present war as aggressive. That, it may fairly be said, though true, is no more than half the truth, for hatred of Austria may almost be said to be one of the bonds that make Italy the "geographical expression" into Italy the nation, and it is exceedingly doubtful whether Italian troops could be induced to take the field as allies of Austria. Other European countries which have declared their neutrality are Bulgaria, Spain, Portugal, Holland, Switzerland, and Greece. In most of these countries, however, preparations have been made for eventualities. Holland and Switzerland have ordered partial mobilization, and a treaty exists between Great Britain and Portugal according to which the latter country furnishes 10,000 men to assist Britain in case of war. Japan has announced that in the event of England becoming involved in the Far East she will carry out the obligations of the Anglo-Japanese treaty.

The financial aspects of the European situation, with which we deal more fully elsewhere, are naturally of a seriousness that can hardly be overrated. When the New York Stock Exchange closed on Friday, not an exchange of first-rate importance in the world remained open. The English bank rate was advanced last week first to eight per cent. and then to ten, where it remains. Following a meeting of Secretary McAdoo and leading bankers of New York on Sunday, a reassuring statement on the banking situation was given out, and it was announced that measures would be taken for the conservation of the gold supply. Secretary McAdoo also issued a statement that $100,000,000 of additional currency would be issued immediately to the banks of New York. Congress has authorized the issuance of an amount estimated at one billion dollars in emergency currency if the banks of the country should ask it.

Some anxiety has been occasioned by the position of American citizens travelling in Europe. Owing to the suspension of service by some of the transatlantic lines and probable suspension by others, their prospects of returning to America in the immediate future appear somewhat vague, and their embarrassment is increased by the difficulty of obtaining money through the ordinary means of exchange used by travellers. The matter has been taken up by the United States Government, and measures for the relief of peripatetic Americans are being considered.

The Mexican situation, like everything else, has been overshadowed by the news from Europe. There are apparently no developments of great importance to record, and the reduction in the quantity of news reported is to be welcomed as tending to an improvement in quality. As we go to press, however, the report comes that the Constitutionalists have refused to entertain the conditions of peace proposed by the representatives of Provisional President Carbajal at Saltillo. It is stated that they have never even seen Gen. Carranza himself, and considerable anxiety is felt in Washington as to his intentions regarding an amnesty.

We deal elsewhere with the important decision delivered on Saturday by the Interstate Commerce Commission in the advance rate case. The decision gives the railways in the territories west of Pittsburgh and east of the Mississippi River an increase which, it is estimated, will yield between $10,000,000 and $15,000,000 additional yearly revenue.

The intervention of the President in the dispute over wages between managers of Western railways and the enginemen and firemen in their employ resulted on Monday in a decision of the managers to accept the plan proposed by the Federal Board of Mediation, which had already been favorably passed upon by the representatives of the men.

With appropriate ceremony the Cape Cod Canal, connecting Buzzard's Bay with Barnstable Bay, was opened to commerce on July 29. The cost of this useful enterprise has been $12,000,000, all of which is private capital.

"Hunger-striking" seems unlikely to become a popular hobby among criminals in the United States. In the case of the female I. W. W. agitator, who has gained some notoriety by attempting a hunger-strike, strongly suspected of being assisted by a tabloid diet, Miss Katharine B. Davis, Commissioner of Correction for New York city, last week gave notice to the press that no further information concerning the progress of the adventure would be forthcoming.

The deaths of the week include: Prof. Paul Reclus, July 29; Prof. Francis H. Storer, July 30; Jean-Léon Jaurès, Thomas J. Kiernan, July 31; Harry Wilson, August 2; Col. Stephen Crosby Mills, Prof. Ralph C. H. Catterall, August 3.

The Week

Sir Edward Grey's reading of an official document in the House of Commons was the first authorized and authentic account we have had of the extent of the Anglo-French agreement. Rumors about it have been thick. Most of them have been wide of the fact. The Foreign Secretary's explanation made all clear. There is no formal alliance. No explicit military convention has been signed. What passed was simply an exchange of notes, by which the two Governments bound themselves, in case either was attacked by a third nation, to consult together with a view to joint action. This may be said to be an alliance in everything except form. It has most of the advantages of a defensive alliance without its disadvantages. That it is considered binding both in Paris and London is clear. This accounts for the persistent efforts of the French Government to put Germany in the position of the aggressor, and also for its confident expectation that it would have the cooperation of the British navy. It explains, too, the dominant English feeling of the moment, as expressed by Lord Charles Beresford, when he calls upon the nation to "pay a debt of honor" to France.

Nevertheless the British Government would be disinclined to join in the war against Germany unless it were convinced that the highest national interests were involved. Why they are, it needs but a moment's reflection to see. If Germany were to triumph over both France and Russia and sweep everything clear to the North Sea and the Channel, England would not be safe for a day. It is to avert the possibility of such a blow at her very life that she has been seeking good understandings with France and Russia, and straining her financial resources in order to out-build the German navy. The feeling in England that, now that the fated hour has struck, it would be folly to hold back, will surely be so strong and urgent that, in our opinion, it is bound to decide the issue with the Government. How vital its decision is considered in Germany, may be judged by the enormous and unprecedented bids which the Berlin Foreign Office has made to England in order to induce her to remain neutral.

The military rôle which England may fill in the war is plainly indicated. She may send an expeditionary force to Belgium, but this could play only a small part in the land operations, where millions of men will shortly be engaged. It is British command of the sea that will be the fearful make-weight thrown against Germany. The German navy, in the face of the combined English and French fleets, will be either annihilated or bottled up. This may easily be in the long run the decisive element in the struggle. France would be nerved by the assured English naval support to endure initial disasters to her army, if they should come, and to fight desperately on the defensive. So would Russia. And England, once in the fight, would never rest until German sea-power was forever broken.

Italy's attitude respecting her obligations under the Triple Alliance may be based upon remembrance of a saying by Metternich. There was talk of an alliance between England and Austria, and Metternich was asked if it might not be a good thing. He replied: "Certainly. So might an alliance between a man and a horse. But it is important to know which is the man and which is the horse." Italy has made it pretty plain that she has no idea of offering herself as a horse for her ancient oppressor, Austria, to ride off on.

A most dramatic index of French unification in the face of danger is furnished by the simultaneous addition to the Cabinet of two "strong men" of the Republic, one of them the most unrelenting political opponent of President Poincaré, and each at one time a bitter enemy of the other. Théophile Delcassé was Minister of Foreign Affairs at the time of the Morocco incident, and in that humiliating moment was sacrificed to Germany. Shoulder to shoulder with him is now placed Georges Clemenceau, whose Ministry, it is interesting to remember, fell in 1909, primarily through the vindictive attacks of Delcassé upon the naval administration. The heated debate, following the latter's exposure of irregularities and inefficiency, began with a speech of Clemenceau's upon the inappropriateness of attack from the man responsible for the country's defenceless condition in 1905, and ended with a declaration by Delcassé that the shame was not at all his, but that of those whose criticism had frightened France into her shrinking attitude. The time has come when quarrels are forgotten, and the two men can employ their abilities and experience with a single mind.

The action taken by the New York banks on Monday, authorizing the issue of clearing-house certificates, must be judged in the light of the wholly abnormal circumstances of international finance. It is a precautionary measure, adopted, as was the closing of the Stock Exchange last Friday and the arrangement on Saturday for special banknote issues, wholly because of the state of affairs in Europe. There is no panic in this country, and there is excellent reason why there should be none. Our financial situation at home stands out like a rock in the vista of other great markets submerged in the flood of the Continental war. We are not only in a sound position in our home affairs, but our position towards the European markets—holding, as we do, the largest exportable surplus of American wheat in our history, at the moment when Europe's need of it is paramount—is of unusual strength. With a serious shortage in this season's European yield of grain as a whole, with the world's stored reserves last month 29,000,000 bushels below the figure of 1913, with the Australian, Indian, and South American harvests not due until next winter, and with several European countries provided with only three or four weeks' supply in hand, Europe will be compelled to buy our wheat, and to find the way to pay for it and transport it. We are inclined to doubt if a neutral state, in time of war, has ever been placed in so peculiarly advantageous a situation.

Nevertheless, the complete derangement of Europe's own finance, the blockade of the foreign exchange market, and the official postponement of collection of indebtedness in European markets with which New York's financial relations are intimate, could not fail to cause the greatest confusion and embarrassment on our own money market. In what way this part of the situation will be straightened out, it is not easy at the moment to say; but pending the adjustment that must be made in that quarter, the adoption of all necessary precautions in advance is entirely wise. The duty of our bankers is to confront the situation without any sign of fright on their own account. The part which the people at large will be called upon to play is to accept philosophically such temporary inconvenience as Europe's troubles may occasion in their banking arrangements, and to recognize the great underlying strength and soundness of the American position. We shall presently learn what it really means to be a self-supporting industrial, agricultural, and commercial state, at a time when the rest of the world is going to war, and when the fighting nations must

depend for their subsistence on the supplies of foodstuff which we are better able than ever before in our history to spare for them.

We find it hard to believe that the proposed legislation at Washington throwing open American registry to foreign vessels will succeed in its purpose. Its desirability no one can question; everything must be attempted to relieve the frightful stagnation of the Atlantic trade which is upon us, and to aid what may soon be starving Europe as well as warring Europe. But the difficulty seems to be that, under the Declaration of London, belligerents may disregard anything that is obviously a temporary transfer of nationality during war. Thus the sudden appearance on the high seas of the Imperator or Vaterland flying the American flag, but manned by their German crews, would not for a moment be respected by British cruisers. What is required is a *bona-fide* transfer of foreign ships to American owners, not for a few thousand dollars, but for their entire value. Even if foreign owners should be willing to sell at present, would American capital be forthcoming under these speculative conditions? When the ships are transferred, American navigation laws will apply, considerably increasing the cost of operation. More hopeful is the report from Washington that the leaders of both parties are of the opinion that this is just the time to revise all our shipping laws and to deal with the whole question of the revival of our merchant marine. That it needs scientific attention is as true as the fact that it has long been abominably neglected and hampered by utterly antiquated laws.

The chairman of the Republican State Committee of Massachusetts makes a statement for which the terrible word "reactionary" is none too strong. It is that there will be no Committee slate in the Republican primaries. "Perhaps I am unduly sensitive on the subject," he says, "but I don't want any Republican aspirant for office to feel that he is not going to have a fair chance to get a nomination at the hands of the party." He goes so far as to admit that he likes to see candidates coming into the field. "It is a healthy sign," he thinks. Now, this kind of talk might have done very well once, but it has been rendered obsolete by the custom of the Progressives in putting their State Committee behind a candidate long before the primary. Possible rivals submit their claims in an almost formal way, and abide by the decision of the central body. Does not everybody know that Joseph Walker is to be the Progressive nominee for Governor of Massachusetts, although other candidates are whispered about? What kind of contest is there in Illinois over the selection of the Progressive nominee for the high office of United States Senator? Who will be found to have nominated the Progressive candidates for Governor of New York, Senator from the same State, and all the other important places on the ticket? Primaries are too uncertain. In the slate is the hope of anti-bossism.

Not amalgamation, but a quiet bolting of the ticket, is the weapon held in reserve by Illinois Democrats in case Roger Sullivan wins the nomination for Senator. One by one his opponents have been withdrawing from the race, in order that the fight against him may be concentrated behind a single leader. The latest to take himself out of the contest made this significant statement:

> The progressive Democrats of Illinois want a chance to beat Mr. Sullivan with a candidate whose success will insure the end of bossism in Illinois. If they are not given this chance, they will take another means of destroying the Democratic end of the Sullivan-Lorimer partnership. They will allow Sullivan to be nominated, and in November they will discipline the political leadership in the Democratic party in Illinois by selecting a Progressive United States Senator.

Another of these anti-Sullivan candidates who had also withdrawn spent a day on Beveridge's campaign train and had a conference with Medill McCormick. It is even reported that Joseph E. Davies, Commissioner of Corporations and secretary of the National Democratic Committee, has abandoned his support of Sullivan and is quietly working in the interests of Raymond Robins, the Progressive candidate. Sullivan came to Wilson's support at a critical time at Baltimore, but Bryan has been fighting him bitterly in the *Commoner*. The Administration has nothing to gain by his election.

"Fusion in spots" is now the Colonel's slogan. This to the Progressive candidate for Governor in Maine who came to him to say that the Progressives would not compromise in Maine so long as the Republican leaders were those charged with the crime of 1912. But he went away satisfied when the Colonel explained that fusion was to be "localized" in those places only where the Republicans were willing to break with the corrupt bosses. Localization would seem to be rather an unhappy phrase, in view of what has happened to the efforts to localize Servia and Austria. The Colonel's mind is now altogether fixed on the corrupt bosses; there must be a general Continental war upon them. Curiously enough, we have heard nothing from Oyster Bay this summer about the new Nationalism, or even of that pious undertaking, the recall of decisions. This puzzles us all the more because of the statement of the 100 Indiana Progressives who bolted back to the Republicans this week, that they did so only because the Progressive party had accomplished its holy purpose and been victorious all along the line.

Penrose has been thought to have far the best chance in the Senatorial fight in Pennsylvania, but Gifford Pinchot's battle tactics must fill even the boss with doubt of the result. One day last week, for example, the Progressive candidate was at the corner of Water and Mifflin Streets, Philadelphia, at six o'clock, primed to greet 1,500 men on their way to work. These men, if we may trust the account in the *North American*, were wonderfully well informed on the political situation, for they "had all heard of Pinchot and his fight against Penrose." And the intimacies Mr. Pinchot struck up with these men whom he had never seen before! "You're the boy, Pinchot," one assured him. "You'll beat him." So it kept on all day, for the untiring candidate went from one factory to another, taking advantage of the noon hour to make an address, and standing from the middle of the afternoon until after six in the evening at the gate of a saw works, greeting the men employed there as they found time to come out in groups. At the end of the day, his managers figured that he had broken his record by shaking the hands of 2,500 of the "industrial workers" of Philadelphia. A poverty-stricken Progressive registration can hardly matter when the candidate goes out into the highways and byways and compels the voters to come in.

While the assassination of Jean Jaurès in Paris last week cannot be directly attributed to his steadfast opposition to war, it is plain that the brain of the man who shot him had been upset by the notion that the eloquent Socialist leader was somehow impairing the military strength of France. It was presumably the act of a madman which robbed the Republic of one of its most remarkable talents. Jaurès was generally regarded as the finest speaker in France. His orations in the Chamber were events. He had the port, the voice, the gesture to make his

great flow of soul take on the appearance of classic eloquence. Not since Berryer or Gambetta had a Frenchman risen to fill the popular conception of a great public orator as did Jaurès. In addition, he was an indefatigable organizer, an editor, filled with the enthusiasm of his propaganda, which, in later years, took on international proportions. Whatever his mistakes and weaknesses, he was one of the intellectual forces of modern France, and to have the thin-spun thread of his life slit in this abhorrent way is a tragedy of which the sadness extends beyond the bounds of his own country.

We published recently a letter from a studious correspondent who sought to elucidate the mystery of the "Nut"—an unnatural phenomenon which suddenly appeared in London about a year ago, and in a brief career has gained immortalization in the pages of *Punch*. In America we are acquainted with the "Nut" only by hearsay. Broadway knows him not. And, if we are to believe an article in a recent issue of the London *Times*, our acquaintance with him is likely to remain vicarious. Apparently he is an exotic creature, quick to bloom, and destined as rapidly to fade, for already the *Times* declares him to be "a little past his grandeur and verging on his decadence." *Sic transit gloria Nucis.* He is destined to go the way of his predecessors, but antitheses, the beau, the macaroni, and the dandy. And so the *Times* has done a service in putting on record for the benefit of posterity, before he passes and is succeeded by another type, exactly what manner of man was the "Nut." His general appearance we know from the English comic papers. The keynote of his attire is an expensive slouchiness, and it is his earnest desire to give the impression that he has but just desisted from driving furiously over the face of the earth in a high-powered automobile. But the *Times* reveals the finer points of the 'Nut." It is, for instance, of the utmost importance to know that such is his desire to curtail space and time that "that which to slower men is absolutely impossible he regards merely as 'abso. imposs.'" And we first learn from the *Times* that it has been reserved for the female "Nut" to abandon the time-honored expression "my aunt!" for the more daring expletive, "my godmother!" Could "nuttiness" be more nutty?

"The day of the war correspondent is gone." So telegraphs a war correspondent, Dr. Dillon, from Vienna. He knows that he would not be allowed to go to the front, or to send any reports at all on military operations. Truly the day of Forbes and Burleigh, not to go back to "Bull Run" Russell, is gone. Never again will army commanders give a free run of their headquarters to "chiels" taking notes to be incontinently printed. The change from the old times, for which the reasons are obvious, has been slow in coming, but is now almost complete. Grim soldiers like Kitchener never had any love for newspaper correspondents, though he was forced to tolerate such a man as G. W. Steevens both in the Sudan campaign and in the South African. Our own war with Spain showed a relapse from the growing practice, and seemed, as everybody remembers, to be waged by and for the newspapers. The Japanese, in their war with Russia, kept the correspondents at a safe and inglorious distance; and by the time the last Balkan war came along, the shutdown was complete. The military argument for it is convincing. In informing the public, the newspaper informs the enemy; consequently nothing must be published until long after the event, and then only in a form agreeable to the army authorities. This may seem hard on the press, and also on a news-eager public, but it is war.

The extension of the Ford profit-sharing plan to include customers as well as employees is not the first instance of the kind in this country. In 1905, the N. O. Nelson Manufacturing Company of St. Louis, makers of engines and boilers, after an experience of nine years of sharing their gains with their employees, announced that profits above 6 per cent., which would be regarded as interest on the capital, would be divided in the proportion of 1 per cent. on wages and salaries and 1½ per cent. to customers, this last amount being distributed to individuals in accordance with the gross profits on their purchases. Two years ago the percentages on wages and salaries and gross profits were made equal. Mr. Ford's plan differs from this one in setting aside specific sums to be returned to customers as rebates in case the sales amount to 300,000 cars for the year; and the size of the rebate is the same regardless of the price of the car. A greater difference between the plans is that the Ford Company makes its award in the form of cash, while the Nelson firm gave its customers stock, upon which they received dividends, and consequently acquired a voice in the management of the concern. The extent to which this process has been carried is shown by the fact that the shares thus obtained by employees and customers now comprise two-thirds of the company's stock. Employees and customers are represented on the board of directors. Incidentally, it may be noted that, while the employees have been and are free to join any labor union, none of them have done so, with the exception of fifteen or twenty in one department.

The opening last week of the Cape Cod Canal deserves far more attention than it has received. The colossal undertaking at Panama, and such gigantic engineering feats as the bringing of water from the Catskills to New York city, with their hundreds of millions of expenditure, naturally overshadow an enterprise which has cost but twelve millions of dollars and has been marked by nothing remotely as interesting as a Culebra Cut. Yet it is a most useful and praiseworthy undertaking. No government subsidy has aided it; no State or Federal credit has been drawn upon, nor a single "pork barrel" opened for it. It is precisely the kind of enterprise in which Americans used to take their greatest pride—one initiated and carried out by individual daring and enterprise, financed by private investors, constructed with consummate skill and remarkable speed, without any scandal—a monument, in brief, to Yankee foresight and skill.

News that the administration of Denver has cost $100,000 more in the first year of commission government than under the mayoralty system has been heralded as a fact of decisive importance regarding the comparative merits of the two methods of government. Of course, it proves nothing at all. Commission government may turn out to be more expensive for Denver than the mayoralty system, or it may not. One year shows nothing whatever. The same thing happened with Trenton in its first year of commission government. But what was the reason? Not that the new form of administration was extravagant, but that any form of government would have had to meet certain obligations incurred by previous governing bodies. These disposed of, the cost of governing Trenton fell, not merely to the old level, but below it. Whether this improvement was due to the new system or only to better management, or to both, cannot be said offhand. But until her commission government has been in operation for considerably more than a year, any conclusions based merely upon an increase in Denver's expenses must be valueless.

THE RESPONSIBILITY FOR WAR.

Germany, having grasped her sword, has procceded to lay about her with a high hand. Hcr entrance lnto Luxembourg, her invasion of Belgium—both of whlch have had their neutralization solemnly guaranteed by the European Powers, Germany included—were the directest klnd of challenge to England, and there was never any doubt as to how it would be answered. By this action Germany has shown herself ready to llft an outlaw hand against the whole of Western Europe. It is not simply that she has stood as one prepared to violate international compacts. Treatles go crashing to the earth ln time of war, and the German authorities may plead military necessity. But the ultimate purposes, the enormous stakes for which the Emperor has hazarded all, have not been concealed. If Germany could beat the armies of both France and Russia, with England remaining aloof, she would attain not only the hegemony of all Europe, but complete dominance. She would seize Belgium and Holland and present a formidable front on the North Sea. By means of these latent threats, the Emperor William has, as it were, put himself in the position of the first Napoleon. If a coalition against his overweening pretensions did not exist, it would have to be invented.

Luxembourg in 1914 recalls Luxembourg in 1867. At that time it was Napoleon III who was planning to take possession of the Duchy. Gen. Moltke wished to seize the occasion to make war upon France. But Bismarck put his veto on the plan. Moltke pledged his word that the Prussians could beat the French. War was bound to come sooner or later, so why not force it at once? Bismarck refused. He said that he did not believe in the policy of anticipatory or "preventive" wars. Moreover, and this was his real reason, Prussia could not be sure that an unprovoked attack on France would not create military alliances against her too powerful to be overcome. So he contented himself for the moment with checkmating Napoleon III by making public the secret treaties of offensive and defensive alliance with the South German kingdoms, and by bringing about the London conference that neutralized Luxembourg. But in those days there was a great statesman at Berlin, imposing his will upon the King. To-day we have a feeble Chancellor entirely overridden by the Emperor. Kaiser Wilhelm has, indeed, dropped the pilot!

The German Emperor protests that he has been "forced" into war by his "envlous enemies." Of this history will judge. By the light we have at present, this at least is clear, that if Emperor William did not directly cause and desire the war, he at least failed to prevent it when it would have been easy for him to do so. The proof of this lies upon the surface of events, as one reads their succession in the European press. There was nowhere in Europe the stunned surprise of the United States at the sudden rise of the spectre of war. There the danger was instantly visible. It was felt to be acute at the moment of the presentation of the rough Austrian note to Servia. Everybody at once jumped to the conclusion that the move had been made with Germany's privity and consent. The German Foreign Office did not deny it, though it gave out a statement to the effect that, while it had been aware in general of the "scope" of the Austrian demand on Servia, it was not to be understood as approving the violent language in which it was couched. So there was such a thing as Austria stamping her big boots too noisily for even a Prussian Junker! But the point to watch was St. Petersburg. There the Austrian affront to Servia caused extreme emotion. An extraordinary Council of Ministers was at once called, and at its close the public was informed: "Ministers are unanimously agreed that Austria-Hungary has thrown down a challenge to Russia, and that, in M. Sazonoff's words, there could be only one answer."

All Europe saw at once in this a threat of war to which no country could set a limit. Then it was that the English Foreign Secretary, Sir Edward Grey, going straight to the core of the matter, addressed his appeal to the German Emperor. He besought Emperor William to join with England in immediately calling a Congress of the Powers to deal with the differences between Austria and Servia, and so prevent war. After a day's deliberation, the Kaiser declined the offer. He still professed to desire peace and to be working for it earnestly; but whether he was sincere or not, the fact is now plain that his refusal of the British plan was fatal. It is idle to speculate on his motives. But the conclusion cannot be escaped that he either made a gross miscalculation of the diplomatic situation, and was completely deceived as to his own power to bluff Russia off again, or else that he deliberately chose a path which he knew could issue only in war.

Either way, it was a decislon big with fate. The human mind cannot yet begln to grasp the consequences. One of them, however, seems plainly written in the book of the future. It is that, after this most awful and most wicked of all wars is over, the power of life and death over millions of men, the right to decree the ruin of industry and commerce and finance, with untold human misery stalking through the land like a plague, will be taken away from three men. No safe prediction of actual results of battle can be made. Dynasties may crumble before all is done; empires change their form of government. But whatever happens, Europe —humanity—will not settle back again into a position enabling three Emperors—one of them senile, another subject to melancholia, and the third often showing signs of disturbed mental balance—to give, on their individual choice or whim, the signal for destruction and massacre.

THE MILITARY PREPAREDNESS.

Forecasts as to what may happen, now that all Europe has decided to halt the progress of civilization by going in for wholesale murder on a more terrible scale than the world has yet witnessed, would be utterly futile. The magnitude of the forces involved staggers the imagination; beside them the armies of the Napoleonic era fade into insignificance. The Germans call the "Battle of the Nations" that which was fought at Leipzig by about 425,000 men in 1813. The German standing army to-day alone comprises 700,000 men; about 1,800,000 will be under arms by the end of this week, with 1,500,000 more available as a final resort and for guarding communications. These are, if anything, underestimates; it is believed that actually the turn-out will be larger. The very numbers to be called out in every country will enormously increase those economic factors which have so much to do with the outcome of any prolonged struggle. Modern war is infinitely more costly and destructive than that of any other period of history, and the question of finance must indubitably play a greater part than ever before.

It is, however, possible to sum up somewhat accurately general military conditions among the various nations which have been drawn into the conflict. Thus, it is not often that so frank a criticism of a neighbor's army appears anywhere as that which has just been printed by the *Militär Wochenblatt*, ln regard to Russia. This official German military organ can hardly conceal its contempt for the Czar's forces. It points out that Russia never yet won a victory over an army of equal strength, and would not have defeated Turkey in 1877 without the aid of Rumania. The five new Russian army

corps which were supposed to have been created after the Japanese disaster do not exist, says this authority. There is certainly no reason whatsoever to suppose that the morale of the Czar's troops, their leadership, and their armament have been in the slightest degree improved since the Manchurian campaign. The reorganization of the Russian navy has likewise made almost no progress. What new ships have been added to the fleet are manned by the same kind of officers and men who proved so utterly ineffective in the fleet of Rozhestvensky. True, in fighting at home the Russians will have marked advantages as compared with their campaign in Manchuria, where one long, for the most part single-track, railway line connected them with their base of supplies. It is not likely that if they attack Germany they can get far across the border; in all probability they will be fighting on defensive lines. It is not impossible that their best tactics will be those which proved so fatal to Napoleon. They are certainly not on a par with their neighbors to the east.

As for the German army, the *Militär Wochenblatt* boasts that Germany can "contemplate the gravest events with entire equanimity, with confidence in God and in her own strength." Whether this confidence does not perilously border on over-confidence is one of the questions that can be answered only by the arbitrament of war. But there are foreign observers, and some German critics as well, who feel that the Kaiser's army has not only too great confidence in itself, but that it has not profited by the lessons of the Boer War and the Manchurian campaign. In the annual manœuvres conditions have constantly arisen which would have meant the wiping out of large masses of troops in actual hostilities. There have been cavalry charges as hopelessly futile in conception as that of the French cavalry at Sedan. The Germans have only just adopted a modern campaign uniform for all troops, similar to the khaki of Great Britain and the United States, but of a light gray color; so recently has this been decided upon that it is doubtful whether the whole army can be supplied with it in time to discard the uniforms of 1870, the helmet and heavy blue and red coats of the Prussian infantry, for instance, which were such shining targets from Worth and Gravelot to Paris. But it is undeniable that the *Mannczucht* of the Germans, the discipline of the individual soldier, stands as high to-day as ever; and that, whatever its moral defects, the corps of officers is more enterprising, hard working, and professionally zealous than that of any other nation. It is a singular coincidence that this national crisis finds at the head of the General Staff another Von Moltke. Has he his uncle's talent? Are there other great leaders? Upon this depends, after all, the outcome; as France showed in 1870, superb individual prowess, and the gallantry of whole army corps, count for nothing if the leaders blunder.

As to France, there can be no two opinions that the army as a whole is in vastly better condition than when it faced the Prussian army in 1870. And yet it has only recently received a bad black eye. The General Inspector of the Fortifications Artillery wrote to the War Minister in January, 1914: "In forty years we have made no progress with our material." The War Minister himself admitted that, in their technical troops (railway, engineer, pioneer, etc.), the Germans were far ahead of the French. To make good the deficiencies in equipment, the Minister has just asked only one billion four hundred and eight millions of francs, this to bring the artillery up to date, to modernize the forts on the German boundaries, and to purchase any number of other supplies, including two millions of pairs of boots absolutely needed for a campaign. Even the supplies of ammunition are far from complete. The War Minister declared: "I have told the truth and would be a criminal had I portrayed the conditions otherwise." In view of what has come to pass, he may, none the less, regret the frankness of his utterances. But the *morale* of the troops is not affected by this. France cannot, of course, put into the field such numbers as Germany, but she will not be able to complain of the spirit and courage of the men. It cannot be maintained, however, that the French service is equal to the German in evenness and uniformity of training and discipline, though the average French soldier has probably greater adaptability and mental alertness than the German.

When it comes to the fleets of the various nations, the British, of course, rank first, with the Germans a good second, the Russians negligible, and the value of the French in great doubt. Both on land and on sea terrible new engines of warfare, the submarine, the dirigible, and the aeroplane, will have their first real trial, and no one can estimate what they will do to add to the horrors of the conflict. The apparent certainty that England will sooner or later be drawn in makes inevitable the greatest battles the world has yet seen, to make a mock of our Christianity, 1,900 years after the coming of the Prince of Peace.

THE RAILWAY RATE DECISION.

Obscured as it is, in the public mind, by the outbreak of European war, Saturday's decision by the Interstate Commerce Commission, on the Eastern railways' petition for higher rates, appears to the average reader, and quite inevitably, as a matter of subordinate interest. With the stock exchanges closed, it is impossible to ascertain, through the course of prices, what the judgment of the financial community on it really is. It would no doubt be equally impossible to draw that inference if the Exchange were open, and confronted simultaneously with the news from Europe.

We are inclined to believe, however, that if the decision as it stands had been published at an ordinary time, it would not have been ill-received, even on the Stock Exchange. It concedes the main contention of the railways as to the need of larger revenues. It grants many increases in rates. On railways in certain parts of the territory covered by the application it grants the full 5 per cent. increase applied for. It therefore disposes of the argument which has created most uneasiness in the prolonged controversy over this application—the argument that the Commission was unwilling to use its authority to increase freight charges. Further than this, the opinion handed down with the decision declares unreservedly that railways operated with private capital must be subject to such regulation, in the matter of rates allowed, "as will reasonably permit a fair return on the money invested." Recognizing frankly the difficulties which confront the railways, the Commission announces it as its duty and purpose "to aid, as far as we legally may, in the effort to meet the situation."

To the railways, the disappointing aspect of the decision is that, while granting the increase to roads between western Pennsylvania and the Mississippi River, the Commission denies any increase to the railways east of that territory. Its ground for this discrimination is that, in its judgment, the Eastern lines are as a rule already "distinctly prosperous" and that, where they are not, the trouble is due to other causes than low rates; whereas the Western lines have been operating under rates which were both relatively and actually too low. These were, in fact, established during destructive "rate wars."

When the fifty railways, in May of 1913, asked for an average of 5 per cent. increase in rates, they based their petition, first, on increase in wages and taxes; secondly, on

the ground that costly additions to facilities were needed; thirdly, on their need of funds, which, they contended, could not be raised unless freight rates were increased. The Commission agrees with the railways on all of the points thus raised, except the last. The increase actually granted will apparently add from $9,000,000 to $15,000,000 to the gross income of the lines immediately concerned, and of the roads which either operate them or participate in their rates through exchange of traffic. This approximately balances the estimated increase of $11,000,000 in operating expenses, through the series of wage increases allowed through arbitration.

Regarding the larger needs of the railways, the Commission points out how, in its judgment, earnings may be increased without increasing freight rates. It first expresses the belief that the passenger business handled by the Eastern lines is unremunerative. Admitting that in many instances unprofitable passenger rates are due to "fares fixed by statutes in certain States," it holds that, if the railways reconstruct their accounts so that the public can be informed as to the exact losses incurred in handling that branch of their business, "the people of those States will cheerfully acquiesce, as the people of New England have done, in granting reasonable increases."

It is next suggested by the Commission that "all the railroads in official classification territory examine their freight rates, rules, and regulations with the view to increasing rates that are found to be clearly unremunerative." Of these rates, many "had their origin in fierce competition for traffic, and have been continued through ignorance of the loss they entail." In the belief of the Commission, the Eastern railways can add largely to their income by doing away with special services now offered to favored shippers, such as free time for unloading or loading freight; savings can also be effected by doing away with passes and free service in the handling of private cars.

Other recommendations for similar economies are submitted. It naturally remains to see how far they are practicable, and, if so, how far they will meet the real needs of the companies. Perhaps the fairest comment on the decision as a whole is that it does not close the question of the Commission's attitude on rates, even of these Eastern railways, but leaves it open. The opinion of Saturday recognizes the Commission's duties in the matter, and their performance does not end with this decision.

THE VANISHING PROGRESSIVES.

Almost as suddenly as the war crisis has startled an unprepared world comes news from all sides of the collapse of the Progressive party. Last Thursday more than one hundred men who voted its ticket in 1912 met in Indianapolis to announce their return to the Republican fold. Some of them have been leaders in the new organization which was to regenerate America, but are now ready to renew their old allegiance. The reasons for their defection no longer exist, they stated in their explanation to the press: "The organized protest against methods and men, but not against principles, was effectual. The purpose of the third party is accomplished." In their view it dies victorious. The Republican State Chairman jubilantly exclaimed that "the Progressive rank and file are with us heart and soul in support of the party of protection."

When a few Louisiana sugar Democrats placed private gain above party principle and bolted to the Progressives, Col. Roosevelt sent them telegrams of congratulation on their high-minded action. It is safe to say that he will be as silent about this defection in Indiana as he has been in regard to the similar signs from other States. Of these there have been so many as to furnish a partial explanation of his latest about-face, after all those glowing assertions that the Progressives never, never would compromise. In the old days, no one used to be a more sensitive political barometer than the Colonel; it is not beyond the range of possibility that his brilliant stroke of amalgamating on Hinman was hastened by a recognition that before so very long he may have little or nothing left to trade with. The disintegration of the party in Massachusetts must have been particularly trying to him, for, like Indiana and California, Massachusetts was a banner State. But when Mr. Charles S. Bird refused to be a candidate for Governor for the third time, the life seemed to go out of the party. It has lost its Boston newspaper; its candidate, Joseph Walker, is a weak leader, if only because he did not leave the Republican party until he had obtained everything possible from his association with it. Worst of all, the handful of rich men who have financed the Progressives have withdrawn their support, so that the managers, after a futile struggle to raise a "war fund" of $50,000, have been compelled to settle their debts at 50 cents on the dollar—rather an interesting position for a party of social justice to occupy.

In California, where Gov. Johnson denies any personal break with Col. Roosevelt, and is said to have an excellent chance for re-election, because of his accomplishments in office, the Progressive registration is less than 200,000, while twice as many Republicans enrolled. In Idaho, the Bull Moose anticipated Col. Roosevelt by endorsing the Democratic candidate for Governor. In Kansas, they are running a straight ticket with a popular editor, Henry J. Allen, as its head. But his hopeless candidacy, which practically insures the election of the present Democratic Governor, really interests nobody. From Topeka comes the report of an almost unheard-of condition of general apathy, which seems to have particularly affected Progressives. "There is," says the report, "a growing Republican confidence that, after the primaries, when the Progressives will make rather a ridiculous showing, in numbers, the new party will rapidly disintegrate." There are no contests for party nominations, and the drafted candidates decline to go out to arouse the electors. Leaders like ex-Gov. Stubbs seek to postpone the inevitable by dragging out new issues; hence a recent article of his advocating Government ownership of railways. This certainly would not appeal to the Colonel. Even in Ohio the tide is running strongly towards the Republicans, though this did not seem to be the case not long ago. In Bartholomew County, for instance, prominent Bull Moosers are seeking Republican nominations, and the prospect is that only one-fifth of the Progressive vote of 1912 will be polled this year.

In New York the Colonel's nomination of Hinman has not gone so well as appeared at first. If the ex-Senator seems to have the lead, neither District Attorney Whitman nor Job Hedges, who is very popular in certain up-State counties, gives any sign of withdrawing. There is some talk of a compromise candidate upon whom all three could agree, evidence of this being the attempt to induce Senator Root to run. The truth is that conscientious Progressives are shocked not only by the Colonel's *volte-face*, but by his open bossing of the whole party. Chairman Bird sulks in his tent. There is little enthusiasm left, if the truth be told; and it will be amusing to see how rapidly the rank and file will now return to the Republican band-wagon. Mr. Roosevelt's manœuvres to capture the Republican nomination in 1916 are certain to be the chief interest remaining in the party. Its existence will always be quoted as the most remarkable proof of a single individual's popularity and political power in our history; for the rest it bids fair to go the way of all our other

third-party movements before two years more have passed. All of this will justify the position of those who held from the first that no new party can come into being without some one compelling moral or economic issue; that a programme of all the virtues, attractive as it may be, does not afford a sound political basis, at least when coupled with the fortunes of an ambitious self-seeker without consistency or fixed principle.

TEACHING BY MOVING-PICTURES.

To a person of old-fashioned ideas, the announcement that the Government has given its official sanction to the use of moving-pictures in schools must be somewhat of a shock. What is to become of a country that reverses the order of nature by making the hours that should be most miserable in the life of a child among the most attractive? Yet the Department of Education has no doubts in the matter. "Within the next decade," it prophesies, "the moving-pictures will be the indispensable adjunct of every teacher and educational lecturer. On the public platform the cinematograph will inevitably have its recognized place, and it may even invade the pulpit. As the attention and interest of educators are more and more drawn to its merits, the future usefulness of the educational cinematograph bids fair to surpass the predictions of its most sanguine advocates." Such an utterance from such a source is emphatic testimony to the rapidity with which the most popular invention of our day is passing from the stage of mere novelty. Indeed, a series of "scientific pictures" is now a regular part of the programmes of the best motion-picture theatres.

The range of films already available for educational purposes is very wide. Aeronautics, archæology, chemistry, forestry, geography, history, hydraulics, music, physics, seismology—one could go through the alphabet. Even the highest abstractions of pure reasoning will some day doubtless be photographed for the man in the street. At present there are certain difficulties in the way of the ordinary school and the ordinary teacher. With such a list of subjects at command, there would seem to be nothing to prevent every school-room from having its share of moving-pictures, but in many cases the commercial spirit has rendered films undesirable for such use. For instance, some makers have short-sightedly had their names conspicuously displayed in the films. Then many films contain more than one subject, so that between a series of illustrations in ornithology and one depicting the story of Hiawatha, may be a set of love scenes that illustrate nothing except the demand of the typical audience for variety. A more serious obstacle is the limited number of educational films obtainable. The slow financial return from these pictures has led manufacturers to produce them in small quantities, so that when a teacher wants a particular series of pictures he may be unable to get them until it is too late for them to be of the best service.

In New York, and in some other places as well, another obstacle is the provisions of the laws regarding licenses and precautions against fire. A school wishing to have an exhibit of moving-pictures must construct a special booth of fireproof material. These difficulties have led some institutions, especially universities, to make their own films, and to arrange a system of exchange of films. Wisconsin, with characteristic enterprise, has organized a film service for the whole State, and is sending moving-pictures to every district, town, and city in circulating-library fashion. Nor are all the pictures meant for the children. Approved methods of physical exercise for pupils are shown to teachers by the same means, and thus in a few minutes they learn what by any other method not only would require much more time, but would not be so intelligible. Despite this activity, however, the educational use of moving-pictures is in its infancy. This is shown by the care that must be exercised to avoid pictures that convey a false impression. The temptation to heighten the dramatic element in historical scenes is often yielded to, with the result that pupils have to ask which is correct—the book or the pictures.

The dangers in this development are as evident as the benefits. One of the chief reasons advanced for the use of moving-pictures in schools is that the eye grasps facts more quickly than the ear. Yet one of the objections to our educational methods is that they appeal almost entirely to the eye already. A deeper one, in the minds of some persons, is the impetus that this use of moving-pictures will give to the idea of making school-work entertaining at all cost. These objections really lie against the over-use or the misuse of such pictures rather than against all such use. If history or literature can be made more vivid and impressive by more in the way of pictorial representation than we have been accustomed to, the opportunity certainly ought to be seized. Educators will surely be capable of guarding against a superficial treatment of such studies, or the substitution of pictures for thinking. In the field of science, the innovation is less open to question. The universal acceptance of the laboratory system gives sanction to reproductions by camera of the processes employed, although here, too, no one will favor substitution of seeing for doing.

NOVELIZED HISTORY.

For some time in France the novel has suffered serious competition from the historical and biographical memoir. This is due, no doubt, to the taste for the "document" cultivated in their readers by the leaders of the last great school of French fiction. From the document incorporated in the work of art to the document presented by itself or made the basis of a special monograph is, after all, but a step; and if the novelists are now at a disadvantage from this phase of public taste, they have only themselves to blame for it. Perhaps, however, they suffer more in their artistic pride than in their pocketbooks. For the new *genre* is one to which they can readily turn without much change in their habits of composition. The character of many of the works which now appear in such quantities is such that it is not difficult to imagine that they are written by men who are novelists by predilection and training, so much do they ordinarily tend to emphasize the romantic, sentimental, or even sensational aspects of their subjects.

At first confined to France, this new literary movement has spread to England and America, and already is beginning to have, no longer merely translations of French works, but works by native writers based upon French models. There is now such a demand for these books that the inquirer will learn from the clerks in any leading bookshop that, with certain classes of readers, they have quite displaced the novel. Probably the only thing that keeps them from an even wider popularity at present, and thus far constitutes an even greater menace to fiction, is the fact that they are published at prices two or three times higher than fiction. Even so, almost as many counters are stacked with the opulent octavos containing *réchauffés* of royal and literary love-affairs, as are allotted to the twelvemos enshrining the chaste inventions of our most popular novelists. Just why there should be this differentiation in format between the two "best-selling" classes of to-day is not quite clear, unless it is that the publishers, not altogether sure at the start of the success of the innovation, sought to indemnify themselves for a small sale by

a large profit per volume. It is certain that it is only by means of a specially large type and "padding" that these works get their present imposing appearance. Doubtless it is only a question of time before some publisher, realizing the larger opportunity which awaits him, will reduce the size, eliminate much of the decoration, and make an appeal to the larger novel-reading public. Then let fiction look to its laurels.

Perhaps, too, this same publisher will make another innovation, namely, in the choice of subjects. It is interesting to note that, till now, even in those works that are written by Frenchmen, French themes have largely predominated. This is owing partly to the fact that the *genre* itself is French, and partly to the superior savoriness of French political and literary history. So far, the Napoleonic era has not unnaturally attracted the greatest number of writers, and we have had scores of volumes, not only about the Emperor of the French himself, but about his sisters, brothers, marshals, and other functionaries. The *ancien régime* and the Restoration followed close behind, with particular attention to royal mistresses. When the principal personages of any period are exhausted, the minor characters appear and are made to replay their small parts. Often these are rescued from utter oblivion, and it argues no slight measure of ingenuity on the part of the authors to have disinterred them at all, not to mention the feat of expanding their obscure lives to the scope of special monographs.

The French supply has so far sufficed, with a little assistance, mainly from Italian sources. But in view of the rate of consumption it might be well for the provident author to look afield for fresh subject-matter. This exists ready to hand. English kings also had mistresses. Even America might furnish its quota of "fascinating" personalities, and although the greater sternness of republican morals might offer some obstacles, still our simpler courts and salons have had their beauties, who were also not without their rôle in politics. Is it possible that in this country the royal *cachet* is necessary in order to render a brilliant social or political career interesting? We are still hoping to see printed in gold on the backs of splendid volumes bound in light pink and delicate lavender such inspiring titles as: "Dainty Dolly Madison," "The Mother of Her Country and Her Times," "The Récamier of the American Republic," "The Love Affairs of Alexander Hamilton," and, best of all, "Ten Wicked Women of the White House."

Foreign Correspondence

THE EVE OF WAR IN VIENNA—THE EFFECT ON THE FINANCIAL MARKET—STATEMENTS ON THE SITUATION.

VIENNA, July 19.

Not since the famous "Black Saturday" on the Vienna Stock Exchange—November 9, 1895, when conditions at Constantinople suddenly seemed to threaten a European war—has there been such a panic in this market as that which began ten days ago, and which, during half of that period, has involved a most extraordinary collapse. Prices, day by day, went on falling from the moment of the Bourse's opening until its close; indeed, trading continued on the street after each day's closing, so that the opening at noon on the following day found prices far below the last official quotation of the Bourse.

This time, there is no doubt whatever about the cause. In the press and out of it, in public discussion, in inspired Ministerial statements, the fact is being daily more firmly established that Servia's attitude can no longer be tolerated by Austria-Hungary. The judicial examination on the murderous outrage of Sarajevo has had to be carried on with utmost severity, and, though the results are kept secret, some news passed through the closed doors—military authorities taking care that it should do so, in order that the public might not be taken by surprise, and also because indignation must be maintained at boiling point.

No doubt is felt here that the origin of the crime has been traced to Servia. The conspirators had dwelt in Belgrade, the bombs and revolvers, and the poison for the perpetrators' suicides, came from Belgrade, and all the persons concerned were in one way or another connected with Servia—some of them with the Servian army itself. These facts alone were sufficient to alarm the Bourse, and to inspire it with very well-grounded fears. The newspapers have not been reticent; they have painted the Servians quite as black as this deplorable affair admitted.

Next, one after another, the utterances of responsible persons have been quoted and discussed. The Hungarian Premier, though he declared that the time for speaking out had not yet come, said in terse words: "Affairs between us and Servia must be cleared up!" The Vienna Foreign Office, though exceedingly reserved—as is the way with Count Berchtold, that avowed despiser of public opinion—has not denied that the situation is grave, that Austria will *this time* certainly insist upon satisfaction of its just demands. And now the Servian Prime Minister, M. Pasics, has taken to speaking his mind.

To a German journalist this statesman said, referring to Panslavism and a Greater Servia: "*Time* is doing our business; we have no need to conspire"; and to an American he remarked: "The murders of Sarajevo have interrupted our work of twenty years for the promotion of Panslavism; we are the greater sufferers, not Austria-Hungary." Imagine the effect of such utterances on the highly strung, nervous Bourse, which is anxiously watching, while quotations fall from low figures to lower figures still, to depths that nobody would have believed possible as recently as three weeks ago. To-day, Sunday, the *Neue Freie Presse*, always the most impressive and conservative organ of all, describes the horrors, the waste, and the tremendous consequences of a big war, which Austria has been spared during fifty years. We shall no doubt see the result of this publication on 'Change to-morrow.

Last Wednesday, July 15, there was a respite; quotations ceased falling, and some even began to recover. This lasted until Saturday, when M. Pasics's voice was heard for the first time, and the hopes which had been entertained with regard to Servia were extinguished. The improvement had not been due to any great lessening of the fears entertained, but to the fact that the large number of persons who have lately been too much intimidated to invest, and who own big balances at their bankers', took advantage of the ruinous prices of securities, seeing their way, as they thought, to profitable investment. This naturally caused quotations to rise; and speculators on the fall, to whom a part of the general déroute must be attributed, were stopped in their endeavors to provide themselves with the stocks they needed at ruinous prices.

The number of firms and private individuals who have in these five days suffered losses from which they cannot recover cannot be ascertained. Those who speculate through their bankers, and have deposited about one-third of the sum speculated with, as is the custom in this country, have had to pay up on the very day when quotations were lowest, and have no doubt, in many instances, looked ruin in the face. One man, the head of a firm of brokers, preferred death to the shame of insolvency and killed himself by opening the tap of his bedroom chandelier. He left a letter saying he could not survive the losses incurred during the week on 'Change.

This fateful week begins with the announcement that the Austro-Hungarian Government is about to send the much-discussed note to Belgrade. When that comes, we shall see what is to be the attitude of the great European markets in regard to it, what will be the Servian answer, and what would be the larger sequel if war should break out between these two states.

ILL-CONSIDERED "PACIFICISM"—FRANCE'S AFRICAN COLONIES—A COMPARISON OF BRITISH, GERMAN, AND FRENCH METHODS OF COLONIZATION.

PARIS, July 22.

There is a danger that Pacificism and the movement towards international arbitration may come to be considered the property of certain nations—against others. Pacificism does not necessarily coincide with peace-making, nor theories of arbitration with the practice of peace. A working desire that the incalculable evils of war should be lessened, and that all mankind of every blood and color should no longer be obliged to count war among the inevitable causes of death and disease and misery, ought to be cultivated everywhere—who can doubt it? But such a desire and its working may be ill-counselled and ignore facts and feelings of whole communities of mankind, even when these are the most immediately concerned. And this would be a universal pity, for such a movement would defeat its own object.

An overwhelming impression of this danger has been made by late peace congresses and by recent controversies of Socialists among themselves and—for the French, at least—by the last Lake Mohonk Conference on International Arbitration. The English historian

Freeman welcomed the disasters of France in 1870 by the same cry for her utter destruction which Roman Cato raised against Carthage—"Gallia est delenda!" This may be excused by his having lived through the series of military campaigns of the Second Empire. Nowadays, since the nationalities whose union into independent states resulted from those campaigns have been making history on their own responsibility, Emperor Napoleon III may be judged less harshly. His principle of nationalities is now forever rooted in the conscious feeling of those people in whom it seems to be disregarded by pacifists and arbitrationists—although, one need not doubt, unconsciously.

The startling voice of one dead immeasurable years ago has just been heard expressing this tendency of some to-day. It is in the newly published letters of Thomas Carlyle, who cared little for peace and was capable of ranking arbitration among the Unveracities. "I believe magnanimous, pious, strong, and modest Germany is henceforth to be queen of the Continent, instead of vain, vaporing, impious, and mischievous France." On some such general principle, dispensing with any inquiry into facts or regard of human feelings or respect of blind entanglements which once done cannot be undone, too much recent talk of peace seems to have been founded. Now peace among nations is something that is only to be obtained in practice; it is quite certain that it can never come as a satisfaction of partisan and sectarian and doctrinaire theories.

Perhaps the most discouraging instance, whose actuality is strengthened by the renewal of political disputes about the Congo in connection with the present Caillaux affair, is the acceptance at the Lake Mohonk Conference of Mr. E. D. Morel's book, "Morocco in Diplomacy," without question or limitation, as an "admirable account." No suspicion seems to have been roused by the frankly and intensely partisan tone of the book; but the notorious fact should not have been ignored that no competent Frenchman or Belgian of any party is willing to accept a single fact on Mr. Morel's uncorroborated testimony, or to admit a single one of his judgments as fair or probable without further and strict sifting and examination. It is not necessary to take sides or go into detail, for which there is no space here. But it should be noted that M. André Tardieu has made very definite accusations against Mr. Morel's disinterestedness in African affairs, while his every statement has been subjected to criticism which cannot be wholly baseless. The contrast between such writing as Morel's and that of Sir Harry Johnston, whose experience and temper give a widely different competence, is another reason why would-be peacemakers should not take their opinions ready-made without proofs and on suspected authority. Still more portentous is the ignoring of the diplomatic dealings between England and France as disclosed by M. Hanotaux, who was French Foreign Minister at the time.

To come down to particulars which belong to a journal, no account seems to be made of the fact that this late and further advance of France into Africa was initiated, aided, and abetted by Bismarck, who applied his favorite phrase that neither Tunis nor Morocco—and doubtless not Madagascar, nor the Congo, nor all Indo-China—was worth the bones of a single one of his Pomeranian grenadiers. There can be no doubt that his idea was to keep France occupied far away, and so weaken her at home; and, it may be mentioned in passing, it is entirely probable that he was pleased to think the consequences would be disagreeable to England.

A more important fact which neither Morel nor whole Conferences of Peace or Arbitration can change—for it passed long ago into the inevitabilities of history—also is ignored. This is that France for nearly a century has been vitally engaged in Algiers—so that there could never be any question of allowing Germany to establish herself in Morocco under penalty of constituting another exposed frontier. For Spain, the question is different; and twenty-two years ago I had occasion to express the patriotic views and desires of Canovas del Castillo, then Spanish Premier, who had given a life's attention to Morocco. In the event, it is probable that Spain has received as much of Morocco as she can handle; but even here Germany has taken advantage of her presence to retard the construction of needed railways in the French part.

One must be very ignorant of facts either in Morocco or elsewhere in Africa to imagine that Germany has been deprived of any opportunities of colonial expansion in the English or French sense. All the efforts of Germany in Morocco were limited always to mine prospectors and commercial travellers. When she began complaining, she had no more trade there than the United States, perhaps one-tenth that of France or England. Now that Moroccan ports are filling up, international conventions allow Germans at this moment to interrupt municipal works by claiming rights and appealing to international arbitration; and they give no sign there—as they have given few or none in their own possessions—of using Africa for anything else than a trade output.

Meanwhile, if the benefit of the native populations of colonies or protectorates and their happiness in the common-sense of mortals is to be estimated, then France has nothing to fear. Where one spear of wheat grew before, she has already made a thousand grow. She has given Morocco roads and security for native marketing. I do not know that Algiers has a more dissatisfied Arab or Berber population than British India has discontented Hindus; and there is an intercommunication between the directing French and the natives which can never exist between natives and officials of English or German temper.

Sir Harry Johnston has borne witness to this. A resident British magistrate for six years between French and German colonies in Africa has described the case to me. "In my experience, the native Africans in the long run appreciate the fairness and justice of British rule, but there is no human relationship between them and the English. This is the case also in the German colonies, with the aggravation that the natives cannot endure their military ways and temper. I am obliged to say that they are happiest with the French, who associate with them as men with men, like cheery grown people with children, not standing off nor patronizing."

This is not the place to go into defects in systems and business policies, "concessions" to companies and the rest, nor to decide which nation protects most its own trade interests. But why do Arbitrationists pay no attention to the steady emigration of Africans—Kabyles, Senegalese, and so on—into the mainland of France for the harvest, mining, and all work, exactly like Italians and other Europeans? This is civilization, and peace also.

S. D.

LABOR TROUBLES IN HOLLAND—THE SOCIALIST LEADERS — PROGRESSIVE DEMANDS.

THE HAGUE, July 20.

The recent tram strike affords a good opportunity to say something about the labor movement in Holland. This movement, like every other in this country, is distributed over the usual Protestant, Catholic, and Neutral (*i. e.*, Socialistic) groups. A small group of non-socialistic, non-confessional men may safely be left alone, because in nearly every conflict they side with one of the other unions. Those who profess anarchism pure and simple also may be left out.

By far the strongest are the skilled labor unions (if I may translate the Dutch term "vakvereeniging" in that way). These unions are associated in a league which comprises far more than half of organized labor. This league in its origin and existence is socialistic, and the political leaders of the Socialist party give the orders. This does not apply only to any general labor movement, but also and more particularly to local labor conflicts.

It is obvious that most masters, while willing to deal and to discuss matters with their own men, or with their leaders, greatly resent having to negotiate with salaried members of any union which represents actually only part of their men. The laborers, however, are well aware that a salaried leader of this kind is much more independent than any employee, who may be victimized at a not very distant day under one pretext or another.

Almost interminable conflicts have resulted from this state of affairs. Rich masters and rich associations of laborers have repeatedly engaged in conflicts which have lasted for months.

Nevertheless, after the railway strike of 1903, which ended by giving the railway men a kind of semi-official status, most strikes and lockouts have been of a local character. Of late, the various transport trades and the textile branches have been among those most affected.

The growth of the influence of social-democracy has been opposed in various ways. Perhaps the most effective has been the influence of the various churches and the forming of confessional unions, all of which are led by clergymen. More in the limelight, however, were the political actions of various parties. The "Katheder-Sozialismus" (which came from Germany) has found a fertile soil here. The views of your countryman, Prof. Richard T. Ely, also exercised a great influence on the younger generation.

By the younger generation I mean the students of political economy now verging on their fortieth year, especially those who attended the Amsterdam University. To those joint influences are due a number of acts passed during recent years, all tending to protect the physical and financial interests of the laborer. A dwelling-house act, an act upon the labor contract, a dock laborers' act, an act regulating the working hours of women and children, a bill on night labor for bakers, are all of recent date. Acts dealing with insurance against accidents, old age, sickness, were completed last year, and will probably be welded into one act at an early date.

Besides all these general acts and regulations there has also been enacted a great deal of municipal legislation, and it is obvious that

action of this kind was calculated to take a good deal of wind out of the Socialistic sails.

Thus, in order to retain their hold upon their followers, the Socialistic leaders had to adopt a course of asking too much and of continually shifting their position. As soon as it appeared likely that one of their demands was about to be granted, they increased the extent of what they had desired so as to apply the same principle to another group or trade than it was meant for originally, in order to be able to pose as the true and only friends of the laborer and of the proletariat generally.

This policy was made clear the other day. There has been a conflict in The Hague between the Hague Tramway Company, which has a monopoly of electric-rail traffic, and its men. In the first place it was a question of salary and of off hours. The company is rather undercapitalized and is earning about 16 per cent. on its capital of 1,000,000 florins. All the rest of the capital has been issued in 4 or 4½ per cent. bonds. The increase of salary and the other alterations demanded by the men would have rendered necessary an annual expenditure of about 130,000 florins out of the available dividend of 160,000 florins.

This outlay would have meant a loss to the shareholders of 13 out of their 16 per cent. annual dividend. The directors, accordingly, could not but refuse the demand as preposterous. A strike ensued, in the course of which there was shooting, stone-throwing, and menacing of the "blacklegs." In the Municipal Council the Burgomaster read a letter from the directors to the effect that they were willing to discuss reforms, an increase of salary, etc., with the local authorities.

This was not only the first, but also a very important, step towards peace, but the Socialists veered round immediately, and demanded the discussion of these reforms between the directors and the striking union. Suddenly an increase of salary, more off days, and similar concessions became of minor importance to the recognition of the General Labor Union, which took the lead over the heads of the local organizations of the tram hands.

Thus, notwithstanding the official endeavors to finish the conflict, matters have threatened to come to a standstill again, even though the most conciliatory attitude has been taken, merely because the Socialistic leaders see a moral profit in the continuation of the conflict.

Nobody suspects them of aiming at private profit—they have the amelioration of the working conditions of their followers sincerely at heart—but the tactics prevailing among them do not admit of accepting any such amelioration coming as a free gift.

Everything must be obtained—forced from the masters—under Socialistic pressure and at the demand of the workers' unions. *Nulla salus extra nos!* seems to be their ground. And it is a pity that they do not appear to realize that in similar circumstances numerous capitalists, who formerly showed their willingness to relieve their employees as much as possible, begin to refrain from doing so voluntarily and to prefer waiting till they are inevitably forced into doing it. This is to be deplored, but can hardly be wondered at.

J. H. A.

Books and Men

IMAGINARY WARS.

To mention books on imaginary wars and battles is almost sure to remind a number of your readers of "The Battle of Dorking." The very title of that sketch must have had something to do with its success, for the contrast between grim battle and the peaceful town of Dorking, principally famous for its estimable hen, caught the fancy. Sir George Tomkyns Chesney was the author, and his work appeared in *Blackwood's* in 1871. It was frequently reprinted in pamphlet form.

"The Battle of Dorking" may not have been the first account of a war of the future, but it was probably the earliest of those fictitious invasions of England by the Germans which have occupied so many writers. Its author wrote as a veteran of 1925, telling his grandchildren of the humiliation of his country in 1875, when Germany, after conquering the French, captured London and overturned the British Empire.

In spite of the interest aroused by Sir George Chesney's dismal prophecy, very few writings of this kind seem to have been published in English for the next twenty years. Since then a small library of them have appeared. Mr. H. G. Wells has pictured various frightful cataclysms, in which some draper's assistant or Cockney green-grocer is displayed in the centre of earth-shaking events. The world's peace has been menaced from Mars, and Europe has been overwhelmed by the Yellow Peril. Our Pacific Coast has fallen into the grip of little men from across the sea, and our navy has more than once been saved from destruction by some obscure inventor. Within a year, Mr. H. H. Munro, in "When William Came," established the Germans once more in London, and turned upwards the moustaches of all England.

None of the followers of the veteran of Dorking, however, were more painstaking than Mr. William Le Queux. "The Invasion of 1910," published in 1906, is a long and exceedingly interesting book. The author claims to have travelled ten thousand miles in a motor car, studying the topography of the "invaded" district. The sudden descent of the Germans during the peaceful hours of a Sunday morning in the summer, and the rush of two excited journalists to the War Office (where they are told by the care-taker that they had "better come to-morrow, sir, about eleven"), are delightfully improbable. They foreshadow the opening act of Major du Maurier's "An Englishman's Home," in which the law-abiding Briton becomes annoyed at those "Johnnies"—as he calls the invading army—who are "messing-up" his lawn, and threatens to have them arrested.

Things go very badly for England in Mr. Le Queux's novel. The Germans are on shore in a jiffy. In one place about 38,000 of them land without being seen by any one but a fisherman. There are battles and repulses. London is besieged, bombarded, and taken. Then the volunteers rally, the proud Prussian is driven forth, and the book ends not altogether happily, it is true, but with the despot's heel no longer upon the shore.

"The Great War of 189—" is perhaps the most remarkable of all these forecasts. It was published in 1893, and the authors were Rear-Admiral Colomb, Col. J. F. Maurice, R.A., Capt. F. N. Maude, Archibald Forbes, Charles Lowe, David Christie Murray, and F. Scudamore. The authors did not foresee some of the developments of international politics, notably the triple *entente* of Great Britain, Russia, and France, so we have the first of these fighting the other two in a war that also involves Germany, Italy, and a number of lesser Powers.

But many of the incidents, especially in the opening chapters, come astonishingly close to the actual events of this summer—more than twenty years after the publication of the book. Of course, it required no unusual clairvoyance to make the war break out in the Balkans. That has been the recognized danger-zone for years—"there'll be trouble in the Balkans in the spring" was the constant observation of the war correspondent in "The Light that Failed." But since 1893 the storm centre has shifted twice, once to the Far East and once to Morocco. Now, and for the past two years, it has been where it was placed by the military authorities who wrote "The Great War of 189—"

Another curious coincidence is that this fictitious war has for its immediate cause the attempted assassination of a prince—Ferdinand of Bulgaria, now "Czar." His would-be assassins are urged on by "Russian intrigue," whereupon some "editorial comments" are made in an unnamed newspaper. They begin in this wise:

> It is imposible to overrate the grave significance of the attempted assassination at Samakoff, which in the light of our correspondent's telegrams would seem to be the prelude to very serious complications in the East. . . . The dramatic incident may prove to have endangered the peace of Europe. We have long familiarized ourselves with the thought that the Great War of which the world has been in constant dread for some years back, and which is to readjust the balance of the Continent, is much more likely to break out in the region of the Danube than on the banks of the Rhine, and the incident at Samakoff may well precipitate the catastrophe. . . .
>
> Servia and Bulgaria are soon at war. Here fact refuses, in the present instance, to follow fiction. Austria invades Servia, and occupies Belgrade. There is an illustration—"Here at Last!"—the Austrian officers comfortably drinking beer and toasting one another at the outdoor cafés of the Servian capital. The facts of 1914, in this case, seem submissive to the fiction of 1893.

In the imaginary war Russia and Germany are soon fighting, and France loses little time in declaring hostilities against her old enemy. England fights France by sea, and Russia by land. There is a general mêlée, by which, in the end, nobody is much benefited—a prophecy rational enough.

EDMUND LESTER PEARSON.

Genius Loci

A narrow path led me along the hillside, through rows of apple trees and poplars and past a line of cedars marching monk-like down the slope. Everywhere was a smell of apples—a strong, over-ripe odor, as of a cider press in the sun; and everywhere lay ripe and over-ripe apples—on the path itself, among the weeds under the fence, and in the field, where a solitary cow was lazily eating them. Up the slope stretched a vineyard, mellowing in the heat of the sun; and from it also came a fragrance of fruit, though most of the grapes were still forbiddingly green. Between the path and the first row of vines, goldenrod was glowing in abundance, intermingled with crimson clover, in which yellow-jackets and bumble-bees revelled, and grasshoppers scraped out their strident notes. Occasionally, away up in the clattering poplars, a cicada buzzed with rising and waning fervor, and the breeze took up the indolent strain and bore it down the slope to mingle with the universal insect murmur. Adjoining the vineyard was a field of tomatoes, smooth and warm and here and there flashing in the sun; and from them, too, came an odor of fruit, heavy but wholesome.

Below the path, below the meadow in which the lone cow ate in calm oblivion of all save the apples, below the line of cedars marching down the slope, was a yellow wheat field, extending, in its opulence, far down to the brook. The brook itself was lost in the green of weeping willows, but I could see the wooden bridge, and through the opening that it made a little red church with a slate roof, and a little row of trees that led to the graveyard. And through and above this same narrow opening, I looked upon a vista of fields and hills that, in the clear air, did not cease till they were confronted by the purple mountains.

Often, in the years since the day I paused to look upon this landscape, have I returned to it, with an increasing attachment, allowing my eyes to follow that lengthening perspective all the way from the apple trees and poplars to the mountain range that set a limit to the view; my ears to hear the grasshoppers, and the cicada in the breezy poplars, and, unless my memory exceeds its function, the hollow crunch of the apples in the cow's mouth; and my Unpoetic Sense to enjoy the smells of apple, grape, tomato, clover, now mainly one and now another, and sometimes a composite of all of them mixed with I know not what additional soporific and intoxicating fragrances. Brooding on this scene, and asking myself why it so often floated into my consciousness, I came to the conclusion that, whatever the cause, it did not arise mainly from the beauty of the prospect, since many a finer landscape which I had seen had promptly melted into the dark past. Nor was it owing to the fact that the landscape was striking, that it included elements so unusual that it could not be readily forgotten.

No, it was none of these, but rather what, through lack of better knowledge, we vaguely denominate "the spirit of the place." By this term I suppose we mean a spirit, an atmosphere, a spiritual unity, which envelops a place somewhat as the feeling of the poet envelops the poem, being everywhere and yet nowhere. So we speak of this as a typical scene of the Maine coast, or that as a view typical of what Mr. Burroughs has aptly called "the flat, featureless, monotonous, cornstalk-littered Middle West"; meaning that the very spirit of the austere coast of Maine breathes in this scene, and the very spirit of the open, almost blank countenance of Illinois is magically caught and held in that view. But are we not, in defining "spirit of the place" thus, adding mystery to mystery, or, in part, finding mystery where none is? Indeed, one of our writers on nature has become obsessed with the idea that "each locality" has "a personality of its own," an idea to which he has already devoted a pair of lengthy books, and since the supply of personalities that might be celebrated is well-nigh inexhaustible, one hesitates to think of what may be in store for us. There is no need of annihilating the phrase "spirit of the place," but there is need (if no other, the unwritten volumes suggest one) of arriving at a more tangible conception of what we mean when we use it.

It is pretty clear that the idea of a spiritual unity is insufficient. An amusing, but not uncommon, illustration of the uncertainties involved occurred the other day when, with a friend, I was looking at an exhibition of landscape paintings. We paused before an admirable picture of a red sawmill, before which ran a curving road, and behind which rose a high hill or low mountain. I could not help thinking of just such landscapes which I had seen in Pennsylvania many a time, and I am afraid was about to give utterance to my thoughts when my friend remarked: "Do you know, that's got the very spirit of New England? Remarkable how he caught it—it's exactly like a certain place I've seen near my wife's old home." Almost the only safe conclusion to be drawn from these remarks was that my friend had been in New England.

After all, do we not, in using the phrase "spirit of the place," have in mind, not a subtile element which covers the whole scene as the glass covers a water-color, but a combination of characteristic details? To me, that red sawmill stood in Huntingdon County, Pennsylvania, because, in the valley of the Juniata, I had seen hills of just the height and sky-line, and roads swinging with just the curve, that I beheld in the picture. To my friend, the sawmill stood in central Massachusetts, because it resembled a red barn he had seen there. We were both wrong, of course, since the painting did not contain enough characteristic details to be typical of any place. As for the landscape that I described at the outset, that has lingered in my memory so long, I am inclined to think, because, combining magically a large number of characteristic details, it *is* typical of a certain place which I once knew well, and has, consequently, a significance that it would not have if it were a random collection of details. The apple trees, the tall poplars, the line of cedars, the vineyard and tomato field, the weeping willows down by the brook, the little church and church-yard, the wave on wave of field and hill terminated by that alien range—all these characteristic details, when seen collectively, produce that sense of locality which we roughly call "the spirit of the place"; they become, so to speak, articulate, having a power of expression denied to many another landscape of the same countryside. The larger the number of these characteristic details, or the more unusual the details, the less the danger of confusing one spirit with another. If, in the case of the landscape above, I omitted several characteristic details, or if I omitted only one so peculiar to the place as the weeping willows, the possibility of reminding the much-travelled reader of quite dissimilar scenes would be greatly enhanced.

That it is these characteristic details that count is perhaps corroborated by the true sense of the phrase for which "spirit of the place" is a loose equivalent—*genius loci*. Properly, by *genius loci* we mean, nothing so delightfully vague as a spiritual aroma, but a concrete presiding spirit, such as the traditional snake. Thus we speak of the loon as the *genius loci* of a Northern lake, or the cañon wren as the *genius loci* of the gorges of Arizona, or the white pine as the *genius loci* of New England. In singling out in this manner one bird or tree or flower to epitomize the whole place, we are confessedly arbitrary, since we might just as well, perhaps, choose a different *genius*. The early summer meadow of New York State, for example, might be represented equally well, among the birds alone, by the bobolink, the meadowlark, the grasshopper sparrow, and the vesper sparrow. Each of these is an intimate part of the whole, and could therefore appropriately symbolize the whole. How intimate, through the faculty of association, is the relation between the characteristic detail and the whole, is comprehended by every one who has seen a wild creature, a *genius loci*, in a place that was foreign to it—like the scarlet tanager I once saw hiding from the amazed stare of a cluster of sparrows in the heart of a city. An interesting example of the power of the symbol to carry with it into alien surroundings the surroundings proper to it, was recently mentioned in a letter to the London *Times*. The writer remarked that he never smells the gorse when in full bloom on a hot summer's day without having a vivid memory of the sights and sounds of the beautiful South Sea Islands, owing to the fact that the odor of the gorse is the same as that of the copra, or drying cocoanut—an odor characteristic of those islands. In a somewhat similar way, my scarlet tanager brought me a vision of green woodland peace. It seems, indeed, worth while to know geniuses.

Norman Foerster.

Civil War Literature

By CHARLES FRANCIS ADAMS.

IV.

In dealing with the long diplomatic career of Lord Lyons* as a whole, Lord Newton is naturally most attracted to that portion of it in which he himself to an extent participated—the later experience of his chief as Ambassador of Great Britain at Paris during the fall of the Napoleonic dynasty, and the long period of unrest and uncertainty which succeeded thereto; for Lord Lyons's tenure of the office covered the twenty memorable years between 1867 and 1887. In making such use of the large mass of American material at his service as commended itself to his sense of literary proportion, Lord Newton has manifestly felt under a certain constraint as respects the experiences of Lord Lyons. America being to him an unknown diplomatic quantity, the biographer seems to stand in a somewhat unnecessary apprehension of a still surviving sensitiveness. His sense of the humor of a situation at times, however, happily dominates. So we are now favored, again confidentially, with this really droll illustration of the difference resulting from the point of view. It affords what the late Horace Greeley would have termed "mighty interestin' readin'," when taken in connection with the memoirs of Mr. Gideon Welles. It very freshly describes a somewhat surprising conception which at one time seems to have obtained lodgment in the mind of the Secretary of State, but to which reference will in vain be sought in our own historical material, including the three solid volumes, "Service in Washington." Lord Newton says:

In August, 1863 [a month, be it observed, after the Gettysburg crisis] a somewhat surprising proposal came from Mr. Seward. In a confidential conversation with Lord Lyons he expatiated upon the necessity of reviving a better feeling between Great Britain and the United States, and of making some demonstration calculated to produce the desired effect. England, he said, had made such a demonstration before the war by the visit of the Prince of Wales, which had been productive of the happiest results. Now it was the turn of the United States to make a corresponding display of goodwill, but it was difficult to devise the means of doing so, as the President could not travel, and America possessed no Princes. Would Lord Lyons think the matter over?

The latter, having duly reflected, expressed the opinion that there was no real hostility to the United States in England, although there was undoubtedly a certain amount of sympathy with the South, and that consequently there was no necessity to take any extraordinary step. Mr. Seward, however, having returned to his suggestion of making some counter demonstration in the nature of the visit of the Prince of Wales. . . .

"The only conjecture I can make," wrote Lord Lyons, "is that he thinks of going to England himself. He may possibly want to be absent for some reasons connected with the presidential contest. If he thinks that he has himself any chance of being taken as a candidate by either party he is the only man who thinks so at this moment. It is, however, generally considered to be an advantage to a candidate to be out of the country during the canvass. I cannot see any good which his going to England could effect with regard to public opinion. If he considered himself as returning the Prince of Wales's visit, the absurdity of the notion would alone prevent its being offensive. The majority of the Americans would probably be by no means pleased if he met with a brilliant reception. He has, besides, so much more vanity, personal and national, than tact, that he seldom makes a favorable impression at first. When one comes really to know him, one is surprised to find much to esteem and even to like in him. It is however hardly worth while to say more on the subject, for it is a mere conjecture of mine that he was thinking of going to England when he spoke to me. It might however be of advantage for me to know whether you would wish to encourage the idea of some public demonstration or other, if he should return to the subject when I get back to Washington. I told him that so far as public opinion in England was concerned, the one thing to do was to let us really have a supply of cotton; that without this demonstrations and professions would be unsuccessful: that with it they would not be required."

Whether Lord Lyons's conjecture was well-founded or otherwise, the prospect of a visit from Mr. Seward possessed no charms for Lord Russell, whose antipathy to the American Secretary of State was pretty generally understood. "The following letter," Lord Newton adds, "appears to be full of good sense and instructive as regards the real value of those visits of exalted personages which produce such illimitable enthusiasm in the press." Lord Russell to Lord Lyons, October 2, 1863:

Upon considering Mr. Seward's hints to you of doing something here as an equivalent or a return for the Prince of Wales's visit to the United States, I do not see my way to anything satisfactory. These visits of Great Personages seldom have more than a transient effect; they form no real and solid relation of friendship between nations, though if undertaken at a fortunate moment, they serve to bring out and demonstrate a friendship already existing.

The visit of the Prince of Wales was thus fortunately well timed; but if Mr. Seward or any conspicuous statesman of the United States were to visit this country now he would find us all divided. The Government would show him every attention and civility: the Anti-Slavery party would probably make great show of sympathy by addresses and public receptions. But the party who press for recognition of the South would hold aloof, and in some unmistakable manner, prove that there is a great deal of sympathy with the South in this country.

In these circumstances I do not think that any such mark of friendship as Mr. Seward suggests would be likely to produce the good effect of which he is desirous. Mr. Sumner's conduct is very bad; he has taken infinite pains to misrepresent me in every particular. I have done my best to counteract his efforts by my speech at Blairgowrie. I don't know how far I may be successful, but I rely on your constant watchfulness to prevent any rupture between the two countries, which of all things I should most lament.

The question of the ironclads is still under investigation. The Cabinet must consider it very soon, and I have no doubt we shall do all that is right to preserve our neutrality free from just reproach—unjust reproach we shall not yield to.

Owing to continued ill-health, Lord Lyons was compelled to pay a visit to Canada in the autumn of 1863, and, upon his return to Washington in October, accompanied by Admiral Milne, then in command of the British South Atlantic naval force, he reports Mr. Seward in a more conciliatory frame of mind than ever, chiefly owing to the detention by the British Government of Confederate ironclads just referred to. "Mr. Welles and the lawyers at the Navy Department, however, still 'appeared to be thoroughly wrong-headed and unable to see that municipal law is one thing and International Law and the relations between Governments another.' The Secretary of the Treasury, Mr. Chase, engaged on an electioneering tour, distinguished himself by spirited speeches, talking of 'taking Old Mother England by the hair and giving her a good shaking,' and was himself outdone (in anti-British rancour) by another distinguished politician, Mr. Sumner. There was in fact no sign of change in the feeling of the people at large towards us, and the visit of a Russian squadron to New York was made the occasion of an anti-British and anti-French demonstration."

We next obtain from these confidential communications a curious glimpse of one feature of our Civil War record to which American investigators have given scant attention. The bounty system in use in recruiting our volunteer army, and the abuses incident thereto, occasioned Lord Lyons an amount of trouble of which the patriotic American of the present day has little realizing sense. Complaining bitterly of the burden of work thrust upon him, Lord Lyons wrote to London:

It seems to me that everybody North and South who gets into trouble discovers that he or she is a non-naturalized British subject.

Lord Newton then proceeds:

Consequently, when hostilities began, the Washington Legation was besieged by persons who desired to be exempted from service by getting registered as British subjects. . . .

The difficulty really arose out of the defective military organization of the United States, which was based upon the voluntary system. The so-called voluntary system, which is in reality only a high-sounding device to impose upon an impecunious minority what ought to be a general obligation, may be an admirable institution in time of peace, but it invariably breaks down in a really serious emergency. . . .

At first these appeals [for additional levies] were responded to with the greatest enthusiasm, but it was not long-lived, for, as has been related, even as early as the battle of Bull's Run in July, militia regiments insisted

Lord Lyons: A Record of British Diplomacy. By Lord Newton. London: Edward Arnold. 2 vols. 30s. net. The work is published in this country by Longmans, Green & Co., New York, $8.50 net.

upon leaving at the completion of their period of service, and from that date the difficulty in finding recruits continued to increase. . . .

It became clear that not only was it difficult to attract volunteers, but also to keep them when obtained. In view of the methods employed in recruiting it was not surprising that the results were frequently unsatisfactory.

The usual method employed was to inform the Governor of a State of the number of men required. The Governor having made the necessary announcement, private persons came forward offering to raise regiments. Each set forth his claims, his influence in the State or among a certain portion of the population, and his devotion to the party in power. . . .

As the contest progressed, the bounty system was responsible for innumerable cases of kidnapping in which British subjects were the sufferers. Kidnapping especially flourished in New York, where the emigrants were an easy prey. . . .

In the autumn of 1862, Fire Island was filled with unfortunates cheated and deluded, or forced thither by the police who received ten dollars a head for each man. Now in addition to the enormous bounties offered, there is placarded in conspicuous places on the walls of the New Park barracks at the City Hall the following very suggestive notice: "Fifteen dollars Hand Money given to any man bringing a volunteer."

Lord Newton then quotes from a report of Gen. Wistar, in command of the national forces at Yorktown, Va. Gen. Wistar in this report calls attention to what he refers to as an "extended spirit of desertion prevailing among the recruits recently received from the North." He then goes on:

There seems to be little doubt that many, in fact I think I am justified in saying the most, of these unfortunate men were either deceived or kidnapped, or both, in the most scandalous and inhuman manner, in New York City, where they were drugged and carried off to New Hampshire and Connecticut, mustered in and uniformed before their consciousness was fully restored.

Even their bounty was obtained by the parties who were instrumental in these nefarious transactions, and the poor wretches find themselves on returning to their senses, mustered soldiers, without any pecuniary benefit. Nearly all are foreigners, mostly sailors, both ignorant of and indifferent to the objects of the war in which they thus suddenly find themselves involved.

Lord Newton, evidently with an eye to Earl Roberts's movement in favor of compulsory military service, now agitated in Great Britain, then goes on:

These outrages committed in the name of the Voluntary System, and many of the victims of which were Englishmen, constantly took place even after the Act of July, 1862, which provided for the enrolment in the militia of all able-bodied citizens between the ages of eighteen and forty-five, and it may be presumed therefore either that the United States Government was afraid to enforce its laws or that the so-called "volunteers" were chiefly foreign subjects. In any case, amongst these unhappy victims were numerous British youths under twenty-one years of age, and the efforts made to obtain their discharge on the ground of their being minors were rarely successful and eventually abandoned altogether.

The wealth of undisclosed original material of the character of that here given—revelations from the inside of men, opinions, and events of our Civil War days—reposing in the archive-room of Norfolk House may be inferred from this fact: Lord Newton asserts that early in November, 1863, Lord Lyons had then already that year received from Mr. Seward considerably more than nine hundred notes. At some future time these will afford a rich field for the American historical investigator; but some conception of the Civil War work devolved on the British legation at Washington may be gathered from the official figures given by Lord Newton. During the year 1864 no less than 1,816 dispatches or letters were received from the United States Government; and Lord Lyons during the same period transmitted 2,782, addressed apparently to the Department of State. Lord Newton adds: "Nor does it seem probable that Lord Lyons's numerous private letters to the Secretary of State and other correspondents are included; whilst there is no mention of telegrams." Meanwhile, there is undeniable significance in this extract from a letter subsequently writen by Lord Lyons to Earl Granville, then Foreign Secretary: "Above all things, we must try and keep as much as possible out of Blue Books. If it is absolutely necessary to have one now, pray let me have an opportunity of looking over everything of mine it is proposed to publish, and suggesting omissions."

Lord Newton thus refers to the usual routine of the British Chancery at Washington during the Civil War:

The secretaries and attachés had to be at their desks at 9 a. m. They worked continuously without a luncheon interval until past 7 p. m., then adjourned to Willard's Hotel to indulge in the pernicious local habit of swallowing cocktails, dined at 8, and were frequently obliged to return to the Chancery afterwards and work till midnight or even later.

Elsewhere, reference as follows is made by Lord Lyons to the Washington of the war period:

It "is a terrible place for young men; nothing whatever in the shape of amusement for them, little or no society of any kind now; no theatre, no club." (I, 87.)

The simple fact is that with all who have personal recollections of it—now not a large number—the national capital of the Civil War period is, mentally, morally, and socially, an altogether unsavory memory. With its barrack-like taverns, unpaved, unkempt, and overcrowded, the common resort of the vicious and depraved of both sexes, it was a half-built, wretchedly governed, semi-Southern municipality suddenly called upon to meet the requirements of a great war, involving the presence of an improvised army and the daily expenditure of millions in paper dollars and fractional currency. Of Lord Lyons himself under such unattractive environing conditions his biographer now says: "He used to state, in after life, with much apparent satisfaction, that during his five years' residence in the United States, he had never 'taken a drink or made a speech.'"

Lord Newton concludes his comments on this subject as follows:

In spite, however, of the disadvantageous circumstances under which Sir Edward Malet passed his time at Washington, it is worthy of note that he considered that every one in the British Diplomatic Service should rejoice if he had the chance of going there, and he bore emphatic testimony that, according to his experience, English people were treated with extraordinary courtesy and hospitality however high political feeling may have run.

Physically broken down by labor of this sort, Lord Lyons welcomed his permission temporarily to return home in December, 1864. So thoroughly was he broken down that upon arriving in England and domesticating himself with his sister, the Dowager Duchess of Norfolk, he made little progress towards recovery, and was for a considerable time almost incapable of either physical or mental exertion. In the spring of 1865, it became necessary for him, therefore, to resign his post at Washington and to retire temporarily from diplomatic service. It is pleasant to find that in doing so his opinion of the American Secretary of State had risen, as the result of long and intimate relations, and he thus wrote to Mr. Seward of his own successor, Sir Frederick Bruce:

You will, I am sure, be glad to form with him the confidential and intimate relations which did so much, in my case, to make my task easy and agreeable. The friendly and unconstrained terms on which we were produced so much good, that I am most anxious that my successor's intercourse with you should be placed at once on the same footing.

Mr. Seward, upon being informed of the resignation of Lord Lyons, in a letter written to him under date of March 20, 1865, thus expressed himself:

I have never desponded of my country, of emancipation of her slaves and of her resumption of her position as an agent of peace, progress, and civilization—interests which I never fail to believe are common with all branches of the British family. So I have had no doubt that when this dreadful war shall be ended, the United States and Great Britain would be reconciled and become better friends than ever.

I have thought that you are entitled to share in these great successes, as you have taken so great a part of the trials of the war. But God disposes. I feel sure that if I never find time to go abroad again, you with recovered health will come here to see the reign of peace and order. So I shall not dwell upon our parting as a final one.

Lord Newton in closing thus expresses himself in regard to the service then rendered by Lord Lyons:

It was the good fortune of this country to be represented during a protracted and dangerous crisis by a man who, distinguished by exceptional prudence, tact, judgment, and sincerity, added to these qualities a most minute knowledge of his own duties accompanied with indefatigable industry. It is not too much to say that any one wanting in these

qualities would have found it impossible to prevent the calamity of war between England and the United States, and the diplomatist who successfully avoids a catastrophe of this nature and at the same time protects the interests of his country is as deserving of gratitude as the successful commander who appears upon the scene when diplomacy had failed.

So far, however, as the distinctively American investigator of our Civil War attitude towards Europe, and especially Great Britain, is concerned, what is perhaps not the least valuable intimation to be found in Lord Newton's biography is contained in a fragment of a familiar letter from Lord Lyons to Lord Granville, dated at Tours, September 19, 1870. The German investment of Paris, after the two capitulations of Sedan and Metz, was then imminent. Referring to a conversation which had just then taken place between the Prussian Ambassador at London and Lord Granville, Lord Lyons wrote:

On his part it is just the old story I used to hear in America from the Northerners: "The ordinary rules of neutrality are very well in ordinary wars, such as those in which *we* were neutrals, but our present cause is so preëminently just, noble, and advantageous to humanity and the rest of the world, that the very least other nations can do is to strain the laws of neutrality, so as to make them operate in our favor and against our opponents." (I, 323.)

News for Bibliophiles

THE FIRST PUBLISHED ACCOUNT OF JONATHAN CARVER'S TRAVELS.

[The material contained in the following article was originally printed for circulation among its members by the Wisconsin Historical Society.—Ed. The Nation.]

It is worthy of note that the first published account of Capt. Jonathan Carver's extensive Western travels, from his own pen, appeared in the Boston *Chronicle* of February 22, 1768, in the form of a letter to his wife at Montague, Mass., dated from Michillimackinac, September 24, 1767, and communicated to the paper by a "gentleman of distinction." For some reason, now completely hidden, Carver says in his "Travels" (London, 1778, p. 148) that he arrived at Mackinac in "the beginning of November, 1767," while in the letter which follows he specifically gives the date as the 30th of August. Here is Carver's letter in full:

My Dear—I arrived at this place the 30th of last month, from the westward; last winter I spent among the Naudoussee of the Plains, a roving nation of Indians, near the river St. Piere, one of the western branches of the Mississipi, near fourteen hundred miles west of Michillimackinac. This nation live in bands, and continually march like the roving Arabians in Asia. They live in tents of leather and are very powerful. I have learned and procured a specimen of their dialect [cf. "Travels," London, 1778, p. 82], and to the utmost of my power, have made minute remarks on their customs and manners, and likewise of many other nations that I have passed through; which I dare say, you and my acquaintance will think well worth hearing, and which I hope (by the continuation of the same divine Providence that has hitherto in this my journeying, in a most remarkable manner guarded over me in all my ways) personally to communicate. It would require a volume to relate all the hardships and dangers I have suffered since I left you, by stormy tempests on these lakes and rivers, by hunger and cold, in danger of savage beasts, and men more savage than they; for a long time no one to speak with in my native language, having only two men with me, the one a French man, the other an Indian of the Iroquois, which I had hired to work in the Canoe. I never received any considerable insult during my voyage, except on the 4th of November last, a little below Lake Pepin on the Mississipi. About sun down, having stopt in order to encamp, we made fast our canoe, and built a hut to sleep in, dressed some victuals and supped. In the evening, my people being fatigued, lay down to sleep: I sat a while and wrote some time by the fire light, after which I stept out of my hut. It being star light only, I saw a number of Indians about eight rods off, creeping on the banks of the river. I thought at first they had been some wild beasts, but soon found them to be Indians. I ran into my hut, awakened my two men, took my pistol in one hand, and sword in the other, being followed by my two men well armed. I told them as 'twas dark, not to fire till we could touch them with the muzzle of our pieces. I rushed down upon them, just as they were about to cut off our communication from the canoe, where was our baggage, and some goods for presents to the Indians; but on seeing our resolution they soon retreated. I pursued within ten feet of a large party. I could not tell what sort of weapons of war they had, but believe they had bows and arrows. I don't impute this resolution of mine to any thing more than the entire impossibility I saw of any retreat. The rest of the night I took my turn about with the men in watching. The next morning [we] proceeded up the Mississipi as usual, though importuned by my people to return, for fear of another onset from these Barbarians, who often infest those parts as robbers, at some seasons of the year [cf. "Travels," pp. 51-54].

My travels last year, by computing my journal, amount to two thousand seven hundred miles, and this year, from the place where I wintered, round the west, north, and east parts of lake Superior, to Michillimackinac, are two thousand one hundred miles; the total of my travels since I left New-England, is, four thousand eight hundred miles, by a moderate computation. Part of the plans and journals, with some letters concerning the situation of the country, I sent back with some Indians, which plans and letters Governour Rogers has sent some time ago by Mr. Baxter, a gentleman belonging to London, to be laid before the lords of trade. My travels this summer I am now preparing for the same purpose, which is the reason of my not coming home this fall.

I have seen the places where the Spaniards came and carried away silver and gold formerly, till the Indians drove them away, undoubtedly there is a great plenty of gold in many places of the Mississipi and westward. I trust I have made many valuable discoveries for the good of my king and country.

I cannot conclude without mentioning something of the superstition of the Naudoussees where I spent the last winter which agrees with the account of the father Hennipin, a French Recollect or a Fryar of that order, (who some years ago traveled among some part of the Naudoussees, tho' not as far west as I have been) has given of that people concerning books [cf. Thwaites's edition of Hennepin's "New Discovery," Chicago, 1903, p. 233]. I had with me some books necessary for my employment, which they supposed to be spirits, for as I by looking on the page when I first opened the book, could tell them how many leaves there were in the book to that place, they then would count over the leaves and found I told true; supposing the book was a spirit, and had told me the number, which otherways they judged impossible for me to know, they would immediately lay their hands on their mouths, and cry out in their language, Wokonchee, Wokonchee, which signifies, he is a God, he is a God; and often when I desired to be rid of my guests in my hut, I would open the book and read aloud, they would soon begin to go away, saying to one another, he talks with the gods. Many other remarks of the like kind I have made of that people [cf. "Travels," pp. 253-255].

They believe there is a superior spirit, or God, who is infinitely good, and that there is a bad spirit, or devil. When they are in trouble, they pray to the devil, because, say they, that God being good, will not hurt them, but the evil spirit that hurts them, can only avert their misery [cf. "Travels," pp. 381-382]. I have seen them pray to the sun and moon and all the elements, and often hold a pipe for the sun and moon and the waters, to smoak.

On my return to this place, I received the thanks of the Governor Commandant, who has promised he will take special care to acquaint the government at home of my services.

I have had my health ever since I left home, blessed be God, I hope you and all our children are well. I have not heard from you since I came away. Give my most affectionate love to my children. I long to see you all. I expect to be at home next July. I have two hundred pounds sterling due to me from the crown, which I shall have in the spring. Give my compliments to all friends and acquaintances. I am, My dear, your's forever,

Jonathan Carver.

Capt. Carver returned to his family at Montague in August, 1768, and lost no time in taking steps to have published in book form an account of his travels. The Boston *Chronicle* of September 12, 19, and 26, 1768, contained definite "proposals to the public." In these proposals, the book was described very much as it eventually appeared in London ten years later. The price was to be two Spanish dollars, and "subscriptions are taken in by Capt. Carver at Montague, and by J. Mein, at the London Book Store, north side of King Street, Boston." However, the traveller appears to have received little encouragement in his undertaking, and on February 22, 1769, he sailed for London in the Paoli, Capt. Hall, carrying with him, says the *Essex Gazette* (Salem, February 28, 1769), his draughts and journals, and good recommendations for his faithful service. After many vexatious delays, Carver's "Travels" finally saw the light in London in 1778, and rapidly became immensely popular. To satisfy the demand, many editions appeared in English, French, German, and Dutch.

And to-day the book is still widely read, and in its numerous editions it finds ready sale in the auction-room and elsewhere.

A word about Carver's estimable wife. He had married Abigail Robbins in 1746, and there is no evidence available to show that they were not on good terms at the time of the traveller's departure for London. But the sad fact is that Capt. Carver seems to have had nothing to do with his family after he left America, and while in England he contracted a bigamous marriage. He died a pauper in purse in 1780, leaving at least one child, a daughter, by this second marriage. The wife of Carver's youth survived him twenty-two years (in comfort, let us hope), dying, much respected, in the seventy-third year of her age, at Brandon, Vt., November 9, 1802, while living in the family of her son-in-law, Joshua Goss, who in 1774 had married her daughter Abigail. Mrs. Carver's resting-place in the old Congregational burying-ground at Brandon is marked by a simple slab on which her virtues are set forth.

JOHN THOMAS LEE.

Correspondence

MR. ADAMS AS CRITIC.

TO THE EDITOR OF THE NATION:

SIR: No more welcome writer or instructive critic on either side of the Atlantic could have undertaken the task of reviewing Lord Newton's recent interesting Life of Lord Lyons than Mr. Charles Francis Adams.

Only yesterday I had occasion to turn to Professor Hadley's reference to the crisis of 1873, in which he says that a really great man, Mr. Adams, had appeared on the scene and promulgated an idea which has been of vital force and accomplished no end of good in corporate regulation ever since.

I regard Mr. Adams's account of the Washington Treaty of more service in cementing the two great English-speaking nations than all else that has been written to that end. And I shall, with a vast number of readers, look with the deepest interest for what he has to say in the *Nation*.

R. WEATHERBE.

Grand Pré, Nova Scotia, July 25.

JUSTICE IN ALABAMA.

TO THE EDITOR OF THE NATION:

SIR: My attention has just been called to the news-item from Mobile, reprinted in your publication of July 9, and your editorial comment thereon. In justice to this State, I desire to call your attention to some salient points which seem to have escaped your notice in connection with this matter. You arraign the administration of justice in Alabama because, according to the dispatch, a negro was convicted in this State of stealing or robbing (the words are used as synonymous) another of fifty cents, and sentenced to imprisonment for fifty years therefor, a whole year for each penny collected. The writer of this startling news makes no distinction between the offences of robbery and petit larceny, and you yourself fail to take note of the distinction. The truth is that this negro was convicted of robbery, one of the gravest crimes known to our law. It was so regarded by the common law of England, and is so regarded by the criminal jurisprudence of all our States. The crime is severely penalized because of the *manner* of its commission, and usually the penalty is fixed without regard to the amount extracted from the victim. While I have not access to a criminal code of New York, I know that a wide distinction exists in that State, just as here, between petit larceny and robbery. I cannot agree with you in your characterization of this case as an instance of incredible inhumanity. Whether this negro's gain amounted to fifty cents or fifty dollars, his guilt was equally great, for our highways must be kept free from such depradators for the benefit of rich and poor alike. Neither do I think you chose a good text from which to score us for our injustice to the negro. True, administration of justice in the South is far from perfect, just as in your own State. In my opinion, the negroes in this State usually get justice in the criminal courts, while the whites frequently escape. But that even happens sometimes in New York. In justice to our State, I think you should correct the gross injustice which you did us in the article above alluded to, and when again you are moved to preach to us, please start with a case where justice has failed, not one where it has triumphed.

ADDISON WHITE.

Huntsville, Ala., July 22.

AN ITALIAN BOOK-LOVER.

TO THE EDITOR OF THE NATION:

SIR: The bibliomaniacs appear to be passing unnoticed an anniversary which would seem calculated to stir reverent reminiscence—the bicentenary of the death of the most notable of their fraternity, the Florentine librarian Antonio Magliabecchi, which occurred in July, 1714.

Of humble origin, and in his youth unable to read and write, Magliabecchi worked for years in the shop of a dealer in fruit and vegetables; but he showed so keen and genuine an interest in the backs of books that a book-dealer across the way finally employed him as his helper. In a very few days, even before he had learned to read, he had made himself invaluable to the dealer because of his accurate knowledge of the location and price of every volume in stock. In the course of years he became the oracle of all the scholars in the city, for he never forgot the volume, edition, page, and line of a sentence he had once read. He studied the catalogues of every great library of Europe, and although he left the city limits of Florence only twice in his life and neither of these trips was more than half a dozen miles in length, he was said to be able to locate the contents of every other notable library as accurately as those of his own collection. On one occasion the Grand Duke is said to have inquired what the chances were of obtaining a certain rare and valuable book. "You cannot get it," replied Magliabecchi. "There is only one copy known to be accessible, and that copy is at Constantinople, in the library of the Grand Turk. It is the seventh volume in the third row from the bottom of the second case to the right as you enter." Magliabecchi's private library exceeded 30,000 volumes, and his rooms were piled with books from floor to ceiling, with only a narrow aisle between; but aside from books, his worldly possessions were limited to two straight chairs and a cot to sleep on.

Magliabecchi was so engrossed with his books that he very rarely undressed, but snatched an occasional hour or two of sleep in one of his chairs or on his cot, from which he never removed the heaps of books and papers, but threw himself across them without disturbing them. He was dirty and dilapidated to a shocking degree, since he never had time to give the slightest attention to his personal appearance. He was very considerate of the spiders who hung their festoons about his precious volumes, and became very angry if a visitor broke their webs in entering. His reputation was world-wide, and various monarchs tried to entice him to their courts, but since money, ease, and fame were alike indifferent to him, he paid not the slightest attention to their offers. He several times set himself and his possessions on fire in his absorption, but some one always intervened in time to save him, and he died a natural death at the age of eighty-one. His private library, which he bequeathed to his native city, is now the largest and most important in Florence.

ROY TEMPLE HOUSE.

Norman, Okla., July 25.

JEAN-LEON JAURES.

TO THE EDITOR OF THE NATION:

SIR: The greatest parliamentary tenor, as his opponents were fond of describing him, has passed away. The sarcasm fitted, almost too well; Jaurès too frequently allowed his voice to run to falsetto tones; but that unpleasant organ drew throngs; a Jaurès afternoon at the Palais Bourbon was not unlike a Caruso evening at the Opéra. Whether they had come to admire or to damn, all applauded; he did it so well; almost too well to appear absolutely sincere. Yet he was sincerity itself. His marvellous pyrotechnic displays were not tainted with mountebankism; his eloquence was almost a reflex. Jaurès could not help being eloquent. One is almost tempted to recall Daudet's fling at Southerners who never thought unless they were talking.

A child of fifteen, Jaurès loved to harangue his fellow-citizens and to explain to them the local issues of their little town of Castres. The boy orator was a plodder, too; he conquered his degrees at an early age, and graduated from the Ecole Normale, the most mandarinlike establishment of higher learning in France, at the head of his class.

At twenty-six he was returned to Parliament; lost his seat a few years later; taught philosophy at the Toulouse University; returned to the Chamber, and became, so to speak, an indispensable element of French parliamentary life. At one time he even rose to the dignity of Vice-President of the Chamber, which, for a Socialist, was no mean accomplishment.

Soon after his entrance into political life he identified himself with the Socialist movement; a group gathered around him which he ruled not dictatorially, but merely through the prestige of his extremely broad mind.

Jaurès soon took issue with Guesde, who clung to the orthodox theory, known as the cataclysmic, according to which collectivism will be forced upon the world overnight. Jaurès had a deep sense of the continuity of human history; he believed that the social revolution would only be accomplished by the definite and harmonious will of an immense majority. A revolutionary minority, he was wont to repeat, however intelligent and energetic, will never bring about a revolution.

Those who to Guesde were the conscious tools of capitalism—reformists, Radicals, or

mere Republicans—were to Jaurès the unconscious tools of Socialism. He never practiced exclusivism, he never hesitated to form alliances with bourgeois Republican groups whenever the Republic, which he considered as the indispensable basis for the building-up of Socialist institutions, was threatened by Royalist machinations. Charged before the Amsterdam Congress of 1904 with being an opportunist, Jaurès boldly declared that, in order to bring about the victory of Socialism, he believed in none but practical methods.

It may be that his death closed prematurely a chapter of his evolution which would have proved of intense interest. The man who had opposed the syndicalist idea of active minorities as stubbornly as the Marxist dogmatism surprised his own associates on July 17 of this year by offering a motion which committed the Socialist party to a purely syndicalist measure; the general strike as a response to attempts at mobilization. Guesde then branded him as a traitor to his party; French jingoes, who couldn't forgive him for advocating a rapprochement with Germany, called him a traitor to his country; a stupid youth did the rest. Whatever we may think of the man and of the politician, we must concede that he was a wonderful generator of activity, mental and physical. Present at every important congress, enlivening the debates with a flash, drawing fire from his opponents, and answering them in Chesterfieldian style, he, in a sense, made history wherever he went. In spite of his immense labors as agitator and leader he managed for ten years to contribute a daily article to his paper, *l'Humanité*, perhaps the most interesting product of a Radical party, as it constituted a consistent commentary on life, legislation, literature, and art. He also found time to embody in his book, "La Réalité du monde sensible," an interesting variation on the monistic theme. Historians have disagreed with the point of view he expressed in his voluminous work on the French Revolution, but its basis of facts has been found unimpeachable. An inexhaustible publicist, he had begun the publication of an encyclopædic history of Socialism. ANDRE TRIDON.

New York, August 3.

LIQUOR AND DRUGS.

To the Editor of The Nation:

Sir: In view of the claim by opponents of prohibition that drug-using is most prevalent and serious where the sale of liquor has been prohibited, I wish, while the matter is still fresh in the public mind, to call attention to the extent of the drug traffic in New York, where there is certainly no lack of liquor, as indicated by the immense amount of news and comment in the New York papers.

The opponents of prohibition argue that if a prohibitory law is not enforced, it should be repealed, yet nobody seems to be arguing for a repeal of the Drug law.

I desire also to call attention to the traffic in drugs in the prisons as indicating how little regard the political appointees of a corrupt liquor organization like Tammany have for any law which they are supposed to enforce.

It is also noteworthy that the recent National Convention of Alienists and Neurologists put alcohol first in the list of the causes of insanity and derangement, and drugs lower down in the scale. WILLIAM H. ANDERSON.

New York, July 27.

Literature

A "STANDPATTER" OF THE EIGHTEENTH CENTURY.

The Life and Correspondence of Philip Yorke, Earl of Hardwicke, Lord High Chancellor of Great Britain. By Philip C. Yorke. University of Chicago Press. $13.50 net.

A new life of Lord Hardwicke was much needed, for historians have been obliged to content themselves with the very prejudiced and untrustworthy life in Lord Campbell's "Lives of the Lord Chancellors," the stupid three volumes by Mr. Harris, or the uninspired annals in the "Dictionary of National Biography." All three of these works show little understanding of the real services of Lord Chancellor Yorke to the development of English law, and they fail completely in making evident the reasons for his long possession of political influence. The present author, therefore, had an opportunity to produce a great and important contribution to our knowledge of the history of the eighteenth century by picturing in all its phases one of the most typical personalities of that age.

Mr. Yorke is a descendant of the Chancellor, and so had no difficulty in placing himself in the environment of his hero, through the perusal of family letters, listening to family traditions, and by the careful study of the activities of his ancestors chronicled in many state papers, private correspondence, and contemporary memoirs. The perusal of his three ponderous volumes gives evidence of his industry and his conscientious attempt to perform an act of piety; but that same perusal has left the reviewer with a feeling of having been present during most of the laborious undertaking. Like the real Lord Hardwicke, his biographer has taken the Chancellor very seriously and has woven into his narrative all the pomposity of the average eighteenth-century politician, until one longs for a little touch of George Selway's sprightliness when over his cups, rather than the same George's grim humor when present at his favorite entertainment in a chamber of death or at a hanging. Still the ponderousness of the biography may be excused on the plea that it reflects the seriousness of Lord Hardwicke's own life.

But the greatest disappointment of the whole book is that the author gives us no comprehensive view of Lord Hardwicke the politician. The word politician is used advisedly, for the author always calls him a statesman—perhaps a natural mistake for a relative and one who sees in the Chancellor the only hope of an expanding eighteenth-century Britain; but to understand the politics of the eighteenth century in England one should have studied the development of politics in ancient Rome or in modern United States, where similar conditions have produced similar results, an alliance of "Big Business" and politics with a natural lowering of political honesty. The Whig ring that managed to usurp all power under the Hanoverian dynasty finds its most similar counterpart in the Senatorial ring of Rome which was broken by Julius Cæsar, or in Tammany Hall of New York. Now, Lord Chancellor Yorke's great influence—benign his biographer calls it—was due to the fact that he allied himself with the right ring and proved himself, as a rule, loyal to his friends, just as the modern politician does.

Whiggism has always been a fetish among historians of the right party affiliations, and it is a fact that the best known and most popular historians have glorified the Whigs; and in writing of the development of Whiggism writers have always identified as real Whigs that particular faction which was led by Lord Hardwicke and the Duke of Newcastle, whereas—provided Whiggism is to be identified with progressivism, as is systematically done by writers—that particular clique of "real Whigs" was of the ultra-conservative type and can be compared to the wing of our own Republican party which upholds the popularly designated creed of "standpattism." The author shows throughout his work no understanding of this very real distinction. His creed is expressed on an early page (143):

> The Whigs, who secured the Hanoverian succession, the national church, the law of the land, religious and civil liberty as far as the perils of the times permitted, together with the power and ascendency of Britain among the nations, constituted the only party capable of carrying on the administration at this time and worthy of the national confidence; and they were necessarily supported by all except those who had something to gain by a return to arbitrary government, anarchy, and confusion, and who could acquiesce in the subordination of British to foreign interests abroad.

Although the statement, if limited to the first years of the reign of George I, might pass as a somewhat biassed interpretation of a Whig gentleman, it is an absolutely wrong analysis of the condition for later years, particularly when the term Whig party is limited, as it is by Mr. Yorke, to a particular faction of politicians; and it fails therefore as a *vade mecum* through the intricacies of eighteenth-century politics. Yet Mr. Yorke assumes that his ancestor is always following the right and saving the empire, whatever combination his own faction makes with those formerly opposed to it. Hardwicke's introduction into politics was due to the Pelham interests, to which he remained faithful throughout his life. With his patrons he joined the forces of Sir Robert Walpole as long as his star was in the ascendency; but like the Pelhams, he felt that his political future would be served better with the downfall of that autocrat, so that his influence was lent for the purpose.

After the fall of Walpole there was a further division of the Whigs into factions, the two principal ones being that led by the Pelhams and Hardwicke and that of the Duke of Cumberland. Besides these, there was the progressive party, of which William Pitt was becoming the leader, and also the Leicester House faction of the Prince of Wales.

The chief aim of all these factions was the holding of office, and the game of politics simply turned on the possibility of ousting the "ins" or routing the "outs." Even such an important event as the outbreak of the French and Indian War was occasioned by the manipulations of the "outs," the Duke of Cumberland's faction; and the plot was so far successful as to bring some of them to power.

Of all these schemes and counter-schemes, there is sufficient evidence in the letters printed by Mr. Yorke, but there is no evidence of the author's understanding of their significance. Instead we get a picture of the Lord Chancellor as a great statesman, advising only what he regards as the best for the country. The game of politics was not for such an *Uebermensch*.

There has been, therefore, much left out by the author of these volumes that we should have expected to be included; but, on the other hand, there is much to praise. First of all, this is a life of the Lord Chancellor which gives an adequate and authoritative treatment of the externals. Controverted points are carefully investigated, and although historians will not accept the decisions where they depend on interpretations of important historical events, still there are sufficient data presented to form a personal judgment. It is a pity that more space is not granted in three volumes to treat at greater length Lord Hardwicke's contributions to the development of the law of equity, but to a careful reader of the life it is very evident that his services in this field have been great and are his surest titles to fame.

Another service of the work is an admirable pen portrait of the Duke of Newcastle. To picture this fussy, self-seeking politician was not a difficult task, as he has revealed himself—so unlike the ways of Lord Hardwicke—through his letters. There has never been a satisfactory publication of Newcastle's letters; but in these volumes we have numbers of them that will make possible a better estimate of the man.

Mr. Yorke has fortunately broken away from the time-honored English method of incorporating the private letters and public documents in the text of a biography, a practice that compels a cutting of the text to fit the needs of the composition. Instead of this, the author has printed after each chapter of narrative a collection of letters written by and to the Earl of Hardwicke. He has not, however, had the courage to print these in their entirety, and in his preface he confesses that certain liberties, such as modernizing the spelling, have been taken. On the whole, the selection of letters has been well done, when it is remembered from what a large mass of material the choice had to be made. Still, such a selective method is not sufficient for historical students, and a great service to research in both England and America would be performed if steps were taken to publish *in extenso* the extant correspondence of eighteenth-century politicians.

CURRENT FICTION.

The Sheep Track. By Nesta H. Webster. New York: E. P. Dutton & Co.

The Celebrity's Daughter. By Violet Hunt. New York: Brentano's.

These novels are sufficiently alike in theme and in species to be mentioned together. They both belong to that order of minor English fiction which deals conjointly with the life of art and the life of fashion. The "artistic temperament" is a well-recognized asset for novelists, but hardly more valuable than the aristocratic temperament. Mayfair is not less thrilling than Bohemia; where the two impinge, romance greatly flourishes. "Trilby" was merely a piquant rendering of the old theme. The "sheep track" of the first of these novels is, as may be imagined, the path followed by conventional society. The writer loses no opportunity of elaborating the metaphor. Her heroine, Marica Fayne, though her father is, as it were, a registered animal, has been bred away from the track. Fayne is a scholar and antiquary who chooses solitude as a setting for his remote thoughts. He worships beauty in the colder "classical" sense, and brings up his daughter in ignorance of everything ugly to eye or mind, taking it for granted that she will continue satisfied with his way of life. But she is young and beautiful, and has her instincts, to be confirmed by her first contact with the world. That world divides itself for her into a world of pleasure and a world of happiness. At first she identifies the one with the other, and both with the life of "society"—the sheep track. Unluckily for our satire, the portraits of sheep chosen as typical—notably a Lady Grundisburgh and a Lady Plumpton—are ridiculous and feeble caricatures. The young Earl of Windlesham, with whom Marica falls in love, and from whom she barely escapes, is, from what we have gathered of earls, somewhat more credible. But it is Peter Trent, the plain, solid man, waiting unobtrusive in the background, who really seems most like a person (Fayne himself is a monster). We are glad, for several reasons, to leave Marica in his hands.

The "Tempe" of "The Celebrity's Daughter" is a very different sort of girl from Marica Fayne, a more modern type of heroine. She tells the story herself, in that tone of "frankness" which means a deliberate abstention from modesty, not to say decency, and which marks a type of female now frequently and publicly pleased with herself. The celebrity, Vero-Taylor, whom his daughter always calls "George," is understood to be a novelist of distinction. We find him a shabby cad who has eloped with a woman of title and does not know what to do with her. He borrows right and left, but the ménage is supported chiefly by an allowance made to the lady of title by a former admirer, and another made to the distinguished novelist by his injured wife, Tempe's mother. Mrs. Vero-Taylor would be a somewhat more remarkable person in real life than in a novel. Deserted by her husband, she becomes at once an accomplished and popular actress. She will not give her "George" the satisfaction of a divorce. In the end, however, her hand is forced in two ways. The woman of title is a baroness in her own right, and if her forthcoming son by "George" is not legitimate, the poor innocent will lose what would otherwise be his birthright. This consideration works upon the actress's motherly heart. Secondly, George is made dramatic censor, and has in his hands the fate of a play which his wife believes will make her fortune. The upshot is a refined bargain by which the wife yields her husband a divorce in return for his favorable verdict upon her play. As for Tempe, the girl, she loves a young man of family whom she knows to be an utter rake, and who finally disappears from view in the rôle of a co-respondent, on the way to a cynical marriage with his latest victim. A drunken "Aunt Gerty" and numerous comic society people supply an element of even more buoyant mirth to this charming tale. There would seem to be no essential disharmony shown here between the wayside strollers of art and the followers of the social sheep-track. The moral is that, with certain differences of usage, they are all equally nasty.

The Autobiography of a Happy Woman. Anonymous. New York: Moffat, Yard & Co.

Transition: A Psychological Romance. By Lucy Re-Bartlett. New York: Longmans, Green & Co.

First, a caution to the reader not to be led by the title of our first to look for anything pleasantly idyllic in these pages. The writer is a militant woman, happy because she has won her personal fight, a fight against the inherited helplessness and dependence of her sex, not in politics, but in the ordinary business of living. What she has here written is not properly an autobiography, but a tract. The style is lively and aggressive. It disposes, for example, of the present day as "a money-mad age whirling dervish dances round the umbilical cord of its own ego." The upshot of the matter is that this woman succeeded in making her own way in the material world, and thinks it a necessary and beautiful thing that all women should be able to do that. She has a raging contempt for the "generation of women that had to marry willy-nilly, or be damned," the generation that was helpless and nerveless when thrown upon its own resources. The book presents neither a consecutive story nor a sustained and progressive argument. We learn something of the writer's experiences as student, schoolmistress, woman of business, and journalist. But she continually interrupts her own story to tell the stories of other women, and to point and repoint her single moral. She is fond of italics, and of simple, strenuous words like "swat" and "bump" and "smash." For in the creed of current feminism the swat is mightier than the slumper.

In "Transition: A Psychological Romance," no such vulgar word is to be found, nor is the thing itself admired for its own sake. Nevertheless, this is a novel or series of dialogues strung together on a slight thread of plot, in defence of English militancy as one of the natural manifestations of that "coming order" which Mrs. Re-Bartlett has already celebrated in more than one volume of essays. The Hugh and Maimie of the tale are intended as mere types; the girl, of the young woman whose mind and spirit are full of the new cause, but whose heart still yearns for a mate among the unjust sex; the man, of the thick-headed citizen, wedded to the traditional notion of a female sphere, yet hopelessly in love with one of the recalcitrants. Poor Hugh—we rather pity him, he is so evidently a man of straw set up to be demolished, or converted. He seems really "a decent sort," deserving better of fate than his continual rôle of listener. The lectures he has to hear, the *argumenta ad hominem* supplied by his innocent heart, make up together a course of sprouts predestined to be too much for him. Maimie is not only a pretty girl and a militant—she is a mystic on the way to becoming an Illuminate. After and beneath her in all her phases, honest, bewildered Hugh must struggle till he comes to a knowledge of the only formula by which she may be won. The story as a story is rather absurd, but the author is not a novelist, and confides to us in her Foreword that the need to sketch pictorially the new order of life has so worked upon her that "reluctantly, fearfully," she has felt driven to adopt a literary form which she "never thought, and never wished, to touch." Such an enterprise, if the novel is really a literary form, takes courage. If Mrs. Re-Bartlett had chosen the epic or the dramatic form for her criticism of the hour, she would have been laughed at—if any one could have been found to give her a hearing at all. It is understood that one cannot step casually into success in either of those fields. But the novel is fair game.

The Day that Changed the World. By Harold Begbie. New York: George H. Doran Co.

This is a sort of sequel to Mr. Begbie's other books about conversion; but whereas the others dealt with observed fact, this is an attempt at millennial fiction. The topic is peculiarly fitted to bring out the author's weak points—lack of creative imagination and occasional want of humor. On the "Day" all professing Christians suddenly find that they really believe in God. This, in Mr. Begbie's view, includes belief in immortality, and in heaven and hell. It is affirmed over and over again that the hell which awaits sinners is a place of eternal torture. The realization that there is an actual God of love who condemns the wicked to everlasting agony affects different classes and persons in different ways. Fashionable ladies go slumming and take the poor for drives in their motor cars; great corporations raise wages or announce profit-sharing plans; the Bishop of Brompton and many others take to warning prostitutes in the streets that they are on the road to perdition; the leader of the Conservative Opposition in Parliament offers co-operation in reform legislation to the Liberals; the militant suffragettes transfer their enthusiasm to a campaign "for modesty, for simplicity, for dignity" of dress. "There is something definitely, flagrantly irreligious in the very spirit of women's dress. One cannot even think of St. Mary in the dress of to-day. . . . Mrs. Frothingham [leader of the militants] told me it was fifty thousand times more inspiring than campaigning for a vote." All this might be made very amusing, and some of it is so; but Mr. Begbie's intention is absolutely serious.

WALTER BAGEHOT.

Life of Walter Bagehot. By His Sister-in-Law, Mrs. Russell Barrington. New York: Longmans, Green & Co. $4 net.

It is not easy to judge such a work as this. The writing of English biography has fallen so predominantly into the hands of amateurs, addicted to padding and platitudes, that a proper norm of comparison scarcely exists. How commonly, after going through one of these contemporary lives, we are reminded of the words of Bagehot himself: "Are you not conscious yourself that you do not know so much of a man just after reading his biography? It requires time to let the encumbrance of circumstances pass off. Just in the same way there is no singleness, no unbroken, defined, unified delineation of character in contemporary narrations." Judged thus, by comparison with the stream of amateur essays called biography, Mrs. Barrington's work is excellent. But by any stricter norm of criticism it would have to be condemned pretty severely for its mass of irrelevant matter and its futile circumlocutions.

To be more precise, the first six chapters (considerably above a third of the whole book) are intolerably long-drawn-out. The rambling account of Bagehot's childhood at Langport and education at University College, London, is written by one who had no first-hand knowledge of her subject, and had few documents to rely upon. The letters quoted are the usual meaningless correspondence of a boy; there are few telling anecdotes, and the attempt to trace the character of the man to the surroundings of the child, as generally happens with those who try to bend the bow of Sainte-Beuve, is merely a multitudinous waste of words. Most distressing of all is Mrs. Barrington's harping on the occasional insanity of Bagehot's mother and the effect of this family anxiety on his temperament. It would have been well to have this matter out, once and for all, clearly and explicitly; but the continual allusion to it, with never a straightforward statement of Mrs. Bagehot's form of mania and its consequences, is unnecessary, and even exasperating.

There is an abrupt change for the better with the visit of Bagehot to Paris in 1851, when he was twenty-five years old. Though he had already begun authorship in a small way, the shock of the *coup d'état* seems to have first set his real powers in motion. The letters which he wrote to the *Enquirer* on the political situation of France are still good reading, containing, among other memorable sayings, his famous characterization of the English people: "I fear you will laugh when I tell you what I conceive to be about the most essential mental quality for a free people whose liberty is to be progressive, permanent, and on a large scale: it is much *stupidity*." A shrewd paradox, but whether true or not, or whether the truth lies rather with Goethe's belief that the French would be saved in the end by their *intelligence*, only time and the college debating society can decide.

With this visit to Paris, Bagehot's private correspondence also begins to show the color of his genius. There is, for instance, in a letter to his father, a vivid description of the barricades, not without a useful glimpse into the nature of revolutionary mobs in general. We can quote only a few lines:

> The people making them [the barricades] were of two very unlike sorts. Immensely the greater number were mere boys or lads, *gamins* is the technical word, the lower sort of shopboys and sons of the better artisans, not bad-looking young fellows at all, liking the fair, and in general quite unarmed. Besides these and directing them were a few old stagers who have been at it these twenty years —men whose faces I do not like to *think* of—yellow, sour, angry, fanatical. who would rather shoot you than not.

From this time the interest of the life flows in a full stream, despite the meandering style of the biographer, and with the exception of one long and impertinent excursus on the acts of the biographer's father in India. We follow now the Bagehot we already knew from his books, in his career as banker with the great house of Stuckey to which his father belonged, in his editing of the *Economist*, and in his introduction into the higher political circles through the Right Hon. James Wilson. From the purely human point of view, one of the most entertaining sections of the book is that which tells of Bagehot's visits to the home of Mr. Wilson at Claverton, and his relation with the family of daughters there, one of whom he married, and another of whom is the present biographer. Indeed, Bagehot was the most human of men, as any reader of his literary or economical essays knows, and Mrs. Barrington was quite right in making this characteristic of the man the keynote of her narration. Even the dull routine of bookkeeping could not depress his spirits. "I have devoted my time for the last four months," he writes to his very close friend, R. H. Hutton, "nearly exclusively to the art of bookkeeping by double entry, the theory of which is agreeable and pretty, but the practice perhaps as horrible as anything ever was. I maintain, too, in vain that sums are matters of opinion, but the people in command here do not comprehend the nature of contingent matter, and

try to prove that figures tend to one result more than another." As a matter of fact, this astute economist and analyst of finance was never a master of addition.

Mrs. Barrington quotes at considerable length from Bagehot's essays, and adds criticisms which are sometimes wise and sometimes not. At the very beginning of the book she makes this statement: "A striking point about all his work is that he not only has mastered his subjects exhaustively, but enjoys them keenly." The second point is abundantly true, and explains the unfailing zest and gusto in Bagehot's writings, even when they deal with topics seemingly the most remote, to use one of his own fine phrases, from "the hearth of the soul." But the first point made by Mrs. Barrington is true only with reservations, particularly in his literary essays. His criticism is always interesting and buoyed up by a profound and sympathetic understanding of human nature; the critic seems to have lived literature. But his actual baggage of book-learning, as we have been trained to demand this by the great and exhaustive critics of France, is sometimes rather slender. He will give you the man Shelley to the life, and the human value, or lack of value, of Shelley's poetry; but for a genetic study of romanticism and Shelley's place therein, we must go to other sources.

A word must be said in conclusion in regard to the proofreading of the book. This is not only bad in the ordinary sense, but is disfigured by such monstrosities as "Hissus" for *Elissus*, and "Oeneas" for *Aeneas*. In several places such errors as "came" for *gave*, or "felt" for *left*, turn sense into nonsense.

ROME AND HER LOCAL COMMONWEALTHS.

The Municipalities of the Roman Empire. By James S. Reid. New York: G. P. Putnam's Sons.

The substance of these lectures, delivered originally in the University of London, has been heard also at the Lowell Institute in Boston and in Columbia University. The object is to present the Roman Empire in the aspect of a vast federation of local commonwealths, each retaining in some degree the characteristics of the earlier "city-state" of the Græco-Roman world. It is a view well worthy of extended presentation, but the fragmentary character of the evidence remaining with regard to the local constitution and administration even of any single one of the vast number of municipalities concerned makes the task an almost hopeless one from the outset.

After speaking of the extent to which the Roman dominion grew, Dr. Reid says:

> Scholars by profession know well, but students less advanced often fail to realize, that through this marvellous evolution there runs a continuous thread of history which is rather municipal than imperial.

If he had said that there runs through it virtually a separate thread for each separate municipality, these almost countless threads falling into more or less closely related groups, and all finally centring at Rome, he would have expressed his own view more fully and conveyed to the reader more clearly the perplexities of his task as an historian. It is no reflection upon the skill of the author to say that the result makes extremely hard reading, and the fact that he has been able to hold audiences together in three different cities for the delivery of such intractable material in an extended course of lectures must be taken as a compliment both to his own power as a speaker and to the intellectual earnestness of his hearers.

One might readily imagine that Rome, in her pathway to world-conquest, would have reduced municipal organization to a single type as she went, in the interest of convenient administration. But she knew the nature of the populations with which she had to deal too well to attempt to crush local pride under the odious weight of a dead uniformity imposed from without. Her demands were for a long time little more than the minimum which would safeguard her own suzerainty, and the later encroachments on local autonomy were but the working of internal elements of decay which were destined to bring her own ruin.

The differences marking the municipalities under her control grew out of various causes. The old idea of the "city-state" naturally tended to variety, as the history of the Greek cities so vividly shows. Cities which owed their birth and growth to the slow working of natural causes differed as a class from the large number of those which were founded at a stroke either as a bid for glory on the part of the founder or as a means of holding conquered territory. Again, the cities of the eastern half of the Empire, all through its history, were marked by characteristics profoundly different from those of the West. The Empire was thus a vast system of laboratories of experiment in municipal administration, never seriously hampered by arbitrary imperial interference with local methods. But if no ruinous pressure was felt at this point, it did finally come at another. The material demands of the Imperial Government grew gradually heavier and heavier. Mines, forests, fisheries, and other natural sources of wealth fell more and more under control of the emperors. The manufacture of necessary articles for the military and official service went generally into the same hands. The requirements of the Government post service were a severe burden upon all towns along the routes, and the delivery of corn and other provisions for public use was a heavy weight upon municipalities and farmers alike. And so it happened that the Empire itself drained away the life-blood from these local communities which alone had given it its vitality. Dr. Reid's closing words sound like an echo from the pages of Tacitus:

> In this tragedy of ruin it is difficult to assign any great rôle to human will. No movement in history wears more the appearance of a destiny, sweeping along in an ever-growing flood, imperious and irresistible.

This book could not possibly hold the interest of one who reads for mere entertainment. It is distinctly for the student, who has some knowledge of Rome already and is willing to do vigorous intellectual labor for more. One is sorry that material worked over three times for oral delivery should have been allowed to go to the press and through the press in such shape as to require two pages of *addenda and corrigenda*. It should also have been impossible for a book to get by the proofreaders of the Cambridge Press with two separate referenees to the Colonia Agrippinensis (Cologne) as constituted in 50 B. C., especially when in both cases the Emperor Claudius is mentioned in immediate connection with the incident. Are our best publishing houses possibly relaxing in their sense of responsibility in points of mere scholarship? We would not, however, close with an unfavorable impression. The wealth of matter which the author has here brought together is really indispensable to any earnest student of Roman history.

A TRAVELLER DE LUXE.

Impressions de Sicile. By Princesse Marie Wolkonsky. Paris: Librairie Hachette. 1914. 20 francs.

This sumptuous quarto, brightened by a number of colored reproduetions from the author's own paintings and printed on paper kindly as well to the eye of the reader as to its profusion of well-selected photographic illustrations, will certainly make Sicily live again in the imagination of any one who has had the good fortune to travel there. The Princess made her tour by automobile, starting southward from Messina and holding closely to the coast until she reached Selinunte. From Selinunte she passed northward to the Segestan ruins, through Alcamo to Palermo and then close along the shore to Capo d' Orlando. A break in the road east of this point made it necessary to turn southward into the mountains, and Messina was finally attained by way of Randazzo, Franeavilla, and Taormina, with the addition of many fine views of Ætna to the original sehedule. Her first sight of the colossus on reaching the summit of the Sierra del Ré, some twenty miles distant, ealls forth this passage; it was in the winter, with the snow mantle falling well down the slopes:

> The obliquely shining sun cast shadows of transparent blue and tints of opal over its sinuosities. A white flaky smoke, losing itself in the clear heavens, crowned the majestic cone. What a marvel, this spectacle of Nature! Ætna, like a gigantic diamond, darts its dazzling fires over the roseate background of the sky. We stop, entranced by this fairy spectacle, wholly unlike that of the snowy peaks of the Alps.

Her likening of the mountain to a diamond recalls the Italian habit of speaking of its fertile slopes as "empearled" with the farm-

houses which gleam in the distance, and the disaster which crushed so many of those farmhouses only a few weeks ago brings back to the mind as well the comment of René Bazin, "seulement, quand le géant se secoue, les perles tombent!"

She did not climb Ætna, and it may well have been a commendable feeling of fitness that led her to leave that awe-engendering summit to its conspicuous seclusion. It is not so easy, however, to find a satisfactory explanation of the fact that Mount Eryx (modern San Giuliano) was not included in an itinerary unhampered by imperative limits of time or expense. Gregorovius, the historian of mediæval Rome, was charmed with the place, though with an attitude not unnatural to a German of fifty years ago he felt it necessary to deny that the Æncid had any part in the attraction. But an educated traveller from France, even in these days, should be too susceptible to the spirit of Virgil to pass unconcerned within a few miles of ancient Eryx, which adds to its Virgilian memories so magnificent a view of the Mediterranean underneath, Sparagio looming into the upper blue to the east, the lofty Egatian Islands under the sinking sun, and the salt basins, wheat fields, and vineyards stretching off southward towards Marsala and Mazzara. Nor did Castrogiovanni, the ancient Henna, with its wealth of Sikel and Greek legend, lure her into the interior. In fact, the evidence of this volume goes far to fix Princess Wolkonsky as too essentially a modern to do full justice to her subject. There is much to appeal to the eye in Sicily, even if its past were utterly unknown, but there are few localities in which a sympathetic grasp of remote history and legend will yield heavier returns to present appreciation.

Of course, such a tour involved occasional lodging in places where hotel accommodations were but ill-adapted to Parisian sensibilities. In one case, at least, the beds were so uninviting to a more intimate acquaintance that the night was passed *sans déshabiller*, with sleep still further destroyed by the uproar of the "artists" of an ambulant kinematograph outfit, and the dust of that town was somewhat indignantly shaken from the tires of the Wolkonsky automobile at the hour of five in the morning, "la nuit . . . la plus mauvaise de tout notre voyage." The volume does not show much evidence of a sense of humor sufficient to minimize such infelicities of travel, though the author had been much amused the evening before at this same hotel by the naïve reply of "don Peppino" to a request for six eggs for the next morning: "Je suis incapable de les faire, mais la patronne le pourra." Whether the unusually early hour of departure forestalled the capability of "la patronne" we are not told. A slip in geographical names may be pardoned, but one feels more like granting grace to the author than to the house of Hachette for such an error as occurs in a paragraph on "an unique view" from a hilltop near Solunto. "D'un coté, le regard plonge jusqu' à la lointaine Palerme toute empourprée de soleil; de l'autre, l'œil est captivé par la beauté du golfe de *Trapani*." It would indeed be "an unique view" if the eye could pierce all that lies between Solunto and Trapani. Of course, the Gulf of Termini Imerese was meant.

Notes

"Love Insurance," by Earl Derr Biggers, is announced for publication by the Bobbs-Merrill Company.

Among the volumes announced for publication in September by Thomas Y. Crowell Company are: "Bullfinch's Mythology"; "Hints for Young Writers" and "I Had a Friend," by Orison Swett Marden; "The Man Napoleon," by William Henry Hudson; "Women of the Classics," by Mary C. Sturgeon; "Stories from Browning," by Rupey C. Turnbull; "Stories from Wagner," by J. Walker McSpadden.

The announcement comes from the Oxford University Press that it is about to issue a new series of small anthologies under the general title of "Oxford Garlands." The first four volumes of this series—Religious Poems, Sonnets, Poems on Sport, and Love Poems—will be published early this month. The poems have been selected and briefly annotated by R. H. Leonard.

"Chessmen in Action," by W. P. Turnbull, and "Lessons in Pawn Play," by the Rev. E. E. Cunnington (Dutton; 60 cents and 75 cents net, respectively), are timely in view of the increasing interest now manifested in the game. In the former Mr. Turnbull gives many interesting end-play problems, in which different pieces are employed, showing their relative values and methods of play. The lessons in pawn play are particularly valuable to beginners, and one hundred examples are given with their solutions, so that the novice may learn the reasons for moves and combinations.

"Game Protection and Propagation in America," by Henry Chase (Lippincott; $1.25 net), is a useful handbook covering all important phases of a subject that is fortunately attracting more and more attention. The economic as well as the sentimental reasons for game conservation are stated, the necessity for education of the public opinion emphasized, the State, national, and international phases of the matter severally considered, the legal phases of property in game discussed, and many practical suggestions given on such subjects as the field-work of game-wardens, the restocking of game covers, the propagation of game fishes, and the fighting of forest fires. An appendix gives a model constitution and code of by-laws for the formation of game clubs, organized, of course, for purposes of conservation.

Those who are frightened by the formidable six volumes of Mr. Macauliffe on "The Sikh Religion" will be glad to turn to the little volume by Dorothy Field on the subject "The Religion of the Sikhs" (Dutton; 70 cents net). The author evidently does not work from first-hand sources, but contents herself with using translations of native texts. A result, we do not obtain anything new in the presentation of the subject, but the little compilation is useful as giving in a brief form all the essential facts of the curious religion of the Sikhs. The specimens of hymns seem to have been chosen with care and illustrate some of the views and doctrines brought forth in the body of the volume.

"The China Year Book" for 1914 (Dutton; $3.50 net) has been considerably revised and enlarged since its predecessor appeared last year. The editors mention the difficulties that the compilers of a book of this kind have had to meet in view of the disturbed political conditions in the country, but so far as can be gauged in a cursory examination of the volume they appear to have overcome these obstacles in a satisfactory fashion. The department entitled "Who's Who?" which, we are informed with pardonable pride, "contains nearly twice as many names as appeared in the 1913 edition," should prove of especial service to distressed journalists wrestling with the perplexities of Chinese nomenclature. It will be an inestimable boon, for instance, to have at hand an exact authority for the spelling of "Amuerhlingkuei," which is the first name on the list of the distinguished ones. The chapters on Commerce and Industry have also been amplified, and in the department dealing with Greater China, Lieut. G. C. Binsteed contributes a valuable chapter on Mongolia. The preparation of the list of names of members of the Senate and House of Representatives must have been a somewhat discouraging task, for a large number of the names have asterisks against them indicating that their possessors were "unseated by Presidential orders, November 4, 1913," and there is an afterthought in the form of a footnote to remind us that the National Assembly was dissolved by the autocratic Yuan Shih-Kai in January of this year.

The same publishers bring out this year for the first time "The South African Year Book," by W. H. Hosking ($3.50 net), a convenient work of reference which supplies a very real need. Subsequent editions will doubtless be considerably revised and amplified. In particular, the pages devoted to Races and Languages appear to us to be inadequate, and information concerning the Boer element in South Africa is scanty; we have, for example, found it impossible to discover from the Index any figures giving the ratio of the Dutch population to the British, the only comparison used being apparently, that between white and colored. The figures on Agriculture also leave something to be desired, unless the Index is seriously at fault, for, though there are plenty of statistics giving the values of production, nowhere are we able to find any estimate of the area of land under cultivation. Doubtless, these and other deficiences which use of the book may reveal will be supplied in subsequent editions. Meanwhile, "The South African Year Book" will form a welcome addition to the reference library.

As Napoleon wished his fame to rest upon his Code, so Lord Milner preferred, as he said in the farewell banquet at Johannesburg, "to be remembered for the tremendous effort, wise or unwise, in various particulars, made after the war, not only to repair its ravages, but also to restart the New Colonies on a far high-

er plane of civilization than they had ever previously attained." Mr. W. Basil Worsfold's two volumes, "The Reconstruction of the New Colonies under Lord Milner" (Dutton; $7.50 net) are an excellent statement of what this tremendous effort was and what great results it accomplished. They are a continuation of his earlier book, "Lord Milner's Work in South Africa, 1897-1902," and cover nominally the three critical years from the final surrender of the last Boer Commandos by the Vereeniging Agreement of May 31, 1902, until Lord Milner's retirement from South Africa in March, 1905; but they include also an interesting "epilogue" in which the author summarizes the economic and constitutional changes in the Transvaal and Orange Colony until May 31, 1910, when these new colonies joined with Natal and Cape Colony in the creation of the Union of South Africa.

Lord Milner's is a figure around which still rage burning controversies. He was the steadfast and outspoken champion of that British Imperialism whose greatest exponent was his chief at the Colonial Office, the late Joseph Chamberlain. When the latter resigned from the Balfour Cabinet in 1903 on account of Tariff Reform, Milner was offered his place, but with a characteristic sense of duty he declined the office on the ground that he could not leave his work in South Africa. Mr. Worsfold, too, is an imperialist and expounds imperialism vigorously. He also gives evidence of the soundness of his views and supplies a wealth of valuable information which he has gained from a study of the Blue Books, from his access to Lord Milner's own papers and private diaries, and from his wide opportunities as editor of the Johannesburg *Star*. He admires enthusiastically Lord Milner's unquestioned administrative ability; he appreciates sympathetically Lord Milner's efforts after the war to raise Boer and Briton into mutually respecting, loyal, and contented citizens of the British Empire at a time when the Boers held aloof from his Crown Colony Administration and when the British Radicals criticised him because he did not think it prudent to grant responsible government immediately; and he sees in retrospect to what a great extent Lord Milner's measures of administrative improvement and unity prepared the way for the eventual Union of South Africa. This being so, his volumes are a vigorous defence of Lord Milner against ignorant critics in England as well as a clear and valuable History of South Africa from an Imperial point of view.

The first volumes catalogued in Ernest A. Baker's "A Guide to Historical Fiction" (Macmillan; $6 net) are Jack London's "Before Adam" and H. G. Wells's "A Story of the Stone Age"; and it brings its compendious list to Gen. Charles King's narratives of the Philippine insurrection and to Pierre Loti on the Turkish unrest ("Les Désenchantées"). The book will fill a gap on reference shelves into which Mr. Jonathan Nield's "Guide" has imperfectly fitted. A simple plan divides the thousands of items, classification being made into nations or groups of nations (Germany, Switzerland, Austria, and Hungary, for example, are considered together), and each division is then considered as to historical periods or episodes. Nearly three-fourths of the heavy volume is usurped by the British Isles, America, and France; but even Africa receives twelve pages, and Asia twenty-five. As in the author's "Guide to the Best Fiction," each book gets from a score to several hundred words of description, the date of appearance, publisher, price, and main editions being noted. The principles of selection are generous, and books like the Sagas and Cid, Defoe's pseudo-histories, Fielding's and Dickens's social studies, and Henty's juvenile books, are cheek by jowl with deliberate, carefully documented pieces of novelized history like "Romola" and "War and Peace." Want of literary merit is no bar, as in Mr. Baker's companion volume; the number listed is portentous. A single index includes authors, titles, and geographical and historical names. The mass of information presented inclines one to be lenient with deficiencies, such as the omission of volumes of short stories like Daudet's and Coppée's on the Franco-Prussian scene, or George Moore's "The Untilled Field," as deep a study of actual Irish conditions as is easily found; and the rare omission of an outstanding work, as Bazin's "Les Oberlé." Of errors, only a few parallel the listing of Eggleston's "Hoosier Schoolboy" under the English Colonies. Users of the volume must be careful to note that when a given work covers a span of years the date under which it is indexed represents the end of the period.

In "Bread and Cireuses" (Lane; $1.25 net) Helen Parry Eden wears with grace two very different mantles. In verses of childhood she shows a tender and subtle observation; in humor and satire her work is full of neat outcroppings of the Horatian spirit. The poems which celebrate Betsey-Jane's first party, the pinafore bought in Bruges, her relations with Four-Paws and Jocko, and her incontinent desire to go to heaven, are cunningly etched pictures, with an interfused maternal feeling. Among the topical skits to which Mr. Eden lends a hand practiced in *Punch* and elsewhere are "The Vegetarian's Daughter," "To a Journalist," and "A Lady of Fashion on the Death of her Dog," all bringing a past brilliancy and spice to present-day topics.

> Who now with quaverlug eloquence wouldst fill
> And tiding of a pilfered purse, the street
> Maddened with motors and the armored fleet
> Of base mechanical engines out to kill.
> Go, thou sole arbiter of Buff and Blue,
> Time hath prevailed against thee, yield the floor,
> Toil, on bare sufferance, from door to door,
> The hooters hold the highway;—as for you,
> You voice the missing ha'pence of the poor,
> And they the incomes of the well-to-do.

A musing philosophy in several of the Betsey-Jane poems rises to poignancy in the "Epitaph on a Child"; while the "Elegy for Father Anselm" has stateliness of march, and there are a few souvenirs of Drayton and others of his age.

Students of the legend of Tristan and Iseult will welcome "Isoldes Gottesurteil in seiner erotischen Bedeutung: ein Beitrag zur vergleichenden Literaturgeschichte" (Berlin: Hermann Barsdof Verlag), by J. J. Meyer, for it offers a remarkably full collection of parallels to the motif which gives its title to the book. Those who are familiar with the version of Gottfried von Strassburg will recall the incident of how Iseult passed unscathed through the ordeal of carrying a glowing piece of iron in her hand as a test of the truth of her asseveration that she had always been faithful to her husband, King Mark. In view of her intrigue with Tristan, it was hopeless for her to make such an asseveration without qualifying it. She accordingly contrived an incident with a supposed beggar which enabled her to except this person in her oath, without exciting the suspicion of Mark and his barons that she had been really unchaste. The beggar was, of course, Tristan in disguise. She had thus fulfilled the literal requirements of the oath, and consequently escaped unharmed. This motif of the ambiguous oath is especially common in the Orient, and the examples which Professor Meyer brings together accordingly drawn mainly from the literature of India and other Eastern countries. As might be expected from the nature of the "Tristan" episode, which they are intended to illustrate, these tales are licentious in the extreme. On the other hand, some of them, like the story of Durgila (given here in German quatrains), possess undeniable literary merit, and they all throw light on the primitive attitude of mind which views the literal fulfilment of an oath without regard to its spirit as satisfactory even to God.

The very abundant notes at the end of the volume are full of valuable information on the rather unsavory subject of eroticism in the East and mediæval Europe. Similarly the first part of the book is devoted to a general discussion of conceptions of love in European literature during the Middle Ages. Beneath the conventional veneer of the *amour courtois*, the author sees nothing but sheer grossness and brutality. There is, of course, a considerable element of truth in this view, but Professor Meyer injures his case by his unrestrained exaggeration. There were gleams of light even in the Dark Ages that do not appear in his picture. In conclusion, one cannot but express wonder that the author should have taken no pains to make his book usable. He has not divided it into chapters, and one has to find one's way through his pages as best one can.

The Philistine enigma is discussed by Prof. R. A. Stewart Macalister, the well-known Palestinian excavator, in "The Philistines, Their History and Civilization" (Oxford University Press). The origin of this people has been a standing puzzle—it has been held that they came from Crete or from the coast of Asia Minor. Macalister, after detailing such hints as are given in the Old Testament and in Egyptian and other inscriptions, concludes that they probably came from both these regions—a non-Semitic seafaring people, who, like the Northmen, descended on cultivated coasts, seized territory, and established kingdoms. But he confesses that the data are not sufficient to warrant a positive assertion. One bold hypothesis he ventures to put forth—he holds that it is to the Philistines we owe the so-called Phœnician alphabet; but the grounds on which he bases his argument are precarious, and this hypothesis must be relegated to the limbo in which other explanations of the origin of our alphabet repose, there to stay till we have more light on the early Mediterranean conditions. Professor Macalister has not solved the great problems involved in his investigation, but the materials he has collected help us to understand the general life of western Asia in the fourteenth and thirteenth centuries B. C.

"The West in the Diplomacy of the American Revolution," by Paul Chrisler Phillips, published in the Social Science series of the University of Illinois, is a careful investiga-

tion based upon documents in the French, English, and American archives. Mr. Phillips's main thesis is that Vergennes's policy was dominated throughout by the desire to humiliate England, and that he never had any desire to secure an increase of French possessions in America. He maintains that the "Memoire Historique et Politique sur la Louisiane par M. Vergennes," published in Paris in 1802, and relied upon by Professor Turner, was a forgery. According to Vergennes, France would be sufficiently benefited, first by securing the independence of the English colonies, secondly by attaching the new nation to France, thirdly by increasing the territory of Spain in America at the expense of England. Much new material has been used to support this thesis; and in the main it seems well established. The difficulty of Vergennes's policy lay in the fact that while Spain was hostile to the independence of the colonies and determined to extend her interests in the Mississippi valley, the colonists insisted upon the Mississippi and the Great Lakes as their rightful boundaries. The chief embarrassment of Vergennes, therefore, arose from the necessity of reconciling the conflicting interests of his allies. Against Spain he insisted upon independence for the colonies; but he wished Spain to be satisfied, and could not support the colonies in their extreme western demands.

Mr. Phillips shows that it was this attitude of Vergennes in respect to the disposal of the West, and particularly the excessive zeal of his agents Girard and Luzerne in support of Spanish interests there, that gave rise to the anti-Gallic sentiment in Congress and the appointment of Jay and Adams as peace commissioners. In the opinion of Mr. Phillips, Girard and Luzerne supported Spanish interests far more vigorously than the instructions of Vergennes warranted, and the suspicion of the latter's sincerity which Jay and Adams carried into the negotiations was entirely unnecessary. There is doubtless truth in this. Yet it is true that Vergennes wished to satisfy Spain as well as the United States, that he was content to insist upon the independence of the colonies without raising the question of what the boundaries should be, and that he neither thought they had any valid claim to territory west of the Alleghanies nor made any effort to aid them in securing that territory. If England had retained Canada, including the northwest territory, and Spain had secured Florida and the greater part of the southwest territory, would not the United States have been bound irrevocably to the French alliance? And in that case would not France have been in a position to exercise a first-rate influence in the New World? One can with difficulty avoid the inference that Vergennes would have been very well satisfied with such a solution. Yet it is true that he did not make any serious effort to prevent the United States from acquiring the territory which they desired. Mr. Phillips has presented his material in a clear and vigorous style, although with a good deal of unnecessary repetition.

The second volume of the Harvard Studies in English consists of "The English Moralities from the Point of View of Allegory" (Boston: Ginn; $2), by Prof. W. Roy Mackenzie. The author, in his own words, has taken "high ground." He not only proposes a new definition for morality play, but contends that his is the only right one. He approaches the type as a botanist studies a new flower. He fixes upon allegorical structure as the distinctive mark of the species, and then applies this means of identification rigorously. "The Nice Wanton," usually classed with the moralities, is excluded, because, although "the moral is insisted upon more steadily and more earnestly than in many of the full-fledged Moralities," "while the play lacks allegorical structure, no amount of moral earnestness can retain it in the class." "Kynge Johan," frequently connected with the history play, is included, because, although "it is evident that a thread of history runs through the play from beginning to end," "this historical thread could be removed in a few moments, and the play would remain, in texture, exactly as it is now; whereas any attempt to remove the allegorical element would result in the complete dismemberment of the play." Not only is the definition perfectly logical, but the classification of moralities based on it is consistent. It brings out more thoroughly than has hitherto been done the allegorical elements in the various kinds of morality. In spite of harboring a doubt as to whether any phenomenon in literary history is truly to be studied by this inelastic method of natural science, one entertains a hope that Professor Mackenzie will turn his study of allegorical method to further account in throwing more light on the provenance of this type of drama.

NOTES FROM ABROAD.

In the days when the London Underground Railway was never free from smoke, the men employed on that road were reported to be singularly exempt from consumption. Since electric traction took the place of steam trains, this hygienic distinction has been lost. The railway, however, is making a new reputation for its station flower gardens, which compete annually for prizes awarded after an inspection by the directors. The chief hindrance of a tunnel gardener, it seems, is not the lack of light or the difficulty of watering, but the draught set up by passing trains.

The Church of England continues to be disturbed by the unrest among English women. Hunger-strike litanies in St. Paul's and bombs at Westminster Abbey have now been followed by the demand that women shall be admitted to the priesthood. Some of the Nonconformist denominations—notably the Friends and the smaller Methodist bodies—have at various times made effective use of a female ministry, but in such cases the motive for the offer of service has been evangelistic zeal, not sex equality. The *Guardian*, the leading Anglican paper, dubs the proposal a "preposterous suggestion," and there is not the least prospect of its being seriously entertained. At the same time it is receiving sufficient support to become the source of a troublesome agitation.

One of the youngest and most popular of Swiss authors, M. Gonzague de Reynold, of Geneva, has lately published the first volume of a book entitled "Cités et pays suisses." His object is to call attention chiefly to the aspect of Switzerland which so often escapes the notice of the tourist who hurries directly to the Alps, and neglects "the plain." The work is partly historical, partly descriptive. This volume deals with "la Suisse romande," a second will treat of "la Suisse allemande." M. de Reynold is a poet as well as a prose writer, and his new book contains some lyrical pieces which are not without beauty.

Prof. Adrien Naville, who recently retired from the philosophical faculty, is a member of a family which has done much for the University of Geneva, and which has been for many years associated with the intellectual development of the town. His father, Ernest Naville, a man of profound learning and an author of great critical ability, was his predecessor in the chair of philosophy. The son, after teaching philosophy at Neuchâtel, came to Geneva, where he has had a large and faithful following. Among the books and many philosophical writings which he has published, the most important is his treatise on the classification of the sciences, which is quite the most satisfactory discussion of the subject which has appeared since the time of Auguste Comte.

The art collection at the Berne national exposition has caused a great deal of almost abusive criticism. M. Simonet, a very competent judge, writes: "Never, I believe, was an exposition of paintings dishonored, anathematized, and yet more frequented than this national exposition." The fault seems to be that of the jury who, it must be admitted, have shown little discrimination, and have hung next to pictures of undoubted excellence works which awaken disgust and derision. Strange to say, indignation is excited not merely at the vices of technique and manner, and at the barbarity of the contrasts of color and eccentric draughtsmanship, but also at the subjects of many of the paintings, which give one an impression of ethical and æsthetic decadence. Probably the jury was not able to oppose the new ideas and methods of the younger school of Swiss artists, whose ideal seems to be a deformed imitation of certain foreign masters.

The Paris season has had its tragedy in bibliophily. Those who still remember that there were Symbolists may also recall the name of Paul Verlaine's "accurst poet," young Arthur Rimbaud. The sonnet in which he attributes particular colored audition to each vowel would be substantially all that remains of his work if it were not for the unending malodorous publications about his relations with Verlaine. He tired dreadfully of poets and versifying at eighteen, and was lost to Paris ken. After nineteen years, during which he gave no sign, his death was announced from the Red Sea, where he had lived at peace with his conscience trading in Abyssinia. A thin book of verse, "Saison en Enfer"—the only one published by himself—he had himself suppressed soon after its appearance in 1873. Only six copies, held dear, have been known to exist—until, after forty years, two hundred uncut copies have just been found lying forgotten in the printer's store-room at Mons, in Belgium. The owners of copies—previously rare—insist that the author's intentions shall be carried out, and these inconvenient volumes be suppressed. There is an unprized and little-sold common edition of the poem in a volume of collected works of Rimbaud, which he never saw; it was published by Symbolists long after he had deliberately forgotten them and was dead. As to bibliophiles, Tristan Bernard says that he has a copy of every known edition of Fénelon's "Télémaque"—and that he has never read the book.

Science

POPULAR ASTRONOMY.

The Call of the Stars. By John R. Kippax. New York: G. P. Putnam's Sons. $2.50 net.

The author has hit upon a plan, essentially quite new, of compiling into a single volume not only the material of astronomical fact and theory, but also judicious excerpts from the vast stores of legendary lore that form a precious heritage from the ages. So "The Call of the Stars" is of course in no sense a text, still less a treatise for the technician, but rather a sort of cyclopædic compendium of astronomical literature drawn from the widest variety of sources, literary, historical, and scientific. Each chapter is a unit in itself, and forms a continuous story. There is no attempt at fine writing; indeed, the style as a whole is rather subdued, indeed prosaic in spots. It is nevertheless a good, honest, successful attempt to present in authoritative and well-balanced fashion the entirety of astronomical appeal at the present day.

The style is lightened by an exceptional variety of poetic quotations, showing a wide acquaintance with astronomical allusion in all literatures, from Hesiod and Aratus to Walt Whitman and Lydia Sigourney. Astrologic and legendary quotations are profuse. The main facts of descriptive astronomy, with here and there a geometric explanation, are set forth in plain language, without frills, much less pleasantry; and while it is a mere compilation, with no pretence of being anything else, it will be found especially useful to schools as a work of reference, and exceedingly useful to magazine and newspaper writers, who are continually under the necessity of presenting the different phases of astronomical progress, in their attempt as educational media to instruct the public, along with their fancied function of cleverly amusing it.

The stars proper take up about half of the book, and are divided into four seasons, with their appropriate constellations in succession. Orion is especially well and fully done, and the huge magnitude of the neighboring dog-star is quaintly and, for aught we know, cosmically accounted for by Zacris Topelius, the late Finnish poet, who states that "the lovers Zulamith the Bold and Salami the Fair, after a thousand years of separation and toil, while building their bridge of starry light, the Milky Way, upon meeting at its completion—

> Straight rushed into each other's arms,
> And melted into one.
> So they became the brightest star
> In heaven's high arch that dwelt,
> Great Sirius, the mighty Sun,
> Beneath Orion's belt."

Astrological stories form a frequent and welcome inclusion; and the fact is noted that Virgo as a feminine sign is astrologically unfortunate, as in England to-day. The star maps are rather insufficient in size for actual study of the sky. The illustrations, from recent work at the great observatories, are, as a rule, excellently chosen, though one is here and there defective in printing. The selections from the abounding field of art might well have been more numerous in a book of this character, with the history of all such allusions, often of exceeding interest. Barnard's fine photographs of Mars afford no suggestion of canals.

The moon receives the fullest exposition, as we might expect, in what is perhaps the best chapter of all, though the illustrations are not quite up to standard, that of the full moon not representing that body at the full at all. Adjoining the principal temple of the Sun at Cuzco was a chapel consecrated to the Moon, the acknowledged sister-wife of the Sun, and the deity held next in reverence to him, as the mother of the Incas. The zodiacal light and the *Gegenschein* are not omitted, but we should like to have seen more about the glacial epoch, tidal evolution, zones in the asteroid ring, and celestial photography; though if we except the colors of the stars, there are very few topics about which less might have been said. This author is rather too positive about the planetesimal hypothesis, and Kippax accepts See and Lowell as if ultimate authorities, crediting many wondrous things to the Arizona Observatory which are persistently invisible from other parts of the world. Nevertheless, he makes a very serious effort to be judicial in all controversial questions concerning Mars. In the matter of stellar ages, our real knowledge is far from being complete enough for unconditional statements.

The book is well printed and bound in the usual Putnam form. Blemishes of literary style are not frequent, and printers' errors are pretty nearly eliminated (excepting pp. xvii, 315, 369); standard time was introduced in 1883 (328); it is Stephen's law (370); the year of Kuhn's spectroscopic work on Saturn is 1895 (393); Tempel (411); perturbations of Uranus, not Neptune, have been employed to locate a possible trans-neptunian planet; why should the earth's "gravitative influence cease at 620,000 miles"? (313); and the reputed canals of Mars have been just as well seen with little instruments as big ones (371), sometimes perhaps a trifle better.

"The Call of the Stars" will be found a most useful book for libraries, and it deserves rewriting and bringing down to date every few years. The rather abrupt ending might well be modified, and an ampler index would be found very helpful. Nevertheless, it is easily among the best English compilations of astronomical fact and fancy.

The increasing popularity of the rock garden is in a measure attested by the publication of a second edition of a competent British work, "Rock Gardens: How to Make and Maintain Them" (Scribner), by Lewis B. Meredith. In chapters on The Site, The Natural Rock Garden, The Artificial Rock Garden, The Rockwork, The Soil, Propagation, Planting the Rock Garden, Cost, etc., the author covers the ground carefully from the point of view of an experienced gardener; and the second half of the book is devoted to an Alphabetical List of Plants Suitable for the Rock Garden, with full particulars of their habit, time of flowering, cultivation, etc., including a number of valuable plants not listed in the earlier edition. Some parts of the book—especially the chapter on cost—will need translation in the light of American conditions, but this does not seriously affect the usefulness of the book. It is well printed and illustrated, and contains an index.

"Flowering Plants of the Riviera" (Longmans; $3 net), by H. Stuart Thompson, is a handy guide to the local flora of the Riviera. Most modern manuals of botany are now arranged upon the system generally known as Engler's, in which the relationships, as now understood, are clearly presented. In the system of Engler, the families which are regarded as the lower are treated first, and the series closes with the most complex. In the system adopted, with one important modification, in this volume, the series begins with the Crowfoot family, and places the Compositæ not far from the middle. So far as the search for the name of a plant in a manual is concerned, there is very little difference between the two systems. It is enough to say that the system here used is exceedingly conservative. The author has given clear and concise descriptions, and has done a good deal towards explaining some of the puzzles of distribution. The reproductions of some excellent water-color paintings are successful in most cases, but they lack sorely some definite standards of measurement. On account of this lack, plants of large size and some of very small size are jumbled together, without any caution as to the great disparity which exists.

Prof. Paul Reclus, the noted French surgeon, died in Paris on July 29. Professor Reclus was born on March 7, 1847, at Orthez, in the Basses-Pyrénées. He was educated in the College of Sainte-Foy-la-Grande and in the Lycée of Nîmes. He was a professor of clinical surgery in Paris University, and was principal surgeon in the hospital of the Hôtel-Dieu. Professor Reclus was a member of the Academy of Medicine and an officer of the Legion of Honor. He was the author of several works on various diseases and on surgical practice.

Prof. Francis Humphreys Storer, who died in Boston on July 30, was born in the same city on March 27, 1832. He studied at Lawrence Scientific School, Harvard, and was assistant in chemistry at Harvard to Professor Cooke from 1851 until 1853. He then served as chemist for the United States North Pacific exploration expedition, and after that service went abroad to continue advance studies and research. In 1865 he was made professor of general and industrial chemistry at the Massachusetts Institute of Technology, remaining there until 1870. He became professor of agricultural chemistry at Bussey Institution, where he remained until 1907, after his first year there becoming dean of the Institution. He was a fellow of the American Academy of Arts and Sciences. Professor Storer was the author of several scientific works, including "Dictionary of the Solubilities of Chemical Substances," "Manual of Inorganic Chemistry," "Manual of Qualitative Chemical Analysis," and "Agriculture in Some of its Relations with Chemistry."

Drama

A PERSISTENT SEASON—GLEAMS OF INTELLIGENCE IN THE LORD CHAMBERLAIN'S DEPARTMENT—LONDON REVUES.

LONDON, July 17.

In defiance of unusually fine weather and warmth, though not excessive, yet above the average, the theatrical season, like Charles II, takes an unconscionable time in dying. We are well past the middle of July, yet there are two moderately important events still ahead of us. One is the production of a play by Mrs. W. K. Clifford, entitled "A Woman Alone," which is an attempt to urge a middle course between the complete subjection and the complete emancipation of women. Mrs. Clifford believes in the active and intelligent coöperation of women in the affairs of the world, but she would leave the voting power to men. Having read the play, I think I may safely prophesy that it will neither check the militants in their mad carcer nor damp the ardor of the men and women who are working for woman suffrage by legitimate methods. That woman suffrage will come before long seems to me personally as certain as that the sun will rise to-morrow; and it is equally incomprehensible to me that some people should seek to hasten the inevitable by burning churches, and that others should dream of retarding it by half-hearted arguments, dialectical or dramatic. Mrs. Clifford's argument, so far as I can follow it, is neither a very forcible nor a very clear one.

The other impending event is the first English production of Maeterlinck's "Monna Vanna." Hitherto it has lain under the censor's ban; but an unwonted spasm of common-sense has overtaken the Lord Chamberlain's office, and not only "Monna Vanna," but Ibsen's "Ghosts," after having headed for years the list of immoral works, is suddenly certified as fit for human consumption. As both plays are well known in America, I need not enlarge upon the absurdity of the situation. "Monna Vanna," to my thinking, is a bad play. There is no logical or psychological justification for the insulting condition which Prinzivalle attaches to his demand for Giovanna's visit to his tent. It is grossly inconsistent with his attitude of reverent adoration, and has therefore an air of being dragged in for the sake of its suggestiveness. So far, I think the censor could have made a plausible defence of his veto. But one artistic error does not make an immoral play; and the whole tone of M. Maeterlinck's drama ought to have placed it far above the censor's censure. The case, however, falls in with a theory I have long maintained: namely, that, where the censor has any show of reason on his side, it is almost always on account, not of any moral blemish, but of some artistic blunder committed by the author.

The removal of the embargo from "Ghosts" was celebrated on Tuesday last by a public performance at the Haymarket Theatre, organized by the indefatigable Mr. J. T. Grein, whose Independent Theatre gave the first private performance of the play a quarter of a century ago. Here again, if any excuse could be found for the censor, it would be in one or two artistic flaws which, for my part, I confess to finding rather painful. For example, Oswald's defence of "free marriages" on the ground that legitimate marriages are too expensive is so absurd that it gives one a little shock not only to hear him adduce it, but to find Mrs. Alving accepting it without demur. The whole gist of his argument is that these unions are as stable and as fruitful as though they were legalized; how, then, can the trifling cost of the actual ceremony have anything to do with the matter? The censor might, not entirely without reason, have argued that he could not give his sanction to a play in which irregular unions were defended by shameless special pleading, against which the champion of conventional morality, Pastor Manders, is not suffered to advance any effectual protest. But, in fact, the whole history of "Ghosts" illustrates the unreasonableness of censorship as an institution. That the play is, in every true sense of the word, profoundly and austerely moral, no one who knows it can doubt; yet there are certainly things in it to which an official guardian of conventional morality cannot reasonably be expected to give his deliberate sanction. The mistake lies in imposing, or seeming to impose, upon any one the duty of guaranteeing all the sentiments expressed in a dramatic work. Either he will be a vexatious futility or he will crush the whole moral and intellectual life out of the drama. The former is the alternative realized in the recent history of the British censorship.

Its vexatiousness is illustrated in a play which Mr. H. B. Irving produced last week at the Savoy Theatre—"The Sin of David," by Mr. Stephen Phillips. It must be twelve or thirteen years since Mr. Phillips, then in the first flush of his dramatic activity, told me that he had sketched a play on the subject of David and Bathsheba. I warned him that the censorship blocked all Biblical subjects: his own "Herod" was barely allowed to pass, because, though the title was Biblical, the action was not. He found on inquiry, I imagine, that he might as well attempt to put King Edward as King David on the stage; wherefore he transferred his scene of action from Judæa to Cambridgeshire, and made his David and Uriah a general and colonel in the Parliamentary army during the Civil War.

The loss, of course, was enormous. The Oriental environment would just have suited Mr. Phillips's lyric method, and though the story was doubtless rather too cynical to be handled with ease, there is no reason to doubt that Mr. Phillips, at that stage of his career, could have overcome its difficulties. Transferring it to England, he lost not only the atmosphere and the temperature of the original, but was compelled to water down the theme almost into insignificance. His Sir Hubert Lisle is not a majestic criminal like the King of Israel, but only a man who performs what is almost a duty under circumstances which make the duty almost a crime. He does not, like David, invent the forlorn hope which is to rid him of Uriah—Mardyke; the opportunity occurs in the ordinary course of the campaign, and Mardyke is the one obvious man to be detailed for the job. The case becomes one of subtle casuistry—an interesting dramatic motive, no doubt, but not to be compared with the torrent of passion which sweeps David onward, so blinded by desire that he is, it would seem, genuinely surprised when Nathan, after telling him his own black story in parable, winds up with the incomparably dramatic "Thou art the man!" There is nothing in Mr. Phillips's play at all analogous to this scene: in so far, at any rate, the censorship has impoverished English literature.

"The Sin of David," regarded simply as it is, without reference to what it might have been, suffers from Mr. Phillips's characteristic short-windedness. It is not so much a fully-developed drama as a scenario with some of its dramatic passages clothed in lyric verse. But short-windedness in blank-verse drama is infinitely preferable to long-windedness—the rock on which so many an ambitious play has split. It may, at any rate, be said for Mr. Phillips that, if he leaves us somewhat unsatisfied, he often charms and never bores us

A play produced a few nights ago at Wyndham's Theatre interested me a good deal, not by reason of its own merits, but because of the mystery of its obvious relationship to Mr. George Cohan's "Seven Keys to Baldpate." It is called "From Nine to Eleven," and its author is Mr. Walter Hackett. The scene is carefully non-committal; nothing is said to locate it either in America or England; but from many small indications I judge it to be in fact American. Has it been acted on your side? I do not know. Did it precede "Seven Keys to Baldpate"? I do not know. All I know is that the author plays the same trick upon his audience which Mr. Cohan plays in the piece which Mr. Charles Hawtrey is to produce some six weeks hence. A jeweller from whom a lady has obtained a valuable necklace "on approbation" is dunning for its return. She cannot return it until eleven o'clock, and it is now only nine—how is the jeweller to be kept quiet during the interval? She appeals to her uncle to exercise his well-known powers of romance and keep the impatient creditor fascinated for two hours. Then, without any warning except a momentary darkening of the stage, we find ourselves plunged into a lurid and variegated detective story, enacted by the same characters to whom we have already been introduced; and it is only at the end of the third act that we find it to be a "sell"—

an objectivation, so to speak, of the story which the uncle is supposed to improvise for the benefit of the jeweller. Though the actual plot is wholly different from that of the "Seven Keys," the mechanism is identical; and it seems rather unlucky that the public should have been thus put on the scent, as it were, of the joke to be played upon them in Mr. Cohan's amusing "mystery farce."

An interesting special matinée was given at the Prince of Wales's Theatre a week or two ago, when a political comedy by Lady Randolph Churchill was produced, under the title of "The Bill." A minister has staked his reputation, and almost his life, on the passage of a universal suffrage bill. The measure is like to be defeated through the desertion of a group of the statesman's own party, headed by an influential baronet. But the statesman's second wife, an ambitious, domineering woman, obtains possession of a very compromising letter which the baronet has written to the statesman's daughter-in-law, and uses it to force him to abandon his opposition to the bill. When the daughter-in-law, however, learns that this blackmailing machination is going on, she determines to defeat it even at the expense of her own good name, and by making a clean breast of her indiscretion (it was no more) to set the baronet free to vote according to his conscience. He does so; the bill is defeated, and we gather that the statesman's life is shattered, though he does not actually die on the stage. The play is fairly skilful and fairly entertaining; but these modest merits are not, unfortunately, enough to distinguish it from the crowd of semi-successes. If any one should know political life in England, it ought surely to be the widow of one Cabinet Minister and the mother of another; yet Lady Randolph has not quite escaped that air of unreality which somehow clings to political plays above all others. The production was notable for a charming performance of the indiscreet but generous-hearted daughter-in-law by Miss Marie Doro.

I have lately been making a round of the great variety theatres which are given over to the craze for so-called "revues"; and, without being unduly confident, I think I can perceive a certain upward movement in these formless fantasies. Those which are now running are on the whole decidedly better than "Hallo, Ragtime!" at the Hippodrome, which set the fashion some eighteen months ago. In that I could discover no redeeming feature except the acting of Miss Ethel Levey.

What is remarkable about these huge machines is their international character. They are not really English at all, but Anglo-Franco-Russo-American. Among the leading artists, other than dancers, the American element largely preponderates. Apart from Miss Ethel Levey, who I think has the makings of a serious actress, Miss Elsie Janis, at the Palace, easily heads the list. She has very genuine cleverness, refinement, and charm, and may fairly be said to make the success of "The Passing Show." In all of the productions Americans are prominent and popular, and have so set the style that I took for Americans one or two performers who turned out, on inquiry, to be English. The French element comes in mainly in the scenery and dresses. Paul Poiret has dressed several Alhambra shows, and in most of the productions there are one or two scenes of real originality and beauty by French painters. An odd phenomenon, by the way, is the sustained popularity of a series of French revues, played from beginning to end in French, at the Middlesex Music Hall in Drury Lane. I went to see "Vive L'Amour!" the other evening, and found it so thoroughly Parisian in its slang that most of the jokes escaped me. Certainly the popularity of these pieces is an amazing symptom of the "entente cordiale," though there is perhaps more cordiality than "entente" on the part of the English audiences. The Russian element is to be found in the dancing. Many of the actual performers are Russians, and the influence of the Russian Ballet is perceptible at every point. On the whole, in spite of many vulgarities and inanities, these entertainments show a certain aspiration towards beauty, wit, and even intelligence, which is not to be despised. And their internationalism is, to my thinking, a valuable feature. It is something for two nations to have even their vulgarities in common.

WILLIAM ARCHER.

Music

RECOLLECTIONS OF A MUSICIAN.

Ecole Buissonnière. Par Camille Saint-Saëns. Paris: Pierre Lafitte & Cie. 3 fr. 50.

Like Berlioz, Schumann, Liszt, and Wagner, Saint-Saëns has written books that will live as long as his musical scores, which are among the best France has given to the world; indeed, it is safe to pronounce him the most scholarly composer that country has produced, and, next to Bizet, the most inspired. As a man of letters he is less brilliant and imaginative than Berlioz, but also less erratic and fantastic. His "Harmonie et Mélodie" (of which seven editions have been printed) and his "Portraits et Souvenirs" are delightfully stimulating, and give vivid glimpses of his experiences, his friends, and his opinions. A systematic book of mémoires, he has declared emphatically, he will never write; but the two books just named largely take the place of such, and what was missing is supplied by his latest volume, "Ecole Buissonnière," which, as the title suggests, is a rambling collection of articles on all sorts of subjects, giving the reader a good idea of the different ways in which he has worked and enjoyed life. As some of these chapters have appeared quite recently in *l'Echo de Paris* and other periodicals, and the author is now in his eightieth year, it may be assumed that this will prove his last contribution to French literature—for literature it is, having many of the best qualities of the Gallic style.

His way of relating the principal events of his career *en passant*, in the course of diverse discussions, has the advantage of sparing the reader dull biographic details which in a regular book of memoirs would have had to be introduced for the sake of continuity. It is only to his infancy that Saint-Saëns devotes a special chapter in the new volume. Among the interesting facts we gather from this are these: that the first instrument which appealed to his musical instincts was a tea-kettle, the singing of which, gradually growing more intense, aroused his "curiosité passionnée"; that he began to pick out tunes on the piano when he was thirty months old (this he himself remembers); that he refused to learn children's pieces, because the accompaniment was too simple and "the bass did not sing"; that at five he played sonatas and began to compose, directly on paper, not by the easier way of searching out tunes on the keyboard; that at first he did not like a violin alone, but enjoyed a number of violins played together, whereas the entry of trumpets, trombones, and cymbals made him cry out: "Stop them—they prevent me from hearing the music"—an objection which not a few adults raise against much of the music of our day.

It was by no means an easy row that Saint-Saëns had to hoe when he grew up. In the Conservatoire his merits were not acknowledged at once, and his efforts to come before the public were for a long time futile. Young American musicians who think they are not appreciated should read the "Histoire d'un Opéra-Comique" in this volume, in which the author relates in detail his trials and tribulations with the "Timbre d'Argent." There was at that time a curious prejudice in Paris against French musicians, from which not only the eccentric Berlioz suffered, but also the younger men, among them Bizet. Concerning him, when he gave the Parisians the delicious "Pêcheurs de perles" and the immortal "Carmen," Saint-Saëns remarks that "the devil in his own person, coming directly from the infernal regions, could not have had a worse reception." About his own masterwork, "Samson et Dalila," the author informs us that had it not been for Liszt, who brought it out at Weimar, this opera would have never seen the light of day.

These are a few of the biographic details that may be culled from the "Ecole Buissonnière." No less interesting are his reminiscences of diverse friends to whom sections are assigned—Victor Hugo, Pasteur, Louis Gallet, Pauline Viardot, Liszt, Rossini, Massenet, Meyerbeer, Offenbach, Ingres, and others. Curious details are given regarding open-air performances in France. There are chapters on Egypt and Algiers, on stars, on travel now as contrasted with former days of discomfort, on optical questions, on religious music, on the pronunciation of Latin in the French churches, and on organs and

organ-playing. For more than twenty years Saint-Saëns was organist of the Madeleine in Paris, and this, he declares, was one of the joys of his existence, as it must have been of the congregations and of many tourists. Instead of playing the works of others, or his own, he nearly always improvised, and in this art he was without a peer, although, as he remarks, improvising was formerly "the glory of the French school." Lefébure-Wély, he continues, "who was a marvellous improviser (I have a right to say so, for I have heard him), did not write any organ pieces that rose above mediocrity; and I could name some among our contemporaries who do not rise to their full height except when they are improvising."

With the latest developments of French music, Saint-Saëns is not at all in sympathy. Without mentioning names, he loses no chance, from the preface to the final pages, to hurl an anathema at Debussy and his more or less radical imitators. The admirers of this sort of thing, he declares, are lucky: "they enjoy pleasures of which I have no conception, and which I shall never know." He has no interest in musical anarchy—in an "art" which violates all the rules of musical grammar and preaches that any combination or sequence of tones is legitimate. To him the great Frenchmen in music are Bizet, Berlioz, and Gounod, and he has much admiration for Massenet, whom he calls "one of the most brilliant diamonds in our jewel casket." Those to whom "the horrible is beautiful and the beautiful horrible" may not like him, but Saint-Saëns admires him for having dared to write music which is pleasing. He may not have been profound, but neither were the Greek sculptors profound; "their statues are beautiful and their beauty is a sufficient merit." Massenet had his faults, but "ce n'est pas l'absence de défauts, c'est la présence des qualités qui fait les grandes œuvres et les grands hommes."

HENRY T. FINCK.

The Edward MacDowell Memorial Association has chosen August 19 to 23 for its fifth annual festival in Peterborough, N. H., which promises to surpass all previous festivals by the variety of its programmes, the large list of participating artists, and the increasing interest of the music-loving public all over the country. One of the main purposes of the festival is to give composers, playwrights, and interpreters opportunity to exhibit their work to advantage without incurring any expense for singers, orchestra, or chorus. Most of the American composers whose works are to be represented next month will be present to conduct them personally. Among them are: Edgar Stillman Kelley, W. H. Humiston, Lewis M. Isaacs, Edward Ballantine, Gena Branscombe, Rossiter G. Cole, Chalmers Clifton, Arthur Farwell, Henry F. Gilbert, Arthur Nevin, Deems Taylor. The Boston Festival Orchestra has again been procured for these performances. The Peterborough MacDowell Choral Club, of seventy-five voices, will be heard, among other things, in Haydn's "Creation." Orchestral and choral works by MacDowell are on the programmes. There will be dances by Lada, the talented American girl who studied her art in Russia. Ferdinand Reyher contributes a play called "Youth Will Dance," introducing a series of old English morris dances, and one of the afternoon programmes includes "Pan and the Star," a pantomime by Joseph Lindon Smith with music by Edward Burlingame Hill. Full programmes may be obtained, with particulars concerning accommodations, from the Edward MacDowell Memorial Association at Peterborough, N. H.

One of Ignaz Friedman's achievements which is attracting attention abroad is a new edition of the compositions of Chopin. *Die Musik*, of Berlin, considers it of sufficient importance to devote four columns to a review of it. Breitkopf & Härtel are the publishers. In preparing this edition, Friedman followed the example of Mikuli, and once more compared the printed copies with the original manuscripts. In the case of Chopin, to be sure, this procedure does not always settle points that are in doubt, for he made frequent changes in his copy, and there are as many readings of some of his works as of Bach's "Chromatic Fantasy" and his "Well-Tempered Clavichord." Friedman has paid special attention to phrasing, fingering, expression marks, and, above all, pedalling, which is of such superlative importance in the playing of Chopin.

George Henschel—Sir George since the King's last birthday—was the first singer who fully revealed to American audiences the wonderful art embodied in the songs of Liszt when they are not only interpreted by a genuine vocal artist, but played by a great pianist. He usually played his own piano part, and to hear him thus perform Liszt's mastersongs (the best of which have also been issued in a separate volume by the Oliver Ditson Company) was an experience to be remembered. He was also for many years an authoritative interpreter of the songs of Brahms, with whom he had much personal intercourse. Sir George was the first conductor of the Boston Symphony Orchestra (1881-84). Since then he has spent most of his time in London, conducting, singing, and teaching. On April 29 last he made his farewell appearance on the concert platform in London. Thirty-seven years had elapsed since his first public appearance in that city. Few musicians have had such a far-reaching influence on musical life in England. It has been said that "there are few English singers who have not at some time or other passed through his hands, and who would not confess that they owed a great deal to him."

That there is no prejudice in Germany against American composers is demonstrated by the growing interest in the songs and piano pieces of Edward MacDowell, and the cordial reception given this year to Edgar Stillman Kelley. Under the presidency of Carl Stoeckel, of Norfolk, Conn., a society has been formed for promoting the publication and distribution of Professor Kelley's works.

Saint-Saëns is a great traveller, and it is therefore not incredible that, notwithstanding his age, he has consented to cross the ocean and pay this country another visit during the coming season. Campanini has included his opera "Déjanire" in the repertory of the Chicago Opera Company, which has his promise to conduct it in that city and in Philadelphia. He is also to play one of his concertos at a Sunday concert. It is inconceivable that he should not also be heard in New York.

Art

A STUDY OF PESTILENCE.

Plague and Pestilence in Literature and Art. By Raymond Crawfurd. Oxford University Press.

In these pages Dr. Raymond Crawfurd deals with the artistic and literary associations of the pestilence from the earliest times until the end of the eighteenth century; from the plague which smote the Philistines in Ashdod to the plague which devastated Moscow in 1771. He has added a learned appendix in which he states his reasons for diagnosing the plague of Athens, in 430 B. C., as typhus fever rather than as Oriental plague; but, with this exception, he only impinges on the fields of medical science and of history so far as is necessary to give coherence to his narrative. The result is a work of quite unusual interest. Indeed, the only serious fault we have to find with it lies in the fact that it contains no index, table of contents, expository page-headings, or titles of chapters. We are turned adrift upon a chartless sea of print, and, having finished our voyage, must trust to our memories for every detail of it. This is unquestionably a drawback, but one which is somewhat mitigated by the strict chronological order in which the subject is arranged. Moreover, the page-margins are ample, and, when all is said and done, one's own marginalia are the most satisfactory marginalia there are.

Of a work of this kind the illustrations naturally form an important feature. If they do not really illustrate the text, they are worse than useless, and we are glad to testify that in the volume before us they are well chosen and numerous, ranging from photographs of classical Greek and Latin coins, of mediæval plague-banners, and *Pestblätter*, to reproductions of quite modern pictures. There is, however, a startling omission, and one which seems almost inexplicable in view of the stress which Dr. Crawfurd lays upon the time-honored conception of pestilence as caused by darts or arrows. It was, as he is careful to remind us, the Archer Apollo (Ἀργυρότοξος) who shot pestilence into the Grecian host; the brazen buckler which fell from heaven into the hands of Numa was given to ward off the arrows of pestilence; Bonfigli's banner, in the chapel of the Gonfalone at Perugia, depicts the Madonna protecting her votaries from the arrows of an angry Christ; while it was because St. Sebastian is always represented as arrow-pierced that he became a plague-saint. Yet the painting which, of all Italian paintings, most completely illustrates this idea finds no place in Mr. Crawfurd's book. We, of course, refer to the Tovoletta di Biccherna, of 1437, where the Plague is represented as a Demon-Archer, mounted upon a furiously galloping black horse and shooting arrows as he comes. The air is full of them, and all doubt as to the symbolism of the picture is

removed by the fact that one arrow is directed towards the groin, another towards the neck, and two towards the armpits of the various victims—details these which, we should have supposed, might at once have caught and riveted the attention of a medical man (see W. Heywood, "A Pictorial Chronicle of Siena," Siena, Torrini, 1902, pages 57-60). Probably, however, Dr. Crawfurd has never seen the painting in question, nor even the photograph of it which hangs in the R. Archivio di Stato in Siena among the *Tavolette dipinte della Biccherna e della Gabella.*

In Italy, at any rate, Dr. Crawfurd seems rarely to have left the beaten track; his information is generally at second hand, and we take leave to doubt if he even understands the Italian language. When, on page 114, he speaks of Lando di Pietro, *Landus Aurifex* (see the Milanesi documents, I, 228), as "Lando Orefice," and again, on page 115, as "Orefice" simply, it is difficult to escape the conclusion that he regards *Orefice* as a family name instead of, as it is, the Italian for *goldsmith.* Such slips (and there are others with which we have no space to deal) scarcely decrease the value of the book. We mention them to the end that if, as we hope there may be, there is a call for a second edition, Mr. Crawfurd may find time to correct them.

NEO-CLASSIC ARCHITECTURE.

Monumental Classic Architecture in Great Britain and Ireland during the Eighteenth and Nineteenth Centuries. By A. E. Richardson, Fellow of the Royal Institute of British Architects. New York: Charles Scribner's Sons. Small folio. With 136 illustrations.

Mr. Richardson was well advised in undertaking the preparation of this work. It was high time that some one should do for the neo-classic architecture of Great Britain a like service to that which has been repeatedly rendered to her mediæval architecture —Norman, Gothic, and Tudor. It has been too much the custom to misprize and decry the neo-classic work of English architects, especially of those coming after Inigo Jones and Christopher Wren. Certainly the average American architect is apt to imagine that, in spite of the achievements of Gibbs, Sir William Chambers, and the Adam brothers, England has very little to show in the way of really successful architecture in the classic styles or spirit. A perusal of Mr. Richardson's systematic and admirably illustrated volume ought certainly to correct any such misconception.

After such a perusal one may, perhaps, still contend that the classic styles have always been foreign styles in England, their forms and spirit in a certain degree alien to British taste, and that even the best English examples hardly measure up to the quality of the best Italian and French work. But it will be impossible to deny that the showing made in this volume is really impressive; that not a few of the buildings illustrated are worthy to be called masterpieces; while, to many readers, the wealth of names of notable architects marshalled in the text and represented by their works in the illustrations will be surprising.

The 136 illustrations are mostly from photographs, all of high quality; while the plans, elevations, and other diagrams are precisely such as are needed to elucidate the text and supplement the views. Inigo Jones, Wren, and Gibbs do not figure except incidentally in the text; but Sir William Chambers and his successors, to the close of the neo-Greek period, are well represented. London, Bath, Dublin, Edinburgh, and Liverpool supply most of the examples. The text is sufficiently full and detailed. It avoids extravagant praise, while seeking to do justice both to the greater and to the lesser lights whom it mentions. The point is well made that the classic styles brought into England a really monumental architecture to supersede the essentially provincial earlier Renaissance styles, known as the Elizabethan and Jacobean. The four chapters between the Introduction and the Appendix treat of the Roman-Palladian Phase, 1730-1780; the Græco-Roman Phase, 1780-1820; the Greek Phase, 1820-1840; and the Culmination in the neo-Greek and Italian Phase. There are a full bibliography and an index. The work is commended to architects, and should prove especially suggestive to students of our own "Colonial" architecture.

For some years there has been evident in this country a revival of original, or painter, etching—etching, that is, as a means of direct expression for the artist, as distinguished from reproductive etching, in which a painting or other work of art is translated into the language of copper, etching needle, and acid. On the whole, the younger generation of etchers has accepted the art, with its advantages and limitations, and has realized the necessity of respecting the nature of the medium and of adapting it to each individuality. The "Year Book of American Etching" (Lane; $2 net), though far from including all of our best men in this field, does afford a good view of the state of the art with us to-day. Its hundred illustrations evidence diversity of personal expression and various influences, and they also cover a variety of subjects. There are depicted definite localities, spots in Venice, Oxford, Honfleur, Harlem River, Chicago. There is the landscape presented by MacLaughlan, Manley, and others rather for its own sake and its mood, the latter occasionally underscored by the use of descriptive titles with a literary flavor. Figure pieces include the stern vigor of Lewis and the melodramatic tinge of Higgins. The pictorial possibilities of our industrial undertakings—not a much-worked field—have been seized occasionally by Pearson and Horter. In calling attention to the last-named fact, one wishes, like Mr. Forbes Watson, who contributes an admirable introduction, to avoid the charge of false patriotism. We shall not produce American art by the mere process of picturing American subjects. As Mr. Watson points out, it is the man and his attitude that counts, whether he find topics in his own land or in some other that happens to enlist his sympathies.

Finance

THE WAR MARKETS.

With almost inconceivable rapidity, the prediction which financial experts have for years been making—that outbreak of a general European war would bring in the markets a situation unprecedented in history—has been fulfilled. On Friday of last week, when Germany sent her ultimatum to Russia, the Bank of England advanced its discount rate to 8 per cent.—the highest since the Overend-Gurney panic of 1866—and the London Stock Exchange was closed; this being followed by the closing of all stock exchanges in this country, and by cessation of business on all Continental exchanges.

On Saturday, the London bank rate went to 10 per cent.; the highest in the institution's history, and never matched but twice. On the same day, in connection with Germany's declaration of war on Russia, the foreign exchanges of the world fell into an unworkable condition. Demand sterling at New York, whose normal maximum is 4.89, and which had already gone to $5 in the pound on Thursday, touched $6½ on Saturday, and has gone to $7 this week. These are prohibitive rates for all except business conducted on a basis of paramount necessity. They meant that the machinery for financial drafts by a market in one country on a market in another had broken down. As a matter of fact, exchange on London has this week been virtually non-procurable at New York.

The first effect of this embargo on international settlement of accounts was the declaration at Paris of a "moratorium"—whereby payment of maturing indebtedness is by governmental decree deferred for the period of a month. The Balkan States set the precedent for this, in their recent war. Adoption of this expedient was under discussion, even at London, over Sunday. When this present week began, a temporary substitute was adopted, in the shape of a declaration by Parliament of three successive extra "bank holidays"—an expedient borrowed from the act of the legislatures in our own California, Oregon, Washington, Nevada, and Oklahoma, during the panic of 1907. With this was coupled a decree releasing bankers from immediate liabilities on maturing foreign bills.

Simultaneously, our Government authorized the issue, if necessary, through the banks, of $500,000,000 or more of "emergency banknotes," based on approved commercial assets and taxed at so high a rate as to insure its return from circulation when conditions again are normal. It was properly assumed that this would prevent a shut-down on cash payments to depositors, a currency famine, and a premium on currency, such as occurred in our panic of 1907. The adoption of this expedient was followed, at the banks of New York and other cities, by the authorizing of clearing-house loan certificates, whereby a bank whose cash reserve has been drawn down too low, in a run of depositors,

that not a few of the buildings illustrated this [illegible] been
[illegible] itors,

may pay its balances due to other banks in the Clearing House, at the daily settlement, in due bills secured by high-grade collateral.

Other emergency expedients may follow, abroad and here; for the situation arising from the blockade of international exchange, the embargo created on the markets of countries now at war, and the withdrawal of merchant ships through fear of capture, is one of the widest imaginable ramifications. It has now directed all interest, in this country, to the problems of the import and export trade.

Nothing at all resembling the present European situation has existed since Napoleon declared war on England in 1803, and the mutual interdependence, on a credit basis, between such markets as London, Paris, Berlin, Vienna, and New York, was then of trivial scope, compared with the relations which exist to-day. That the greater part of our usual import trade from the European Continent is already cut off, follows necessarily from the seizure of railway facilities in France and Germany by the governments for military purposes, and from the holding in port of transatlantic vessels of those countries. Merchandise importations, from France and Germany alone, usually average a million dollars daily—which gives some conception of the problem now created, especially when credit obligations must in large measure have been incurred already, against merchandise consigned to this market from those countries and obstructed on the way.

The still larger problem of our export trade covers business not only with those countries, but with other European destinations. Our export trade to Europe averages $4,000,000 daily. Nearly one-third of it is with France and Germany direct, and that, for the moment at any rate, is completely blockaded. The rest, including the great amount which usually goes to England, is halted by the present absence of facilities for financing the export movement.

With this extraordinary problem the commercial and banking interests of New York and London have to grapple, and all that even the most experienced international bankers can yet say is that it will have to be solved through stress of sheer necessity, but that, apparently, financial machinery altogether novel will have to be invoked. It is plain enough that the expedient of the Napoleonic wars, the squadron of merchant ships under convoy of an armed frigate—familiar to our boyhood in the pages of Captain Marryat—would inadequately cope with the occasion, even if such an arrangement were actually feasible.

Meantime, however, our wheat, for which the need on European markets will grow more and more urgent daily, is piling up at our ports and inland storage points, and both the grain exporters and the grain exchanges are for the present in a state of complete bewilderment. What will be the precise outcome of this remarkable dilemma, and exactly how the sudden deficit in merchandise importations will affect the home-producing markets of the same commodities—for home consumption will not stop—are among the questions which are presently to be answered, adding something new to economic science.

The Call of The Stars
a Popular Introduction to a Knowledge of the Starry Skies
By John R. Kippax, M.D., LL.B.,
8° 41 illustrations. $2.50.
"Whoever in this day makes a book so informing, so brilliant, so specific as to be literally a call of the stars to students and general readers is a noble minister to science and has an educational message that is much needed. . . . We welcome with genuine satisfaction and delight this book which is in the fullest sense the impelling call of the stars. To see the book is to want to know it, to know the book is to want to know more and more about the stars, and whoever dips into the book will find indifference to astronomy gone forever, and whoever stays with it to the final paragraph will enjoy it more and more and will be the richer in knowledge, the nobler in thought, more reverent in spirit."—*Journal of Education.* (June 18, 1914.)

PROSE NARRATIVES

Edited by CHAUNCEY W. WELLS, University of California.

A volume supplying more than 20 models for the writing of simple narration. It excludes stories but covers a wide range of history, legend, and autobiography, including the Bible, the Sagas, Herodotus and Pliny, Benvenuto, Cellini, Defoe, Franklin, Macaulay, Carlyle, Froude, and Stevenson. An appendix cites supplementary reading along the same lines. Price $1.25.

ESSAYS IN EXPOSITION

Edited by BENJAMIN P. KURTZ, Ph.D., HERBERT E. CORY, Ph.D., FREDERIC T. BLANCHARD, and GEORGE R. MacMINN, of the University of California.

A college course in exposition. The Introduction takes the place of the usual rhetoric and is followed by over 500 pages of selections for analysis. The authors represented are John Stuart Mill (3 selections), Cardinal Newman (3 selections), Matthew Arnold (3 selections), Ruskin (3 selections), Spencer, Huxley, Fiske, Froude, Macaulay, Bagehot, Dowden, and John Addington Symonds. Price $1.30.

Savannah, Ga., J. Gardner.
Springfield, Mass., Hotel Kimball Newsstand.
Toronto, Canada, Prince George Hotel Newsstand.
Washington, D. C., Newsstands at National, Willard and Shoreham Hotels.
Winnipeg, Canada, F. R. Morris.

Nearly Ready

Hunter's Civic Biology

By GEORGE WILLIAM HUNTER, A.M., Head of Department of Biology, De Witt Clinton High School, New York, N. Y.

A book which will teach good citizenship as well as biologic science. In this one year's course, the emphasis is laid on the biological factors of the pupil's surroundings, and he is taught how to better the conditions. The subject is related to his everyday life and topics of interest to him are used for illustrative material. The technical terms are reduced to a minimum. Everything in the treatment is concrete and practical, with special attention paid to the economic phases of biology. The applications of biology and physiology to hygiene are fully treated, especially as regards foods, nutrition, and nerve control.

VOL. XCIX.—NO. 2563 THURSDAY, AUGUST 13, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

Who would buy an expensive atlas just now?
THE ATLAS OF EUROPE
with Maps by J. G. Bartholomew in
Everyman's Library
Costs, in cloth, only 35 cents
Reinforced cloth 50 cts., leather 70 cts.

AN INCOMPARABLY VALUABLE

ECONOMIC HISTORY OF RUSSIA

In two vols. By JAMES MAVOR *Cloth, $10 net*

Russian history has been thoroughly rewritten within twenty years by such men as the late Prof. Kluchevsky and others whose works are inaccessible to English readers. This copious, rich material has been thoroughly studied, and its results presented together with his own observations and first-hand knowledge by Prof. James Mavor, Ph.D., of the University of Toronto. It is unquestionably a survey the importance of which can scarcely be overestimated.

Fine Maps by the great geographer, J. G. BARTHOLOMEW, cover the whole world in four volumes of handy atlases in
Everyman's Library
Per volume, cloth, 35 cents
Reinforced cloth 50 cts., leather 70 cts.

A History of Russia By Prof. V. O. KLUCHEVSKY, late of the University of Moscow.

The only complete history of the least understood periods of Russian history, those preceding the beginning, about the middle of the seventeenth century, of Western influence. The result of years of expert investigation, it contains much which was never published before concerning the political, economic, legal, and religious institutions of Russia. Its author is fearless in his criticisms of accepted theories and original in his own account of the fundamental character of the nation which is bound to loom so large in the near future of Europe, yet is among the least known of her people.

In three 8vo volumes translated by C. J. HOGARTH. The set, net $7.50

THE SLAV SPIRIT IN BOHEMIA'S WARS

The Hussite Wars

By the COUNT LÜTZOW

Cloth, 8vo, with frontispiece, net $4.50.

The book is timely because its author shows that instead of being purely religious controversies, as is often assumed, these Bohemian civil wars were largely caused by racial antagonisms, the revival of the Slavic spirit, and the rise of a strongly democratic feeling; the same causes which are factors in the present European struggle.

HOW BELGIUM CAME TO BE A NEUTRAL STATE

England and the Orleans Monarchy

By Major JOHN HALL

With a portrait. Cloth, 8vo, net $4.00.

A brilliant piece of diplomatic history detailing the creation of Belgium as a neutral state by the Five Powers; and the establishment of the *entente cordiale* between France and England; both influential in forcing England into this colossal war.

GERMANY'S AMBITIONS, SUCCESSES AND FAILURES

Modern Germany

By J. ELLIS BARKER

4th, very greatly enlarged and thoroughly revised edition. Cloth, 8vo, net $3.00.

The best summary in print of Germany's political and economic problems, her foreign and domestic policy, her ambitions and the causes of her successes and her failures. Its later chapters treat of Russo-German relations, the Triple Alliance, Germany's attitude toward England, the Moroccan Crisis, the significance of recent elections, and of industrial conditions. An incomparably useful book.

Modern England

By LOUIS CAZAMIAN Net $1.50.

An account of the evolution of modern England from the viewpoint of France, and exceptionally interesting in comparison with the studies made by English, American, or German authors. Its author is a lecturer at the Sorbonne.

Common Sense in Foreign Policy By Sir HARRY JOHNSTON. Cloth, 8vo, $1.25

An exceedingly brilliant and competent account of the problems faced in shaping Great Britain's policy toward France, Germany, Austria-Hungary, Russia, the East, and America, published only last year.

The Meaning of Money
By Hartley Withers
Cloth, 8vo, net $1.50.
The money-values of the whole world have been upset. A man who thought he had thousands in his pocket could not even buy a shave. The clearest, simplest statement of what money really is, is to be found in this book.

AMERICAN PUBLIC OPINION

By JAMES WHELPLEY DAVENPORT

Author of "The Trade of the World." Net $2.50.

Studies which interpret America's relations to international questions, including financial matters, immigration and its connection with the Russian treaty, our attitude toward the Balkan States, etc.

From Jena to Eylau
By Freiherr von der Goltz
Cloth, net $2.50.
The history of the disgrace and the redemption of the Old-Prussian Army. A famous bit of military history.

NEW YORK, THURSDAY, AUGUST 13, 1914.

Summary of the News

In a special Chronicle of the War, which will be found on page 185, we record the principal events in the military and naval campaigns in the European war. That department will be continued during the course of the war, and we shall endeavor to record in it only the news of the week that has been officially confirmed or that appears *à priori* to be reliable.

In estimating the value of any news that comes from the seat, or rather the various seats, of war, attention must necessarily be paid to its source. Up to the present most of our information on the course of the war has come from London, Paris, and Brussels. Berlin has been almost shut off from communication. It is only to be expected that the reports received should be to some extent colored by the source from which they come. Thus the importance of French or Belgian victories, even when they are officially confirmed from Paris or Brussels, is likely to be somewhat exaggerated, and similarly the scanty news that trickles through from Berlin by way of Amsterdam is not to be accepted at its face value. On Saturday, for instance, it was officially announced in Berlin that Liège had fallen, and the news was received with uproarious enthusiasm. In Brussels the report was categorically denied. Both statements were to some extent true, the fact being that German troops had entered the city of Liège, but that the surrounding forts—the really important defences—were intact.

United States embassies in Europe are likely to be kept busy during the next few months. Since the declaration of war the embassies in London and Paris have taken charge of German interests in these capitals, and British interests in Berlin are being attended to by Ambassador Gerard and his staff.

Less anxiety is felt concerning the safety of American tourists in Europe and their prospects of returning home. Administration officials are understood to be satisfied by the general tone of messages received from the various European countries. Secretary Garrison stated on Monday that it seemed probable that the regular steamship lines would be able to take care of the traffic and that it would not therefore be necessary for the Government to charter special vessels to bring home the stranded American citizens. Arrangements have been made for the relief of the destitute.

One of the immediate effects of the war in this country has been to cause considerable anxiety concerning the marketing of the cotton crop of the South, more than half of which is usually disposed of abroad. The Department of Agriculture has recommended cotton growers to use the nation's credit to the utmost, and to withhold cotton from the market until conditions are more favorable. A movement has been started by prominent bankers to extend credit, and to make large loans in the South, so that cotton growers may be able to tide over the present crisis. Ultimately it is expected that, even if the European market is unavailable, there will be a demand for the full crop in this country and in South America.

The President on August 6 issued a request to all officers of both services, whether active or retired, to refrain from public comment upon the military or political situation in Europe.

The Federal Trade Commission bill was passed in the Senate on August 5, by a vote of 53 to 16, and was referred back to the House for final disposition. On the following day the Clayton bill, the second of the three anti-Trust measures, came before the Senate.

The appointments of Paul M. Warburg, of New York, and Frederic A. Delano, of Chicago, as members of the Federal Reserve Board were confirmed by the Senate on Friday of last week. The Board as completed, besides the two gentlemen named, consists of: W. P. G. Harding, of Birmingham; Adolph C. Miller, of San Francisco; Charles S. Hamlin, of Boston, and the Secretary of the Treasury and the Controller of the Currency, who are members *ex-officio*.

In the primaries held last week in Nebraska, Missouri, and Oklahoma, the results of the candidatures for the United States Senate were as follows: In Nebraska Senator Bristow was defeated by ex-Senator Charles Curtis; in Missouri Senator Stone, and in Oklahoma Senator Gore, were renominated.

A terrible accident, in which thirty-eight persons were killed and forty injured, occurred on August 5 at Tiptonford, Mo., when a Kansas City Southern passenger train collided with a gasolene-motor car.

The Government suit to recover 125,000 acres of valuable timber land in Arkansas, listed in the original survey as lakes, was instituted in the Federal Court in Chicago on August 5. The land is valued at $9,000,000, and is held by several lumber companies. The suit also seeks to recover $2,000,000 for timber taken from the land.

Dispatches from Mexico during the past week have been almost as conflicting as in the glorious days when correspondents were first turned loose at Vera Cruz. This time, however, the contradictory statements that have appeared from day to day appear to have been quite legitimate and due to uncertainty in Mexico itself as to the intentions of Provisional President Carbajal and Gen. Carranza, while Gen. Villa, of course, is always a fruitful source of speculation.

On Thursday of last week it was "officially confirmed" by José Castellot, the representative of Provisional President Carbajal in Washington, that an agreement had been reached between the Carbajal delegates and Gen. Carranza, and that the peaceful occupation of Mexico City by the Constitutionalists was assured. On Friday came the news of a complete disagreement and the report that Constitutionalist forces were marching on Mexico City. It was also reported that there had been continuous fighting at Mazatlan and that the besieging Constitutionalists had captured all the outer defences of the city.

On Monday came a curious statement on the authority of a "high official of the Mexican Government" that a transfer of power was to be made by Provisional President Carbajal to Eduardo Iturbide, Governor of the Federal District, who would in turn hand over the power to Gen. Obregon, from whom, presumably, it would be transferred to Gen. Carranza. From this mass of contradictory statements the only safe inference to be drawn would seem to be that Gen. Carranza continues obdurate in insisting on an unconditional surrender of the Government.

The resignation of Viscount Morley as Lord President of the Council followed close on that of John Burns from the Presidency of the Local Government Board, which we recorded last week. Earl Beauchamp has been appointed to succeed Viscount Morley, and Walter Runciman to take the place of John Burns.

Financial conditions in England appear to be rapidly adjusting themselves to the emergency of the situation. Mr. Lloyd George, Chancellor of the Exchequer, announced in the House of Commons on last Friday that the banking business was everywhere normal, and that people were paying in money freely. On Thursday of last week the bank rate, which had been raised to 10 per cent., was reduced to 6 per cent., and on Saturday it was still further reduced to 5 per cent.

It has been given out that the fact that several of the intending exhibitors at the Panama Exposition next year are at present busily engaged in slaughtering one another will not be allowed to interfere with the plans for the Exposition. Indeed, it is possible that the war in Europe may even assist the success of the enterprise, since many tourists from North and South America, who would under ordinary circumstances go to Europe, may be diverted to San Francisco.

In consequence of the war in Europe the race for the America's cup has been postponed. The New York Yacht Club last week cabled the Royal Ulster Yacht Club to inquire its wishes concerning the matches. The Ulster Club replied suggesting a postponement for one month, and in the event of war still being in progress an extension of the postponement till next year, when the races should be sailed under the same conditions and with the same challenger and defender.

The deaths of the week include: Thomas J. Creamer, Rear-Admiral R. B. Bradford, August 4; Mrs. Woodrow Wilson, August 6; Col. John Schuyler Crosby, August 8; President R. Saenz Peña, Sir Edward Anwyl, August 9; William Nelson, Col. R. A. Thompson, ex-Gov. J. B. Smith, August 10.

The Week

Universal and respectful sympathy has gone out to President Wilson in his deep personal affliction. That such a blow should have fallen upon him at a time when he must stagger under official burdens heavier than any President since Lincoln has been called upon to bear, adds to the mute pity of it. Yet in the very fact that he cannot pause to indulge in the luxuries of sorrow, but must steel his heart and press on in his high public duties, he may find a temporary dulling of his grief. He must know that all his fellow-countrymen have mourned with him during the past week.

Whatever of evil the war of nations may have brought upon us Americans, the country is indebted to it for a clear revelation of the efficiency of the Administration of President Woodrow Wilson. The great machinery of government has functioned quickly and well. If we have seen in England a fairly amazing subsiding of popular passion, but yesterday threatening civil war, we have witnessed on this side of the water a similar and a most praiseworthy readiness to rise above partisanship and stand by the President in his effort to take in all possible sail and render the ship of state as safe as may be in the hurricane that has suddenly burst upon it. Quietly and effectively every disposition has been made, without the slightest blowing of trumpets or hurrahing about it; if anything has been overlooked which might have been foreseen, it has yet to appear.

While the credit for all this belongs to many men, the chief praise is, of course, due to the captain, who, face to face with a most distressing personal bereavement, yet continued to devote himself to his work precisely as if his mind were completely at ease as to all private affairs. He has met the national emergency with the same poise and skill with which he has held Congress to its work from the very inception of his Administration. The sneered-at college professor has shown again not only what it means to have communed with the world's philosophers, but has demonstrated the supreme value of rigid mental discipline as well. His hand on the helm has never wavered; his own coolness and steadiness under conditions which might have snapped many a physically stronger man have won him the unbounded admiration of the corps of newspaper men who have daily found him about the only outwardly unruffled man in the intense heat and fearful strain of Washington. They will not soon forget the eloquent words with which he outlined to them the gravity of the war crisis and the duty of the press—words spoken primarily for them, but which they demanded for publication. And the public will not forget that his message tendering the good offices of this Government to the warring nations of Europe was written at the bedside of his dying wife. In every way in this grave emergency he has given fresh proof of his marked fitness for the headship of the nation.

A glance at a batch of German newspapers recently come to hand, printed on the eve of the war, is sufficient to show how swiftly the significance of the Austrian ultimatum to Servia penetrated the German mind. It was everywhere taken for granted that this move had been made with the knowledge and consent of the German Foreign Office. Indeed, the German Ambassador in Paris promptly announced that Germany was aware of the Austrian note and would support her ally, though he added that there was no intention of forcing a war. But the German press was instantly alive to the danger of a general European war. The Hamburg *Fremdenblatt* foreshadowed it, and so did the Berlin *Tageblatt*. These two papers discussed the matter in phrases so nearly identical that it almost seems as if they were obeying an order of the day. Both spoke of the intention of Germany to "localize" the war, if possible—as if you could localize an earthquake—but also declared the firm purpose to go to war with France and Russia, if necessary. It is, however, in the *Frankfurter Zeitung* that we find the gravity of the situation best appreciated and most weightily discussed. This Liberal organ did not conceal its belief that the whole system of European alliances was on the point of being broken down. Nor did it share the opinion of those optimists who predicted that Russia would back down as she did in 1909. It apparently had a juster measure than most Germans did, including the Emperor, of that "Nationalismus" in Russia which would infallibly push the Czar into defence of Servia. On one point the *Frankfurter Zeitung* was in error. Alluding to the possibility of England's being drawn into the conflict, it said: "A country of which one great province is in open rebellion cannot be imagined to be desirous of incurring military dangers outside its own territory." The best comment on that is the roar of English guns in the North Sea.

A striking detail of Germany's preparations for the future was revealed a few days before Austria lighted the torch, in a remarkable statement from the Burgomaster of Rotterdam. The Vulkan Company, which builds Dreadnoughts for the German navy as well as Atlantic liners for the German steamship companies, has for two years been trying to induce the Government of the Netherlands to permit it to construct a harbor capable of accommodating Dreadnoughts, with a coaling station and the usual accessories, for purely "private" purposes. The proposal aroused great opposition in Holland. The people of Rotterdam protested against the plan, and the Ministry was compelled to promise legislation placing all harbors under public control. Nevertheless, when the Chamber adjourned, the bargain was secretly made. When this became known, the indignation of the people of Rotterdam was so great and the danger was regarded as so grave that the Burgomaster took the very unusual course of issuing a statement manifestly intended as a warning and appeal to England. The comment of the London *Times* upon the statement, while displaying keen interest in the matter, shows what a change in the relative emphasis of national and international affairs has taken place in the past two weeks. Says the *Times:* "However engrossed the people of Great Britain may be just now in their domestic affairs, they are not so preoccupied as to ignore this development, or to be unmindful of the significance of the moment chosen to announce it."

The strength of the active Austrian army is set forth by the latest German newspapers as comprising 34,000 officers and 380,000 men. The Berlin *Tageblatt's* military writer, Major Moraht, asserts that this force can speedily be raised to two millions without the *Landsturm*, or the final reserve. The regular army, which is but 8 per cent. of the population of the Dual Monarchy, begins the war at an unfortunate time, for it was just in process of a reorganization largely increasing its numbers, which change cannot now be carried out. It is reported to be well armed, particularly as to artillery, but comprises a considerable number of organizations it would not be safe to use against the Servians, because of racial entanglements. These could, however, be employed against Russia or to guard communications. Yet the general belief is that Germany has a weak reed to lean upon in her ally, whose army would be of little avail against Russia should Italy declare war against her quondam al-

lies. The German press speaks handsomely of the Servian troops, estimating that Austria would need 450,000 men at least to conquer that mountainous country. From the general tone of the news it would appear that but little progress has been made in that direction. Austria, at least, must deeply regret by this time the terrible situation in which her ferocious ultimatum to Servia has placed her and her ally.

Though there are rumors of Japan's preparing for war, German naval and military strength in China is comparatively so small as to preclude the necessity of Japan's being called in under her treaty with England. Germany has but a small settlement in the Orient; her troops would not amount to more than about five thousand men of all arms. These probably will concentrate on the Kiao-chau Bay at Tsing-tau, which is fortified and well designed for defensive purpose. If sufficiently provisioned, it would prove a severe obstacle to an attacking force. England could withdraw from the various parts of South and North China about 5,000 regular troops. These could, if necessary, be supported by French regulars from Tongquin and Cochin China, or Russian troops from the north. It is very unlikely that operations of any consequence would affect the Straits Settlement or the India Seas. The sphere of decisive action would probably be restricted to the Yellow Sea or to the close proximity of Tsing-tau. Should the war, however, inspire an outbreak of revolution in China or fresh unrest in India, complications of far greater moment might arise in the East. This, however, is highly improbable. If Japan joins in the clash of arms, she will very likely be the principal attacking force on Kiao-chau by land, while a part of her fleet will reinforce the British. In this case the German force would be outclassed on all sides and the struggles both on land and sea should be brief. But whatever may happen in China, the future relative power of foreign nations in the Far Orient will depend entirely on the outcome of the war in Europe.

We cannot commend too highly the vigorous action of President Wilson in enforcing the neutrality laws of this country by the stationing of guard-ships in the chief harbors to watch the movements of any outgoing merchantman, by the patrolling of the coast by destroyers, and by the regulation of the wireless system. That the wireless should come into it is one of the interesting developments of this war. Undoubtedly, before another comes to pass there will be such powerful stations on the Continent that a nation may be able to communicate direct with its cruisers on this side of the water, without the necessity of a relay station on Long Island. Meanwhile, it would obviously be unjust for the United States to permit the German company to transmit orders to the German cruisers on this coast, or the French or English to their cruisers. The United States suffered so much from violations of neutrality by Great Britain during the Civil War that it cannot be too careful in enforcing its absolute non-partisanship at all points where friction might possibly arise or grounds for damages be given.

At the opening of last week the declaration of a general moratorium on debts was discussed at London, and a suspension of the Bank of England Act. Monday was a regular bank holiday; the Government extended it by decree until Friday; but on Thursday night a moratorium on debts for a month and the suspension of the Bank Act were decreed. England has never before declared payment of debts suspended, since the modern credit system was created. France resorted to the expedient in the War of 1870; so did the Balkan states, in October, 1912. France proclaimed it at last week's close, Germany early in the present week; though its scope in those countries seems to have been limited. The moratorium applies only to financial and commercial liabilities—not to such obligations as rent and salaries—and it was forced on Europe by the inability of bankers in one country to meet maturing drafts, when they could not collect what other European markets had contracted to pay to them.

The suspension of the Bank Act of 1844 was due to another cause. Last Friday's statement showed the Bank to have lost from its reserve, during the seven preceding days, no less than $84,500,000. Its gold holdings were reduced $52,500,000, and, since its loans had increased $90,000,000, its ratio of reserve to liability fell from the previous week's 40 per cent.—the traditional "minimum of safety"—to 14⅝. It could not, under such conditions, continue issuing notes covered wholly by gold in its reserve, as the Act of 1844 requires; therefore, for the first time since 1866, the Act was suspended. The Bank is now issuing notes in excess of its gold reserve. Suspension of the Bank Act is a panic expedient, but not an inflation expedient. It will not involve a premium on gold, unless gold redemption of the notes were also to be suspended. That was done continuously in the period between 1797 and 1821; not since. The Bank Act itself has never been suspended except in the London panics of 1847, 1857, and 1866. The economist Newmarch once predicted that, engaged in a formidable war, the British Government would "commandeer" the Bank of England's gold reserve; but it has not proposed any such expedient. The Bank still holds £27,600,000 gold; its outstanding notes are £36,100,000. Last week its £29,700,000 circulation was covered by £38,100,000 gold. At the crisis of the Overend-Gurney panic strain, on May 30, 1866, it had £26,500,000 notes outstanding and held £11,800,000 gold against them. Its actual banking reserve was only £859,000 in its vaults, and its ratio of reserve to liabilities fell to the extraordinarily low percentage of 3¼.

It is an obvious fact that the revenue situation of this country, recently so favorable, is greatly altered. The customs duties of the Government amount to more than a third of its entire income; and last week's reports from the custom houses indicate how deeply they have been cut into. But it is also obvious that for some time it will be impossible to outline the loss with exactness, or to plan compensatory means of securing revenue, and that hasty measures might be very unwise. Should the ocean be opened within a few weeks to the greater part of our overseas commerce, any comprehensive Congressional action may be unnecessary. Should the naval blockades long continue, there is little doubt that it may be necessary to reimpose some of the special internal revenue taxes levied in our two last wars. It has been pointed out that the Spanish-American War impost on beer would now cover one-third of the necessary sum. But such measures are to be taken only when shown indispensable. The announcement of the Ways and Means Committee of the House in this connection is highly reassuring. It proposes to study the situation thoroughly between now and adjournment, with a view to taking little action earlier than the middle of September, and—if the state of the war is still uncertain—to possible postponement of it until the regular December session.

Like the battle of Blenheim, the passage of the Trade Commission bill by the Senate, following its adoption by the House, was a "famous victory," although what good may come of it at last may puzzle more than Little Peterkin to say. Changes made in it on its way through the Senate necessitate its

return to the House, which means, of course, that it will go to conference for whipping into final shape. The bi-partisan vote in its favor last week disposed of any possibility of charges of "caucus control." Almost exactly half of the Republican Senators were recorded as voting for it. Yet this was rather an indication of the radical temper of our most conservative legislative body than proof of the wisdom of the bill. The central feature of the measure is the transfer of the powers of the Commissioner of Corporations to a Trade Commission of five members, with a considerable enlargement of those powers, particularly by the conferring upon the Commission of authority to issue orders against "unfair competition." Just what is the significance of that phrase, either in practice or in law, we are left to discover by the operation of the bill. There is not a little force in the protest of the Merchants' Association against the passage of anti-Trust legislation just now, not only upon the ground assigned by the Association of disturbance to business from the European war, but also from the fact that, with that struggle absorbing public attention, such legislation will not receive the criticism that it ought to have.

The confirmation last week by the Senate of the nominations of Messrs. Warburg and Delano, as members of the Federal Reserve Board, was doubtless hastened by the war and the financial difficulties which it has precipitated in this country, as in all the rest of the world. The country is to be congratulated on getting such men as Mr. Warburg and Mr. Delano to complete and strengthen the Federal Reserve Board. At the same time, it should not be expected that there will be any haste in setting the new system of banking and currency into operation. The urgent needs of the financial situation have been met, as they had to be met, by emergency measures which seem to be ample. With them the Federal Reserve Board would not for a moment think of interfering, nor could it wisely take steps in a hurry to supplement them. The mere calling upon the banks at this time for their subscriptions to the Federal reserve system would be an embarrassment. It will, no doubt, be avoided for the present.

The apparent willingness of the Senate to resume consideration of the treaties whose shelving was recently proposed until the regular session will be the more remarkable for coming when European chancelleries are so war-engrossed. We hope that any taking up of pending agreements will not mean a loss of distinction between good and bad. Secretary Bryan, in signing with Minister Chamorro the Nicaraguan treaty, stated on August 5 his confidence in its prompt ratification. The original compact, as he said, has been stripped of the protectorate clause which the Foreign Relations Committee found objectionable; its main provision is now the simple payment of $3,000,000 for a permanent option on the Nicaragua Canal route, and the right to naval stations on the Bay of Fonseca and neighboring islands. But Secretary Bryan speaks of leaving the Platt amendment for future consideration. It is not certain, moreover, whether the alleged danger of German or other purchase of a canal route valueless to us justifies a $3,000,000 bid, or any bid at all. As to the twenty peace treaties, however, which the Foreign Relations Committee has so surprisingly approved and urged, there can be but one mind. Amid the inevitable sneers at pacific efforts, this is the moment to pass them. Their acceptance would be welcomed by France, England, and other nations—Germany did not negotiate a convention; it would be an excellent step for America, and would be a forcible and timely endorsement of pacifist principles.

The passage by the House last week of the General Dam bill, by a vote of 190 to 47, means that one of the more important of the Administration's tasks is well accomplished; so well accomplished that even the Progressives, who once claimed to be the only true conservationists, have nothing but praise for the joint product of two Democratic Cabinet officers and two Democratic chairmen of committee. The Adamson act is the result of an almost unique amount of conferring between House and Senate, Cabinet and President, and has been amended until, as Congressman Donohoe remarked, "the original bill would not be known." Six months ago a committee report to the National Conservation Congress alleged a threatening state of things which this bill was intended to avert. It was set forth that not merely was "the central fact in the water-power situation of to-day concentration of powers," with ten groups of interests controlling 65 per cent. of all the water power in the country, but that these interests had in the last two years increased their control of power held undeveloped more than twice as fast as their developed power. They were a menace not only to competitive rates, but to the rapidity with which the latent water power in America should be opened up. The act contains almost every possible safeguard against the growth of hydro-electric power monopolies. Franchises are limited to fifty-year periods, and if their privileges are abused, they are revocable. At their expiration the plant may be acquired by Federal, State, or municipal government at actual cost, "unearned increment" being disregarded. The way is paved to a new era in public use of stream-flow power.

Are the Democrats going to leave the Republicans behind in the new political game of amalgamating with the Progressives? Following the lead of Wyoming and Utah, comes Massachusetts with an arrangement by which the Progressives will endorse the Democratic candidate for Congress in the Second District, and the Democrats, in turn, will endorse the Progressive candidate for Councillor. The object of the "deal" is to defeat Representative Gillett. The man upon whom the two parties have agreed for Congressman is Prof. Edward M. Lewis, Dean of the Massachusetts Agricultural College at Amherst. As he is also well known for his work in the pitcher's box in his college days, it is evident that the unamalgamated Republicans will face a formidable opponent. The puzzle in these successive Democratic-Progressive alliances remains as baffling as ever. One can imagine either of the old parties, which by hypothesis are reprobate and lost to all sense of honor, jumping at a chance to walk with the saints, but how do the saints manage to reconcile their consciences to walking with the reprobates?

Roque Saenz Peña, the President of the Argentine Republic, whose death was announced on Monday morning, was a delegate to the first Pan-American Congress in Washington in 1890. In that gathering he displayed the knowledge of international law which later made him generally known, even before he rose to the Argentine Presidency. It is worthy of note that his colleague at Washington, Señor Quintana, also became President. A reasonably good friend of the United States, Señor Peña stood up robustly for his own country, and for what he believed to be the conception that ought to rule the intercourse of the world—particularly the relations between North and South America. His recent characterization of the Monroe Doctrine as highly elastic—in fact, a "rubber doctrine"—had more of humor in it than we are accustomed to expect from Spanish-American publicists; nor will many deny that there was also truth in it.

ENGLAND AND THE WAR.

It was inevitable that England should be drawn into the war. No British Government that had held back under the circumstances could have lived a day. Once more we have the grim irony of history, that a Liberal Ministry, pledged to peace and devoted to domestic reforms, should be forced to enter into war.

The motives, as well as the rights and wrongs of this action, will be endlessly debated. But it is the direct results of it upon which the world's attention is now fastened. That it has radically changed the whole nature of the war, simple inspection is enough to show. It is not merely the fact of another first-class Power joining with France and Russia against Germany. The significant thing is the kind and weight of resources which England brings to the alliance. It may easily be the case that some future Admiral Mahan will write a book on "Sea Power," in which the events soon to occur will furnish new illustrations of the old theme. Concerning the outcome of the actual naval battles of which we shall shortly hear, we make no predictions. There are too many untried experiments in modern war at sea, too many unknown elements, to make it possible for even the highest naval experts to be sure of what will happen. We know how recently Admiral Percy Scott, the recognized authority on gunnery in the English navy, has expressed his doubts concerning the utility of the Dreadnoughts. Admiral Mahan himself, with the modesty of a man who knows all there is to be known about modern ships and guns—and also knows how large our ignorance about them necessarily is—refrains from making any positive forecasts. Even in so technical a matter as the effects of gun-fire, he admits that the naval world is much in the dark, and declares that we shall have to wait for the test of battle before we shall know whether the "all-big-gun" ships are a mistake or not. All these matters are still behind the screen.

What all can see, however, is the fact that England's entrance into the struggle will make some enormous differences. It will tend, for one thing, to shorten the war; since the vast forces engaged, and the tremendous efforts required to maintain them, will the sooner lead to exhaustion and the necessity of making peace. But there is one important respect in which the full exercise of British sea power will prove not only of military advantage to England's allies, but of speedy and mighty benefit to the now prostrate ocean commerce of the world. What we mean is this. Whether the German navy be destroyed, crippled, or simply bottled up by the joint navies of France and England, the sea-routes to both France and England will soon be made reasonably safe for trading vessels. Only here and there can a German cruiser keep to the sea. On the other hand, England and France will be able to release a great number of cruisers to act as convoys to merchant ships. It is to be expected, therefore, that we shall very soon see the ocean highways available for trade. What this will mean, in the way of sinews of war, to both France and England, especially with the German mercantile marine swept from the sea, it is needless to point out. But we in this country may find solid reason for encouragement in the prospect that our own blockaded foreign trade may in a few weeks be restored to something like its normal proportions.

Whatever may be the real and deeply underlying reasons for England's going to war with Germany, it cannot be denied that she had a sound reason, under international law. By invading Belgium Germany was violating a treaty to which all the European Powers had set their hand and seal, and in the observance of which England had a peculiar and even vital interest. She was thus well within her legal rights in asking both France and Germany whether they would respect the guaranteed neutrality of Belgium. But the military plans of Germany could not then be changed. She admitted, through her Chancellor, that she was going counter to the law of nations, and made anxious profession of her purpose to "rectify the injustice," as the German Chancellor phrased it, after the war was over; and in her natural desire to keep England neutral, undertook to give the most formal promise never to annex any portion of Belgium. This promise, coming from an avowed treaty-breaker, was received for what it was worth by the House of Commons—that is, received with jeers. Thus Germany, in order to snatch the military advantage of a march on France through Belgian territory, brought upon herself the immense military disadvantage of adding England to the countries with which she is at war.

That the German Foreign Office quickly perceived the blunder of driving England into hostilities, is evident from the great efforts it made—when too late—to secure British neutrality. The offer after offer, and bid after bid, which poured in upon London from Berlin in the critical days, July 30 to August 5, were the plainest sort of confession that German diplomacy was aware of its own oversight in not having made sure of the position of England before declaring war upon Russia and France. It is impossible to imagine Bismarck allowing war to be begun without having first made his diplomatic combinations. It was his fear of powerful alliances against Germany which induced him to veto Moltke's proposal to seize an occasion in 1867 to attack France. There is a Bismarck statue in Berlin, but it is all too plain that it has no living Bismarck. To press all the details of the approaches and appeals made by Germany to the British Government would be unfair. We have, as yet, only the English account of them. Sir Edward Grey's counter-proposals, if any were made, have not yet been published officially. But enough is known—enough lies on the surface—to make it certain that, however it may have been with the German army—the German navy has speedily been rendered immobile—German diplomacy went into the war strangely unprepared.

THE REAL CRIME AGAINST GERMANY.

We have received protests from a number of German sympathizers against the attitude adopted by the *Nation* in fixing the responsibility for the war in Europe mainly upon the Kaiser. We are assured that this is a holy war into which Germany has been forced against her will; that she is the only bulwark between the rising tide of Slavism and the endangered civilization of Western Europe, and, therefore, that enlightened sentiment the world over should side with her as against the aggressions of the Powers like England and France, whose real motives are jealousy and envy of the wonderful commercial growth of the Kaiser's Empire.

The *Nation* has always entertained and expressed the highest admiration for the German people, but never for the Germany of the Kaiser. We have never believed that a people of essentially noble quality should be subject to the will of an autocratic king or emperor, however enlightened he may be, or however ardent a guardian of peace during a long period of years. Never have we upheld the Germany of the mailed fist, of the autocracy of militarism; against its excesses, its encroachments upon civil rights, its assertion that it constitutes a sacrosanct caste superior to any other, we have protested in season and out of season. We have long seen in this swashbuckling, overbearing attitude of the militarists, and particularly in the activities of such a body as the German Navy League, a grave menace to the

peace of Europe. We have never had the least admiration for a Kaiser who vows that he rules by divine right and not by popular consent; and we cannot now uphold a form of government which denies to masses of its population the right of the franchise.

It is another Germany which we have been proud to recognize and acclaim—the Germany of high aspirations and noble ideals, the Germany of intellectual freedom, the Germany to whose spiritual leadership every nation the world over is deeply in debt. Its flag has meant to us the flag of scientific knowledge planted furthest north in more fields of mental and governmental activity than is perhaps any other. It is the country of Fichte, of Kant and Hegel, of Schiller and Goethe, of Körner and his fellow-champions of German liberty in the wars for freedom just a century ago; of Carl Schurz and Siegel and Kinkel and their revolutionary comrades of 1848; of Schubert, Schumann, and Wagner; of Lessing, of Mommsen, of Helmholtz and Siemens and all the rest of the intellectual heroes who have been and are the real glories of the Germany for which we have entertained so profound a respect. We have realized, too, the splendid qualities which have made of Germany a foremost trading nation and have watched with amazement, like all the world, her rapid commercial conquest of the seas and the four quarters of the globe. Yet, after all, it is to the Germany that has done so much for our own university life and for our intellectual and artistic development that hosts of Americans have been profoundly attached.

Against this Germany the war into which it has been so recklessly plunged is nothing short of a crime. Whether victory or national disaster come out of it all, the intellectual and spiritual growth of the nation is checked for no one knows how long. The fine flower of its youth is to be immolated by a ruler whose signature to a single order signed their death-warrant. No consent of the people's parliament is asked; no time taken for angry passions to cool. Out of this war can come only another heritage of hatred and bitterness, of sorrow and suffering. The mighty commercial edifice erected by German enterprise and toil is already crashing to the ground. Ruin already claims tens of thousands. Germany's merchant fleet is being swept off the ocean. Her internal development is at an end; her schools and universities are idle; the whole nation is being brutalized and, through the hot haste of the Kaiser, Russia and France and Belgium as well.

Is it any wonder that true friends of Germany cry out against all this from the depths of their affection for her? That they protest against the sophisms of a Münsterberg and of all those who would suddenly see in this horrible slaughtering of the true Germany a new crusade against the heathen? For ourselves we can only say that the one consolation in it all is that, if humanity is not to retrograde unspeakably, absolutism must pay for this denial of Christianity. Out of the ashes must come a new Germany, in which democracy shall rule, in which no one man and no group of professional man-killers shall have the power to plunge the whole world into mourning.

THE POSITION OF ITALY.

One of the surprises which Germany has had in this war is the failure of Italy to act as it was supposed that she would as a member of the Triple Alliance. It is clear that Austria and Germany expected her to come forward promptly as an ally in arms. No one supposed that she would do more than make a military demonstration in force on the French frontier, or possibly send an army into Albania, but as much as that would have been of great value to the German General Staff. One of the objects of the German Foreign Office in making so great an effort to throw the onus of aggression upon France was unquestionably to induce Italy to believe that it was a clear *casus fœderis*—that is, that Germany had been attacked, and that Italy was bound by treaty to come to her aid. But the Italian Government has declined to accept that view. It does not concede that the war which Germany is waging is defensive.

When Europe first learned of Italy's joining the Triple Alliance, there was great astonishment. How could Bismarck possibly have induced the Italians to clasp hands, for any purpose, with their hereditary enemies and oppressors, the Austrians? There was much ill-informed talk about the arts of flattery having been used. Italy was seduced by the compliment of being invited to enter the circle of the great European Powers. But this was an absurd explanation. The statesmen in Rome, as well as those in Berlin, must have seen a definite national advantage in the Alliance, else they would not have gone into it. Why Bismarck turned to Italy, he plainly set forth. He had her in mind originally as an annex to the League of the Three Emperors. That was because Italy was "monarchical." It was the monarchical principle which he desired to exalt as against any possible republican tendency. Later, when the Czar dropped out of the *Dreikaiserbund* and threw himself into the arms of France, Bismarck took up with Italy almost perforce, as the only possible country to be drawn into an alliance at once with Germany and Austria.

What did Italy stand to gain by the Triple Alliance? The burdens which it entailed upon her were obvious. She had to spend more money on armaments. The Germans were always nudging her about the size and efficiency of her army. And there was the constant peril that she might be involved in a war in which she had no direct stake. But there was at least one great national interest, as the Italians regarded it, which would be furthered by Italy's membership in the Triple Alliance. It would be a check to French expansion in North Africa. Supported by Austria and Germany, the Italian Government would have a free hand in pursuing, when the time came, their own cherished plans for planting Italian colonies in the African possessions of the Sultan. The war in Tripoli furnished the long-awaited opportunity, and, by so much, justified the sacrifices which Italy had made in behalf of the Triple Alliance. Gladstone, who was certainly a true and proved friend of Italy, writing to Labouchere in 1891 about the Triple Alliance, observed: "What a little surprises me is that the Italians should not better understand the frailty of the foundation on which, I fear, they have built their hopes." But Italians to-day would point to their African acquisitions as the warrant for what they had done and dared. And now that they have come to a friendly agreement with France touching North Africa, and signed a convention establishing mutually the rights of Italian residents in Tunis and of French residents in Libya, they may well feel that the greatest of the objects which they had before them in joining the Triple Alliance has been completely attained.

This being so, the Italian Government, in coming to the momentous decision how to interpret its present treaty obligations, and how to shape the course of Italy in the existing war, may easily be imagined to have turned to the pages of the great Italian master of statecraft. In particular may it have read with attention the famous eighteenth chapter of "Il Principe," in which is discussed the question in what way states are to observe treaties (*la fede*). It will be remembered that the Florentine Secretary lays it down flat that a prince, if he is truly "prudente," need not live up to treaty obligations when he finds that they will injure him

(*gli torni contro*), or when the objects which he had in making the treaty are attained. Both these things Italy might allege to-day of the Triple Alliance, though we do not intimate that she would think of boldly avowing the doctrines of Machiavelli. If it came, however, to recriminations between her and Germany on the subject of treaty-breaking, the Italian Foreign Minister might naturally be moved to quote the following from the very close of chapter xviii of "Il Principe": "There is a prince of the present time, whom it is best not to name, who preaches nothing but peace and good faith, but is of both the deadly enemy."

INEFFICIENCY AND REFORM OF THE COURTS.

At a time when the wide dissatisfaction with our legal and judicial system is largely manifested in belief that procedural reform is the one panacea, the preliminary report to the National Economic League on "Efficiency in the Administration of Justice" should serve as a needed corrective. Charles W. Eliot, Louis D. Brandeis, Moorfield Storey, and the other committeemen who have given the subject a year's study, report that new practice acts and court rules cannot touch the root of the difficulty. No less than three remedies commend themselves to the committee as of more primary importance: a reform in the choice and tenure of judges; a change in the organization of the judicial system, with particular attention to its unification; and a general elevation of the training and traditions of the bar. "Except and until these matters are attended to," in the words of the investigating committee, "the best practice act the wit of man can devise will fail. If they are attended to, an inferior practice act may be made very tolerable." This finding, moreover, follows so close an examination of the shortcomings of the courts in their three main fields—the interpretation of the law, its application to litigated causes, and its enforcement in criminal cases—and is shown to be so practical in nature that it carries general conviction. Its essential point, that the standard of the judiciary and of the practicing profession must be raised, is based on an historical survey of American courts.

The classical and constructive period of the American bench was that preceding 1850—the era of Kent and Story, Marshall and Shaw; and this, as the Committee says, was the period of appointive courts. The innovation of the elective judiciary, prevailing everywhere outside New England, brought in a mediocre and technical judiciary. Its reaction has been especially damaging in the field of the interpretation of the statutes. Under our system of judicial power, almost everything turns on the strength, capacity, and learning of the judge. He must be an expert; and the people have shown themselves markedly incompetent in either selecting experts or keeping them in office. A comparison of the illiberal and wrongheaded decisions on contracts of the Illinois and Missouri Supreme Courts since 1880 with those of Massachusetts or the United States on the same subject, is eloquent. A contrast of the same kind could be drawn between the judicial application of the Massachusetts practice act and that of the New York code of 1848. Those States in which interpretation of the law has been best are those in which the bar has had the most influence in the choice of judges. How this expert influence can be strengthened, how the judiciary may again be made appointive in certain cases, and how electoral sentiment may be made insistent on strong individual judges, are problems requiring urgent solution. The arousal of public feeling should be inevitable under a continuance of the rejection of social legislation by many State courts. Necessarily, a stronger, more expertly chosen judiciary means a better field of lawyers and an elevation of bar requirements; and here the second recommendation to the League comes into play. The final cause of bad legal interpretation which it notices is our poor legislative technique, and it looks to our legislative reference bureaus as a promising mitigation.

The need of a better court organization is especially evident in the disposition of litigated cases, and it is a matter so large that the question of procedure is included in it. Our inherited English court system, with the demand in rural America of 1800-1850 for decentralizing justice and bringing it to every man's door, is well known to have given us a system of specialized local courts instead of specialist judges, and of hard and fast court staffs which may not be shifted even from one tribunal empty of business to another choked with arrears. The rapid rotation of judges prevents any one man from acquiring a thorough experience with one class of business, and resulting facility of action. Another form of waste is the frequent treatment of controversies in part in one court, in part in another, with resulting conflicts or maladjustments. The multiplication of tribunals to meet our new problems of industrial and urban communities, and the great increase of litigation involved in the recent expansion of commerce, industry, and population, have aggravated the situation until State reorganization is in many places indispensable. The report recommends, instead of the old specialized courts, the institution of a unified court system with specialist judges. Some one high official of this system should be charged with supervision of the judicial business of the whole court, and enabled to control calendars, distribute business, transfer cases, and reassign judges. Such a plan, it is clear, means a wholesale revolution of our State courts in the interest of centralized simplicity. But the Committee points out that it would assist in the organization of the clerical side of the courts, now equally confused, and that it would permit a frontal attack on bad procedure. There is too much hard and fast rule in procedure, too much "record" worship, too much formal pleading, too many trials and retrials, and too frequent a throwing of causes out of court when a transfer would save the proceedings already undertaken.

One fact in support of the report's attack on our organization for litigation will occur to every one—the difficulties of many municipal courts in adjusting themselves to State systems. Chicago and Cleveland have centralized the administration of their own "petty" causes; and this is, in miniature and in makeshift form, what should be done in many States as a whole. But this bad organization is not found so closely connected with judicial inefficiency in enforcing the law, as distinguished from applying it. Here a primary cause is the weakening of public interest and initiative in the carrying out of criminal enactments. For one thing, a diversity of interests in different parts of the State often leads to the imposition of laws by one section, and their resistance by a second. For another, there is constant fear of political oppression through the criminal law, and frequent class suspicion of some phases of enforcement. To the political aspects of criminal justice the report traces many of the shortcomings of the courts; and few communities have not had public prosecutors who were spectacular when the general conscience was aroused, and sluggish when they feared offending powerful interests. One reform is legislation permitting a public examination of accused persons under proper safeguards. But with crime, as in the two other fields, we come back to a better selection of judges, who shall be guaranteed a longer tenure, and to the raising of qualifications for the bar, as the most essential steps.

JULES LEMAITRE.

In the death of Jules Lemaître on August 6 French impressionistic criticism has lost its most sparkling leader. Born in 1853 in an obscure provincial village near Orléans, M. Lemaître taught in obscurity as a hard-working professor of literature at Havre, Algiers, Besançon, and Grenoble before he was brought into prominence by the famous criticism on Renan. "Renan est gai," he kept repeating ironically in his vivid description of the great Semitic scholar's lecture-room; "but M. Renan has not the right to be gay; he can be so only by the most audacious or the most blind of inconsistencies. Even as Macbeth murdered sleep, so M. Renan twenty times, a hundred times, in every one of his books has murdered joy, murdered action, murdered spiritual peace and the tranquillity of the moral life."

Thereafter, following Francisque Sarcey and J. J. Weiss, M. Lemaître became one of the most influential of the Parisian literary and dramatic critics, writing for the *Journal des Débats*, the *Revue des Deux Mondes*, and the *Revue Bleue*. Unlike Brunetière, whose interest centred in the classical writers of the seventeenth century, M. Lemaître loved the ultra-moderns. "I so love the literature of the second half of the nineteenth century," he exclaimed with characteristic sensitiveness and sympathy, "that at times it makes me quiver with delight and feel the pleasure penetrating to my very marrow. I love it even down to all its affectations and follies and extravagances, the germs of which I find in myself. . . . Is it a fault in me that I like better to re-read a chapter of Renan than a sermon of Bossuet?" This is the keynote of his first period—before the Dreyfus Affair. At that critical time, lacking definite inner standards of his own, Lemaître swung over more towards authority, Rome, and reaction. He became an active nationalist, entered into political life which he did not thoroughly understand, and expressed political views in books which did not add to his reputation. The effect of this rather unfortunate break in his career was to make him more serious and more religious, and to throw him back more to classical writers. So, during the last few years of his second period, he lectured at the Sorbonne and wrote volumes on Rousseau (1907), Racine (1908), Fénelon (1910), and Chateaubriand (1912). In 1911 he was appropriately chosen to deliver the oration at the unveiling of the Bossuet monument at Meaux; there he took occasion to quote with approval Bossuet's protest in one of his great orations against the arrogance of the so-called "free-thinkers" of his day.

Lemaître marked the revolt against the "scientific" criticism of Taine, and the harsh dogmatic classifications and classical disdain of Brunetière. Rejecting their erudite and ambitious generalizations, he preferred to rest his criticism on intuition. He was a champion of relativity and pluralism, and akin intellectually to Anatole France and Bergson. "What impression does a piece make on me personally?" That was his touchstone. He approached an author with a genial sympathy instead of with a preconceived formula. He could completely surrender himself to receive an impression. In the case of a writer whom he liked, he could surrender himself so completely as to identify himself, as it were, with the writer; so that the writer's faults gave him real pain as if they were his own. Brunetière condemned Flaubert's "Bouvard et Pécuchet"; Lemaître read it with delight, in spite of its faults (which he admitted), because it was Flaubert—and he liked Flaubert. So, too, he wrote a delicious critique on George Ohnet, when the literary "mandarins" disdained to notice an author whose novels were selling by the half-million while their own works sold only by the thousand. He laid bare the business-like way in which Ohnet wrote to please the bourgeoisie, whose wants the popular novelist could gauge and satisfy as easily as a grocer reads his scales and sells sugar. He dissected Ohnet's plots and revealed them to be merely the old familiar ones which every one had always used. Ohnet was simply feeding the successful, stupid merchant, who seeks literary culture, and supposes he is getting it when Ohnet offers him the beauty of the chromo, the optimism of the simpleton, the discrimination of the concierge's daughter, and the sentimentality of the Sea Side library. In short, M. Lemaître showed Ohnet to be "la triple essence de banalité"; but he gave him the full credit due for being a very shrewd and clever purveyor for the crowd, though never an æsthetic artist creating for the lettered few.

Lemaître himself wrote novels and dramas which showed good observation of human nature, delicacy of analysis, and clever construction; but it is upon the literary and dramatic criticism in "Les Contemporains" (seven volumes, 1885-99) and "Impressions de Théâtre" (ten volumes, 1888-98), and upon the studies in literary biography noted above that his permanent fame will rest. He did not attempt to impose any literary doctrine, found any philosophy, or draw any wide-reaching conclusions in regard to contemporary French literature. But he expressed brilliantly and charmingly the sincere and instructive impressions which literature made upon an unusually sensitive, subtle, and sympathetic nature.

GENIUS AND GEOGRAPHY.

Where do America's native men and women of distinction come from? What sections produce most of them? These questions, by no means new, are subjected to unusual tests by Dr. Scott Nearing in the current number of the *Popular Science Monthly*. The title of the article in which they are discussed is "The Geographical Distribution of American Genius." Genius is a big word. By it Dr. Nearing means nothing more phenomenal than sufficient prominence to cause the publishers of "Who's Who in America" to write to you for particulars regarding yourself which the world hitherto has somehow managed to get along without. In the year 1913 there were just 18,794 such persons in this country. Dr. Nearing does not maintain that every one of these are gifted with the divine fire. He hazards the assertion that there are omissions, and likewise that names are included which are not exactly distinguished. But these imperfections, he thinks, do not seriously affect his conclusions.

The first fact to be established is the familiar one that New England has a lead in the number of eminent men and women in proportion to population that is "little short of phenomenal." With less than a fourteenth of the population of the United States, that section has been the birthplace of almost a fourth of the native-born of distinction living in 1913. The Middle Atlantic States come next, with a fifth of the population, and somewhat less than a third of the distinguished. Then follow the East North Central States, where the proportions are almost equal. In the remaining sections, the percentage of population is above the percentage of eminent natives, the South Atlantic States making the best effort to equalize them. But Dr. Nearing is not content to leave the matter here. Changes in population have been rapid in recent decades, and the supremacy of New England must be tested by more careful analysis. We must know when these distinguished persons of 1913 were born, and what the proportion of population in the various sections was at that time, or, rather, those times.

This recasting of the figures is all the more necessary as it turns out that "a sur-

prisingly large number" of our Immortals of 1913 were born before 1850. Only one in a hundred was born after 1880, only fourteen in a hundred after 1870. More than a fourth of the total number were born prior to 1850. Arranging our eminent natives by decades according to date of birth and taking the population of the various sections of the country for such periods, we find that up to 1880 New England's ratio between distinguished natives and population was steadily ahead of that of any other section. The Middle Atlantic and East North Central States also presented, for virtually the entire time between 1850 and 1880, a larger proportion of eminent natives than of population. As a further test, we may limit the figures of population to the native-born whites, omitting the negroes for the benefit of the South and the foreign-born for the benefit of certain sections of the North. But this only increases New England's lead. Every one of her States, from Maine to Connecticut, had in 1880 a larger percentage of eminent natives to native whites than the country at large had. Vermont led New England, and Rhode Island, the last New England State in this respect, led New York, the nearest rival, by a margin of 30 per cent.

But about 1880 a change began to set in, for when the figures are cast up for 1890 New England is found to have relinquished her lead in favor of the Middle Atlantic section. Her long diminishing proportion of the population is at last reflected in a diminished proportion of eminent natives. During the decade 1880-90, New England's percentage of the total population declined 7 per cent., but her percentage of eminent natives born during the decade was 35 per cent. below that for the decade preceding. The Middle Atlantic section, on the other hand, virtually stood still in percentage of total population, but increased the birth-rate of its eminent natives by no less than 50 per cent. Just why this should have taken place, either in the ninth decade of the nineteenth century or at all, Dr. Nearing does not attempt to explain. One may guess that the continued loss of enterprising sons and daughters by emigration may have had something to do with it, and it was inevitable that the growth of the newer portions of the country would lessen the gap between them and her, if only by providing them with native officials. But it would require a special investigation to ascertain all the causes of her decline, and even then there would remain for the ambitious a difficulty as great as that of choosing one's parents; the difficulty, namely, of selecting one's birthplace.

Chronicle of the War

Even the exact status of the belligerent Powers and their relations one to another have been until recently, and to some extent still remain, extremely confused. The Powers actively engaged in the war up to the present are eight in number: France, England, Germany, Belgium, Russia, Austria-Hungary, Servia, and Montenegro. In effect, Germany and Austria-Hungary are fighting the rest of the Powers, but technically the situation is more complicated. Thus, until Monday, Germany was at war with Russia, France, England, and Belgium, and Austria was at war with Russia and Servia, but not with France or England, and the Ambassadors of Austria remained in London and Paris. This anomalous situation was simplified on Monday, when Austrian troops were massed on the Swiss border and France, demanding to know the intentions of the Dual Monarchy and receiving no reply, formally declared war. Up to the time of writing diplomatic relations are not yet severed between Great Britain and Austria. Bellicose Montenegro formally joined the fray by declaring war on Austria on Saturday, and on the same day Portugal, in reply to an inquiry from Germany as to her intentions, announced that she would place herself unconditionally on the side of Great Britain, according to the terms of an old treaty between the two countries. Servia also declared war on Germany on Saturday.

As we point out elsewhere, such European diplomacy as has not been shattered by war has centred at Rome, and the reluctance of various Powers to make a formal declaration of war may be traced to a desire, on the part of Austria, to draw Italy into the fray as a member of the Triple Alliance; on the part of France, to enable Italy to maintain her declared neutrality. The terms of the Triple Alliance would demand Italy's support in case of Austria and Germany being attacked. The view that Italy has taken, however, and evidently intends to stand by, is that her partners in the alliance are the aggressors. In view of recent news, and particularly that of the bombardment of Antivari, in Montenegro, by Austria, it would not be surprising if Italy were eventually forced into war on the side of her more natural ally, France.

Holland has so far been able to maintain her neutrality, and there have even been rumors, which must be accepted with great reserve, and are probably due only to the fact that the sole news from Berlin has come by way of Amsterdam, that a tacit understanding has been reached between Holland and Germany. In view of the popular Dutch dislike of Germany, such an agreement appears improbable. In the Far East, China has declared her neutrality, but Japan, while remaining neutral for the present and supporting the President of the United States in his offer of mediation, has made plain her intention to uphold British interests in the Far East, in accordance with the terms of the Anglo-Japanese treaty.

War between Great Britain and Germany was declared by both countries almost simultaneously on the evening of August 4. Preparations in England were already far advanced, and as we write mobilization is almost complete. Lord Kitchener has been appointed Minister of War, and Sir John French Inspector-General of the forces. Immediately on war being declared, Admiral Sir John Jellicoe, in command of the British fleet in the North Sea, was instructed to "capture or destroy the enemy." So far there has been no general engagement between the British and the German fleets, nor is their exact position known. Apparently the German fleet is hugging the harbors in the neighborhood of Heligoland, and the British fleet is faced with the task of keeping it inactive and of repelling attacks by torpedo boats. Mr. Winston Churchill, First Lord of the Admiralty, announced in the House of Commons on Friday the destruction by torpedo-boat destroyers of the German mine-layer Königin Luise, and the loss of the small British cruiser Amphion, which was blown up by a mine. These events happened on August 5.

Interest in the campaign by land has centred in the German operations in Belgium and the French invasion of Alsace. The German advance into Belgium began on August 4. On the following day the villages of Visé and Argenteau were taken, and the attack on Liège was commenced. The German troops that have been engaged in the operations around Liège are the Seventh, Ninth, and Tenth Army Corps. The resistance offered by the Belgian troops was obviously not provided for in the German plan of striking quickly at France through Belgium. Even if we assume that the invasion of Belgium was intended rather as a screening movement, the moral effect of the reverses which the German forces have suffered must be regarded as serious. The exact extent of those reverses cannot even now be accurately ascertained. Severe fighting took place during the last four days of last week, and an official report from Paris put the German losses as high as 25,000. A more conservative estimate, however, should probably be adopted. The German infantry apparently attacked with considerable courage, but little observance of the lessons taught particularly by the Boer War. Attacking in close formation, they were mown down by the gunfire from the Belgian forts, which seems to have been astonishingly accurate. An incident of the attack was a charge by Uhlans, who penetrated the city as far as the Rue Sainte Foie, and were then cut to pieces. In the battle on August 5 the Germans are said to have abandoned seventeen machine guns. German troops finally took possession of the city of Liège on August 8, but the forts still hold out, and are said to be well provisioned and armed, and capable of withstanding a siege.

On Saturday came the news that a French army had crossed the German frontier into Alsace and had entered Mülhausen, an important town of 90,000 inhabitants. No serious defence appears to have been offered by the German troops to the occupation of Mülhausen, but a sharp fight had previously taken place at Altkirch, near the Swiss frontier. The French losses in the fighting there are officially stated not to have exceeded 100 killed and wounded. The German troops were stated on Monday to have inundated the Seille valley, between Metz and Nancy, to hinder the advance of the French, but the quantity of the water was insufficient to prevent the French forward movement. Skirmishes have taken place all along the French

front, but nothing that can be described as a battle has as yet occurred. Details of the French advance are kept closely guarded by the Government.

Mobilization in France has practically been completed, as is indicated by the reported improvement of the ordinary train service. Beyond stating the fact that a French army is in Belgium, going either to the relief of Liège or to meet the German army of invasion at some point, such as Louvain, between Liège and Brussels, it is difficult to speak with confidence. It may be assumed, however, that the army is in two divisions, the one advancing from Tournoi and the other along the Meuse by way of Namur. There seems to be no doubt, either, that British troops have been landed in France, and are proceeding to the relief of the Belgians; but beyond an isolated dispatch telling of the landing of 22,000 English troops, no information has come on this point.

It is impossible to speak with any confidence of what is likely to be the development of the German attack. As we write it is reported that the plan still is to deliver the main attack through Belgium, and that Brussels will be the next objective. The movement of German troops in Luxemburg, however, appears to be worth watching. There they are in close proximity to Metz and to the battlegrounds of 1870-71. Their scouts have already crossed the frontier into France. Of the numbers of the German troops in Luxemburg, or, indeed, elsewhere, one cannot even form an estimate.

Russian mobilization is not yet complete, a fact which doubtless accounts for the unexpected appearance of some 30,000 Austrian troops on the Swiss border, near Basle, who have come to reinforce the German army in Luxemburg. This would seem to indicate that Austria shares the views of Germany, that a quick and decisive blow must be struck at France before Russia is ready to take the field. Russian troops, however, have crossed the Austrian frontier, for an official dispatch dated August 11, from St. Petersburg, tells of a skirmish between Austrians and Russians at Zalotche, in Austrian Galicia. On the other hand, a dispatch from Vienna of the same date says that Austrian troops have occupied Miechow, in Russian Poland, ten miles within the border. Reports have come from several sources of the bombardment early last week of the Russian fortress of Sveaborg, on the Gulf of Finland, by a German squadron.

The quarrel between Austria-Hungary and Servia, which was the original cause of this monstrous tramping of legions across Europe, has been somewhat lost sight of in the vista of the larger issues which have been presented. So far as can be gathered from meagre and severely censored dispatches, it would appear that but little progress has been made with the Austrian invasion of Servia. The bombardment of Belgrade has apparently been continued, but that the Servians can contemplate with equanimity. One report last week had it that there was not an Austrian left in Servia; another dispatch, which may doubtless be accepted as reliable, says that Servia has taken the offensive, and there have been reports of skirmishes in the neighborhood of Visigrad, in Bosnia.

Foreign Correspondence

ON THE BRINK OF WAR—AWAITING THE KAISER'S WORD—PREPARATIONS IN SWITZERLAND—AN EXODUS OF TRAVELLERS.

PARIS, July 31.

I wish to describe the sensations which the near danger of war produces among peaceful peoples. In five days' time I have shared such sensations in France and in Switzerland with men of many minds and interests. What I may say will come after events have decided whether it is to be peace or war; but it will relate what the cable cannot transmit. Briefly, I have had to go back myself to the Franco-Prussian war of 1870 and to what I remember from my childhood during our Civil War to find anything like the emotion prevalent here.

I had to go from Paris to Lausanne, in Switzerland—a matter of ten hours by train—on the day when Austria's ultimatum to Servia expired. There was no immediate alarm as yet, and no skurrying to and fro of distracted travellers, as there has been since. The action of Austria exasperated persons of every nationality, because it threatened to disturb their summer plans, and because they were already depressed by the long stretch of bad weather. But every one, without exception, was honest enough to acknowledge that individual Servians—to put the mildest construction on what has happened—had been very trying.

People had not forgotten the murder of their King and Queen eleven years ago, nor the assassination of the heir of the Austro-Hungarian throne and his wife. If President Wilson was right in refusing to recognize government constituted by assassination in Mexico, then Emperor Francis Joseph had the right to see that Servia does not shelter the assassins of his heir. I have found this impression general among Frenchmen, who sympathize most with Russia's desire to prevent the annihilation of Servian independence.

A second impression, from the start, has been that Russia cannot yield yet again to the high-handed Austrian methods of dealing with Servia and Montenegro. If the great White Czar cannot protect his brother Slavs against the suppression of their race, then the hour of Russia's abdication in Europe has come. This is not far-fetched talk to Frenchmen, as it may seem to Americans. Without defining the exact limits of the Franco-Russian alliance, even the man in the street knows that, if the conflict spreads to war between Russia and Austria over Servia, it will be all but impossible that Germany and France should not be drawn into the struggle.

This has worked up the popular consciousness of French and Swiss and Italians to the fact that the peace of Europe or a general war within a week depends on the will of one man—Kaiser Wilhelm. Because he is an enigma, because he put aside—perhaps very properly—the propositions of Sir Edward Grey for an international peace-persuading palaver, because his Ambassador plainly notified France that any help given to Russia in case of the latter's intervention would find Germany standing beside Austria—it is because of all this that every one I see around me, French and Swiss and Italians and Germans themselves, are walking about in what yesterday's *Secolo*, of Milan, calls "eccitazione grandissima."

The sober, unsensational *Journal de Genève* says this with more authority than I can give it: "In this extremity of danger, all eyes are turned to the German Emperor. The *Novoie Vremia* (in St. Petersburg) adjures him to hold back Austria—if there is still time—from the act which may set all Europe in flames. The *Temps* (in Paris) puts its hope also in William the Second. More than ever before, he is master of the hour. Often he has declared that his intentions are invariably for peace. More than once he has given his proofs, particularly in 1913 for the treaty of Bucharest. Governments have faith in him—and the peoples, too. We wait for the gesture from him which can still stop short a catastrophe that would be little less frightful for the conquerors than for the conquered."

It is a long time since the chief of any race of men has heard words like that. When this is read, the world will know whether it is to tremble or rejoice at the nod of this new Alexander.

I have found the Swiss more upset by what is going on than the French. All the young men I meet are sure they are going to war in a week—that is, to march to defend the neutrality of their frontiers. The boots and the porter of the hotel, and the house-agent's clerk, from whom I am renting a villa for an American of Paris, all have the same conviction. They say: "The French army will march across us to take the offensive against Germany; and Germany is all ready to cross the Rhine into Basle against the French; and they will fight their battles in our valleys!"

I have my doubts, though it seems a Swiss general has shown it all in a book. At any rate, these young fellows are all resolved to fight both parties impartially.

The Swiss, of all others, have the first and foremost reasons to dread war. They live on summer travel, and the mere threat of war is driving away their customers. One mountain hotel-keeper says he will have to close in a few days if there is no change. "First, all my Austrians left together; then the Germans went; now the French are going, and the Americans have stopped coming."

It is worse than this. If you are in Switzerland, how are you going to get back to Paris? Trains are already held up in Lyons, in case they should be needed for mobilization and transport of troops. How are you going to get money from Paris? For that matter, Swiss banks give out no more gold, but only the big silver five-franc piece, like a United States dollar. And if you are in Paris, must you lay in hams and canned goods and such for fear no provisions will reach the city? Already grocers refuse to change your fifty-franc banknotes ($10), unless you buy ten francs' worth of foodstuffs.

All this may be the midsummer madness of a war-scare, but it is very real to people on the brink of war. Besides the material bother, often equivalent to financial disaster, there are innumerable anxious emotions of flesh and blood. A doctor of the reserve bids me good-by and he leaves for sudden service. An automobilist of the general staff is awaiting orders to join his post. And the wives are dissolved in tears. If war comes, their husbands may not come back—for, indeed, "War is hell," and pacifism does not seem to be of much account. S. D.

A Duke Among the Wits

PART ONE:—WHARTON AN EXAMPLE OF THE PASSION OF VANITY; HIS LIFE AS POLITICIAN AND MAN OF THE WORLD.

To those who admit an acquaintance with the wits of Queen Anne and her successor, the Duke of Wharton has been a portentous but rather vague figure. An idea of the man had, indeed, been fixed in their minds once for all by one of Pope's terrible portraits:

Wharton, the scorn and wonder of our days,
Whose ruling passion was the lust of praise:
Born with whate'er could win it from the wise,
Women and fools must like him, or he dies:
Though wond'ring senates hung on all he spoke,
The club must hail him master of the joke.
. . . . . .
Thus with each gift of nature and of art,
And wanting nothing but an honest heart;
Grown all to all; from no one vice exempt;
And most contemptible to shun contempt;
His passion still, to covet gen'ral praise;
His life, to forfeit it a thousand ways;
A constant bounty which no friend has made;
An angel tongue, which no man can persuade;
A fool, with more of wit than half mankind;
Too rash for thought, for action too refined;
A tyrant to the wife his heart approves;
A rebel to the very king he loves;
He dies, sad outcast of each church and state,
And, harder still! flagitious, yet not great.
Ask you why Wharton broke through ev'ry rule?
'Twas all for fear the knaves should call him fool.

That is a portrait done in everlasting encaustic; but of the actual features of the man himself we knew comparatively little, and might reasonably doubt whether the limner drew from the life or from a fancy of his own fertile and malignant brain. In a memoir published in 1896, Mr. J. R. Robinson gave a fairly interesting sketch of Wharton's career, and now the busy pen of Mr. Lewis Melville has supplemented that work with a fuller narrative containing a number of hitherto unpublished letters.* It is the habit of Mr. Melville to be somewhat lenient to the subject he has in mind, but, however Pope may have deepened the shadows, it still appears that no essay, and indeed no biography, of Wharton can do much more than offer a running commentary on the traits we have known from the beginning.

I.

If any man of that age exemplified by his actions the current philosophy of the ruling passion, it was his Grace of Wharton. And whether that passion displayed itself as the vanity of a man of no character to win honor in the game of politics, difficult always, doubly difficult in those days, or as the itching of a high-born nobleman to shine in the still more deadly battle of the wits, it was all, as Pope said, for fear the knaves should call him fool.

As for his lack of character, he came to that by special inheritance as well as by the general dissoluteness of the period. Of an ancient family, his grandfather, Philip, fourth Baron Wharton (1613-1696), distinguished as "the good Lord Wharton," was able in the troubled years of the Rebellion to side with the popular cause, yet honorably to oppose the execution of the King and the usurpation of Cromwell. He succeeded also in combining great personal beauty and lavish display with the strict principles of a Covenanter. Philip's son Thomas (1648-1715), fifth baron and first marquis, went further in the treacherous art of contraries, being at once an incorruptible politician in the party of the Revolution and in private life a notorious rake. It could be said of him, apparently with truth,

Nor bribes nor threat'nings could his zeal abate,
To serve his country, and avert her fate.

Yet for his religion, he was well described by Swift as "an atheist grafted on a dissenter," while Harry Killegrew, one of Charles the Second's masters of ribaldry, could say to him, "You would not swear at that rate, if you thought you were doing God honor." And for his morals, Shaftesbury, an honest and fairly trustworthy reporter, summed them up in a few words: "If I ever expected any public good where virtue was wholly sunk, 'twas in his character: the most mysterious of any in my account, for this reason. But I have seen many proofs of this monstrous compound in him, of the very worst and best." The Marquis came into association with the later circle of wits by taking Addison with him as his private secretary when he went over to Ireland as Lord-Lieutenant. He was himself the author of that extraordinary bit of anti-papistical doggerel, the "Lillibullero," which, according to Burnet, had more political effect than the Philippics of Demosthenes and Cicero, and which my Uncle Toby, long after the battle of Namur, used to whistle to himself to keep up his courage.

Of this stock, diminishing in character by generations and increasing in *hybris*, our illustrious scamp was born, in the year 1698. Whatever else he lacked in training and inheritance, he was from the first prepared to exact the wonder of senates. "His father's care," according to a contemporary biographer, "was to form him a complete orator"; and to this end the lad was put into the hands of tutors who drilled him in literature and elocution. But not for long. At the age of sixteen he eloped with a girl, said to have been "without either family or fortune," and was married in the Fleet. That he was a tyrant to his wife, we have no other witness than Pope; but at least he soon abandoned her, and contrived to amuse himself without her for years. Six weeks after the marriage his father died, and the young Marquis, handsome, witty, but not wise, was left with no curb to his "unbridled excursions" save the hand of his guardians on the purse.

Very soon the boy was sent over to Geneva, with a Huguenot tutor, to study at a religious institution. Naturally he rebelled. He stopped long enough at Paris on the way to get into all kinds of mischief, and thither he escaped again, after a short experience of Swiss discipline, leaving with his tutor his Byronic pet and this not less Byronic note of farewell: "Being no longer able to bear with your ill-usage, I think proper to be gone from you. However, that you may not want company, I have left you the bear, as the most sociable companion in the world that could be picked out for you." In Paris the truant gave himself up to reckless humor and Stuart politics. We first hear of him associating with a Mr. Gwynn, whom he meets at an English coffee-house, and the next day visits in a chamber up many stairs. "Sure, I hope this is not the way to heaven, for if it is, I'll run down stairs again," exclaims our budding wit. Gwynn was apparently abroad for the good of his country, and, with or without his help, the young scion of the Revolution and nursling of Whiggery is soon deeply engaged in the plots to bring James III back to his throne.

And so began the crooked search to obtain general praise in the medley of politics. The boy's beginnings were fair, and he seems to have been introduced immediately into the heart of those wild intrigues which were hatching at Paris and Avignon and which had already driven Bolingbroke from the party. Mr. Melville has printed a number of Wharton's letters from the Stuart Papers which show a surprising grasp of affairs in one so young, particularly a note to the Landgrave of Hesse-Cassel, dated November 4, 1716, when our statesman was only eighteen years old. But no necessity of state could keep his tongue from wagging folly and his brain from plotting dangerous jokes. Only two days after the sober epistle to the Landgrave, the Earl of Southesk is writing to Mar, complaining that unless some one can restrain the young man's loose talk he will ruin himself to no purpose. And in the same month we get this account of him from a correspondent unnamed:

> . . . Lord Wharton was at Lord Stair's on young Geordie's birthday. He proposed to drink confusion to the Tories, and that Liddesdale and Gardener would go to the Coffee-house and he and they would do as much there. When they came there, he cried, Here is confusion to the Whigs! What do you mean, my Lord? say they. —— —— you, says he; do you know I brought you here to get your heads broke? the Tories are too many for you here to drink any other health.

From such perils and plots his guardians delivered him for the time by cutting off his supplies and forcing him to return to England. He had lived lavishly and borrowed recklessly, even inducing the hard-pressed widow of James II to lend him £2,000. "I have pawned my principles," he said to a friend at home, "to Gordon, the Pretender's banker, for a considerable sum, and till I can repay him, I must be a Jacobite. When that is done, I will return to the Whigs."

**The Life and Writings of Philip Duke of Wharton.* By Lewis Melville. New York: John Lane Company. $4.50 net.

What his politics really were at this time, if he had any politics beyond the desire to be doing something, it would be hard to say. In December of 1716 he is writing to the Earl of Mar that he is ready with twenty men to proclaim James in Cheapside; a few months later he has taken his place in the Irish House of Lords at Dublin, and is doing good service for the Government. There is nothing peculiar in this. Most of the politicians of the age were trying to keep the peace with one King while serving the other; but they showed a certain discretion in their duplicity, whereas this young scapegrace had not even the conscience of concealment. One guesses that his real sympathies were with the King over the water, as was the prevailing fashion, for good reasons, among the greater wits of the day, but that the consciousness of talent and the craving for applause tempted him often, though not always, to play a part with the dominant, practical party. At any rate, as a reward for his loyalty in Ireland, the Government, on January 28, 1718, while he was still a minor, created him Duke of Wharton—an extraordinary honor. On February 18 the news is that "the Duke of Wharton has changed his side," and is voting with the other party.

II.

While in Ireland he met the exiled despot of the wits, who preached to him a better sermon than most of those he spoke from the pulpit. "You have had some capital frolics, my lord," Dean Swift is reported to have said to the bragging youth, "and let me recommend one to you. Take a frolic to be virtuous: take my word for it, that one will do you more honor than all the other frolics of your life." Whether the advice fell on heeding ears may be douhted, but, for some reason, on returning to England the Duke seems to have made a modest experiment in virtue. He fell "into the conversation of the sober part of mankind," wrote Mrs. Eliza Haywood, "and began to think there were comforts in retirement." And Lady Mary Wortley Montagu tells her sister that "the Duke of Wharton has brought his duchess to town, and is fond of her to distraction; in order to break the hearts of all the other women that have any claim upon his . . . He has public devotions twice a day, and assists at them with exemplary devotion; and there is nothing pleasanter than the remarks of some pious ladies on the conversion of so great a sinner." But the Duke was soon sinning again, if indeed he had ever stopped. His wife was bundled off to the country; he joined the Hell-Fire Club, which, as Mr. Melville thinks, may not have been as bad as its name, but was certainly bad enough; he played atrocious pranks, one of which sent a foolish dwarf to the madhouse; he drank furiously. Dr. Young is supposed to have lectured him under the name of Lorenzo:

> Thou, to whom midnight is immoral noon;
> And the sun's noontide blaze, prim dawn of day;
> Not by thy climate, but capricious crime,
> Commencing one of our antipodes!

Meanwhile, in 1719, whether as saint or sinner, he had been introduced into the House of Lords, where he soon proved his precocious powers of oratory. There, as president of the Hell-Fire Club, he opposed a bill for preventing blasphemy and profaneness, on the ground that such a law would he repugnant to Scripture! At the end of the year 1721 he was kissing the King's hand as a good Whig. Then again, in May of 1723, he was speaking in defence of that prime Tory, Bishop Atterbury, against the Bill of Pains and Penalties. Horace Walpole, in his "Royal and Noble Authors," says that in the evening before the debate Wharton went to Sir Robert at Chelsea, avowed contrition for his opposition to the court, and consulted with the Minister on the best way of aiding the bill. Having thus got full information in regard to the case, he spent the rest of the night carousing, and the next morning, without having gone to bed, made his great speech in the House of Lords against the Government. Mr. Melville rightly observes that the anecdote, whether true or not, is quite in keeping with the Duke's character; but it can scarcely be true. Sir Robert was not one to he caught by such a trick, and Sergeant Wynne, who was concerned in the case, pronounced the story incredible. It is easier to accept Mr. Melville's eulogy of Wharton as an orator on this occasion: "With a wonderful grasp of detail and a stern logic, he summed up the evidence against Atterhury, and disposed of it, in a quiet, forcible, closely-reasoned manner that suggests the great lawyer rather than the distinguished orator." Yet here again Mr. Melville goes a little too far. It is not quite true that by virtue of this speech "the Duke takes a position among the great men of his day." His argument, indeed, shows a keen grasp of details; but it lacks something more than oratorical manner; it lacks also the persuasiveness of Atterbury's own speech on the occasion. And naturally it failed of effect; for Walpole knew, and Parliament knew, and we know, and probably Wharton himself knew, that the Bishop had been engaged in treasonahle correspondence with James. The Bishop went over to France—"exchanged" for Bolingbroke, as he said, being himself one of the brotherhood of wits—and the Duke consoled himself by inditing an ode "On the Banishment of Cicero," in the Ercles vein suitable to such an occasion:

> Thy Wisdom was thy only Guilt,
> Thy Virtue thy Offence,
> With Godlike Zeal thou didst espouse
> Thy Country's just defence:
> Nor sordid Hopes could charm thy steady Soul,
> Nor fears, nor Guilty Numbers could controul.
>
> What tho' the Noblest Patriots stood
> Firm to thy sacred Cause,
> What tho' Thou could'st display the Force
> Of Rhet'ric and of Laws;
> No Eloquence, no Reason could repel
> Th' united Strength of Clodius and of Hell.

III.

The Duke was not long in following the Bishop, in politics if not in virtue. In a "memorial" to the court at Vienna he made the treatment of Atterbury an excuse for abandoning the Hanoverian cause, but Mr. Melville is probably right in surmising that the itch for high position which he could not obtain from the Government at home, sent him back to the Pretender. Like Lorenzo of the poem—

> Denied the public eye, the public's voice,
> As if he lived on other's breath, he dies.
> Fain would he make the world his pedestal;
> Mankind the gazers, the sole figure he.

However that may be, leaving his noble name to the scandal-mongers of England—who, if we may helieve Horace Walpole, did not miss their opportunity—he crossed the Channel in July of 1725, and was immediately deep in the Jacobite counsels. "Venisti tandem?" exclaimed Atterbury, in a set of Latin verses which do more credit to his knowledge of the Gradus than to his discernment of men.

For a while he takes an important part in that futile weaving of plots which the Jacobites were carrying on all over Europe. At first he is at the court of Austria, where he accomplishes nothing, through no fault of his own, it may be. Then he is in Spain, where he accomplishes less than nothing. Both friends and enemies were heginning to find him out by this time and to regard him as the Miles Gloriosus of politics. A letter from Benjamin Keene, then British Consul at Madrid, tells the sad story in unmistakable language:

> . . . On Tuesday last, I had some company with me that the Dukes of Liria and Wharton wanted to speak with; upon which they came directly into the room. Wharton made his compliments and placed himself by me. I did not think myself obliged to turn out his star and garter [given him by James]; because, as he is an everlasting talker and tippler, in all probability he would lavish out something that might be of use to know. . . . He declared himself the Pretender's Prime Minister, and Duke of Wharton and Northumberland. Hitherto (says he) my master's interest has been managed by the Duchess of Perth and three or four other old women who meet under the portal of St. Germains; he wanted a Whig, and a brisk one, to put them in the right train, and I am the man; you may now look upon me as Sir Philip Wharton, Knight of the Garter, and Sir Robert Walpole, Knight of the Bath, running a course, and, by God, he shall be hard pressed; . . . neither he nor King George shall be six months at ease, as long as I have the honor to serve in the employ I am in.

It is not strange that "the other old women" soon had him excluded from what they were pleased to regard as the secrets of their conspiracy, though the "Knight of the Bath" probably knew more of what was really happening than any one of them. Whereupon our Gloriosus must turn soldier indeed—

> Est genus hominum qui esse primos se omnium rerum volunt
> Nec sunt.

In 1727 the Spaniards made an attempt

to recover Gibraltar, and the Duke obtained permission to serve with the besieging army. The attack was futile, but Wharton at least showed that he was no coward. On one occasion, inspired by brandy, and decked out in his Garter-Ribbon, he went up to an English battery and challenged it by crying out, "Long live the Pretender," and using other "bad language." He was warned to retire, but kept up his posture until struck by a piece of a shell on the toe. So much glory he won, and then, being weary of camp life, returned to Madrid.

Meanwhile he had changed his religion and had married again. In Madrid he became acquainted with the daughter of an Irish exile who was one of the maids of honor to the Spanish Queen. As she was a Catholic, the Duke promptly went over to her religion. On June 17, 1726, we know from a document of the Inquisition that he was firm in his adherence to the Anglican faith; by July 26 he was converted and had his bride. Two years later, hoping to curry favor in England, he was swearing to Atterbury that he was no Catholic—"We might as well think he was a Turk." But when he found his denial of no avail, "he made another sudden turn, and is now as true a Catholic and Jacobite as ever he was." He was no longer taken seriously by the statesmen at home, but the wits had not forgotten him. Mr. Melville quotes an amusing ballad, by Curll, "on the Duke of Wharton's Renouncing the Protestant Religion":

Pray, isn't it queer
That a wild Peer,
So known for rakish Tricks,
That *Wharton* shou'd
At last be good,
And kiss a *Crucifix?*

. . . . . .

Old *Thomas* rise,
And if you've Eyes
To light you thro' the Shades.
See, see your Son
How he has run
From Beggary to Beads!

. . . . . .

He took the Lass
And he took to Mass.
All in an errant Whim,
And did dispence
With Marriage-pence
As she dispenc'd with Him.

The rest is the fifth act of the tragedy. Rejected by the Whigs at home and the Jacobites abroad, without money save what he could beg or borrow, sinking deeper and deeper in the habit of drunkenness, with broken health, he throws away the remainder of his life in reckless and profane debauchery. He could impose occasionally on a gullible traveller, and from one such repentant Englishman we have a terrible picture of him as he was living in Paris in 1729:

In short, he left me sick, in Debt, and without a Penny; but as I begin to recover, and have a little Time to think, I can't help considering myself, as one whisk'd up behind a Witch upon a Broomstick, and hurried over Mountains and Dales, through confus'd Woods and thorny Thickets, and when the Charm is ended, and the poor Wretch dropp'd in a Desart, he can give no other Account of his enchanted Travels, but that he is much fatigued in Body and Mind, his Cloaths torn, and worse in all other Circumstances, without being of the least Service to himself or anybody else.

Evidently, some of the old brilliance which had dazzled England in his youth remained with him almost to the end—the magic audacity of his wit. The end itself was pathetic. While going to rejoin his regiment at Terragona he was struck down by fatal illness, and died in the Franciscan Monastery of Poblet, in the habit of the order, with no one near him save the pitying fathers. He was not yet thirty-three years old. According to the inscription on the stone set up in the abbey, he met death "In fide ecclesiæ catholicæ romanæ," but his old companions at home read another epitaph. In 1733 appeared the Epistle which now stands first in the "Moral Essays" of Pope, and there, in that corner of what may be called England's Abbey of the Unwise, his effigy has a conspicuous place among those who fell as victims of the Ruling Passion:

Wharton, the scorn and wonder of our days.

P. E. M.

Books and Men

THE CRUEL AND ABUSIVE TREATMENT OF SLANG.

Does American slang suffer a sea-change in crossing the Atlantic? Is it really transformed? Or is the alteration merely that undergone by the cranberries which were sent to an Englishman by his American friend? The Englishman had enjoyed cranberry-sauce in this country, and after going home was pleased to receive a barrel of cranberries from across the ocean. In a day or two, however, he wrote: "I thank you for the berries, but unfortunately they have all soured in transportation." Is our slang the same on one side of the ocean as the other, but is its altered taste due to its mistaken use?

Mr. W. J. Ghent, who writes in *Harper's Weekly* on "Our Slang Across the Sea," thinks that when an English scholar sets himself to describe and define the beauties of our slang he retires into a closet, lights a lamp, and evolves a meaning from his inner consciousness—like the German scholar and the dromedary. How else, asks Mr. Ghent, could he have defined "stuck-up" as meaning "moneyless—very figurative expression derived from being 'stuck-up' by highwaymen," after which, this etymologist profoundly remarks, "You have no money left in your pocket."

The English writer whose book Mr. Ghent describes is Mr. J. Redding Ware, author of "Passing English of the Victorian Era." Mr. Ware has evidently studied the works of Mr. Hornung, but neglected Bret Harte. Otherwise he would know that, while an Australian bush-ranger "sticks-up" his victims, the ancient desperado of the American Far West would scorn to commit such an act. To "hold" them up is a different and eminently proper proceeding.

Some other oddities of Mr. Ware's book are mentioned by Mr. Ghent. A chump is defined as "a youth (as a rule) who is in any way cheated of his money—especially by the so-called gentler sex." "Snakes" is given, in Anglo-American slang, as meaning "danger," so "snakes alive" (wholly American) is "much worse than snakes." Naturally, the latter is too horrible to consider. Why Mr. Ware should say that axe-grinders are "men who grumble, especially politically," is hard to understand, since he has given, directly above, the correct definition of "axe to grind."

A few more misunderstandings, not mentioned by Mr. Ghent, occur in "Passing English." For example, Mr. Ware evidently knows nothing of the command to "dry up!" He is content to say that the phrase means "to cease because effete"—from mountain torrents which dry up in summer. "Foxes," he says, are "people of Maine—probably owing to the foxes which prevail there." He has heard of a horrid American oath which he calls "*Gaul* darned." His book is strong on our oaths—"Jee," he declares, is "an oath-like expression. First syllable of Jerusalem. 'Jee! You don't dare to do it!'" (Both "Jee" and "Gaul-darned" give evidence that Mr. Ware learned his American oaths by ear.) "Red peppers," he suggests, is another American "form of swearing." (If so, my education is defective.) "Jag" is always a stumbling-block for English commentators on our slang. Mr. Ware finds it to be a "Spanish-American-English" phrase to express a "desire to use a knife against somebody—to jag him." "Wake-snakes" means "provoke to the uttermost." Perhaps it does. And to "whoop up" is an Americanism signifying "to tune a musical instrument."

"Bull-doze" is, with partial correctness, defined as "political bullying." But the excellent Mr. Ware is not content with this—he must quote an anecdote. "'What do they mean by bull-dozing?' asked an inquisitive wife the other evening. 'I suppose they mean a bull that is half asleep.' And the injured one kept on with her sewing, but said nothing." This, writes Mr. Ware, "will show that even in the U. S. A. themselves this term is not fully understood." "Dodrottedest" is "an example of evasive swearing." That is very true—but a little disappointing.

To be the maker of a slang dictionary one must chloroform one's sense of humor. To define "Let her go, Gallegher!" as "an expression signifying a willingness to proceed" (as one of these dictionaries did) is a dreadful thing. A person with a mind so scientific as to be capable of that would be an intolerable companion. He is blood-brother to the young man to whom a girl said: "How romantic the moon is to-night!" The reply, from the youth, was: "Yes; and are you aware that the moon is exactly 244,678 miles from the earth?"

A slang dictionary and a collection of beautifully mounted dead butterflies are, to me, very much the same. It is right and proper, I suppose, that museums should have the butterflies, but killing them is a shameful thing. Slang words and phrases are, in their own way, as beautiful as moths and butterflies. Their gay life is on the lips of the people. They are held captive in literature—and this is not only excusable but necessary. But in a dictionary they are smothered, impaled, dried, and mounted. You resent that these bright creatures of the language have been pawed by fusty lexicographers.

There will come a day, perhaps, when somebody will issue a rational version of "The Love Sonnets of a Hoodlum." That fine riot of slang—which one of the most learned of professors of English is said to have recited by the hour—will be translated into pure English! Some scholar will put his great, coarse hands to work, and——

O, Mommer, wasn't Mame a looty-toot!
  Last night, when at the Rainbow Social Club
She did the bunny hug with ev'ry scrub
  From Hogan's Alley to the Dutchman's Boot!
While little Willie, like a plug-eared mute,
  Papered the wall and helped absorb the grub,
Played nest-egg with the benches, like a dub,
  When hot Society was easy fruit!
Am I a turnip? On the strict Q T
  Why do my Trilbys get so ossified?
Why am I minus when it's up to me
  To brace my Paris Pansy for a glide? . . .

will be given in some version of cold prose such as this: "Speak, mother, and declare how beautiful was Marie, last evening, when amongst the youths and maidens in the dance she nestled in the arms of unworthy fellows from the lowest purlieus—whilst I remained passive or sought to drown my grief in wine! Is it true that I am the inferior being I seem? [Note by translator: This appears to be the best rendition of "Am I a turnip?" but cf. Schlatter, IV, p. 27], etc."

For two of their definitions, however, much may be forgiven the dictionaries of slang and Americanisms. One of these is the famous entry under "Jag" in John S. Farmer's "Americanisms, Old and New," published in London in 1889.

Mr. Farmer starts well:

"JAG—In New England a parcel; bundle; or load. An old English provincialism which has held ground colloquially across the Atlantic.

Cleveland was forced up 7½ cents by the persistent bidding of one broker buying on a heavy order. He occasionally caught a JAG of 2,000 or 3,000 shares, but kept on bidding as if Cleveland were the only thing dear to him on earth. . . . *Missouri Republican*, 1888."

But he continues:

"Jag is also a slang term for an umbrella, possibly from that article being so constantly carried."

And he proceeds to prove this by a quotation from the Albany *Journal:*

He came in very late (after an unsuccessful effort to unlock the front door with his umbrella) through an unfastened coal-hole in the sidewalk. Coming to himself toward daylight, he found himself—spring overcoat, silk hat, JAG and all—stretched out in the bath-tub.

From the earliest times Americanisms have proved a snare for the English. Grose's "Classical Dictionary of the Vulgar Tongue"—a work not famed for its prudishness—was a century old when Mr. Farmer wrote his book. Grose defined just one Americanism, and the day on which I found it remains in my mind like that on which stout Cortez stood silent on a peak in Darien. This is it:

"TO GOUGE. To squeeze out a man's eye with the thumb: a cruel practice used by the Bostonians in America."

EDMUND LESTER PEARSON.

News for Bibliophiles

A CATALOGUE OF PEPYS'S LIBRARY—BIBLIOGRAPHIES OF STEVENSON AND CRUIKSHANK.

Samuel Pepys the diarist was a true bibliophile and his library of nearly three thousand volumes, happily preserved practically intact for more than two hundred years, is still the distinctive ornament of Magdalen College, Cambridge. Now, for the first time, a comprehensive and adequate catalogue of the library, prepared by specialists, is being published by Sidgwick & Jackson, London. Part I, the "Sea Manuscripts," by Dr. J. R. Tanner, and Part II, the "Early-printed Books to 1558," by E. Gordon Duff, are before us. The latter contains a very interesting general Introduction by Mr. F. Sidgwick, giving an account of the library and its bringing together.

Although Pepys's Diary covers only nine of the seventy years of his life, there are in it about five hundred references more or less definite to his library and to special books which he bought, borrowed, or "turned over" at the booksellers'. This entry of August 10, 1663, telling of his resolution to become "a better husband" by ceasing to buy books will commend itself to the wives of some present-day book collectors:

Whereas before my delight was in multitude of books, and spending money in that and buying alway of other things, now that I am become a better husband, and have left off buying, now my delight is in the neatness of everything, and so cannot be pleased with anything unless it be very neat, which is a strange folly.

But in January, 1668, he was still buying "a great many books," and so filling up his two bookcases that he was "forced to give away some to make room for them," planning then to keep his "proper library" within the limits of these "two presses." His delight in the neatness of everything is shown by his care in cataloguing and arranging or (as he called it) "adjusting" his books, as is recorded in other entries in his diary, as well as by several passages in his will. The books were nearly all put into uniform bindings, with the backs gilded and each volume bearing his "arms or Crest or Cypher" stamped in gold. He was very particular that the books should range evenly upon the shelves, and in some cases the volumes are mounted upon wooden "stilts" covered with leather and stamped in gold so as to appear to be a part of the book. Some of the volumes in the library bear as many as seven changes in shelf-numbers or press-marks, showing that he was continually shifting the books about.

By a codicil to his will, added only a fortnight before his death in May, 1705, Pepys left his library to his nephew John Jackson with full instructions as to its final disposition. It was to be given to Trinity or Magdalen, preferably the latter, and was to be kept together in a room by itself, without additions of any sort except such as might be made by Jackson, and no books were ever to be taken from the room except to the Master's "Lodge," and then never more than ten books at a time. As a final safeguard was added the stipulation that whichever of the two colleges received it, the library was to be open to an annual visitation by the officials of the other, and if it appeared that the terms as laid down by Pepys were not being carried out, the custody of the library was to be transferred. That the trust has been most faithfully kept is shown by the fact that of the 2,971 volumes which made up the library as transferred to Magdalen College by Jackson in 1705, all but seven were still in position in 1906.

The Early-printed books, as catalogued by Mr. Gordon Duff, contain a number of bibliographical and literary rarities from English presses. There are seven Caxtons, one of which is unique; seventeen books or pamphlets printed by Wynken de Worde, five of which are the only copies known, and sixteen pieces from the press of Richard Pynson, seven of which seem to be unique. The Continental books are fewer in number and of less interest, there being apparently but two books printed before 1500.

The "Sea Manuscripts" described in Part I of the Catalogue are mainly material gathered together by Pepys for his proposed "History of the Navy," but among them are other important manuscripts, including originals or transcripts of several journals of early navigators to America and the East. Among these are Clement Adams's account, in Latin, of Richard Chancellor's voyage to Muscovy in 1553; the journals of Edward Fenton's two voyages to China in 1578 and 1582-1583; of Capt. Robert Holmes's two voyages to Guinea in 1660-1661 and 1663-1664; of Capt. William Ambrosia Cowley's Voyage around the World, 1683-1686; Capt. John Narborough's own journals of his voyages, 1669-1686; and Capt. Bartholomew Sharpe's journal of his South-Sea Voyage, 1680-1682. A more elaborate catalogue of the manuscripts in the collection which relate to the English navy is in preparation by the Navy Records Society.

Beyond the fact that it is published at a very moderate price there is little to be said in favor of the new Bibliography of Robert Louis Stevenson, by J. Herbert Slater, just published by Macmillan (75 cents). This little volume is announced as being the first of a projected series of similar handbooks, which will describe the "first, early, and collective editions of a variety of old and modern authors," among which are Francis Bacon, Ben Jonson, Bunyan, and Goldsmith. Good collectors' bibliographies of the books

of these older writers are badly needed, but their preparation will require a vast deal more of original work than has been given to this first of the series which, so far as bibliographical information goes, seems to be merely a condensation of the much fuller and more accurate Bibliography of Stevenson prepared by Col. W. F. Prideaux, and published in 1903. Mr. Slater's arrangement is alphabetical by title, and not, as is the more general custom in books of this character, chronological by dates of publication. Several of the rarer items are, however, mentioned only in the notes, and not in the alphabetical list at all.

As the editor, for nearly thirty years, of the *Book-Prices Current*, Mr. Slater is recognized as an authority on book values in England, and he has affixed market values to most of the first editions in this list. These are mainly prices realized at Sotheby's, American records of sale being ignored, and in many cases they are much too low. For example, twenty-one shillings is a ridiculously low value to place upon the four numbers of the *Edinburgh University Magazine*, and even worse is the price, £2 19s., the latest English auction record on that little pamphlet "Not I, and Other Poems," which is much rarer and more difficult to procure than the similar pamphlet, "The Graver and the Pen," which is valued at "about £18." In the same way the remarks as to the number of copies printed or in existence of some of the pamphlets are probably understatements. This is true particularly of the eighty-page pamphlet "The Story of a Lie," of which Mr. Slater says the copies preserved "are not likely to exceed half a dozen in number," though he gives records of sale of four copies at auction at prices varying from £30 10s. in 1899 to £1 2s. in 1907. This is a book which can always be procured without difficulty, though it generally brings a good price, and the existing copies must be numbered by dozens. The usually accepted story as to its origin needs authentication.

It is almost unkind, in a notice of a book of this character, to allude to a slip like the following. To his bibliographical account of Stevenson's poem "Ticonderoga" Mr. Slater, for the benefit of his English readers, adds this note: "Ticonderoga is the name of an old fort on Lake Champlain, New York State, celebrated in war and peace long before the Revolution which culminated in the Declaration of Independence."

The books, pamphlets, and magazines containing illustrations by George Cruikshank continue to have a perennial interest for collectors, and the rarer items, when in choice condition and original state as issued, command ever-increasing prices. Several guides or reference books on the subject have been printed, the best having been Captain R. J. H. Douglas's Catalogue, published in 1903, which, though badly arranged, contained much important and interesting information there printed for the first time. For whatever reason, a fire in a book-bindery, we understand, his Catalogue has been scarce for a long time. Now there appears a new book, "A Bibliographical Catalogue," by Albert M. Cohn (Longmans; $5), which will take its place as a handy reference book on the Cruikshank collector's shelves. Mr. Cohn's Catalogue is more nearly complete than Captain Douglas's, as he describes 820 items, nearly one-fourth more than those enumerated by Douglas, but as the earlier work contains fuller descriptions of some of the most sought-for and rarer volumes and series, it will not be entirely superseded. Mr. Cohn's collations seem to be accurate, and his estimates of market values of the rarer items are more nearly truthful than in most works of this character, the authors or editors of which do not seem to be able to keep up with the rapid increase in the prices of the great rarities when in the right condition. The books described are arranged under the names of their authors, and at the end is a full index of titles. L. S. L.

Correspondence

LIQUOR AND DRUGS.

To the Editor of The Nation:

Sir: May I call attention to the fact that neither of Mr. Anderson's statements in his letter in the *Nation* of August 6 invalidates the assertion that prohibition increases the sale of narcotic drugs? It is quite obvious that in a city where the nervous tension is so great as it is in New York the use of such means of intoxication would be relatively great. Does Mr. Anderson doubt for one moment that absolute prohibition of liquor in New York would still further increase this use? As to the second statement: I have very serious doubt, the result of much investigation and study, whether alcohol is ever the cause of insanity; that it is the occasion of its manifestation I freely admit. The real cause is to be found in certain protoplasmic weakness of the nervous organization, due most often to vital wastes of various sorts, which seeks in the use of alcohol a stimulation for action, or even a locus of consciousness. The prohibition of alcohol invariably leads to the use of drugs in such cases. The reformable dipsomaniac is one who has not much to fear from his potations. It is the convenience and accessibility of alcohol, and not its inherent quality, that places it first on the lists as the occasion of insanity. Much will be gained when these facts are recognized and scientifically treated.

Oscar Woodward Zeigler.

Baltimore, August 8.

"THE PROMISED LAND."

To the Editor of The Nation:

Sir: During the last year Palestine has been the scene of a noteworthy struggle. For some years philanthropic Jews of three countries, Germany, Russia, and the United States, had had a Technical Institute at Haifa in contemplation. When the final arrangements for opening the school were under way, it became known that German and not Hebrew was designated as the language of instruction. The Jewish population was aroused to so high a pitch of excitement that young and old joined in demonstrations against those supposed to have dictated the change of policy. The lower schools controlled by the same elements, though hitherto lauded as the protectors of Hebrew, were "boycotted" by teachers, pupils, and parents. These militant acts have delayed indefinitely the opening of the Institute, the cherished project not only of the Palestinian Jews, but also of a considerable number of Jews in Russia, who were hoping to secure in Palestine the vocational training for their children denied them by the stepmotherly policy of Russia. And yet, in spite of the grievous loss, there is joy in Palestine, for it is now established that Hebrew lives.

Hebrew has never been a dead language in the same sense as Latin and Greek. Nevertheless, to make it an instrument pliant to modern need, it had to undergo a revival. The opportunity for the renascence was afforded by the gathering of fragments of Jewry in Palestine from every part of the world, all animated by the ideals summed up under the term Zionism. Such groups have been turning Zionward for the last thirty-five years, each bringing its own language with it. The building of the nation was menaced by the confusion of tongues. As a result of concerted action, Hebrew, the never-abandoned language of prayer, became the language of life, too, of the first stirrings of that national life which had been the object of prayer for eighteen centuries, and to-day the pioneers are ready to sacrifice a livelihood for this new-old national possession.

In the Diaspora, the Jew has performed equal miracles of self-preservation. This miracle, however, belongs besides in the category of self-rejuvenation. It is rooted in the *terra firma* of agricultural settlements in some forty colonies and villages. It implies that a Jewish population, rural and urban, has interpenetrated "the land without a people." The Jewish villagers, inspired by unquenchable Hebrew optimism, and applying the Occidental methods brought from the lands of the exile, have created values in an abused country in a single generation. The international movement behind these colonists possesses a fund of over one million dollars, collected pennywise, for the purchase of the land as an inalienable national possession. It operates a bank with branches in Jaffa, Jerusalem, Haifa, Hebron, Safed, Beirut, etc. The land is covered with a network of schools, for elementary, secondary, agricultural, and arts and crafts instruction. Plans are now under discussion for an industrial development as large as the agricultural basis will support, and the poll-tax shekel-paying sympathizers to the number of over 200,000, scattered all over the world, from Sweden to South Africa and from China to Argentina, send delegates to an international congress—in itself a miraculous achievement after a dispersion of nearly twenty centuries—to devise ways and means of investing with a political body the spiritual and cultural manifestations of a national life in Palestine.

The above would go to show that one or the other part of a statement by your reviewer of Dr. Richard Gottheil's book on Zionism is incorrect. Either it is not true that "sentiment alone keeps the Zionists together, or rather from getting at one another's throats," or it is not true that "no movement of a large character has ever thrived on sentiment alone." Nor would it seem that Zionism is doomed, because to define it "baffled" the author of the book, or because it—like life—is composed of "diverse" and "contradictory" currents. Nor does it appear to be final condemnation to say of a movement that "after an existence of barely twenty years the Zionists represent a diversity of views and aims which is almost bewildering." In the face of two thousand years of Jewish separatist activity, they consider twenty a negligible quantity, and in the face of worldwide dispersion, they believe "diversity of views" nat-

ural and indeed a sign of health and modernity. But to speak of "diversity of *aims*" in connection with Zionism is incomprehensible. There is but one aim, national rehabilitation.

The just limits of this letter would have to be transgressed were your reviewer's questionable statements of fact and his debatable opinions to be pointed out. He fails to understand, for instance, the relation of the Jewish "religionist" to the "nationalist" in respect to the movement. He asserts "the failure of Zionism to make any substantial headway after the first burst of enthusiasm had passed"; yet the National Fund added two hundred thousand dollars to its capital during the past year. He does not grasp the growth in Theodor Herzl's Jewish outlook and convictions during the nine years that constituted his Jewish life, and though the premature removal of the regal leader caused grief and for a time consternation, the permanent effect has been misjudged by the reviewer. In all these and many other points he has had no eye for the connection between the modern political movement and the age-long attitude of the Jew in the dispersion towards nationalism and the Holy Land.

Two points should be especially noted. The reviewer chides the leaders of Zionism for having adopted—as he maintains—a wailing and whining tone. He charges them with looking upon "minor social prejudices in the same light as actual injustices and direct persecution," and for exaggerating "the disability under which the Jews labor." There are nearly thirteen million Jews in the world, of whom about one-half live in the Russian hell. To this half it must be left to decide whether there is "no cause for discouragement" after "but a century since the movement began for political and social emancipation of the Jews." There is a Gymnasium at Jaffa; 710 pupils are sitting on its benches; they fill it to the limits of its capacity. Outside its doors, panting for an education, stand three hundred boys and girls, sent to Palestine by their parents in Russia to secure a schooling. Why? Because not only has Russia closed her secondary schools and her universities against them, but also Germany and France refuse to receive them into their higher schools, and ominous rumblings are beginning to make themselves heard in the educational circles of other European countries. For at least one-half of the Jewish people there would seem to be "cause for discouragement."

It is but fair to admit that the modern political form of Zionism originated in anti-Semitism. None the less, to hold it to be a negative movement is to misapprehend its scope. It is not cowardly retreat, but a remedy for an ailment affecting Jews and others. If the world is committed both consciously and conscientiously to the emancipation of the Jew, it should hasten to plead, before whatever tribunal there be, that he be given the refuge of a country of his own, lest the moral fibre of a noble race grow flabby under the disintegrating influences of its present anomalous position. In point of fact, it is the Zionist above all Jews who hates whining. It is because he is weary of being accounted a member of the "backward looking race" par excellence; because he declines to win favor for his people by virtue only of past service, past nobility, and past martyrdom; because he is convinced that it is capable of present service and present nobility, as it has shown itself capable of present martyrdom, that he seeks in these modern days to be more than merely a martyr. He asks a fair chance *qua* Jew to be once more a contributing factor to civilization. In brief, it is because he is a modern man that he is a Zionist, *i. e.*, a complete Jew. As for the religious Jew, when he is a Zionist, he is an intenser Zionist than the agnostic Jew can be. He is imbued with faith that the old land and the new nationality will enable him to transform the "legalism" of which he is accused into the progressive law it was of old. And if it be true that his "religious practices and rites" are to a large extent "survivals of ancient Semitic customs" "grafted on to Prophetical Judaism," then what he desires is the opportunity of revivifying them with a new Prophetism grafted on them.

The reviewer questions the wisdom of the Jewish Publication Society in publishing a book on Zionism, "a movement that arouses as much opposition as it does adherence, written by one who is a stanch and uncompromising advocate of Zionism. . . . Such a presentation is naturally controversial and becomes a special plea for which the Society, though supposed to be impartial, in a measure stands sponsor." The impartiality demanded by your reviewer would, one fears, silence the Society on many subjects of real Jewish interest. Jewishly speaking, though there may be non-Zionism, there cannot be anti-Zionism. Anti-Zionism is assimilation and assimilation is Jewish self-negation. But any one who knows the Jew, and Judaism and Zionism as well, knows that the last is a genuine and an essentially modern expression of the eternal Jewish spirit.

HENRIETTA SZOLD.

New York, July 28.

THE NAVY LEAGUE.

To the Editor of The Nation:

Sir: The reiterated assumption that a certain thing or a movement is reprehensible is one of the subtlest forms of injustice. May one who has been a member of the Navy League since its organization, and who is perfectly familiar with its character and aims, protest against the insinuation, expressed in your article on "Our Military Propagandists" in the *Nation* of July 16, that the League is inspired with the militarist spirit? This is far from being the case, in spite of the facts that some naval officers, as is natural, are enrolled among its members, and that certain unscrupulous manufacturers make money out of the navy. Is dealing in grain wrong just because of an occasional dishonest corner in wheat, or running a grocery reprehensible because some swindling grocer sands his sugar?

The Navy League is a civilian organization, composed of the rank and file of patriotic American citizens, who sincerely and firmly believe that a powerful navy is the best and cheapest insurance against war that this Republic can have. It is therefore an out-and-out peace organization.

As to the fear of militarism, is it not a little ridiculous in a land where the very courts have to be called upon to insure decent treatment for those who wear the uniforms of our army and navy?

EDWARD BRECK.

Annapolis Royal, N. S., July 31.

[The Powers of Europe have been paying premiums on "cheap insurance" against war for some years. Their policies have now matured.—Ed. The Nation.]

GAME PROTECTION.

To the Editor of The Nation:

Sir: Mr. Henry Chase's book on "Game Protection," recently noticed in your columns, seems to the writer to be seriously vulnerable in its treatment of the legal protection of migratory birds. It is his evident opinion that the McLean-Weeks bill will eventually be annulled by the Supreme Court on the ground that the protection of game birds falls within the jurisdiction of the several States, not of Congress, as the Constitution now stands. To meet this difficulty, in case it comes, his suggestion is not the orderly amendment of the Constitution, in accordance with its own terms, but the negotiation of a series of game-protecting treaties. Birds migrating from one country to another, and of demonstrable value to both, he holds, are clearly a proper subject for treaty consideration. Now a treaty is the supreme law of the land, and it is a part of the duty of Congress to pass such legislation as may be needed to carry it into effect. Let the President therefore negotiate, and the Senate ratify, a series of bird-protecting treaties with the different countries concerned, and Congress will at once be clad with the power, now presumably lacking, to protect migratory birds within the limits of the several States.

All this may be clear sailing to the enthusiastic follower of the Sagamore Hill School of Constitutional Law, but to the mind of the writer there could hardly be a clearer case of the *reductio ad absurdum* of the theory that there is no limit on the treaty-making power of the President and Senate. Mr. Chase assumes at the outset that the Supreme Court, as things now stand, will declare the legislation in question unconstitutional, on the distinct ground that it is a matter left by the Constitution to the competence of the several States. The President then negotiates a treaty aiming to secure the same end, the Senate ratifies it, and with no further ado it is affirmed that Congress may now freely enact the identical legislation before invalidated. In other words, the President and Senate, with the aid of an outside Power, may effect a radical change in the distribution of power as between our States and our Federal Government, thus virtually amending the Constitution. Let the prophecy here be ventured that in no clear case will the Supreme Court ever deliver a decision that Congress can be clothed with a new power wrested from the individual States in this way, however close it may have come to doing so in cases lying within a more or less doubtful borderland. If ever it shall be decided that Congress has not the power to protect migratory birds, the clear duty of conservationists will be to work in the duly appointed way for an amendment giving that power.

Of course, the views here expressed are readily combated by a course of reasoning now prevalent in certain quarters: A sovereign Power can make any treaty it —— pleases. The United States is a sovereign Power, and therefore the United States can make any treaty it —— pleases, and Congress can carry it into effect. But our court of last resort has not as yet gone so far from its moorings, and if ever it should do so there will be something more important to protect than game birds.

W. H. JOHNSON.

Granville, O., August 8.

Literature

THE ELDER PITT.

The Life of William Pitt, Earl of Chatham. By Basil Williams. With portraits and maps. New York: Longmans, Green & Co. Two volumes. $7.50 net.

Mr. Winstanley, in his excellent little book, "Personal and Party Government," says that Pitt's "errors were those of the intellect and not those of the heart. He was sometimes mistaken, but he was never mean." This cool judgment finds eloquent amplification in the admirable new life of the Elder Pitt by Basil Williams, a book so good that it bids fair to stand as the standard biography of the great patriot. Mr. Williams does not lay great emphasis upon the mistakes. If Pitt did make mistakes, they were due to his consciousness of the justice of his position, his unwillingness to take less than the most for England, and his unwavering devotion to the "liberty of the subject"—even when that subject was the unspeakable Wilkes. Mr. Williams's volumes, therefore, are a much-needed antidote for the poisoned shafts of Von Ruville, and it is interesting to note the summary treatment meted out to him by Mr. Williams. For example, in a footnote in regard to the Pynsent bequest:

> Dr. Von Ruville makes a laborious attempt to show that Pitt angled for this bequest. He, however, produces no proof of a view, based simply on his own preconceived notion of Pitt's character, and has to invent a suggestion, which is contrary to all the known facts, that Pitt knew beforehand of Pynsent's intention to leave him his property.

Mr. Williams very properly begins with a chapter on old "Diamond" Pitt, the great Governor of Madras, from whom the grandson, William, inherited the stern directness of vision, the love of England, and the peculiar insight into the minds of merchants and traders which gained him the strong backing of the City whenever the court or the great Whig families tried to crush him. From the explosive old Governor the grandson inherited also, unfortunately, that virulent form of gout and that impatience of opposition which often stood in the way of his own interests and those of his country. The author then describes Pitt's independent but earnest career as a student at Eton and Oxford, where he acquired a great fund of useful and premature knowledge; as Cornet in Cobham's Horse Guards, where, instead of merely keeping up an agreeable appearance and waiting to get drunk until one o'clock in the afternoon in accordance with the demands of tradition, he took his military duties seriously, and, like Wolfe, set himself to read every military book on which he could lay his hands.

Pitt entered the House of Commons in 1735 and rapidly became its ablest speaker. He spoke with authority, partly because he was confident of his own ability, partly because he knew he had the people of England behind him, and partly because of his innate oratorical power. Pitt's great service to his country was to lead her confidently and victoriously into the Seven Years' War and save for her the continents of North America and India which were threatened by the Bourbons. He hated the Bourbons because they represented to him all the intolerance and arbitrary rule which his soul abhorred. It was this hatred which made him loved by Englishmen. Such hatred was a simple idea which they could grasp; and it was one they shared and in which their idol never failed them. Another source of his power was the perfect frankness of his public utterances. When he changed his mind he never concealed the fact. "I have," he said, "a contempt for the abilities as well as the honesty of any minister who will not endeavor to gain the confidence of the people." "When I am on my feet," speaking to the House of Commons and through it to the men of England, "I speak everything that is in my mind." But while such frankness brought him the confidence of the nation, it brought him also the strong dislike of the King, so strong, in fact, that it was more than twenty years after he entered Parliament before he was accepted as Prime Minister (December, 1756). England was then just entering the critical period of the Seven Years' War, and Pitt merely uttered what the nation thought when he said: "I know that I can save this country, and that no one else can."

Aside from his popularity and power in argument Pitt could also do much in the House with a look or a tone. Once, when he had concluded a speech and was walking slowly out of the house, just as the doorkeeper was opening the door for him, his ear caught the words: "I rise to reply to the right honorable gentleman." Turning around, Pitt gave the member a look which made him sit down instantly. The member recounting the scene was asked if anybody laughed. "No, sir, we were all too much awed to laugh." Another day—

> it was Morton who had said, "King, Lords, and Commons, or, as the right honorable gentleman would say, 'Commons, Lords and King.'" Pitt sprang up: "My blood runs cold at such words—I desire that they be taken down by the clerk." "Nay," spluttered Morton, frightened out of his senses. "I mean nothing: King, Lords, and Commons: Commons, Lords, and King—it is all one." "I don't wish to push the matter further," said Pitt, "but whenever a member *means* nothing, I advise him to *say* nothing."

When the American war seemed imminent, Pitt proposed an elaborate scheme for conciliation—not so much as an organic law, but as a declaration of principles; in its preparation he had the aid of Franklin, and it was as sound, at least, as the plan of Lord North. He made a tactical blunder, however, in not confiding in any of those men on whose support he had counted. The bill would have been killed in any case, but its summary death was largely due to this proneness "to trust to his own powers of persuasion and despise all outside help." Mr. Williams shows how much better England would have fared with Pitt at the helm, but he does not show sufficiently how largely Pitt himself was responsible for his own lack of power and party connection. We cannot help feeling that Mr. Williams's facts lead to Winstanley's conclusion:

> During the early years of the reign [of George III] it had been within his power to render the whig party an effective force, and he refused to do so: and it is in accordance with the usual irony of history that the man who had assisted to win Canada contributed towards losing the American colonies. He united with his sovereign to destroy the party system; and the disastrous events of the years which elapsed between the fall of Rockingham and the fall of North were to show that Newcastle was right and that Pitt was wrong.

Too much praise cannot be given to Mr. Williams's skill as a biographer. He knows what to omit and how to bring out the high lights of the picture. He does not attempt to write a history of England or a meticulous diary-like life; yet he does not give the impression of jumping from one main incident to another; his narrative is smooth and his style pleasing. He has been diligent, too, in research, making good use of the Chatham MSS. and a mass of other material. Especially noteworthy is his careful reconstruction, in an appendix, of the date, report, and subject-matter of each of Pitt's speeches in Parliament.

CURRENT FICTION.

When Thoughts Will Soar. By Bertha von Suttner. Boston: Houghton Mifflin Co.

Bertha von Suttner's last message comes to us in the form of a novel-essay, in which the modern woman, claiming for her sex participation in the world's activities, shares the honors with the generous American millionaire who devotes his fortune to the creation of an international Chautauqua from which are to rise "soaring thoughts." There is more of the sermon than of the novel in this attempt to formulate the laws of a new science making for the betterment of humanity—moral aeronautics. The perfection of flying must be followed by the conquest of High Thinking, for the possibilities of annihilation have grown too powerful to be abandoned to "low-thinking" man. Just how this fraternal state is to be realized is left to the reader's imagination. Franka Garlett, embodiment of the "high-thinking maiden," is called to her task of marshalling the young girls to the duty of service to humanity by her grandfather's poet-secretary. In public addresses she expounds her doctrines. Her efforts culminate when she is made a member of the Rose Order, organized by the fabulously wealthy John Toker. This genial old gentleman, in order to combat the power of violence, has instituted what he calls "a world-ennobling factory," in the shape of a gigantic Rose Festival, held at Lucerne annually in the month of roses. In the Rose Palace, built by him, he gathers all the "stars from the firmament of living celebrities." With the host as chair-

man, they engage in a mighty symposium, in which music, poetry, science, oratory, and even such Utopian delights as color symphonies have their place on the programme. Their aim is to promote moral aviation, and, of course, to lay countermines against diplomats who would involve peace-loving nations in needless wars. The proceedings of Rose Week fill two-thirds of the book. In spite of the bombastic language, the sickly sentimental episodes, the childish delight in descriptions that add nothing to the story, there is a breath of that whole-souled idealism that pervaded the pleadings of the Baroness for international peace. It breaks through the all but impervious mask of a translation at times unwittingly humorous in its faithfulness to the original. The unanticipated timeliness of much of the volume does not need emphasizing.

An Armenian Princess: A Tale of Anatolian Peasant Life. By Edgar James Brooke. New York: The Gorham Press.

The complications of this simple little story give suspense and variety to a much-crossed course of true love. The author's intention is to demonstrate that the crying need of the Far East is increased missionary activity, and the book is, in effect, a tract in very palatable form. Mr. Brooke is evidently conversant with life and customs in Turkey and Armenia, and his descriptions of them are vivid. He understands the idyllic possibilities in the romance of two poor and persecuted Anatolian Protestants. Their chief persecutor is an arch-villain of unexampled blackness. Hassan Bey, covetous of the beautiful heroine, drives her from her home, ruins her village by extortionary taxation, tortures her father to death, kills her sister and aunt, and hounds her with emissaries to bring her into his harem. Even at her triumphant marriage he appears as a malign spirit, robbing her husband of the home he had prepared. There is nothing incredible in the scenes of massacre and imprisonment in which the hero figures, though the reader would like to believe them so; nor is their reaction upon character melodramatic. It is an apparently truthful picture of a repellent region, perhaps too strongly tinctured with a moral purpose.

That Affair at Portstead Manor. By Gladys Edson Locke. Boston: Sherman, French & Company.

Three detectives are enlisted in the effort to solve the mystery of a stolen and mysteriously restored diamond necklace, or rather the more engrossing mystery of the murder of the master of Portstead, which temporarily eclipses the interest in the initial problem. One of these detectives is an amateur, who is actually made to act like an amateur, without the wonderful insight—or second sight—sometimes suddenly displayed by personages of his class—in novels. A second is a professional from Scotland Yard, who lives down to the reputation that his fellow-detectives have acquired in books by their mingled shrewdness and stupidity; and the third is a woman, a professional, too, who, by the grace of the author, is allowed to understand her job. She does her work in a refreshingly common-sense and untheatrical way, and is really a little in the dark until the revelation that discloses the final secret to everybody else as well as to herself. Of course, there is the usual number of characters, any one of whom might be the guilty one, and all of whom are evidently concealing some knowledge of the circumstances of the crime from coroner and detectives, as well as from the reader. For various reasons, they have been at the scene of the crime near the hour of its perpetration, although that hour was past midnight. To some extent, too, they appear to wish to shield one another. But with the woman detective, Mercedes Quero, alias Mary Grey, on their trail, clue is added to clue, until, with a mass of information in her hand, a confession is forced. Who makes that confession only a very skilful reader of detective stories will be likely to guess.

The Crime Doctor. By E. W. Hornung. Indianapolis: The Bobbs-Merrill Company.

A perusal of Mr. Hornung's book would seem to lead to the conclusion, which we virtuously reject, that the curing of crime is not nearly so inspiriting as its commission. Doctor Dollar, the curer of crime, lacks the buoyant personality of Mr. Hornung's Raffles. In the interests of the impressionable young, the romantic criminal ought doubtless to be suppressed and the good doctor of crime encouraged, but in the interests of romance we prefer Raffles, and we fancy Mr. Hornung himself would share our opinion. And even if we must subordinate romance to good morals, some of Dr. Dollar's methods of treatment are open to criticism on that score. To our puritanical sense, for instance, it seems the height of impropriety for him to have cajoled an impressionable Home Secretary—a character obviously inspired by the picturesque figure which is at present at the head of the British Admiralty—into staying proceedings against a militant young lady who had inadvertently murdered a policeman for no better reason apparently than that she was comely and of an engaging personality; but perhaps Mr. Hornung thinks that the treatment of fair murderers is one of those things that "they do better in France." Dr. Dollar, however, is a disciple of the new theory of crime (or is there one still later?) that the criminal is a lunatic and that his mental deficiency will, if taken in time, usually yield to medical or surgical treatment. As a successful exponent of this theory, it can hardly be said that Dr. Dollar is particularly convincing, but Mr. Hornung has happily endowed him with the instincts of a detective as well as with those of a social reformer, and the result is that the half-dozen stories in this book are sufficiently readable to beguile pleasantly an idle hour.

A PACIFIC PEOPLE.

The Life and Thought of Japan. By Okakura-Yoshisaburo. New York: E. P. Dutton & Co. Illustrated. $1.25.

More and more the world must look to Japanese scholars and thinkers for valuable studies of the national life and characteristics. Material that is not open to the Occidental, even though he has been resident in the country for many years, is at the disposal of the native scholar. Especially is this the case when Buddhism, with its numerous sects, comes into the discussion, as it will do more and more. Its absorbent power, shown in its readiness to admit outside worthies into its pantheon—is it not willing to recognize Christ as Buddha?—renders it a dangerous rival of Christianity; and it is aggressive to-day.

With Mr. Okakura, who speaks from the educational standpoint, the religious attitude asserts itself as of particular value in the teachers whom he has to train. He reviews the history of the nation from the early times when Chinese civilization, with its insistence on ancestor-cult and filial piety, came in to modify the native deification of nature and race heroes. Then followed Buddhism, with its contemplative ideals, its dislike of bloodshed, its imposing ritual. Mr. Okakura credits his people, however, with an inborn dislike of bloodshed, attributing this dislike, along with the apparently antagonistic, but equally strong, preference of that form of suicide known as *hara-kiri*, "to the prime motive of the love of cleanliness in body and mind." But his data and deductions both seem to need revision. The Japanese stage is grewsome with bloodshed, in which the audience finds a morbid satisfaction. And Mr. Mitford's story of an experience he had on the railway between Tokio and Yokohama, told in his recent "Japan's Inheritance," is not abnormal but characteristic. His fellow-passengers were all alighting from the carriages and hurrying in the direction of the engine. "I followed suit. To my horror, I found that a suicide had been the cause of the delay, and the track and the engine-wheels were being hastily cleared of the mangled remains of what had been a human body. But more horrible still, to my mind, was the attitude of the crowd. Neither horror, nor disgust, nor pity could be traced upon a single face. If the general expression might be summed up in a phrase, it was one of amused interest." In regard to the other symptom of a love of cleanliness, Mr. Okakura's logic is quaint. "As I have intimated," he says, "the very mode of suicide by cutting open the belly, *hara-kiri*, is a result of the strong wish on the part of the suicide to show that his 'inside,' the supposed seat of his thought, was not guilty of impure meaning!" That the Japanese are great bathers, and like to keep the interiors of their houses spotlessly clean, is very true; but what about the vile smells that make their inns often absolutely unbearable to visitors who are at all fastidi-

ous? And the vile smells everywhere? Their "cleanliness" does not differentiate them, racially or nationally, by any means, as Mr. Okakura would argue.

He carries this theme into all his evolutionary studies. Love of cleanliness becomes love of peace. "We sons of the Land of the Rising Sun," he declares, "are . . . a set of plain, and simple, peace-loving workers, plodding laboriously along the toilsome road of honest life. . . . We remain to this day the same old set of harmless islanders, with practically the same physical and mental traits that characterized our forefathers at the dawn of our authentic history." How, then, did it happen that Buddhism took on in Japan a military aspect that made it a menace to the secular government? Were not the Portuguese and the Jesuits welcomed because they brought with them the firearms which made Shogun and daimyos stronger? Did not Hideyoshi lead an army of invasion into Korea, largely because the number of idle armed men in the nation had become a danger? And was not Christianity stamped out, at Shimabara and elsewhere, with almost the insanity of cruelty? Mr. Okakura has not a word to say about the place in the evolution of his nation, and also of Buddhism, of those "unruly monks in the Buddhist monasteries" and "Buddhist generals," whom he mentions cursorily in his historical survey. That mild Buddhism, of all religions, should have assumed a military aspect in any country, surely reveals a fighting element inherent in its people. His argument that the Japanese spirit is essentially pacific is not really supported by the story he gives, for he neglects to "thresh out his wheat."

The seven chapters which make up the book were originally delivered in the form of lectures before a Boston audience. Some inconsistencies have been suffered to remain. For instance, at page 2, the author speaks of "Buddha, . . . undoubtedly one of the wisest, if not the wisest, of teachers of humanity," as having been asked by King Mahabrahman to preach the law on Vulture's Peak; but at page 71 he is called "The Indian Prince Gautama [who] attained Buddhaship by virtue of his enormous exertion and toil," and is only one Buddha in an endless chain of such teachers. On page 102 (twice) "Angero," Xavier's convert, should be Anjiro; and, at the foot of page 105, "A History of Japan During the Century of Early European Intercourse" should be credited to Yamagata as well as to Murdoch, for it is a conjoint work. There is unfortunately no index to give the book unity and reference value. Otherwise, the author deserves commendation for his clear and nervous English style, and the careful use he makes of good authorities. The closing chapter on Japanese Home Life and Society is judicious and illuminating, especially when he touches upon educational matters. Although there are kindergartens in Japan, he informs us, the kindergarten does not form part of the national system, and is viewed with disfavor by many educationists. "We are all agreed," he says, "in this, that there should be no systematic teaching, . . . and that the rooms in a kindergarten shall not be called rooms, but nursery-halls." The later severe task of memorizing Chinese ideographs is better undertaken by pupils who have not been spoiled by an enervating system of "reading made easy."

MACHIAVELLI'S FALL.

La Disgrâce de Nicolas Machiavel—Florence: 1469-1527. By Jean Dubreton. Paris: Mercure de France. 3.50 francs.

This is a handy book of Machiavelli's interior life, if we may call it so. That life of his has been passed over or exaggerated in the ages of shifting reputation of the public man and writer:

> Never had a man so many faces as Machiavelli and all—or nearly so—have been fashioned from wickedness.

In the sixteenth century, he was in France an atheist and his book was the "gospel" of Catherine de Médicis; at Rome he was solemnly condemned; and he all but became a Turk when Sultan Amurath was found reading his "Prince" at Constantinople. In the seventeenth century he was a Republican preaching tyrannicide; and England confounded him with the Jesuits, while Holland defended him against the priests. In the eighteenth century, the encyclopædists made him out a professor of tyranny; and Montesquieu announced: "The bill of exchange has killed Machiavellism." Napoleon at St. Helena thought it wise to defend himself from some eulogy of the writer which he had made in his day of power. Then Macaulay came to inform the nineteenth century that Machiavelli could only have been a man of his time, with all the inconsistency that implies. Stendhal, who was not yet read, had been reading him; and, after him, Nietzsche taught disciples to admire his time of will-contradictions. At last, Italian learning has given to the twentieth century the copious and complete life and times and works of the disputed Florentine:

> We wish to approach Machiavelli from another corner—not in the way he approached the ancients, in court costume—but in his working dress of every day, like a manual laborer and official—for with him it is good to have functionaries' talk.

He was the typical functionary of a proud and independent city undergoing revolutions; and as such he came to have fellowship with a captain of the highways; that Cesare Borgia who now gives him renewed actuality. For in this terrible Italian Renaissance the world is now reviewing past valuations with many doubts. Our author recognizes the crisis in his hero's life, which he is not far from making out a legend:

> Machiavelli remained with Cesare Borgia three months and a half (as Florentine envoy in the Romagne which have just been repeating in modern style that old campaign). He passed "big hours" in his company—eighteen or nineteen conversations which he has summed up in his "Legations." It was the fatal moment for him, a terrible *tête-à-tête* which has fixed his place in history. The romantic taste which willed the coupling of these two names, the need of popularizing, levelling, planing down to bring figures of history into equilibrium and to unite fames that affright, the unexhausted abundance of commentaries on the "Legations" and the "Prince" have made sure of such everlasting conversation. The Borgia-Machiavelli dialogue still continues.

It forms, however, a small part of this volume, which gives the common life of the man through the long years of his petulant letter-writing—often very common and sometimes squalid and worse, and not fitted for the reading of youth nor of too inquisitive age. No wonder that the world judged ill what was so full of contradiction.

> No one understood the extreme nobleness—nobleness of a workman of the last hour—amid so much mediocre manual labor of this true workman, builder, engineer, tactician, intendant of troops, who alone gave all at this last hour. Yet in his letters, there passes I know not what of the patriotic and revolutionary enthusiasm of a hero of the Commune.

THE SEA FORCES OF THE UNITED STATES.

Our Many-Sided Navy. By Robert W. Neeser. New Haven: Yale University Press. $2.50 net.

It is time that a book like this should appear, that our people may gain an inside and accurate view of their navy, and it is well that the book comes from the pen of an author so exceptionally qualified for his task. Not only is he a close student of, and an acknowledged authority on, naval affairs, but for months at a time he has been permitted by the Navy Department to live on board one or other of our battleships, so that what he tells us is based on personal experience and observation.

The average American knows the navy, if at all, only as he visits a ship in port, when the strenuous activities to fit her for her place in action are temporarily lulled, that officers and men may become acquainted with their families and friends, from whom they have been separated by long periods spent in exacting drills, manœuvres, training and exercises, with scant intervals of rest. From this visit he is too apt to gain the notion that the bluejackets' labors are solely to keep the ship in exquisite order and the brasses highly polished. So general is the ignorance of the real conditions of naval life that even the present Secretary of the Navy is reported to have issued his order establishing primary schools on board ship "to give the officers something to do beyond standing their watches, eating, and sleeping." Experts in such matters have found that American naval officers devote daily more hours to their work than any other class of men living—no trade, no profession excepted. The readers of Mr. Nees-

er's book will be gradually convinced that these experts in efficiency cannot be far wrong. The marvel is that the days are long enough for the accomplishment of so much and that officers and men can remain contented under such a phenomenal stress, physical and mental. The wisdom and ingenuity which have introduced rewards, competition, team-work, into practically every phase of duty on board our ships finds its guerdon in the excellent feeling prevailing forward and aft and in the splendid morale of our sea-fighters, whether in the sailor's shirt or the lieutenant's "long-tailed blue."

Much space had to be given to descriptions of batteries, engines, torpedoes, etc.—the frame for the picture—but it is the treatment of the human element which deserves the greater share of attention. The mystery of how the recruit who, in the majority of cases, has never seen salt water, can in a surprisingly short space of time be made into a competent electrician, a good mechanic, or a gun pointer who lands his twelve-inch projectile on the bull's eye of a target five miles distant, is solved for us in this volume.

The chapter on the Organization of a Ship should be the first read, since it gives the key to the others and, incidentally, treats of discipline and messing on board. The Bluejackets' Daily Life relates the story of unflagging activity from early morn to sundown—there is no eight-hour day in the navy. There are notable chapters on The Battleship as an Educational Institution, Gunnery, Training, Target Practice, etc., written with full knowledge and in sympathetic vein. That on Sailor as Soldier explains the swiftness and success of the landing at Vera Cruz. The part of Athletics might seem overdone were one to forget that the sail and spar exercises, which, in the daily routine of the old-fashioned masted frigate, kept the crew in good physical condition, being wholly absent to-day, must be replaced by an equivalent; otherwise all hands would suffer in health.

A very illuminating reference to the many services the navy has rendered in times of peace is given in an Appendix. The list and nature of these services come as a surprise to those unacquainted with the obligations under which humanity has been laid by the extended labors of modest American seamen.

The volume is a credit to the Yale University Press. It is copiously illustrated, and is written in a familiar yet engaging style. There are a few typographical errors, but these are of minor importance. So much is said by the author of Guantanamo and its value as an outpost towards the Panama Canal that he ought to have supplied a map of the Caribbean Sea to make clear his contentions.

The book should be widely read, for it tends to correct many popular errors as to what our sailors are and what they are doing, and to justify to some extent the huge sums annually appropriated for their maintenance.

Notes

"Charles Stewart Parnell," by his brother, John Howard Parnell, will be published on September 19 by Henry Holt & Co.

"Soul-Spur," by Richard Wightman, is announced for publication in the autumn by the Century Company.

Little, Brown & Co. will publish this week "The Vanished Messenger," by E. Phillips Oppenheim, and "Oh! James," by H. M. Edgarton.

The Oxford University Press announces for publication this month "The Vital Forces of Christianity and Islam," six studies by representative missionaries to Moslems.

The third volume of the collected essays of the late William Graham Sumner, under the title "The Challenge of Facts and Other Essays," is announced for publication early in the autumn by the Yale University Press. The volume, like its predecessors, is edited with an introduction by Albert G. Keller.

The following books are included in the September list of Frederick A. Stokes Company: "Clay and Rainbows," by Dion C. Calthrop; "Personality Plus," by Edna Ferber; "Burgess Unabridged," by Gelett Burgess; "The Canterbury Pilgrims," by F. J. H. Darton; "London Survivals," by P. H. Ditchfield; "The Forest of Arden," by George W. Edwards; "Sizing Up Uncle Sam," by George Fitch; "Complete Hoyle" (revised), by R. F. Foster; "Love, Home and the Inner Life," by Arthur H. Gleason; "Neighbors of Field, Wood and Stream," by Morton Grinnell; "My Autobiography," by S. S. McClure; "Collector's Manual," by N. Hudson Moore. To the Great Men series will be added volumes on "Edison" and "Balzac," and to the Great Nations series one on "Republican Rome."

The indispensable Statesman's Year-Book (Macmillan; $3 net) comes to us in its fifty-first annual edition. Events in the Balkans have necessitated such alterations in boundaries as to make a new map of the troubled region most welcome. Turkey and China, also, have gone through transformations that have made a thorough revision of the sections dealing with them necessary. The introductory tables have received additions of interest, such as the course of food prices in various countries since the opening of the century, which, however, is too summary for more than the most general inferences. The volume, which, although it has grown to 1,500 pages, is not unwieldy, is edited as usual by J. Scott Keltie.

To the Wisdom of the East series a competent scholar, E. J. Thomas, has added a booklet entitled "Buddhist Scriptures" (Dutton; 70 cents net) which consists of a suitable introduction, historical and literary, and twenty-three short chapters of translation from the best-known Buddhist works, though somewhat abridged and occasionally given in essence rather than in translation. The editors of the series hope that their publications will be "ambassadors of good-will and understanding between East and West" and help to a revival of the true spirit of charity in religious matters. It is a worthy ambition and the selections from the Buddhist scriptures are well chosen to show the true spirit of a religion which embodied more than any other Eastern religion the very attitude of mind which the editors wish to see revived.

A. D. Innes, who is writing a four-volume History of England and the British Empire, is also publishing parallel with it a "Source Book of English History" (Cambridge University Press; two volumes, $1.10 net each). It is intended for use in schools, interesting the student by presenting history to him as it presented itself to the men of the time. The author chooses his selections from the contemporary writers wisely, groups them chronologically together in chapters so that they illustrate a period, and refrains from adding more than a minimum of necessary annotation of his own. This plan differs from that of many so-called "source-books" in that it does not contain constitutional documents for intensive study and interpretation. He aims rather to arouse the interest of the student and give him something of the flavor of the age. In the first volume, covering the years 597-1603 A. D., he naturally draws mostly from the delightful and fairly trustworthy chronicles, but adds also some selections of great literary as well as historical value such as those from Chaucer and "Piers Plowman." In the second volume, 1603-1815, he has shown good judgment in drawing largely from Clarendon, Cromwell's letters, Pepys, Defoe, Burnet, Walpole, and other interesting or amusing writers. He has given still more of the flavor of the age by the reproduction of authentic contemporary pictorial material of a varied nature. He has made, in fact, one of the most attractive source-books we have seen.

In one-third of a million words one can learn how sixteen years of a missionary's life passed, almost day by day—simply by reading "My Ogowe," by Robert Hamill Nassau (Neale; $3 net). The account of discouragingly slow progress in the arts of civilization among the natives along the Ogowé or Ogoway River in equatorial West Africa is veracious, but hardly engrossing. Verily, the leopard cannot change his spots. The author gives interesting, but scattering, details of the customs and superstitions of various tribes, without clearly limning their characteristics. He includes a good deal of sporadic information about the use of the aborigines in the ivory and rubber trades, without giving anywhere the full account which, from an eye-witness so familiar with conditions, would have been valuable. He mentions frequently the fauna and flora without describing their distinctive features. In short, the topics of most interest to his readers he treats in a persistently allusive manner. The volume is a portentous example of the necessity of vigorous sifting and sorting of material.

The aim of Moreley do Wolf Hemmeon's "Burgage Tenure in Mediæval England" (Harvard University Press) is to give a specific description of urban tenure, as practiced in England in the Middle Ages, avoiding speculation as to its origin, and dealing only with the facts as they are found. As the subject has been far from adequately dealt with in the past, Dr. Hemmeon's monograph, despite its somewhat uningratiating

style, supplies a genuine want. The first thing shown is the connection between the burgage and the feudal tenure as regards the extent to which the former was affected by the incidents and other concomitants of the latter, or by the incidents of villeinage, if such should be shown to have existed in boroughs. The purely economic phases of the tenure are next considered, such as the amounts and incidence of the original or quit-rents, and in addition rents and prices of realty in the boroughs. This is followed by a discussion of what was, perhaps, the most important feature of the tenure—its modern aspect, with mediæval modifications, in regard to freedom of sale and of devise. The work closes with deductions and conclusions from the foregoing material, and, in addition, the urban tenure in England is compared with that in parts of France in the Netherlands, and in Germany. As it is in the last country that burgage tenure finds its nearest counterpart, and as the tenure there has not been directly treated heretofore, an appendix is devoted to a short account of the tenure in German cities.

In looking through the Fourth Volume of "Essays and Studies by Members of the English Association" (Oxford University Press), collected by C. H. Herford, many American readers will be puzzled to imagine the kind of public which the editor had in mind in selecting his materials. An article like A. R. Skemp's on "The Plays of Mr. John Galsworthy" might appear in any of the current monthlies. On the other hand, "Some Unconsidered Elements in English Place-Names," by A. Mawer, is of a highly technical character and so finds its natural place in the publications of a learned society. There is, of course, much truth in the reproach which we often hear from our English colleagues that learning and literature in this country too rarely walk hand in hand, but the difference between such articles as those we have named, from the nature of the subjects, is fundamental, and their inclusion in the same volume seems to indicate a divided aim. After all, however, the main thing is that the essays and studies thus brought together should be good in their respective kinds, and from this point of view only a favorable judgment can be rendered in the present instance.

The best article in the volume, J. E. Spingarn's "Note on Dramatic Criticism," comes from this side of the ocean. We have here a much-needed protest against the tendency of the times in dramatic criticism to ascribe an excessive importance to "dramatic technique," the material conditions of the theatre, the influence of the audience, and the conformation of the stage. "What the unities, decorum, *liaison des scènes,* and kindred petty limitations and restrictions were to dramatic theory in the seventeenth and eighteenth centuries," says Professor Spingarn, "these things are to criticism in the nineteenth and twentieth. They constitute the new pedantry, against which all æsthetic criticism, as well as all creative literature, must wage a battle for life." In illustration of the point at issue we might cite a recent writer on Shakespeare, who explains the differences between the plays of the dramatist's second and third periods, respectively, as largely due to the fact that his company had changed in the interval from the Theatre, with its apprentice patrons, to the Globe, where the audiences were of a better class. This really brilliant "note" takes as its starting-point the "Dramatic Museum" of a certain American university (which is not named but which most readers will easily identify) as an extreme manifestation of the spirit which it criticises. Professor Spingarn indicates briefly the development of these ideas from Castelvetro down, through Diderot, Schlegel, and others, to their culmination in our own day.

Of far greater importance than its brevity would suggest is Prof. Oliver Elton's thoughtful essay on "English Prose Numbers," with its classification of the various species of rhythm that are distinguishable in English prose. The great impulse to the study of prose rhythms which was given by Norden's "Die Antike Kunstprosa" (1898) has since communicated itself to the modern languages and we have had within the past two years Professor Saintsbury's elaborate, but, on the whole, unsatisfactory, "History of English Prose Rhythm." The present article, short as it is, seems to us to furnish a better theoretical basis for the study of the subject than Professor Saintsbury's book. Instructive, also, is Miss Lilian Winstanley's article on "Platonism in Shelley." We observe here, however, the disadvantage in the plan of the collection which we commented on at the beginning. The desire to produce something that will appeal to a wider circle of readers deprives this essay of finality. To possess that quality it would have to include a definite and, as far as possible, complete list of the works and passages in Plato and Shelley which connect the two writers, together, of course, with appropriate discussions of the same. But not only would such an investigation be extremely laborious—the result would have no attraction save for the professional student. Miss Winstanley's essay is cast on a much more modest scale than such a study as we have just indicated, but it marks an advance on any previous treatment of the subject. Two contributions to this volume remain to be mentioned: a reprint of the first edition of Defoe's "True-Born Englishman," by A. C. Guthkelch, and G. P. Baker's "Dramatic Technique in Marlowe."

Among the leaders in the remarkable development of linguistic and grammatical studies during the last forty years of the nineteenth century no one was more distinguished for vigor and originality than the late Henry Sweet. A volume of his "Collected Papers," arranged by H. C. Wyld, which has just been issued by the Oxford University Press, will accordingly be welcomed by students of this class of subjects. Most of these papers appeared first in the *Transactions of the Philological Society,* others in German technical periodicals, and one was read before the Shelley Society. Sweet was particularly strong in the observation and analysis of the sounds of living speech, and so we find one-half of the present volume devoted to his system of sound notation (modified from Bell's) and to discussions of spoken Danish, Swedish, Russian, Portuguese, and North Welsh, specimens of phonetic transcriptions from these languages being given in each case. This enumeration is in itself sufficient testimony to the astonishing range of the writer's observation of linguistic phenomena. His intimate and varied knowledge of living languages stood him, of course, in good stead when it came to the discussion of the languages of the past. Five of the remaining papers, ranging from 1874 to 1882, were reports on the progress of linguistic science that were read before the Philological Society at various times during this period. Four more, including his first published paper (1869), "The History of the TH in English," relate to general principles of linguistic study. We know of no contribution to the study of language that within the same compass leaves such an impression of power as the first paper of the last-named group, viz., that which is entitled "Words, Logic, and Grammar" (1876).

"The Coming Hawaii," by Joseph King Goodrich, sometime professor in the Imperial Government College, Kioto (Chicago: McClurg; $1.50 net), is the sixth volume in a series in which the same author has already considered China, Africa, Russia, Mexico, and Canada. It is partly a history of the Hawaiian Islands, partly a description of present conditions, and least of all an attempt to forecast their future, the one thing which the title would suggest. The historical portion is not sufficiently connected and complete to be satisfactory, nor is it always careful of accuracy. In the account of probable visits to the islands before Cook, the story of the wrecking of one of Alvaro de Saavedra's vessels on the coast of Hawaii is alluded to under a date nearly a century too late. The account of the annexation of the islands to the United States is hopelessly fragmentary, possibly because, as Horace suggested to Pollio centuries ago, there was a little danger of treading on live coals underneath the apparently innocent ashes. The real tragedy of the Hawaiian people, fading so rapidly out of existence in a situation where commonsense and justice might have helped them into a healthful civilization of their own, may be read very easily between Mr. Goodrich's lines, although he himself does not see it clearly or feel its force. To attribute the change from an increasing to a decreasing population to indiscreet horseback riding by Hawaiian women will not do. It is preposterous to assign any serious importance to chance accidents from this source in comparison with the ravages of the syphilitic infection first introduced by the sailors of Captain Cook and reinforced with sad regularity by subsequent European and American visitors. There is a great deal of valuable material in this book, but it is poorly arranged, in addition to such other defects as we have indicated. For one thing, however, we may give the author high credit. He sees no necessity of filling the Pacific with warships for fear that Great Britain, Germany, or Japan may choose to wrest the islands from our grasp. With suitable corrections, additions, and rearrangement, the volume might be transformed into a useful "handbook."

Nine years ago William Sharp McKechnie, lecturer on constitutional law and history in the University of Glasgow, issued a bulky volume containing a commentary on "Magna Carta." The work was received with approval at the time, as well planned and useful, but it was subjected to numerous and weighty criticisms. Aware of the defects of the book and desirous of bringing it up to date in matters of scholarship, Dr. McKechnie has recast what he had written, and has issued a second edition (Glasgow: Maclehose). The result is a sounder and more scholarly production in which errors have been cor-

rected and weak statements strengthened. Much new material, also, has been added, and some changes have been made in the appendix of documents. The work is now an excellent commentary on what is perhaps the most famous single text in secular history. Mediæval texts edited by modernists are bound to show at times a certain artificiality of interpretation, and Dr. McKechnie's volume is no exception to the rule; but all things considered it may be commended as a sound and serviceable contribution to the subject.

The series of the "Original Narratives of Early American History" continues the measured tread of its progress, and grows in strength as it proceeds. The last three volumes have risen to a very high level of scholarly excellence, and now a newly issued volume on "Narratives of the Witchcraft Cases, 1648-1706," edited by Prof. George L. Burr, of Cornell University (Scribners; $3 net), enhances materially the repute of the series. It is a model of what such a work should be, combining subject-matter of great human interest with editorial supervision that cannot be improved upon. Professor Burr has made the field of witchcraft, in all its aspects, peculiarly his own, and beyond all others is competent to deal with the colonial phases of the great delusion. These witchcraft tales, as he says, were "bulletins of a war more actual, more cruel, more momentous than any fray of flesh and blood," because they recorded contests in that mysterious and imaginary world where Heaven and Hell, orthodoxy and the Devil fought for the mastery. The panic was not a passing madness of the Christian Church, nor was it local to New England. It was a phase in the history of Christian thought, representing the influence, in about equal terms, of two great forces in the life of modern society, human psychology and Christian theology. The witch-panic found no manifestation in those parts of the world where Christianity did not flourish; it was confined to Christian lands, Roman Catholic or Protestant, and as the outcome of belief in the powers of Satan was a terrible witness to human ignorance and human fears.

The witch-epidemic broke out in nearly all the colonies during some part or other of the seventeenth century. Independent narratives or documents are here printed for all the colonies, where the manifestations appeared, except Connecticut. Two of Connecticut's cases, however, are dealt with by Increase Mather in his "Remarkable Providences," and Prof. Burr prints a bibliography of Connecticut witchcraft in a footnote (p. 16). Thirteen accounts are given, of which all but three relate to New England. The others, which are not narratives but court records, relate to New York, Pennsylvania, and Virginia. Of the New England narratives, one is here printed for the first time, Cotton Mather's "A Brand Pluck'd Out of the Burning" (1693), an account of the case of Mercy Short, which was to have been edited and printed long ago by Dr. Samuel F. Haven, formerly librarian of the American Antiquarian Society. This narrative throws light not only on the Salem trials, but also on Mather's attitude towards them, and it is a matter of congratulation to all concerned that at last we have so authoritative an edition of this unique text. No narrative can compare with it "for the appraisal of [Mather's] credulity and of his rôle as exorcist and as dupe" or for disclosing his innermost thoughts regarding "the Bewitched people tormented by Invisible Furies in the County of Essex." In reading this volume one cannot but be impressed with the New Englander's mania for writing down his thoughts. Ministers and laymen between them have contributed 90 per cent. of its contents, and of that proportion the Mathers, father and son, have contributed no less than half.

The healing power of time is well illustrated by the tolerant interest with which the present generation of Northern readers may be expected to welcome Colyer Meriwether's life of Raphael Semmes (Philadelphia: Jacobs; $1.25 net), the latest addition to the American Crisis Biographies. Mr. Meriwether has not, apparently, unearthed much new material, and has naturally relied a good deal upon Semmes's own books, "Service Afloat" and the "Cruise of the Alabama." Of the available printed authorities, however, he has made industrious use. The chief place, in any biography of Semmes, must, of course, be given to his career as commander of the Sumter and Alabama, and the account of these episodes is both readable and meritorious. For the rest, there is a good narrative of Semmes's service in the Mexican War, an elaborate summary, with becoming refutation, of his views on the constitutionality of secession, and a careful sketch of his life from 1865 until his death, in 1877. Admirers of Gideon Welles's "Diary" will do well to examine Mr. Meriwether's outspoken criticism of Welles for his official attitude towards Semmes.

NOTES FROM ABROAD.

The public librarians in some English cities are blaming the picture palaces for the decreases they report in the number of books issued. It is admitted, however, that interest in certain authors—notably Dante, Scott, Dickens, and Hugo—has been stimulated by the films that have "visualized" their works. At Kendal, for example, during the representation of "Ivanhoe" there was an unprecedented demand for the novel itself. When a film of "Little Lord Fauntleroy" was recently shown at Newcastle, one local bookseller sold in a few days no less than forty-three copies of the book.

At the Congress of the British Radical Association recently held in Aberdeen the address of outstanding interest to the layman was that of the president of the year, Dr. Archibald Garrod, on "Medicine from the Chemical Standpoint." It is described in one of the reports as a grave and considered rebuke of the food faddist, whether qualified or unqualified. "I would venture to assert," declared Dr. Garrod, "that two-thirds of the restrictions [in diet] imposed upon sufferers from particular maladies find no real justification in the teachings of science or experience. How contradictory are the directions given by different advisers to gouty patients as to details of dietary, and how few of them can be justified by reason or argument!"

Pitchpine from the United States has at last won its way into French Government offices, where the *protocole* regulates furniture as rigorously as it does precedence. In the various Ministries in Paris and in the Prefectures of the Departments in the provinces, oak upholstered in rep is reserved for "directors'" private offices; the "chefs de bureau" have mahogany and red rugs; walnut and green carpets belong to the "sous-chefs"; the chief clerks have to be content with leather-covered chairs and varnished black-wood tables, while the "expéditionnaire" has a cane-bottomed chair and schoolboy's desk. This was the lowest end of the official hierarchy until the advent of the typewriter, with the *petites dactylographes*. These have now been recognized as having a right to pitchpine—a new triumph of Feminism.

Lucien Poincaré, the younger brother of the President of the French Republic, has been appointed Director of Higher, that is, University, Education, which is the highest Government place under the Minister of Public Instruction. It is not a Cabinet position, and the appointment is not due to political influence; but it has been won by natural promotion in the University service. The outgoing Director, Albert Bayet, has held the post since 1902 under fifteen Governments. Lucien Poincaré has spent his whole career in the University, beginning with his studies at the Ecole Normale in its famous days. After usual professorships in state colleges of the provinces, and then in Paris, he was appointed to lecture in the Paris Faculty of Sciences. He earned scientific distinction in physics, particularly in electricity, by his researches and writings. He must have shared his brother's administrative ability, for he was soon named to be University Rector at Chambéry, and then Government Inspector-General of Public Instruction. This final promotion crowns this typical career of a successful French Universitarian. The Poincaré family has had other noted men of learning. Among them was that glory of French science, Henri Poincaré. He was first cousin of the President and brother of Madame Emile Boutroux, whose son is mathematical professor at Princeton University.

The death of its founder has led to the absorption of the Hetzel publishing house by the older Hachette Company, of Paris. Hetzel's chief claim to interest is his discovery and appropriation of Jules Verne. He began with him by a life contract, guaranteeing an annual sum of $4,000—which seemed immense riches to the unknown writer. It was not at all proportionate to the rapid success and sale of his books throughout the known world. Jules Verne was content with his bargain, and for many, many years furnished dutifully his two volumes a year. At his death, he left several more finished or nearly so, which explains the continued appearance of new works bearing his name. Hetzel took pains to provide the writer who was laying golden eggs for him with a yacht and all other appurtenances necessary or useful to stimulate his inventive powers. This publishing house had many other successes, nearly all in the same line of higher school-boy reading, but none of at all the same spread. For the needed illustration, excellent line engravings were used, photo-processes not then having been adopted. Copies of some of these publications, illustrated by Riou and Yan d'Argent, and, particularly, Th. Schuler's wood-cuts for Hetzel's popular

edition of Erckmann-Chatrian, have now a certain art value.

Hunger and thirst after sensational stories perhaps obscured the very real lesson conveyed by the chief actor at the trial of Madame Caillaux. The husband had to explain his attitude towards Madame Caillaux the first, with whom he was confronted before the Parisian jury which was trying Madame Caillaux the second. He complained that this first wife of his had not the same "mentality" as himself, that she was not of his world, and was consequently without community of feelings with him. On the contrary, he married his second wife, and found perfect peace with her, because she was a *bourgeoise* just as he was a *bourgeois*. This is of interest from the fact that Madame Caillaux the first has American antecedents and experience—and, among conservative Europeans, the objection to American marriages is based precisely on this bringing in of a spirit alien, if not hostile, to the life of the European party. English and, particularly, American newspapers have indulged in certain obvious and not very intelligent pleasantries on the trial. It might well be contrasted with the case of Parnell, in which politics of equal bitterness were mixed with the course of love—but that case was tried out of court and, mainly, by the celebrated Nonconformist conscience. The striking difference is that foreign journalists seem not to know just where conscience is in France, or, indeed, if there is any. Their pleasantries, of course, have been those of schoolboys play-acting about some distant land with which they are not acquainted. In the meantime, whatever may be thought of the moralities of the case, it should not be forgotten that M. Caillaux has given his proofs as one of the most brilliant Finance Ministers of France, if not of the world, though not the safest. And for that, surely, a master head, if not a New England conscience, is required.

Without belonging officially to German *Cultur*, there is an amount of fossil French to be found in the popular use of Berlin. Clinking glasses to the cry "Prost Knusemann!" is not easily traced to the French "que nous aimons" (the one we love), with the Latin health "Prosit" before. Coachmen declining a fare used to say "Grüssen sie Murmillier!" not knowing they were keeping up all the feud of their guild with Lieutenant de Merveilleux, who was from Swiss Neuchâtel when it was under Prussia. The veterans of the War of 1870 have a proverbial respect for the French commander, Max Mahon (MacMahon). The great-grandson of the Gobelins tapestry-maker, Luc Cossart, a Huguenot, who took refuge in Prussia after the revocation of the Edict of Nantes, was a genuine German, as shown by his name "Luka Kaiser." Odon became Otto; La Fosse was translated Grabow, just as French Canadian Court-demanche is "Short-sleeves" in New England; and Manclerc is Munklerg. "Schuskla!" chanted for the player who has to draw cards is the French "Fourrez-fourrez-fourrez-jusque-là" abbreviated. All this may not be of much use in dictionaries, but it helps to understand the inextricable mixing up of words of unexpected origin in native and idiomatic expressions, and the mingling of parti-tongued humanity which gave rise to it.

Science

COUNT RUMFORD.

MUNICH, July 11.

The Royal Bavarian Academy of Science joined forces with the magistracy of Munich in commemorating this morning* the one hundredth anniversary of the death of Count Rumford, better known to Americans as Benjamin Thompson. Even among the greatest, few men are actually remembered one hundred years after they have passed away; the tribute to Count Rumford was all the more remarkable because at the time of his death at Auteuil (Paris) opinions about the man were still divided, though his great achievements in science were generally recognized. To follow an account of Thompson's career, from his birth, on March 26, 1753, in the small town of Woburn, Mass., through his early life, passed in the most humble circumstances, until we find him one of the most picturesque as well as one of the most notable figures of the day, is to be transported into the realm of historical romances. Famous as a many-sided scientist, he was the founder of the Royal Institution of England, an active member of the Royal Society of Great Britain and of the Bavarian Academy of Science, and in closest touch with the scholars of the French Academy. In addition to this, he was a powerful influence in military and diplomatic circles in England and in Bavaria, and during his sojourn in Munich became the power behind the throne, instituting political reforms, the effects of which are still felt, and leaving behind him traces of his interest in promoting the welfare of the people of Munich that have kept his memory fresh even in the minds of the masses. Among Americans, Franklin, whom Rumford resembles in the manysidedness of his talents and in the contradictory elements in his nature, is his only rival in romantic interest.

The commemorative exercises held in the beautiful *Festsaal* of the older Rathaus revealed the permanence of the impress made by Count Rumford on the city of Munich during his residence here over 130 years ago. The assemblage itself was a notable tribute to this remarkable man. The members of the Bavarian Academy were present in their resplendent uniforms, the city was represented by the "Oberbürgermeister" and the members of the magistracy; royalty sent as delegates Prince Alfons, a cousin of the King, and Prince Konrad, the King's nephew, besides several members of the Cabinet, and in the large audience were to be seen the leading scholars, artists, physicians, and men of letters of Munich and prominent citizens in various walks of life.

The chief magistrate, Dr. von Borscht, made the opening address, in which he emphasized the services Count Rumford had rendered the city of Munich. It was he who projected and laid out Munich's beautiful park, which still bears the name "English Garden," because it was modelled on the parks of England; he introduced a new kind of stove which saved fuel and prevented the thick clouds of smoke that polluted the atmosphere. He taught the people how to make nutritious soups at an absurdly low cost. For many years "Rumford soup" was one of the staple articles of food among the poorer classes. It was Rumford also who introduced the use of potatoes in Bavaria as an article of food, and it is curious to read of the opposition that his efforts first encountered. He instituted shelters for the poor, provided municipal activity for them, and abolished promiscuous begging in the streets. In various other directions he laid the foundations for the excellent administration of the city which has made Munich one of the most attractive as well as one of the healthiest and happiest cities of Europe.

Count Rumford's larger services to the state and his important contributions to science, particularly in the domain of physics and chemistry, were set forth in the main oration of the day by the president of the Bavarian Academy, the distinguished historian, Dr. von Heigel, who also told the details of Count Rumford's romantic career as revealed by unpublished material in the archives of the city. He quoted from a letter which threw definite light on the reasons that prompted Thompson to leave his native land and to seek his fortune in Europe. After receiving a fair education, which included a partial course at Harvard, young Thompson served as an apprentice in a shop in Salem, and subsequently in Boston, afterwards taught school in Wilmington, Mass., and in Rumford, N. H., and at the same time carried on his studies in physics. At an age when others were still pursuing their studies at school, he was ready to undertake original researches and experiments with gunpowder and the velocity of projectiles, the problem of perpetual motion, and the like. He became interested in military science also, and took service in the New Hampshire militia. At the outbreak of hostilities with England, he sided with the mother country, and so pronounced were his sympathies that he proceeded to England to place his services at the disposal of the Government. His attitude naturally made him exceedingly unpopular in the colonies, and this no doubt was the main reason for turning his back on his native land, to which he returned but once, and then only for a short time. The letter unearthed by Professor von Heigel indicates that his attitude was prompted by an apparently sincere conviction that England was right. It is rather surprising to find one brought up as he was siding with the aristocracy and declaring unequivocally in favor of a constitutional monarchy as the best form of government. Throughout his career he showed these two sides of his nature—a strong leaning towards aristocracy based on a dis-

*The actual date of his death was August 25, 1814. The Munich memorial was held a few weeks earlier because of the University vacation, which begins in August.

trust of democracy, and an equally strong desire to improve the condition of the masses. In his scientific work Professor von Heigel showed he was actuated by this practical and philanthropic aim. He believed that scholarship and science should be yoked to public service; that both should be cultivated to improve conditions of life. Wherever he was, in England, Ireland, Bavaria, and later in France, he was busy with plans of reform, municipal and economic reforms, the reform of military organization which he worked out in detail in Bavaria; reform of scientific work, which led to the establishment of the Royal Institution in England in 1799, and prompted him, after his admission to the Bavarian Academy, to evolve an elaborate plan for the reorganization of that body.

Naturally, he reaped the unpopularity of the reformer, which showed itself in the circumstances that forced his departure from Munich. His coming to that city was in the nature of an accident. After arriving in England, where he was well received in aristocratic and military circles, he took service in the Department of State, passing from one position to another until he reached the rank of Under-Secretary. At the same time he carried on researches in various directions, and received recognition by being made a member of the Royal Society. The most famous scholars of the day became his intimates, and his scientific activity in the midst of his official duties was prodigious. In 1782 he was appointed lieutenant-colonel in the English army, and embarked for America to fight against the Colonies. Fortunately, the war soon came to an end and his military activity was limited to some skirmishing near Charleston. He returned to England, and in 1783 retired from the army on half-pay after having been knighted by George III. He then proceeded to Vienna to offer his services to Emperor Joseph II in the impending war against Turkey. On his way to Vienna he passed through Munich and presented his letters to the reigning Elector, Karl Theodor. Thompson, who was very tall and handsome, apparently made a favorable impression on the Elector, and when, on reaching Vienna, he found that war had been averted, he returned to Munich and became the Elector's personal adjutant. He soon began to unfold an astonishing activity and held various posts, from Chief of Police for Munich to Minister of War for the State. His plan for reforming the military organization of Bavaria, which, it is interesting to note, involved an elaborate system of general education for soldiers, aroused much discussion, as did his efforts for the improvement of the city. Increasing influence added to his sense of importance, and he made the fatal mistake of allowing a letter addressed to the King commending his services to be printed and distributed. This aroused the ire of the city magistrates, who began a campaign against the foreigner and "intruder" which finally forced the Elector in 1796 to dismiss him.

Meanwhile, Thompson had been elevated to the highest peerage, choosing his title, Count Rumford, from the name of the town in New Hampshire (now Concord), where he had married when less than twenty years old (or, as he says in a letter, "was married to") Sarah Walker, who was thirteen years his senior, but who had the advantage of bringing her husband a competency. His wife had died in 1792, and it was partly as a tribute to her memory that he chose his new title. He was also accorded a handsome pension and, as an additional mark of royal favor, was appointed Ambassador from Bavaria to the Court of St. James's. Here he encountered the severest disappointment of his life, for after his arrival in England he was told by Canning, the Prime Minister, that as an English subject, which Count Rumford still was, he could not act as the representative of a foreign country. It was a severe blow to his pride, and for a time he thought of returning to his native country. An inquiry as to whether he would be permitted to enter the United States, and how he would be received, elicited the reply that the Government would welcome him and give him some military post consistent with his high distinction and wide renown. He, however, decided to remain in Europe, passed some time in Ireland, where he projected improvements in hospitals and asylums, but spent most of his time during the succeeding years in London, actively engaged in scientific researches and endeavoring to carry out social and economic reforms which had on the whole been so successfully applied in Bavaria. In London, as in Munich, he published papers of extraordinary value.

In 1802 he was called back to Munich, where he became as great a favorite with the King Max Joseph as he had been with his predecessor. He received an increased annual remuneration for his services and rose to the presidency of the Bavarian Academy. His marriage with the widow of the famous chemist, Lavoisier, in 1805, may have had something to do with his leaving Munich again and ultimately settling in Paris, where he was destined to end his days. This second marriage was not a happy experiment, and when on one occasion the Countess poured a pail of hot water over the Count's favorite poodle, the pair decided to separate. Count Rumford passed his last years in retirement at Auteuil, giving the impression of a disappointed and embittered man. In social intercourse he grew morose, but he retained his interest in science to the last. Indeed, some of his most notable researches were made during these years. The range of his researches was always exceedingly wide; he opened up many new avenues of investigation, and it is sufficient to mention here that no less an authority than Tyndall regards Count Rumford as the pioneer in the modern theory of heat.

It speaks well for him that, despite his voluntary exile, he retained so strong an affection for his native land. By his will he endowed a Rumford professorship of chemistry at Harvard. During his lifetime he had given a fund for the encouragement of research to the American Academy of Arts and Sciences in Boston, and had sent a liberal sum for philanthropic purposes to the town of Rumford. When he died, his loss was mourned by no less than four countries.

In a summary of Count Rumford's character, Professor von Heigel properly emphasized certain defects of character which prevented him, despite his achievements, from gaining general confidence and esteem. He failed to give the impression that his motives in his public service, and even in his efforts for improving conditions of life for the masses, were of the highest. His attitude towards life was somewhat cynical. He believed that in order that people should be virtuous they must be made happy. Whatever he did to improve economic conditions was the result of calm and cold calculation; he was apparently not inspired by any deep enthusiasm or love for mankind. We have seen that he aroused opposition even when rendering useful and valuable services; and he had not the nature to bear the disappointments of life in a worthy manner. Granting all this, the fact remains that few men of his day did more to merit the gratitude and recognition of their fellow-men, and it is gratifying to see his memory thus revived in the city for which he did so much, though also somewhat humiliating to reflect that less notice has been taken in our own country of one who ranks so close to Franklin.

An excellent musical programme served to heighten the solemnity of the celebration. The Symphony Orchestra of Munich played the prelude of the "Meistersinger" in masterly style, and furnished the accompaniment to two splendid choruses, one a male chorus of about 100 voices chosen from the "Lehrergesangverein," and a children's chorus of some 200 school children. The former rendered Schubert-Liszt's "Great Is Jehovah," the latter Schmitt's composition of Wieland's anthem, "Praise be to thee, O Lord." The occasion was thus in every respect a noteworthy tribute to the memory of this extraordinary American.

It may perhaps be well to add that there are two monuments to Count Rumford in Munich, a high shaft in the English Garden, and a life-size bronze statue in the Maximilianstrasse, where he stands in a notable group of Munich's greatest citizens. In addition, an oil portrait of Count Rumford adorns the large hall of the Bavarian Academy. This portrait was transferred to the *Rathaus* for the commemorative meeting, where it was placed on an easel banked with beautiful flowers.

MORRIS JASTROW, JR.

"Weeds; Simple Lessons for Children," by Robert Lloyd Praeger (Putnam; 45 cents), is one of the Cambridge (England) Nature Study series. Its hundred pages are well written, well printed, and fairly well illustrated. But the book owes its chief interest to the fact that it is largely devoted to the plants and scenes of Ireland. The author even goes so far as to give the common Irish names of many of the plants which he describes, in *Irish type*.

Drama and Music

CINEMA AND THEATRES IN PARIS.

PARIS, July 18.

The Paris theatrical season began uncertainly in September of 1913, and it has ended palely in June of 1914. All the summer theatres which give far-away reproductions of Paris in watering and seaside places, the amphitheatres of "Nature" in the open air of mountain resorts, Corneille and Euripides amid Roman ruins at Orange, or Shakespeare with restored mediæval ramparts for stage-setting at Carcassonne, neither add to the season's significance nor detract from it.

The first sense of it is that, between legitimate theatre and cinema, this may destroy that. "There are years when things will not go!" Henry Mürger used to say. That has been true of Bohemia for so long a time that it has all but vanished; and it has been partly true of theatre and opera in Paris for more than a year. The question is how far the cinema is to blame for it. People did not realize in the past how much the *mobile vulgus* contributed to the receipts of the most select theatres. Perhaps they do not realize in the present how much the *élite* patronizes the cinema. At each of the theatrical failures of the year—and they are not few—the same question arises. It cannot be limited to France.

The closing of the theatre and opera of the Champs Elysées, which were supposed to run on American money, and the very moderate success of the American opera season, which later took over one of the halls for a month, have to be estimated by themselves. Paris may be cosmopolitan, but its power of assimilating exotic productions is limited. In these two cases, the public seems to have tended towards the minimum limit.

It is not the same with the State Opéra. Fashion, snobbishness, and sincere love of music combined to make "Parsifal" a financial success; but this alone was not enough to get the directors out of their troubles. They have resigned in the midst of their last year of contract with the French Government. The coming director, who was to begin his seven years' contract only at the New Year, has consented to take control in September—and he already has trouble of his own. It is not from the cinema, indeed; but it is from an even more non-musical element—orchestra and chorus and other labor unions clamoring for less service and more pay. The unions are a force in politics; and it has always been given as the excuse of difficulties at the Paris Opéra that politicians of influence interfered with the choice of singers—and *danseuses*.

It is a Spanish proverb, "Dogs dance for money"; and so operas and theatres and the cinema itself must look to the subsidy and the receipts. Art may or may not be their end and aim and final cause; but money is now and for ever their *conditio sine qua non*. This must not be mixed up with the year's most resonant failure—Joseph Strauss's attempt to interest a Parisian public in his "Legend of Joseph," an opera without words. The public was prepared neither for the art nor for the lack of art, whereas the lack of art in theatres which tire and bore aids the cinema, which goes on the principle that "variety is the spice of life!"

Just here there is a very curious flare-back of popular emotion. After knocking down the traditional theatre, the cinema may end by putting it on its feet again. A silly season's correspondence in a Paris newspaper turns upon the relation of the cinema to book-reading. "Does the representation of the plot of a novel at the cinematograph excite the curiosity of the spectator so that he will be likely to read the book?"

A publisher who has a specialty of popular editions of Victor Hugo, Beaumarchais, Zola, and even Racine and Corneille, was asked his experience of the cinema's effect on the sale of books. "Beyond belief!" he answered. "During the time that the film of the book is worked at the cinema, whole editions of the printed volume are sold. Even subscriptions to the illustrated edition of the complete works of Victor Hugo show the effect."

Now the same thing is taking place at the theatre—wherever managers are wise enough to take advantage of it. One Paris theatre in a popular quarter, while the cinema was exploiting the "Misérables" of Victor Hugo in the neighborhood, placarded everywhere: "This week the 'Misérables'—not cinema, but theatre!" The device succeeded; the cinema had prepared a public, perhaps a new one, for the theatre as it had done for the book. And it must be remembered that this influence of the cinema is strongest for great writers of imaginative literature, and should be so for great playwrights.

True, this may prove meagre consolation to the suffering theatrical writers of the present. Well, they must change their methods. The publics of different nations have always had different requirements in their amusements. In the attempt made some years ago to induce the Parisian public to look and listen to Gillette's "Secret Service," the lack of success was attributed for the most part to the breathless running on of events and running off of actors on the stage. People accustomed to following composedly narrower lives in more limited space and time experienced a mental confusion. It has been said of the American woman that pleasure to her is mainly excitement of vital changes. Perhaps the new drama, which will be a resultant of the struggle for life between theatre and cinema, will conform to new habits of eye and mind, quicker than our present potencies. None can doubt that the elementary emotions of human nature will still dominate the public, as they did in slow-moving Greek chorus and tragedy which was almost liturgy, as in Imperial shows that kept Rome tranquil, or parades of self-satisfaction before the Court of Louis XIV, or rutilance of Elizabethans.

That other factor of the contemporary life of youth—the automobile—tends towards the same composite result as the cinema. Its effect on Art for Art's sake has long been deplored; but it remains to be seen if the composite will not excel in clarity and suddenness of impression our late neurasthenics, "devoid of all mental security," as Jules Lemaître complained when Maeterlinck and Ibsen invaded Paris:

O, I see the ancient promise of my spirit hath not set:
Ancient founts of inspiration well through all my fancy yet!

That was mid-Victorian foresight. Before it is realized in the coming theatre, Paris today verifies the insight of a lighter observer of a hundred years since:

—Here one beholds, so correctly and rightly,
The Testament turn'd into melodrames nightly;
And, doubtless, so fond they're of Scriptural facts,
They will soon get the Pentateuch up in five acts.

S. D.

"THE THIRD PARTY."

Described as a farcical comedy, "The Third Party," now being presented at the Shubert Theatre, lives up to its name. Humor of situation alternates with horse play in a manner to enhance the fun, which, if not always fast, is furious. The turns in the series of mishaps are managed with plausibility, so that the complications are increased up to the moment of their untangling, which process is suitably swift. The basis of the piece is the old device of mistaken identity. The confusion, however, is not accidental, but a deliberate ruse on the part of Hillary Chester and Rose Gaythorne, who, posing as husband and wife, in order that she may have an unchaperoned conference in the Restaurant Royal with Christopher Pottinger, M. P., are dragged by their misrepresentation into unanticipated consequences. Rose merely wants to obtain the influence of Pottinger on behalf of her fiancé, but, being interrupted by Mrs. Pottinger, to whom she and Chester are introduced as Mr. and Mrs. Gazzaza, is compelled to accept the invitation of that lady to proceed to the Pottinger country home. There she is recognized by Col. Redwood, who has strict ideas on marriage, and also, being a justice of the peace, power to enforce them. Peril from this source is averted long enough to allow the development of another complication in the presence of Hillary's fiancée, who is naturally surprised at his introduction to her as Mr. Gazzaza, and shocked at the presentation of a Mrs. Gazzaza.

Pottinger and Hillary are the centre of the action, which they make especially diverting by their awkward attempts to "explain" things to those not in the secret. Taylor Holmes, as Hillary, is excellent in his representation of the endeavor of "Mr. Gazzaza" to be loyal to Rose in the deception they are now driven to keep going, and at the same time to prevent his fiancée from doing what any fiancée would do under such cruel circumstances. His facial expression is particularly good. Walter Jones, as the harassed Pottinger, ably seconds him, and a word should be added in commendation of the cast in general.

R. J. D.

Richard Strauss's "Rosenkavalier" was about two years old when it was produced at the Metropolitan Opera House, where it had nine performances last year, with the aid of a star cast. As a rule, however, the Strauss operas have to be produced fresh from the pen to succeed. Königsberg some weeks ago gave "Salome" for the first time, but found that it had waited too long. The public's interest could not be aroused in this once sensational work.

Palestrina, the oldest of all composers whose works are still likely to be heard in concert halls, was until recently believed to have been born in 1524 or 1526. Rieman accepts the latter date, for which Haberl pleads. But more recent researches seem to indicate that Palestrina was born in 1514. In view of this discovery, preparations have already begun in Italy for worthily celebrating the four hundredth birthday of the master who marks the climax of Catholic Church music as Bach does that of the Protestant Church. Wagner was a great admirer of Palestrina, and Saint-Saëns thinks that the beginnings of modern musical expression must be sought in the "Stabat Mater" of that old master.

The oldest of all surviving operas is the "Orfeo" of Gluck, whose two hundredth birthday has just been celebrated in Germany and France. His importance in the history of music lies in his "trying to forget that I am a musician" (as he put it) when composing an opera. In other words, he emphasized the maxim "The play's the thing" even in an opera, and thus controlled the vanity and the excesses of the singers, who, in the Italian productions of his day, had succeeded in making opera a mere occasion for their "stunts" in vocal embroidery. There is another important aspect of art, ignored by the historians, to which Dr. Max Arend calls attention in the "Gluck Heft" of *Die Musik* (Berlin), in an article entitled "Gluck, der Reformator des Tanzes." Not only, declares Dr. Arend, did Gluck's "Armida" furnish the model for the Flower Girl scene in Wagner's "Parsifal," but even Richard Strauss, in his latest work, "The Legend of Joseph," went back to Gluck, whose works he studied thoroughly. Gluck's working principles and ideals in creating his ballets are set forth briefly in a pamphlet by his collaborator Angiolini. Of this document the Vienna Hofbibliothek possesses the only existing copy, so far as is known to Dr. Arend, who has made a German translation of it which is incorporated in this "Gluck Heft" of *Die Musik*.

The *Musical Courier* announces that R. E. Johnston has arranged for an American tour of the famous Sevcik Quartet. It will begin with a recital in Aeolian Hall on the fifth of next January.

Frau Isolde Beidler, the daughter of Cosima Bülow-Wagner, has evidently made up her mind not to let the question whether she is the daughter of Hans von Bülow or of Richard Wagner rest where the courts left it. It is announced that she has in preparation a book to be entitled "Reminiscences of My Father"; and, as she has contended all along that she is the daughter of Wagner, it is obvious whom the book will be about. As she was eighteen years old when Wagner died, she will be able to add some interesting details to the innumerable facts already printed.

Art

VERMEER OF DELFT.

PART ONE:—A PAINTER WHO WAS MORE THAN A REALIST, AND TO WHOM TECHNIQUE WAS THE SYMBOL OF HIS DEAREST EMOTIONS.

In his early thirties, Jan Vermeer, of Delft, was conspicuous enough in his native town to be looked up by the French traveller, Balthazar de Monconys. The interview is recorded with tantalizing brevity in Balthazar's "Journal des Voyages," published in 1665: "At Delft, I saw the painter Vermeer, who had none of his own works, but we saw one at a baker's, which, though it had only one figure, had been sold at six hundred livres." It may be suspected that the baker was something less than the Mæcenas he appeared, for ten years later Vermeer's widow had a suit with a baker to whom two pictures had been pledged for precisely this sum. Vermeer's honorable, if short and unprosperous, career is represented to-day by half a dozen civic dates and by some thirty-seven magnificent pictures. On October 31, 1632, the year of Rembrandt's Anatomy Lesson, he was born in the clean and delightful town of Delft. Of his parents' condition and his own early education we know nothing. April 5, 1653, in his twenty-first year, he took a wife, Catharine Bolenes. They settled in the Old Long Dyke, and in twenty-two years of wedded life she bore him ten children, of whom eight survived their father. Eight months after his marriage, December 29, 1653, he joined the Painters' Guild of Saint Luke. It was three years and a half before he fully paid his initiation fee of only six florins. Nevertheless, in 1662, his fellow painters made him head man of the guild. He served for two years, and again for the same space in 1670 and 1671. He died on the 16th day of December, 1675, early in his forty-fourth year, and was entombed in the Old Church. Twenty years after his death his pictures were still esteemed. In an Amsterdam auction of 1696 twenty of his pictures—the list is still the basis for identification of his works—fetched very fair prices. Then followed more than a century and a half of obscuration.

His pictures, to be sure, for the most part survived, but were casually attributed to other artists—to Terborch and Pieter de Hooch, which was tolerable; to Metsu, which was somewhat less so, and to Eglon van der Neer, which was atrocious. When the indefatigable John Smith was compiling his "Catalogue Raisonné" of Flemish and Dutch paintings, about 1840, Vermeer received only incidental mention. But the moment of rehabilitation was at hand for Vermeer as for so many other forgotten artists. Before 1848, the year of revolutions, Bürger-Thoré had begun to hunt up and buy Vermeers. His comprehensive essays, which appeared in the *Gazette des Beaux-arts* for 1866, had the natural defects of all literature of discovery. Your true explorer is prone to see more than is there, and subsequent criticism has had to abate by half Thoré's list of some seventy-two Vermeers. It required still a generation to bring the world round to Thoré's feeling that Vermeer was a great master. As fine a critic as Fromentin could pass through the Netherlands in 1876 without so much as mentioning Vermeer. Gradually the writings of Henri Havard and Dr. Bode did something to popularize the master, but the movement of modern art was making even more strongly for a revival. Hals and Velasquez had already been consulted by Manet and his fellow impressionists. The generation represented by Degas had need of a still more exquisite exemplar. Vermeer became *par excellence* the painters' old master. Long before the dealers had perceived in him a sensational commodity, he was the shibboleth of cosmopolitan studios everywhere. Indeed, in one way and another he had anticipated many of the technical researches of the '60s and '70s. Nor was his spell there exhausted. As febrile an experimentalist as Vincent van Gogh was entranced by the poise and nobility of The Reader in the Rijksmuseum.

Scholarship and criticism have of late years amply confirmed the verdict of the studios. Hofstede de Groot's monumental Catalogue of the works of Karel Fabritius and Vermeer, 1907, was followed by the excellent little monograph of Gustave van Zype, not to mention a number of special articles by many hands, and now Philip Hale, an excellent painter himself, and a veteran teacher and critic, devotes to Vermeer the most elaborate stylistic analysis ever applied to any artist.*

To one who has ever found Vermeer a painter of the most personal and intimate charm, Mr. Hale's judgments come with a shock. Vermeer is treated as a cold realist, chiefly concerned with problems of lighting, values, edges. He was a pure eye: "he simply painted right on, striving to get the appearance of things." Subject-matter was indifferent to him, save as it was convenient or challenged his dexterity. "It may be said that Vermeer's vision was as impersonal as that of any painter who has ever lived." He was not "primarily a painter of women in the sense that Gainsborough was, or Watteau, but one guesses it was more convenient for him to get them to pose." His works are "simply coldly and definitely right, and they gain something of the hatred which those who are right must always endure." If this were the truth, and the whole truth, about Vermeer, my task

**Jan Vermeer, of Delft.* By Philip L. Hale. With reproductions of all of Vermeer's known paintings and examples of the work of certain of his contemporaries. Boston: Small, Maynard & Company. $10 net.

In this portly and well-printed octavo is contained practically everything that is known about Vermeer, full lists, and bibliography, a brief chronology, and a number of excellent color reproductions.

would soon be done. I should merely have to epitomize Mr. Hale's admirable analysis of Vermeer's composition, values, tone, textures, edges, and repeat his warning to sentimentalists against merely subjective interpretations. But Mr. Hale's entire critique is a signal illustration of the fact that a half truth is more misleading than a flagrant falsehood. Vermeer was a great realist, and much more, and the much more is what greatly counts, and what we must endeavor to find. There is an established principle by which the artist tends to recreate the world in his own image, and the Vermeer reconstructed by Mr. Hale is amusingly like some able but not sufficiently appreciated member of the Boston school of painting, worthily pedestalled on unpopular heights. With a singular lack of humor, Vermeer is represented as a misliked artist. In this Vermeer I recognize as in a remorselessly skilful caricature certain traits of the artist that I love, but the whole picture seems so distorted that I must essay a far simpler portraiture of my own.

The aim of criticism is always to reconstitute a superior personality. If we stop with the mere analysis of his technique, we fail to explain why he ever undertook to create. For the motives to production, at least in the case of a great artist, involve the whole man, and especially his emotional life. His finest thoughts and feelings are the only value in his art. These thoughts and feelings are, of course, expressed by means of his technique. But if we study it merely for itself, we fall short of the vision of the artist. To him it was no cold device for simulating difficult reality, but the symbol of his dearest emotions. These symbols we must endeavor to read. Such reading, naturally, is more or less inferential, but at worst it will be truer to the facts than is the figment of the artist as a mere prestidigitator in a world from which all but art has been scrupulously eliminated. By a simple analysis of Vermeer's subject-matter we may ascertain his preferences. What, then, are admittedly the finest Vermeers?

The finest Vermeers, almost without exception, have no more ambitious subject-matter than a young and usually capable woman engaged in some household occupation. Sometimes she is a milkmaid, carefully pouring milk in her buttery (Amsterdam), or as a placid housewife, with one splendid gesture, she grasps a ewer, while with the other hand she opens a casement (Metropolitan Museum). Sometimes she stands at a window and with gently bent head reads a letter (Dresden, Amsterdam). In the loveliest of all the Vermeers, at Berlin, she only holds out a string of pearls from her fair throat. In one hardly less fine, she is carefully weighing pearls in a balance (Widener collection). Again, in more girlish guise, she bends with unconscious grace over the lace cushion and bobbins (the Louvre). To these may be added the exquisitely candid portrait of a young girl at The Hague. I have named most of the finest Vermeers. Clearly drama or narrative is not of their essence. Sometimes Vermeer's housewife is engaged in a more gentle occupation. She is writing (Morgan collection), playing a guitar or lute (Johnson and Huntington collections), playing the spinet (Beit collection and National Gallery), or standing at the virginals (National Gallery). Of Vermeer's thirty-five figure pieces, twenty-two contain only one figure, in nineteen cases that of a woman.

In eight cases, Vermeer painted compositions of two figures with some pretence of anecdotal subject-matter. Again, a woman always occupies the centre of the little stage. She is writing or receiving a letter, with a maid in attendance (Beit and Jules Simon collections and Rijksmuseum); she is chatting, drinking wine, or discussing a piece of music with a cavalier (Frick collection and Berlin). These conversation pieces are well carried off. They are more studied than a good Metsu, less pointed than a good Terborch. There is a little sense of effort in most of them, and the eight two-figure compositions include only two undoubted masterpieces, the bizarre, yet wholly lovely, Painter in his Studio, of the Czernin collection, Vienna, and the subtly complicated but very intimate Music Lesson at Windsor Castle.

Just three times Vermeer composed his anecdote with as many as three persons: Christ with Mary and Martha (Coats collection, Scotland); Girl with Wine Glass, at Brunswick, and the Music Lesson, at Fenway Court, the last formerly one of Thoré's pictures. All of these are fine Vermeers, but not quite the best. There is one four-figure composition, the early and not wholly successful The Courtesan, at Dresden. Five figures occur only in the homely idyl, Diana and Her Nymphs, at The Hague, again an early and experimental piece.

Does not this rather dull census after all suggest a temperament? Contrast this thinly peopled, often solitary, woman's world of Vermeer with the drastic man's world of Terborch, the casual bustling world of Metsu, the swarming humorous world of Jan Steen. All that these contemporaries reckoned necessary in a picture—action, drama, crucial state of mind—Vermeer calmly ignored. His action is nil, the state of mind of his characters undramatic, habitual, almost bovine. Oddly, since his flavor is domestic, he never plays upon the obvious and always winning theme of motherhood. It was an advantage he willingly conceded to Metsu and Rembrandt.

Shall we then conclude with Mr. Hale that for the charm of a Vermeer we must look merely to its consummate technique? A little study of the four or five women who grace the finest pictures will suggest that we must rather look to some rare lyrical sentiment in the artist's soul of which the technique, marvellous as it is, is merely a secondary evocation. Where else in Dutch art will you find such women as Vermeer's—the Milkmaid, stately as a Millet as she bends over the jug; the little Lacemaker, daintily alert as her beautiful hands attack resolutely their difficult task; the Lady at the Casement, quizzical, capable, with a peculiar sane sweetness; the plump creature of pearl-like blondness, radiant in azure and pale gold, who holds out a pearl necklace from a throat as lovely as the jewels; the candid, fearless young girl with a blue turban suddenly turning out of the picture, mouth half open at the wonder of a friendly world? To her even Mr. Hale has softened. Regarding her, he cites the Mona Lisa, and the analogy, by which he signally fails to profit, might have suggested to him something peculiar in Vermeer's attitude towards women. He observed them not merely with a remarkable attention, but with a special tenderness and reverence. M. Van Zype has aptly called Vermeer's emotional attitude chivalric, implying merely a respectful cult of womanhood and of beauty. It is just about the last sentiment one would expect to find in Holland of his time. Generally the Dutch masters treated woman as a plaything or a mere utility. They did not contemplate her; she hardly seemed worth the pains, but they plainly stated her points, chiefly as regards bed and board. Under such sensual and utilitarian criteria, the poetry which art usually detects in womanhood vanishes. The Dutch artist often rather cynically pokes fun at his women—Terborch does so impliedly, Steen directly—or, after the fashion of Metsu, celebrates the paying housewifely activities. Vermeer does this, and much more. He invests his women, in whom we may surely recognize his wife and daughters, with glamour. In the clean bright spaces of his home on the Old Long Dyke he contemplates the moral and physical beauty of those who have made that house a home. He finds beauty in all the household ritual, and when he seeks it farther afield, he often fails to find it. If ever a painter deserved to be called a feminist, it is Vermeer. He was, despite Mr. Hale, a painter of women, in his own fashion a precursor of Watteau and Gainsborough. It was easier to get women to pose? Possibly. Surely it was more delightful.

Frank Jewett Mather, Jr.

"Ancient and Mediæval Art," by Margaret H. Bulley (Macmillan; $1.75 net), is an elementary textbook on a novel plan. Each period is introduced by an imaginary story which gives some notion of the times and of the condition of the artist. Then follows a chapter on the usual historical lines. Some disparity of style between the two parts naturally results, but the stories are ingenious and instructive, while the compilation is uncommonly well written, accurate, and up to date. The scope is wide, early Chinese and Mohammedan art being included. There are many well-selected illustrations. In schools and for the home instruction of children this book should prove useful.

"What Sculpture to See in Europe," by Lorinda Munson Bryant (Lane; $1.35 net), is an illustrated and very elementary guide fitted for the needs of the greenest type of tourist. It is vivaciously written in a sloppy

way. For example, the flexibility of Michelangelo's dead Christ at St. Peter's is said to illustrate the master's scientific knowledge of *rigor mortis*. The general accuracy of the work may be fairly judged from this specimen.

Finance

IN THE LAST "GENERAL EUROPEAN WAR."

It has been commonly said that it is a century since Europe has been confronted with such a collision of hostile states, march of belligerent armies, and manœuvres of hostile fleets, as have suddenly been brought upon the scene in the past ten days. The statement is entirely true. No parallel for this war, in scope of operations or number of combatants involved—seven states have their armies in the field already—has been presented since the war which began on May 20, 1803, between France and England, which virtually lasted twelve years, and in which every Government of Europe was eventually engaged. In view of what has happened this week, in the finance and trade of the civilized world, a little retrospect is timely.

Both financially and commercially, those were days of small things, compared with these. War had, moreover, been so familiar to Europe, even before 1803, that ocean commerce was already more or less of a gamble. But there were some highly interesting events in those directions, nevertheless.

British consols dropped from 73 to 50 during the first months of the war in 1803. Holland, an ally of France, at once placed an embargo on all British commerce, and an immensely lucrative trade stopped short. From Continental ports like Hamburg, England at once recalled her merchant ships. The Italian Republic, then under Napoleon's domination, ordered that goods and deposit credits in that country, belonging to English merchants, should be seized to provide a fund from which Italian merchants could be recompensed for goods of their own detained in England.

The immediate result of all this was that Great Britain's export trade fell from £45,000,000 for 1802 to £36,000,000 for 1803. But it cut both ways; a letter from Paris, dated August, 1803, declared that "from our seaports we continue to hear of nothing but captures, loss, and failures; of total stagnation in trade and great scarcity of money." To those who have been concerned this week as to how the tourists in Europe would get home, it is interesting to recall what happened to them in May, 1803. There had been a year and a half of peace, and Englishmen, curious to see France under the new régime, had been thronging into that country. Napoleon ordered all of these English tourists—estimated as numbering ten thousand—to be seized and kept in prison. Some of them did not emerge until 1814.

Prices of commodities did not rise everywhere on the outbreak of that war; in England they fell, because of the blockade of the markets, and rose only when the Bank of England suspended specie payments and issued new banknotes not secured in gold, and when the European harvests failed in 1804. Until well on in the war, there was no such thing as drafts on foreign exchange. A merchant ship carried in its own strong box the gold for the business of its voyage, and usually three or four of such vessels would be escorted by a man-of-war. These were the rich prizes of the ocean warfare.

England, being the wealthiest nation even then, financed its long war by huge issues of British consols at 6 per cent. Napoleon began by selling Louisiana to the United States for $16,000,000; he persuaded Portugal to pay him 16,000,000 francs per annum on condition that she kept out of the area of warfare, and he assessed Spain, Italy, and Holland heavily.

As other European nations joined in the fight against France, England began to provide the money for the poorer European states to arm. It made these remittances to the Continent in a curious way. By 1805 nearly one-third of England's trade was with the neutral United States. American merchants bought more than they sold in England, and sold more than they bought on the Continent. They arranged with London to meet their English debit balances by turning over to English agents on the Continent their credit balances at Continental markets, and with these Great Britain paid its subsidies.

When this was stopped, first by Napoleon's decree of 1806, declaring all commercial intercourse with the British Islands contraband of war, then by England's retort in kind, and then by our own Non-Intercourse Act, the trade situation became deplorable. But the Continent steadily insisted on getting British goods. When Napoleon entered Russia in 1812, his own army was largely fitted out with shirts and shoes from England. One enterprising merchant used 500 horses in hauling overland, from the Gulf of Finland to France itself, English merchandise landed in Russian territory. The cost of transportation was said to be fifty times the regular ocean freight from London to Calcutta. Under all these conditions, the price of gold in London rose from 80 shillings per ounce, in the period 1803-6 (the mint price being 77.10½), to 91 in 1809, to 105 in 1812, and to 110 in 1813.

It may be asked, what were the great commercial results, after all was over? Years of complete prostration for the European Continent, which had been ravaged by the armies, was one. Great expansion of England's commerce, when it had driven the French navy from the seas, was another. But the third was the rise of the neutral United States as one of the great commercial and maritime Powers of the world, with a sea trade which it had never possessed before, and which it never lost until our own Civil War.

LETTERS AND MEMORIALS OF

Wendell Phillips Garrison

Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net, postpaid.

THE ROMAN ELEGIAC POETS

Edited by KARL POMEROY HARRINGTON, Professor of the Latin Language and Literature, Wesleyan University, Middletown, Conn.

$1.50

This book has been prepared to meet the generally acknowledged need of a college textbook containing a judicious selection from the field of Roman elegy, with suitable introductory matter and English comments. The selections have been confined strictly to poems written in the elegiac measure, and include the best of Catullus, Tibullus, Propertius, and Ovid. Many cross references and extensive notes assist the student to a comprehensive knowledge of this type of Roman poetry, while the introduction gives a brief account of its origin and development.

NEW YORK CINCINNATI CHICAGO

PROSE NARRATIVES

Edited by CHAUNCEY W. WELLS, University of California.

A volume supplying more than 20 models for the writing of simple narration. It excludes stories but covers a wide range of history, legend, and autobiography, including the Bible, the Sagas, Herodotus and Pliny, Benvenuto, Cellini, Defoe, Franklin, Macaulay, Carlyle, Froude, and Stevenson. An appendix cites supplementary reading along the same lines. Price $1.25.

ESSAYS IN EXPOSITION

Edited by BENJAMIN P. KURTZ, Ph.D., HERBERT E. CORY, Ph.D., FREDERIC T. BLANCHARD, and GEORGE R. MacMINN, of the University of California.

A college course in exposition. The introduction takes the place of the usual rhetoric and is followed by over 500 pages of selections for analysis. The authors represented are John Stuart Mill (3 selections), Cardinal Newman (3 selections), Matthew Arnold (3 selections), Ruskin (3 selections), Spencer, Huxley, Fiske, Froude, Macaulay, Bagehot, Dowden, and John Addington Symonds. Price $1.30.

Sketched by FLORENCE H. BARKLEY.

The Photo Contest

Stories in the Spirit of Mockery
With certain aspects of the war as reflected in foreign cartoons.

Berlin Under the War Cloud

In the World of Science
The puzzle of sex, Montessori, and the element jugglers, by V. J. YOUMANS.

Send 50 cents for three months' trial subscription to the Saturday Edition of The Evening Post, 20 Vesey St., New York City.

The European Crisis

To understand the clashing forces of the present imbroglio, read these books:

The Entente Cordiale from Within

THIRTY YEARS

Anglo-French Reminiscences, 1876-1906
By SIR THOMAS BARCLAY

The "man behind the entente" tells the inside story of his struggle in the cause of Anglo-French understanding. The restless but deeply "human" nature of French politics and policy fascinate the reader as they fascinate the author, who is never so much at home as when delineating the characters of leading men or disentangling diplomatic puzzles of which he has been able to piece together the various threads. Just published. $3.50 net. Postage extra.

The Menace of Teutonic Ambitions

PAN-GERMANISM

By ROLAND G. USHER
Professor of History, Washington University.

Not for a century has there been a crisis in Europe with greater possibilities affecting the welfare of the world than that existing at present. Professor Usher, beginning with the great international movement, Pan-Germanism, considers the grounds for the existing jealousies between England and Germany, the relation of Russia, France and Austria to the affair, the effects of the Balkan War upon the balance of power, and discusses with brilliance the relation of the United States to these new conditions in European diplomacy. $1.75 net. Postage extra.

JUST PUBLISHED
HAUFF'S LICHTENSTEIN
Edited, with Introduction, Notes, and Vocabulary, by GARRETT W. THOMPSON, University of Maine.
"Lichtenstein" has long been one of the most popular historical romances in German literature. Its scenes are laid in the district about the Black Forest in the early sixteenth century. The war between the Swabian League and Duke Ulrich of Württemberg forms the background for the story, and Ulrich is the principal historical character. The story is here presented with but slight abridgment to bring it within the compass of a classroom text, and the present edition is unique in retaining Hauff's own introduction, his division of the story into three parts, and his poetic chapter headings. *Cloth, xxii+566 pp., 90 cents.*

NEW YORK, THURSDAY, AUGUST 20, 1914.

Summary of the News

A résumé of the naval and military operations in the European war during the past week will be found in a Chronicle of the War on page 215. In these columns we shall deal only with the more general or political developments of the situation.

The declaration of war, or rather the official statement that a state of war existed between Great Britain and Austria, which had been regarded as inevitable for some days, finally came on August 13. The form in which the statement was made was probably adopted in order that Italy might not be under the technical obligation to join with her nominal allies in resenting what might have been regarded as an act of aggression had Great Britain actually taken the initiative in making a declaration of war. Nothing, however, appears more improbable than that Italy should now be induced by any consideration, technical or otherwise, to throw in her lot with Austria.

By far the most important development in the international situation was the ultimatum sent by Japan to Germany on August 16, demanding the immediate withdrawal from Japanese and Chinese waters of German men-of-war and armed vessels of all kinds, or the disarmament of those which cannot be so withdrawn, and the surrender without compensation to the imperial Japanese authorities of the entire leased territory of Kiao-chau, with a view to the eventual restoration of the same to China. A time limit of one week was given for the receipt of Germany's reply to the ultimatum, and its demands were to be complied with by September 15. The reply that Germany will give is naturally not in doubt, and so Japan will be added to the Powers with which the German Empire is at war.

Some concern has been expressed in this country lest Japanese aggression against Germany should extend to the German island possessions in the Pacific. The attitude of the Administration, however, is understood to be that it does not question the good faith of Japan, and the British Government on August 17 issued a statement pointing out that the ultimatum was only delivered after full consultation between Tokio and London. It also expressly stated that the action of Japan would not extend to the Pacific Ocean beyond the China seas, except in so far as it might be necessary to protect Japanese shipping lines in the Pacific, and Sir Edward Grey is said to have received assurances from Japan that Kiao-chau would be surrendered to China in accordance with the undertaking contained in the ultimatum.

Some alarm has been caused, particularly to Greece, by the purchase last week by the Turkish Government of the two German cruisers, Goeben and Breslau, which passed through the Dardanelles after running the gantlet of the British and French fleets. Turkey's action was made the subject of inquiries by the Powers of the Triple Entente, and assurances were given that the German crews would be repatriated and the vessels manned by Turkish crews. The purchase has been made, according to Turkish explanations, to compensate for the taking over by Great Britain of the Turkish Dreadnought that was building in English yards, and to offset the recent purchase by Greece of the Idaho and Mississippi from the United States.

Russia at the end of last week made a desperate bid, which appears likely to be successful, for the support of the Poles. A manifesto to Poland was issued by the Grand Duke Nicholas, Commander-in-Chief of the Russian army, promising autonomy to the country in return for loyalty in the present crisis.

The British Government on August 13 adopted the heroic measure of guaranteeing the Bank of England against loss on discounts granted by it. The beneficial effect of this unprecedented action was immediately seen in a considerable easing of the financial situation. The Government has also guaranteed insurance of cargoes, the guarantee apparently being confined to cargoes on British bottoms and consigned to British ports.

The difficulties of American tourists abroad are gradually being ameliorated. With the resumption of transatlantic traffic, many have already returned. Seven boats, carrying 9,000 passengers, left England on Saturday, and within the next three weeks forty-eight other ships are scheduled to leave British ports for America. Announcement of plans for the relief of stranded Americans was made on Tuesday by Henry S. Breckinridge, Assistant Secretary of War. London is to be the headquarters for the relief of those Americans now on the Continent. The cruisers Tennessee and North Carolina will make their headquarters at Falmouth, moving from there to Continental points whenever it may be found necessary.

Since public interest has been somewhat diverted by European affairs, the Mexican situation has settled itself with remarkable rapidity. The process of transfer of power was complicated but expeditious. Dr. Carbajal, Provisional President, on Thursday turned over the chief authority to Gen. Iturbide, Governor of the Federal District, and departed for Vera Cruz. Gen. Iturbide promptly transferred the power to the Constitutionalist Gen. Obregon, who entered Mexico City with his troops on Saturday, amid the acclaim of the multitude. The Federal army has been dissolved, and, with the resignation of the Military Governors of the states of Chiapas, Vera Cruz, Tabasco, and Campeche, the last vestige of the Huerta régime is at an end. Gen. Carranza has not yet entered the city, but is expected to do so shortly.

The Panama Canal was formally opened to traffic on Saturday for all ships up to 10,000 tons register. The steamship Ancon, owned by the United States War Department and leased to the Panama Railroad for service in the New York-Colon trade, was the first big boat to go through. Col. Goethals, builder of the Canal, and an official party, including President Porras of the Republic of Panama, were on board. The trip from ocean to ocean was made in ten hours.

The United States District Court, sitting at St. Paul on August 12, declared the International Harvester Company to be a monopoly in restraint of trade, and ordered it dissolved. An appeal will be taken to the United States Supreme Court.

A conference was held in Washington last week to discuss means for offsetting the estimated loss in import duties of $100,000,000 that is expected to result from the war in Europe. It was decided to draft a bill to raise the amount, and the Ways and Means Committee will take up the task of framing the bill as soon as possible.

The question of the unwarranted increase in the prices of foodstuffs in this country upon the pretext of conditions existing in Europe was taken up by President Wilson last week with Attorney-General McReynolds, with a view to determining whether prosecutions could be undertaken against those who were artificially raising the prices. The matter is under investigation.

The shipping bill, admitting foreign built ships to American registry, was passed by the Senate on Monday by a vote of 40 to 20. The bill was passed in its original form as it had been adopted by the House, the conference report being rejected. The bill suspends the restrictions requiring that foreign built ships applying for American registry be less than five years old, and authorizes the President to suspend also the provisions requiring all watch officers to be American citizens, and requiring survey, inspection, and measurement by officers of the United States. Coastwise shipping will not be affected by the terms of the bill.

The question of the propriety of banking houses in this country arranging loans to any of the European Powers engaged in war has occupied the attention of the State Department during the past week, as a result of inquiries made by J. P. Morgan & Company as to what would be the Administration's attitude towards the project of extending a loan of several hundred millions to France. The reply of the State Department was that such action would be inadvisable, and that "loans by American bankers to any foreign nation which is at war are inconsistent with the true spirit of neutrality." A statement issued by Mr. J. P. Morgan on Monday made it clear that the advice of the State Department would be complied with.

The deaths of the week include: Pol Plançon, John P. Holland, Prof. A. S. Bickmore, August 12; Henry L. Oestreich, August 13; Michael A. Scanlon, August 16; Lieut.-Gen. James M. Grierson, Robert Drouet, August 17.

The Week

Last Saturday the Panama Canal, the greatest engineering achievement in the world, was thrown open for traffic, and—there is no foreign traffic. Could anything be more sardonic? Just when the most notable enterprise of peace nears completion, the war comes on to paralyze ocean transportation. The one is an enormous constructive task finished; the other bids fair to be the greatest destructive action of humanity of which there is any record. The amount of capital which will be destroyed in Europe alone, if this war lasts a few months, would build several such canals. Of course, so far as ocean transportation is concerned, this is a passing condition, while the Panama waterway is presumably there for all time, and it will profit by the trade revival and the regeneration of American shipping whenever they come. But it is doubtful if any one happening could throw into clearer relief the essentially wasteful and destructive character of the war abroad than Col. Goethals's notice to the world that the greatest American conquest of peace is ready to serve those who are so busily cutting one another's throats.

The official British statement about the Japanese ultimatum to Germany shows, what was surely to be inferred, that the step was taken only after consultation with the Foreign Office in London. No proof, however, is offered of the assertion that the two nations were compelled to joint action to "protect their general interests in the Far East." No evidence of German aggression there has been produced. The obvious German policy in the Orient was to lie low during the war. Germany was fully aware of the terms of the Anglo-Japanese treaty, and knew that any attack by her on Hongkong or Wei-hai-wei or the Straits Settlement would instantly bring Japan upon her back. Of course, the English will say that war is war, and that, once in, she is entitled to use every weapon against Germany within her reach. Yet England would have been in a stronger moral position if she had sought to dissuade Japan from striking this blow. The official statement adds that hostile action is to be confined to the China seas and to "German occupation in the Continent of Asia." But this sounds very like the talk about "localizing" the war between Austria and Servia. War has a way of refusing to be a limited liability company. In the end, the Japanese may be found in possession of German Samoa as well as Kiao-chau.

From the full text of the English diplomatic correspondence preceding the war, which has now reached this country, nothing essential is to be gleaned that was not contained in the cabled accounts. One point, however, stands out clearly in the last dispatch of Sir Edward Grey included in the official publication. It was sent on the very eve of war, after he had declined the German offers to insure British neutrality: and it gave Germany a plain opportunity, not only of preventing the war, but of breaking up the Triple Entente. Sir Edward Grey telegraphed to the British Ambassador at Berlin:

> I said to German Ambassador this morning that if Germany could get any reasonable proposal put forward which made it clear that Germany and Austria were striving to preserve European peace, and that Russia and France would be unreasonable if they rejected it, I would support it at St. Petersburg and Paris, and go the length of saying that if Russia and France would not accept it his Majesty's Government would have nothing more to do with the consequences; but, otherwise, I told German Ambassador that if France became involved we should be drawn in.

This was the last and splendid chance for German diplomacy. It failed to grasp it. And the plunge into war was made with, as the *Westminster Gazette* justly observes, "a confusion and miscalculation in the things that Bismarck would have regarded as essential."

Bidding for the good-will of the Poles has been going on briskly, ever since the outbreak of the war, but the Czar appears now to have outbid both his German and Austrian competitors. In an official proclamation from St. Petersburg, the Poles are assured that the Russians are their truest friends. This will be surprising news to the inhabitants of Warsaw. But to give a tangible and striking proof of his benevolent intentions, the Czar makes a definite promise to reunite all Poles in their ancient kingdom, and then to make it "autonomous." This new hope of a restored Poland—a hope which the Poles have cherished indomitably for a hundred and fifty years—has been acclaimed by Polish residents of Paris. "Magnificent! Sublime!" they exclaim. We have yet to hear anything definite from the Poles who have had actual experience of Russian government. They must be reflecting that this is a very sudden change of policy. Far from encouraging Polish national aspirations, Russia has steadily suppressed and punished them. Poles must be excused if they wait a time before believing in this new-found enthusiasm of the Czar for a united Poland.

The numerous dispatches from Belgium which have been received since the outbreak of war, telling of German soldiers suffering from lack of food, will be of great interest to students of military affairs. The German commissariat is one of the unknown factors of the present problem. Unlike the custom in our own army, the Germans make but little of their supply officers; we give them high rank and place them in our army register ahead of all the line officers. In Germany it is just the reverse; the supply officials come far after the line troops, upon whose development everything is concentrated. Fighting in Europe, where there are perfect roads and railways in every direction, makes the provisioning of an army very different from that of our troops in the Civil War, or in our oversea expeditions to the Philippines and Cuba. In 1870 the supplying of the German army was excellently carried out; as Sheridan pointed out, the Germans were able to live largely off the country; but the problem of 1914 is a difficult one, if only because the forces called out are so much larger. Hence there has been a good deal of speculation as to how the commissariat would work over a long line of communications, and particularly if there should be a smashing reverse on the border. If the reports received are true in any considerable degree, it would seem as if this part of the German machine were halting and groaning, just as the reports of charges in solid masses on heavily armed forts indicate a failure to bring the German battle-tactics up to date. An army, as Lord Bacon said, proceeds on its belly, and can crawl at all only if its supplies reach it promptly.

The truth about the war which is at length being furnished to a prejudiced world from impartial sources friendly to Germany does not differ perceptibly in spirit from the truth that emanates from Brussels, Paris, and London. Mr. Ridder's English column in the *Staats-Zeitung*, instead of nailing the lies of Germany's enemies, only nails Germany's flag to the mast in the face of the entire world; a laudable performance in its way, but hardly carrying out the promise that American readers would find in the *Staats-Zeitung* the facts which Anglo-Saxon correspondents and editors are unwilling to give to the public. So the German-American Chamber of Commerce has chosen for

the author of the first of its "impartial presentations" of the war a member of the German General Staff who is now in this country. Our awe for that greatest of military machines is somewhat lessened when a member of the Kaiser's General Staff explains the German method of attacking forts in close formation, at Liège, as resulting from the fact that as the original circle of assailants draws closer to the enemy's position the circle grows smaller, and the formation thickens up. Nor, we hope, is the General Staff's exactitude of information indicated by this officer's statement that "all Belgian fortresses were constructed by French engineers." Gen. Brialmont, who planned the fortifications on the line Liège-Namur and Antwerp, was a native Belgian.

When Gabriel blows the last trump and the elements melt with fervent heat, the *Marine Journal* will rise to explain: "This would not have happened if we had only had ship subsidies." It now emits a wail over the "Day of Retribution" which has come to this country for disregarding its warnings. Didn't it always say that, if the United States did not subsidize a mercantile marine, the day would come when foreign ships would fail us and our commerce would be paralyzed? Well, now you see. "We did not pay the subsidies and now we do not have the ships." But does anybody think that the *Marine Journal* wants the ships without the subsidies? Not for an instant. It denounces the bill to give American registry to foreign-built ships as a "wretched subterfuge" and a "miserable scheme of buncombe legislation." Let any craven American dare to buy such a ship and he will find out what the *Marine Journal* thinks of him. Its platform is, No ships without subsidies. As a last resort, we presume, it might compromise on taking subsidies without the ships.

The decision of the Federal District Court against the Harvester Company, in the Government's suit under the Anti-Trust law, is based on reasoning which will make review of the decision by the Supreme Court, on appeal, altogether desirable. The decision itself was reached by vote of two out of the three sitting Justices, and the two majority opinions are not wholly in harmony. All three agree that the open and obnoxious suppression of competition, which was the main ground for the Supreme Court's decisions against the Oil and Tobacco combinations, has not been proved in the case of the Harvester Company. One of the two majority opinions waives entirely the argument as to alleged unlawful methods of organization, to which much attention is given by the other majority opinion, and asserts that the simple fact of combination of "five great competing companies, which controlled more than 80 per cent. of the trade, . . . is the controlling fact; all else is detail." But as to even this argument of Judge Hook, the minority opinion of Judge Sanborn answers:

> The evidence in this suit seems to me to present a new case under the Anti-Trust law. No case has been found in the books, and none has come under my observation, in which the absence of all the evils against which that law was directed at the time the suit was brought and for seven years before was so conclusively proved as in this suit.

When the Supreme Court reviews the case, it will presumably have to take cognizance of a previous anti-Trust decision of its own, other than the Oil and Tobacco Company decisions of 1911. We refer to the Northern Securities decision of 1904. The main opinion against the railway merger, in that case, answered defendants' argument—to the effect that no overt act whatever had been committed in restraining or regulating traffic by the Northern Securities directorate as such—by the statement that, under the necessary purpose of the combination, "competition between the constituent companies would cease." Justice Brewer's concurring opinion rested on the argument that if "these two railroad companies can, through the instrumentality of a holding corporation," be placed under one control, "then in like manner, as was conceded on the argument by one of the counsel for the appellants, could the control of all the railroads in the country be placed in a single corporation." It has been felt by all close observers of the course of the anti-Trust litigation that the decisions of 1911 swung away from the specific reasoning of the decision of 1904. The Court will now, in all probability, have to examine again, in the light of the Harvester Company's particular situation, the grounds of the opinion in the case of the Northern Securities. It will naturally have to consider the important question how far the precedent is affected by the fact that combination of all existing railways would create an essential monopoly, whereas combination of all existing implement manufacturers would not necessarily have that result.

The acceptance last week by the New Haven Railroad of the reorganization agreement with the Federal Government, the recent rejection of which brought about the Federal suit, was due to several causes. Wish to avoid the delay incident to prolonged litigation was naturally one. Consent of the Department of Justice not to insist on surrender of ownership in the New York and New England line—an important east-and-west route in the system—was another; relinquishment of that road had been demanded in the Federal suit. The question on which the negotiations lately broke down—that of selling the New Haven's Boston & Maine shares, stamped with the formal assertion of the right of purchase by the State of Massachusetts—is virtually left to the courts; for the present agreement provides that if the trustees of that stock shall have been unable to sell it under such conditions within a year, the matter shall go to a trial court. In the meantime, there is the chance that the Massachusetts Legislature may take action that will remove what are now acknowledged impediments to such a sale.

On Saturday the Constitutionalist forces under Gen. Obregon entered Mexico City, the same day that Gen. Huerta landed in England to seek a well-earned rest, with which unfortunately the disturbed condition of Europe may somewhat interfere. The entry of the Constitutionalists was to the accompaniment of much rejoicing, and the streets which but lately resounded to the cries of "Viva Huerta" now echoed the name of Madero—which shows that Mexico City is very much like any other capital. Gen. Carranza's arrival is still being delayed, partly because of the more formal ceremonies that will attend the event, partly because of the necessity of transporting the machinery of government, personnel, and archives, which has moved from place to place during the last two years with the advance of revolutionary fortunes. The transfer of power is taking place in peace; the guarantees demanded for the supporters of the fallen régime have been arranged. A little more than three years after Francisco Madero was installed in power, a government pledged to carry out the political and social reform embodied in the Madero programme will be once more functioning in the capital.

It is not unmitigated optimism to believe that a new epoch has thus begun for the troubled republic. It is true that the habit of revolution may persist, and that unclouded peace is still for the future. But, after all, even in Mexico a revolution, to attain formidable dimensions, must have a

cause behind it. Madero stood for one set of principles, and the reaction under Felix Diaz and Huerta stood for another set of principles. That the reaction has spent its force for a long time to come, if not forever, may be safely assumed. Mexico cannot go back to the state policies and economic policies of Porfirio Diaz. Such dangers, therefore, as are anticipated will arise from the personal jealousies and aspirations of those who have carried the revolution to success. But here also we have grounds for believing that the dissensions between Carranza and Villa have been magnified by their opponents. Or, if strife should break out, there is still the all-important fact that, whereas formerly Mexico's internal troubles were fed in part from across the Rio Grande or regarded with contemptuous indifference there, the elements now in control in Mexico City have behind them the expressed friendship of the United States. Carranza has with him the good wishes of the American people and the Administration at Washington, a factor almost of primary importance in guaranteeing the permanence of the new régime.

Announcement from Washington that 80 out of 130 approved candidates have taken the examinations for the commercial attaché service, and will be hurried through further tests, assures our trade of one form of prompt assistance in taking advantage of its new opportunities. By the end of next month it is hoped to have a Government representative each at Buenos Ayres, Rio de Janeiro, Lima, and Santiago; while already six special agents are ready to depart for the same field. No stroke could have been more fortunate, as events turned out, than that of the Administration in procuring the recent appropriations of $100,000 for the commercial attachés, and of $50,000 for the special agents. Five of the former were to have been situated at London, St. Petersburg, Paris, Berlin, and Peking, and whether the destination of any of them will be changed is not yet known. But the other four, with the agents designated outside the civil service, have a unique opening to prove their usefulness. Emphasis is being laid in the tests not merely on their knowledge of languages and of commercial matters, but upon their character and address. Three of the agents have been assigned respectively to survey the lumber market, the hardware market, and the textile and fruit markets; and the directions of their fellows will be made public in a few days. No one can now accuse American manufacturing and exporting interests of the indifference to South America that was only beginning to be dissipated a few months ago.

The Colonel was never strong on logic, but in his speech on Saturday about the war and the United States and the Monroe Doctrine and the peace treaties, he got himself more than usually tangled up. He began by felicitating his countrymen on their being not only out of this awful European conflict, but freed from the burden of "crushing armaments." This latter immunity is conferred upon us by the Monroe Doctrine. Without it, European Powers would have colonized in South America—he said nothing about North America; Canada doesn't count for the purposes of the argument—and then we should have had to fight them all. Blessed be the Monroe Doctrine, which saved us from all that! But stay a moment. The Colonel is not yet done. Unless the Monroe Doctrine is supported by overwhelming "force," it is worth less than the paper on which it is written. European nations would not respect it for a moment unless we were prepared to whip any or all of them that infringed it. Consequently, we must make our naval and military power so great that all Europe would not dare attack us. Thus does the Colonel work up to his little Q. E. D.—namely, that we are happily free from "crushing armaments."

The most interesting feature of Ohio's State primary, held last week, is the defeat of ex-Senator Foraker in his attempt to put himself in line for return to the body he left five years ago. Personal antagonisms, one of the few certainties of Ohio politics, probably had as much to do with this result as larger issues, although the Foraker platform of opposition to the Administration at all points, good and bad, in the old thoroughgoing way, could hardly appeal to the sober-minded of his party. But while his defeat by ex-Lieut.-Gov. Warren G. Harding is interesting, the more important result of the primaries is the renomination of the Democratic Governor, James M. Cox. Gov. Cox has aroused the enmity of partisans who have not been provided with all they wanted in the way of patronage, and a vigorous fight was waged against him on this score. But it turns out to have been more vigorous than general. His position upon the question of State reforms had won to him the forward-looking Democrats of Ohio, and, as the successful candidates are, under the Ohio Primary law, the official framers of the party platforms, his is more than a personal victory. The disappointing feature of the contest was, as is usual, the light vote.

Just before the European war cloud burst, there were reports from the Middle West of great political activity by ex-Senator Beveridge. He was addressing audiences in Illinois. Then came the war and news from Illinois suffered an eclipse. But it now appears that there was a special election for judge in the Sixth Judicial District, the returns from which have at length been compiled. They are rather interesting. The once triumphant G. O. P. was rent in twain in this district in 1912, the vote being 11,000 for Taft and 13,000 for Roosevelt, which let Wilson walk away with it with 15,000 votes. At the recent election, after a vigorous campaign by Beveridge and Medill McCormick, who toured the district in a special train, and poured out the vials of Progressive wrath upon Cannon, ex-Representative McKinley, and other well-known Illinoisians, the Republican nominee polled 8,000 votes, the Democratic nominee 6,000 votes, and the Bull Moose 2,800 votes, Wilson carried every one of the six counties in 1912, with one exception. The Republicans did the same thing this year, the exceptional county going for Roosevelt two years ago and this time for the Democratic candidate.

One year of a compulsory education law is convincing North Carolina of the shame of having gone for so many years without it. For every one hundred children of school age in the State, at least twelve who were absent before have been taken to school and kept there, an aggregate of 40,000 new pupils being registered. In one county which the State Statistician calls typical, there was an increase in average daily attendance of 17.4 per cent.; in another of almost 30 per cent. Opposition to the law was expected, but its enforcement was "patient and tactful," and it has been heartily supported in nearly all communities. Its results are the more notable in that the act affects only children of from eight to twelve years. South Carolina is witnessing a State fight for a similar measure, and the experience of her neighbor is proving valuable, as the Spartansburg *Herald* notes, to dissipate the impression that compulsory education "cannot be applied in Southern States." There are only six commonwealths in the Union, indeed, which are now without such laws; and in every one of these efforts are being made to enact them.

THE SLAVIC TERROR.

We can readily understand why champions of Germany should speak of the war in Europe as a predestined and gigantic struggle of races. It is the fated collision of Teuton and Slav, they say; and they picture the immense disaster to Western civilization which would follow if the wave of Pan-Slavism proved irresistible and the Czar set his heel upon the neck of all Europe. Such questions as the following have been frequently addressed to the *Nation* during the past few days: What do you think of the Russian autocracy? Do you wish to see the *pogrom* spread over Western Europe? Would you supplant Uhlan by Cossack? Is it your preference that the methods of the Russian police should be made the standard of civilization, and that the ferocious means of restoring "order in Warsaw" should be introduced at Berlin and Vienna? Do you believe in the reign of the law or in rule by the knout?

These questions answer themselves. The very fact that they are put, however, by some of our correspondents, argues an excitable state of mind which can hardly be expected at present to see things in true perspective. It is natural, we repeat, that German sympathizers should seek to raise these terrible spectres of Slavs bestriding the whole civilized world. The war is colossal, and it is easy to translate it into terms of a vast historic movement and the death-grapple of two civilizations. But even in the heat of conflict we should endeavor to keep our heads. And we think that a little calm examination will show that it is impossible to represent this war as a clean-cut combat between Slav and Teuton, or to maintain that the Slavic terror is now, or will be when the war is over, anything so closely resembling a *Dies iræ* as some of our deeply moved German friends would make it out.

Not all of our correspondents are agreed on this Slavic thesis. Some of them contend that the war was caused by Anglo-Saxon perfidy and greed. Others say that it was brought on by the Celt's unslaked thirst for revenge. When you begin moving "races" about like pawns, there is no telling what strange and contradictory juxtapositions and combinations will result! We presume that one reason why some hesitate to go the whole theory of the Slavic menace is that they pause to consider a few facts in regard to the distribution of population by races. Germany herself has fully 2,500,000 Slavs within her Empire. Would she like the word to be spread through East and West Prussia that the hour had now struck for a war to the death between Teuton and Slav, so that her Polish subjects would feel the call of race stronger than that of German allegiance? As for Austria-Hungary, the assumed initiator of this apocalyptic world-war against the Slav, she has millions of Slavs among her own subjects. A rough but fair estimate is that 23,000,000 of the heterogeneous peoples that go to make up the total of 46,000,000 in Austria-Hungary are entitled to be called Slavic. Thus we are asked to believe that Austria has desired to give the signal for a *Weltkrieg* that would array half of her own population against their Government!

Such considerations do not, of course, go to the heart of the Slavic terror. They simply throw light on some of its marginal absurdities. The central prophecy is two-fold. It is that, in case of a defeat of Germany by Russia, France, and England, Russia will instantly proceed to dominate her present allies; and then—prediction number two—that Russian autocracy will irresistibly submerge the civilization of Western Europe. But surely this is "a large order," even for an agitated prophet. Take the first part of it. The Triple Entente exists for the present emergency only. Like the Triple Alliance, it will pretty surely be thrown into the melting-pot after this war. Indeed, the whole foregoing system of European alliances will be broken up. And the supposition that Russia triumphant would at once undertake to drag France and England at her chariot wheels, flies full in the face of all probability. Great Britain cannot in a day forget her far-flung Empire in the Orient, or the historic danger of Russian encroachments upon it. Nor could France ever translate her obligations under the Dual Alliance into a duty to part with her newfound allies, the English, who had saved her from another terrible defeat. If there is any dominating to be done, when the time comes to settle the terms of peace, it is much more likely to be done by France and England together than by Russia alone. More probable than either would be some kind of European Congress—a modern Congress of Vienna—in which all the details could be threshed out.

However, let us grant for the moment the contention of those who are so alarmed by the nightmare of the imminent Slav. Call the war mainly Russia's. Concede that she will claim the victory as hers, with all the fruits thereof. Even so, is there any possibility of a Czar suddenly terrifying all Europe like another Genghis Khan, or of a brutal Russian regimen being imposed upon the countries to the south and west? None whatever, we think, will be affirmed by any cool student of the problem, after balancing all the elements available and weighing all probabilities. One probability stands out so clearly as almost to wear the guise of a certainty. It is that this war is to be followed by immense popular upheavals. These will take the form of determined protests against militarism and also against autocratic government. The vast half-articulate masses will no longer consent to be thought of as merely food for cannon, whenever their besotted rulers give the signal for carnage. And if Russia were to think of setting up an imposing Slavic statue, and bidding all the world fall down before it, she would speedily find that its feet were of clay. The spirit of revolution is only slumbering in Russia. It may awaken any day like a giant refreshed. No one is more keenly aware of this than the Russian rulers; and they cannot fail to dread the convulsions and reactions that are sure to be seen among the Russian people after the war is over. In this ever-haunting fear of revolution in Russia itself there is the plainest assurance that the present attempt to affright by the thought of a Slavic terrorism whelming all Europe will soon disappear like the baseless fabric of a vision.

WHY ENGLAND WENT TO WAR.

What chiefly surprises one who reads the English newspapers published during the week ending August 5 is the extent and intensity of the feeling against going to war with Germany. There was, of course, an active war party. In the press it was led by the London *Times* and *Daily Mail*. And naval men, it is evident, were hot for striking now that the hour for which they had been watching had come. But there was a powerful anti-war party. Its moderate exponent was the *Westminster Gazette*, a newspaper which has long shown that it stands closer to the Liberal Government than any other. It was all for caution and restraint, and, till the last moment, anxious to keep England out of the war and to find some means of coming to terms with Germany. But the impassioned champion of peace, through all the time when the issues hung in the balance, was the *Manchester Guardian*. This able newspaper—thought by many to be the most influential in England: outside London it certainly is—made a most gallant fight against the war. Day after day it made powerful appeals, argu-

ing that neither English interest nor English honor required the nation to fling itself into the gulf of a European war.

And this opinion found very wide support throughout the country. A Neutrality League was formed. It at once gained numerous adherents. It spread its protests broadcast. And a host of enlightened Englishmen hastened to array themselves against the war party. Among them was the editor of the *Economist*, still the chief financial guide of England, with clergymen, professors, philanthropists, and honorable women not a few. One begins to understand why John Morley, veteran Liberal and friend of learning and progress, should have been so moved by all this demonstration that he resigned from the Cabinet rather than put his name to a declaration of war. One of the most striking documents put out was an "Appeal to Scholars," signed by Oxford and Cambridge professors. Those who have lightly maintained that all Englishmen were mad to strike a death-blow at Germany, should at least be given pause by such a passage as the following from this University appeal:

> We regard Germany as a nation leading the way in the arts and sciences, and we have all learned and are learning from German scholars. War upon her in the interest of Servia and Russia will be a sin against civilization. If by reason of honorable obligations we be unhappily involved in war, patriotism might still our mouths, but at this juncture we consider ourselves justified in protesting against being drawn into the struggle with a nation so near akin to our own, and with whom we have so much in common.

What was it, then, that swept away all this opposition to war with Germany, or rendered it futile? What finally broke down English patience? It was unquestionably the German invasion of Belgium. This reckless tearing up of a solemn international treaty, guaranteeing the neutrality of Belgium, and regarded for eighty-five years by all the Powers as a part, in Professor Westlake's words, of "the permanent system of Europe," could not but fill England with alarm, could not but frustrate the efforts of the peace party. Early in the discussion the *Manchester Guardian* had admitted that a violation by Germany of Belgian neutrality would be intolerable; and when the thing was done, and the die was cast, it could only bow its head in grief and say: "Now there is nothing for Englishmen to do but to stand together and help by every means in their power to the attainment of our common object—an early and decisive victory over Germany."

Sir Edward Grey put the case in a way to which every Englishman could not fail to respond: "If it is a case that Belgium's neutrality is gone, no matter what might have been offered her in return, then her independence is gone; and the moment her independence goes, that of Holland will follow." This statement, declared Prof. J. H. Morgan, is one to which "every student of international law will unhesitatingly subscribe." He pointed out by how many binding agreements Germany was estopped from setting foot on Belgian territory. It was not merely a case of the Treaty of London. This was carefully observed by Germany in 1870, when Bismarck was in charge of German diplomacy. After Sedan, Germany thought of transporting her wounded home through Belgian territory, and asked permission to do so. Belgium objected, and Germany acquiesced. Later she took upon herself a still more sacred obligation never to do what she has now done in Belgium. The Hague Convention of 1907 contained this explicit provision: "Belligerents are forbidden to move troops or convoys of either munitions of war or supplies across the territory of a neutral Power." To that Convention Germany was a signatory!

If any doubt remained that it was Germany's disregard of her treaties, and ruthless invasion of Belgium, that threw away her last chance of retaining, we will not say the friendship, but the neutrality of England, it would be dispelled by Sir Edward Grey's speech in the House of Commons, the full text of which has now reached us. He reviewed the whole matter of the relations of England to France, and of the earnest and unceasing efforts of the English Government to prevent the Austrian clash with Servia from drawing the other nations into war. He had no word of animosity to Germany. But he solemnly pointed out the inevitable consequences of violating the neutrality of either Holland or Belgium, both of them states which had no desire except to be left alone and independent, quoting with great effect the words of Mr. Gladstone, that a wanton disregard of the international guarantee of Belgium's independence would be "the direst crime that ever stained the pages of history."

But, of course, none of these things moved the German General Staff! It had its military plans all made for striking at the heart of France through Belgium, and nothing must be allowed to stay their execution. But the plans themselves have already failed, and in bringing England against Germany have a thousand times outweighed any immediate military advantage that might have been gained. It was a colossal blunder. Germany might well make her own to-day the historic warning sent by the French military attaché in Berlin to the War Office in Paris: "Beware of the German General Staff."

SOCIALISM AND WAR.

"Take care," once cried Mirabeau, in words often quoted by Socialist advocates of the general strike, "do not oppress this people, that produces everything, and that, to make itself formidable, has only to become motionless." No recent contention has been more urged by Socialist leaders than their ability thus to stop war. To-day their assertions look as ghastly as those of all other theorizers on war's impossibility. How much influence did Socialists exert during the recent swift march of affairs? We know that there were demonstrations in Paris, Berlin, and elsewhere; that the *Vorwärts* was suppressed for a day and Jaurès assassinated; that anti-war posters were multiplied. We know, too, that in Italy Socialism has been potent in forcing a neutral policy.

The Socialist contentions received their most forcible statement at the last international meeting at Basel, in November, 1912; in the national meetings that followed; and in the pamphlets like George Allan England's "The International Socialist Movement in World Peace." The Basel Congress declared itself ready to order the most drastic measures to prevent extension of the Balkan imbroglio; leaders from the English, French, German, and Austrian Parliaments drew up a manifesto threatening revolution if the war spread; and reports were made of the vast mass meetings that had been held simultaneously a week before in eight European capitals. It was no wonder that the Congress, going so far beyond the mere declarations against militarism of the previous Amsterdam and Copenhagen Congresses, and affirming that millions of men in France and Germany would stop the food supply in case of need, intoxicated the enthusiasts. Mr. England ends his account of the meeting by remarking that "the end of war for all time is now definitely in sight. I express my firm belief that, through the coherent anti-militarism of the increasing Socialist party all over the world, Mars has already received his death-blow." But the more cautious were doubtful, and based their doubts on grounds that are now sustained. The chief weakness, indeed, was revealed at the Con-

gress, in the inability to agree on the general strike as the direct weapon against war. Bebel had refused it his full approval at Mannheim in 1906. In a question of national and party loyalties, many felt that they could not assent to crippling their country while still uncertain of what was happening to her opponents.

The exact status of this question when the war cloud broke is revealed in accounts of the meetings last month of the United Socialists of France. Jaurès, Vaillant, and Rapoport declared for invoking the international general strike in all cases, on the ground that all wars were an imperialistic expression of capitalism. As to its effectiveness, did not the Germans now see in it an adequate weapon to win general suffrage? But Morel and Hervé objected. "I doubt," said Morel, "the sufficient advancement of labor organization in various countries to make a strike other than one-sided, leaving the nation defenceless to active foes." To this the only reply was that the International would reject any plan not adopted on both sides of the frontier. But the division clearly marked the present weakness of Socialist anti-militarism. We see this in Jaurès's replies in *l'Humanité* to a series of articles in the *Temps*. With two countries going to war, he granted that the Brussels bureau must organize "the common and simultaneous action of both proletariates." And to this he saw even more obstacles than did the *Temps*. In Germany, Bebel had stated that popular as well as official action would crush any attempted general strike; in France the working classes had nowhere sufficient unity to pledge their action. What the Socialists *had* accomplished was to educate many millions to hate war, to strive against it as long as they consistently could, and to look forward to a day when the perfection of their organization might prevent it. They made an internal influence felt in each country.

In the crusade against war European Socialism doubtless enlists multitudes who would have no other affiliation with it; certainly, the sympathy that many feel is unaccompanied by any acceptance of the Socialist basis for anti-militarism, or of Socialist aims. Its campaign is felt to be an index of awakening democracy; to express the new realization of the working classes that it is intolerable that their money and their lives should be sacrificed to the ambitions of dynasties and military rings. The reactions that follow the war must surely give an impulse to true democracy, and to nothing else. The Socialists themselves have repeatedly warned autocratic and bureaucratic interests that such reactions were inevitable; they have pointed to the Commune after the Franco-Prussian War, and the Revolution after the Russo-Japanese War; and they have asked what will be the attitude towards change of the many followers of Social Democracy, from the 4,250,000 of Germany to the 1,300,000 of Austria. But the Commune gave the world the French Republic, and it may be trusted that any changes that follow 1914 will be similar in character. The excision of war will be the work of a well-awakened populace, who will be as capable of dealing with it as the one party, so silly in its boasts, has been shown impotent.

THE BILL FOR A MERCHANT MARINE.

It should be clearly understood that the Ship Registry Bill, as it finally was passed by Congress on Monday, does not embody comprehensive revision of our obnoxious shipping laws. The old Navigation Law of 1792 denied American registry to all ships except such as were "to be wholly owned by citizens and to be commanded by a citizen of the United States," and those of which the officers "shall in all cases be citizens of the United States." The amendments of 1884 and 1896 applied the last of these provisions to "all the officers who shall have charge of a watch, including pilots," and, on steam vessels, to "the chief engineer and each assistant engineer in charge of a watch."

The old law also provided that vessels built within the United States, vessels which might be captured in war, and vessels forfeited for breach of law, and no others, might be admitted to American registry. This was amended in 1892 so that registry might be granted to foreign-built ships of a stipulated speed and tonnage, owned to the extent of 90 per cent. by citizens; provided that the same owners "shall, subsequent to the date of this law, have built or have contracted to build, in American shipyards, steamships of an aggregate tonnage of not less in amount than that of the steamships so admitted to registry." But the old provisions which required the officering of these ships by American citizens remained. They were also left in the further amendment under the Panama Canal Act of 1912, in which "sea-going vessels . . . not more than five years old at the time they apply for registry wherever built," were admitted to registry if wholly owned by American citizens.

The only permanent change in these older laws, introduced by the Congressional amendment, is repeal of the condition that the ships must be not more than five years old. Regarding the stipulations as to manning the ships by American citizens, and in regard to certain onerous provisions regarding survey and inspection, the bill provides:

> That the President of the United States is hereby authorized whenever in his discretion the needs of foreign commerce may require to suspend by order, so far and for such length of time as he may deem desirable, the provisions of law prescribing that all the watch officers of vessels of the United States registered for foreign trade shall be citizens of the United States.
>
> Under like conditions, in like manner, and to like extent, the President of the United States is hereby authorized to suspend the provisions of the law requiring survey, inspection, and measurement by officers of the United States of foreign-built vessels admitted to American registry under this act.

In other words, this section, as it stands, is as purely an "emergency provision" as the clause in the Bank Act authorizing the Federal Reserve Board, under exceptional conditions, to suspend for a given period "any reserve requirement specified in this act." It must be discussed and accepted on that basis, and not as a permanent solution of the problem of an American merchant marine.

This leaves the question uppermost how far the suspension, by the President, of the provisions which have obstructed recovery of our former position in that field will meet the difficulties of the hour. That it simplifies them, there can be no doubt. But, naturally, any American owner now transferring his ship from foreign to American registry, and any citizen or group of citizens purchasing ships from foreigners, would like to have some assurance of the scope and duration of the immunity proposed. Congress has conveniently dodged that question and placed it on Mr. Wilson's shoulders.

The first test of the practical usefulness of the new bill will arise in the highly complicated problem created by the offer for sale of their embargoed steamers by the Hamburg-American and North German Lloyd Companies. Our immediate need of new and large ocean vessels is unquestionable; that need has in fact been created largely by the enforced withdrawal of these very ships from ocean service. The objections of general policy which apply to the raising of

money here to subscribe for loans of belligerent European states, do not touch this case; for, in buying the German ships, our people would be transacting an ordinary business operation, would be dealing with corporations, not with governments, and would not be directly contributing to the war fund.

The real problems in this matter affect the questions who is to raise the purchase-money; whether these ships, designed as they were primarily for the tourist business, will be economically fitted for the present situation, and what is to be the attitude of Germany's antagonists towards the whole transaction. Meantime, as was to be expected, transfer to the American flag of vessels owned by Americans and in active service, but hitherto under foreign registry, has begun. This was a natural measure to insure their safety on the seas.

THE STATES AND THEIR ROADS.

Wholly unwise as was the Shackleford bill of last winter, proposing the final expenditure of half a billion of Federal money on the post-roads, it indicated two hopeful facts. The first was the great increase of popular interest in the improvement of the 2,200,000 miles of roads in the United States. The second was a new appreciation that our administration of road-building and road maintenance is crying aloud for centralization. As to the former, the Department of Agriculture has just made public some illuminating statistics. Ten years ago all the States combined appropriated less than $2,000,000 for roads. For 1914 they have set aside $43,000,000—an increase of $13,000,000 since 1912 alone; while in 1913 the single State of New York spent $15,531,928, Pennsylvania $4,606,232, and six other States over $1,000,000 each. Local expenditures have likewise grown by leaps and bounds. Whereas in 1904 their total throughout the nation barely topped $75,000,000, in 1913 they were estimated at $166,250,000—raising the whole national outlay for that year above $206,000,000. Rhode Island now lays claim to having improved 58.8 per cent. of her roads; Massachusetts to 51.2 per cent.; Indiana to 42.3 per cent., and Ohio to 33.8 per cent. How much remains to be done is seen in the fact that our aggregate of State-built roads is still less than France's national system. What we have done, moreover, is too largely sectional; more than four-fifths of our total expenditure is made by six Eastern States and two Pacific States. But the outlook is vastly different from that at the opening of the century.

In the country as a whole this growth of expenditure has been accompanied by an undeniable improvement in road administration. The last few years have seen our half-dozen State Highway Commissions grow to twenty-two, with more certain of creation this winter. Only seven States are now without a State highway law; only nine fail to make regular appropriations for road-building; while toll roads have rapidly disappeared, road taxation developed, and the wasteful system of statute labor diminished. The aims of State Highway Commissions are three: to equalize and distribute the burden of road-building; to insure wise outlay, by avoiding such improvement of disconnected roads as has been charged in New York, with the employment of better machinery and engineering skill than small localities can afford; and to classify the State's highways. Many States have learned that all progress depends on laying out a system connecting the large centres for primary attention; a system connecting county seats for secondary attention; and a final system of local roads for mere general supervision. The experience of Ohio, as brought out last winter in the hearing before the House Committee on Good Roads, is typical of the advanced States. Up to 1904 she had groped without a plan, under laws which enabled the rich urban counties, like Cuyahoga, to build excellent roads, but left the rural counties deep in mud. In 1904 the State Highway Department was created, and, after a period of ineffective, because uncoördinated, assistance to the counties, began work in 1911 on an inter-county system. That system, by legislative action based on expert surveys, has been defined as 9,300 miles—11 per cent. of all the State highways—joining all considerable cities. Not until it and a supplementary system of market roads are finished can State funds be used for other stretches.

A wish to stimulate the local action that still maintains three-fourths of our whole expenditure has led many States to adopt measures parallel to that described by Gov. Major of Missouri at the same hearing. In addition to appropriating $15 per mile for the upkeep of a system of county-seat roads, Missouri has recently agreed to expend dollar for dollar with any sum raised by county tax or popular subscription. "The counties," the Governor testified, "need every cent the Legislature can give them, and they are coöperating as fast as they can." Upon this measure real road advancement, in a region where nothing like New York's $12,000 expenditure per mile is yet required, may be based. But useful as such methods may be, they are mainly characteristic of States timid in incurring a vast lump-sum expense. Bolder State Governments will prefer to centralize their expenditures and their schemes of road-building at the same time. New York, with her recent issues of $100,000,000 in fifty-year bonds, has been widely criticised for burdening a future generation with the cost of highways that may well need replacing in five years; but she follows a plan that the imitation of other well-settled and prosperous States is endorsing. Every step towards the gathering-in of local reins from road districts, townships, and counties to the State has spelt improvement; and that gathering-in is immensely assisted by the concentration of funds. A marked addition to the sources of income from taxes and county and State bonds is shown to be provided by the State automobile taxes. In the whole country that source furnished $7,820,895 during 1913. In New York it reached $1,275,727; in Pennsylvania $841,062; and even in Iowa $787,411.

It was to stimulate filling the sad gaps in the American system of roads that the Shackleford measure was advanced; and these gaps may be emphasized without reading in them any argument for a Federal grab-bag of worse possibilities than the rivers and harbors bills. The great States of Kansas and Nebraska have improved, respectively, three-tenths and four-tenths of one per cent. of their roads. Nevada, North and South Dakota, Montana, Oklahoma, and Mississippi have not yet brought to standard one per cent. Illinois, the third State in the Union, with a wealth of agricultural products that should make good country roads the best of investments, has only 9.6 per cent. that are not half-impassable every spring. The swift progress of the last decade is regrettably uneven; and the prospect of a Federal grant, dollar for dollar, would doubtless rouse to interest the most inert of the Western and Southern States. But the creation of State Highway Departments or Highway Commissions, with comprehensive powers, marks the extent to which centralization of direction in road-building should go. There is no economy in Federal supervision of post-roads; there are sound reasons why roads should be built by State, not national, taxation.

Chronicle of the War

It seems probable that when we write next week we may have to record the progress of a serious general engagement between the German troops and the Allies; whether even then we shall be able to record any definite result appears more doubtful. Up to the present, despite the daily reports of German "routs" and French and Belgian "victories," it is evident that, in comparison with what is to come when the two vast armies shall be really engaged, the battles that have taken place have been the merest skirmishes. We may accept the fact that the Allies have been very generally successful, that is, that they have done what was required and held the German army in check. In numerous outpost engagements, also, they have doubtless scored individual victories. To accept at their face value, however, the official statements issued from Paris and Brussels would be to ignore the facts of the situation. On August 11 the German army in Belgium was around Tongres and St. Trond, its right wing resting on the latter place, that is, about twenty-five miles northwest of Liège. The following day sharp fighting was reported at Haelen, Diest, and Tirlemont, and despite severe reverses at the two former places, by August 17 we hear of German cavalry in the neighborhood of Wavre, fifteen miles southeast of Brussels, and on the following day (Tuesday), we learn that Brussels itself is threatened and that the seat of Government has been moved to Antwerp.

There is nothing startling or alarming for the Allies in the situation. By the time these lines are read it is even possible that Brussels itself may be occupied by German troops. If so, the victory will have been a purely spectacular one, intended for home consumption in Berlin, for the occupation of Brussels is without strategical advantage. The net result, however, of a week's skirmishing shows that the German army of invasion has advanced some twenty-five to thirty miles. This advance is by no means inconsistent with French and Belgian reports of victories, for beyond question the German troops have had to contest every inch of the way and have paid heavily for each step of progress.

We are probably justified in assuming that the German plan of attack was to make a quick and decisive stroke at France through Belgium, and so to crush the enemy on the southwestern frontier before Russia on the northeast was ready to strike. It can hardly be supposed, without holding the intelligence of the German General Staff in very low esteem, that resistance in Belgium was unexpected, but it seems apparent that the resistance encountered has proved very much more effective than had been calculated upon in the German plan of attack. To this extent, then, the French and Belgian troops have met with signal success. Time is probably the most powerful of all the Allies, as it is the most powerful enemy of Germany. The check that the German troops have encountered in Belgium must have been of inestimable value to Russia in giving her time to complete her mobilization, and the crucial moment of the war for Germany may be expected to come when Russia is ready to strike on her northeastern frontier. For the defence of that frontier, Germany has at present available but six army corps (between 300,000 and 400,000 men), in addition to the reserves. Against these Russia will ultimately be able to fling numbers that are almost limitless. The remaining twenty army corps of the German army (about a million men) are all engaged on the long front, of some 250 miles, stretching roughly from Louvain, in Belgium, through Luxemburg, and down through Alsace to the Swiss border. Nothing, it would appear, but a decisive and crushing victory all along this line would enable Germany to release sufficient troops to repulse the general Russian advance, which, if we may credit an announcement in St. Petersburg on Tuesday, was actually begun last Sunday.

In numbers the allied troops opposing the German advance are probably not inferior to the enemy. Considerable mystery has surrounded the movements of the British expeditionary force. Beyond an isolated dispatch two weeks ago telling of the landing of a force of 22,000 in France and the announcement of the arrival of Sir John French, the British commander-in-chief, in Paris on August 14, no news on this point had reached us until Tuesday, when it was officially stated by Lord Kitchener that the British force had landed at French ports. From English papers we know that the force consists of three army corps, making a total of all arms of well over 100,000 men. As we write nothing is known of the disposition of the British troops, and it is probable that nothing will be known until they are reported as in action, but as the situation is at present it seems not unlikely that they may be valuably employed in a flanking movement on the German right.

At the other end of the line, in Alsace, the most definite successes of the Allies have been recorded. On Thursday of last week came reports from German sources that the French advance into that province had been turned back, and that not a French soldier remained on the German side of the frontier. A statement given out by the French War Office on Sunday, however, reported a renewed advance in the Vosges Mountains. The German army corps, which had crossed the frontier into France, was apparently driven back on Saarburg after defeats in the neighborhood of Blamont, Cirey, and Avricourt. Thann, fourteen miles west of Mülhausen, was recaptured by the French, and Schirmeck, twenty-six miles southwest of Strassburg, was occupied on Sunday or Monday after a fight in which, according to the French official statement, 1,000 prisoners, 12 field guns, and 8 rapid-fire guns were taken. It looks as if some importance might be attached to these operations in Alsace. They possibly represent a genuine offensive movement in force to outflank the enemy where he is weak.
